No substantial relief can come to the country until these weights and burdens are removed. The labor and industry of the people demand emancipation from these oppressions. They demand freedom and equality. This can only be had by adopting a strictly revenue policy. Do this and relieve them from the thralldom under which they labor, growing out of your currency laws, and you will have solved the problem of cheap transportation. And again upward and onward will be the progress of American commerce, American industry, and American institutions.

State of Louisiana.

SPEECH OF HON. OLIVER P. MORTON,

OF INDIANA,

IN THE UNITED STATES SENATE,

April 16, 1874.

The Senate having under consideration the bill (S. No. 446) to restore the rights of the State of Louisiana—

Mr. MORTON said:

Mr. PRESIDENT: The bill introduced by the Senator from Wisconsin [Mr. CARPENTER] provides that on the fourth Monday in May an election shall be held in Louisiana for governor, lieutenant-governor, all the State officers, and for members of the Legislature; that this election shall be held under the direction and authority of an officer to be appointed by the President of the United States; that that officer is to appoint commissioners or agents in the different parishes and precincts of the State to conduct the election, the election to be conducted under regulations to be prescribed by this officer, and at the expense of the United States, for which an appropriation of $200,000 is made in the bill. It further provides that on the first Monday after the result of the election shall have been promulgated these officers shall be installed in office, and of course the others turned out. This is all I need say with regard to the bill as a preface to the very brief argument which I shall submit to the Senate this afternoon.

The proposition of the Senator from Wisconsin is that the United States shall guarantee to each State a republican government; that a republican government is one which is chosen and established by the people of the State; that whenever it is believed that the governor and other State officers were not chosen by the majority or in accordance with the constitution and laws of the State, it is within the power and is the duty of Congress to interfere and set aside such State officers and order a new election under the authority of the United States, and under rules prescribed by the Government of the United States; that the Constitution gives the power to Congress to determine whether a State election was fairly held in accordance with the constitution and laws of the State and whether the votes were properly and honestly counted.

This definition of the power of Congress I deny. It was never contemplated by the framers of the Constitution. It utterly destroys the integrity and independence of the State governments. The Constitution declares that "the United States shall guarantee to every State in the Union a republican form of government." The object of this provision was to secure a republican as distinguished from a monarchical or aristocratic form of government; a representative government based upon the people and recognizing their rights. It was not intended to give to Congress power to supervise and correct the frauds and irregularities that might arise in the conduct of elections; but to secure republican as against monarchical or aristocratic forms of government. We had just achieved our independence from a monarchy. There were still many advocates of monarchy living in all the States. During the Revolution there had been a tory party in all the States, and there were still remnants of that party living in some of them in 1787 when the Constitution was formed. At that time the governments of several of the States were actually administered by an aristocracy of property, and apprehensions were entertained that aristocratic principles might grow in power and get the control of some of the States so far as to change the forms of government and subvert the rights of the mass of the people.

From 1774 down to 1787 the great question in American politics had been the rejection of monarchy and aristocracy and the establishment of republican forms of government. There were advocates of monarchy and aristocracy in the convention that formed the Constitution. But republican principles triumphed, and it was intended to secure that triumph by the declaration that the United States should guarantee to each State in the Union a republican form of government. At the very time that the Constitution was formed the controversy was raging in France between republicanism and monarchy, and in fact it had extended into England and every country in Europe, and men were everywhere discussing as the absorbing topic of the day the relative merits of monarchical and republican institutions. Not only the language of the Constitution itself, but the history of the times absolutely demonstrates the proposition that the power given to Congress was to intervene against monarchical and aristocratic and for the preservation of republican forms of Government.

I ask the Secretary to read from pages 201 and 202 of the Federalist an article written by Mr. Madison, the passages I have marked.

The Chief Clerk read as follows:

"To guarantee to every State in the Union a republican form of government; to protect each of them against invasion, and on application of the Legislature or of the executive (when the Legislature cannot be convened) against domestic violence."

In a confederacy founded on republican principles and composed of republican members, the superintending government ought clearly to possess authority to defend the system against aristocratic or monarchical innovations. The more intimate the nature of such a union may be, the greater interest have the members in the political institutions of each other, and the greater right to insist that the forms of government under which the compact was entered into should be *substantially* maintained.

But a right implies a remedy; and where else could the remedy be deposited than where it is deposited by the Constitution? Governments of dissimilar principles and forms have been found less adapted to a Federal coalition of any sort than those of a kindred nature. "As the confederate republic of Germany," says Montesquieu, "consists of free cities, and petty states, subject to different princes, experience shows us that it is more imperfect than that of Holland and Switzerland." "Greece was undone," he adds, "as soon as the King of Macedon obtained a seat among the Amphictyons." In the latter case, no doubt, the disproportionate force, as well as the monarchical form of the new confederate, had its share of influence on the events.

It may possibly be asked, what need there could be of such a precaution, and whether it may not become a pretext for alterations in the State governments, without the concurrence of the States themselves. These questions admit of ready answers. If the interposition of the General Government should not be needed, the provision for such an event will be a harmless superfluity only in the Constitution. But who can say what experiments may be produced by the caprice of particular States, by the ambition of enterprising leaders, or by the intrigues and influence of foreign powers? To the second question it may be answered, that if the General Government should interpose by virtue of this constitutional authority, it will be of course bound to pursue the authority. But the authority extends no farther than to a guarantee of a republican form of government, which supposes a pre-existing government of the form which is to be guaranteed. As long, therefore, as the existing republican forms are continued by the States, they are guaranteed by the Federal Constitution. Whenever the States may choose to substitute other republican forms, they have a right to do so, and to claim the Federal guarantee for the latter. The only restriction imposed on them is, that they shall not exchange republican for anti-republican constitutions; a restriction which, it is presumed, will hardly be considered as a grievance.

Mr. MORTON. Here Mr. Madison declares that the only restriction imposed upon the States by this provision of the Constitution is that they shall not exchange "*republican for anti-republican constitutions*," and that the purpose of the provision was to protect the States against the danger then apprehended by many of the future adoption of aristocratic or monarchical institutions.

The precise proposition of the Senator from Wisconsin is that if in point of fact the governor and other State officers and a portion of the members of the Legislature obtained their offices by fraud, or were not chosen in accordance with the constitution and laws of the State of Louisiana, then Louisiana has not "a republican form of government" within the meaning of the Constitution of the United States.

This makes the existence of republican forms of government in the several States to depend upon the facts attending each election of their officers from time to time, and every fraudulent election or possession of the State offices, to destroy the republican character of the government. It is not possible that the framers of the Constitution had such a definition of a republican form of government in contemplation. *De facto* monarchs, presidents, or governors have never been held to change the form of a government in any state or country, although they did not come into office by the direct line, or through the channels prescribed by their constitutions and laws. They are the accidents of administration, liable to occur in all forms of government, and do not change the nature of the government itself. What the framers of the Constitution had in view was the *constitution and form* of the State governments, and not the contingency of a fraudulent election for governor or members of the Legislature. They intended to guarantee to each State a *constitution and form* of government in which the sovereignty and power were recognized as being in the people, as distinguished from a monarchy or government of nobles, principal men, or privileged class. The Constitution looked to the nature and character of the State governments, and not to the regulation of their election, in regard to which the States were to be left free.

The question as to the power of Congress under the fourteenth and fifteenth amendments to interfere to secure the equal enjoyment of civil and political rights to all the people of a State, and secure to all conditions and classes the equal protection of the laws, is not involved. The Senator does not seek to draw the power from the amendments, but from the guarantee clause before quoted.

If Congress has power to pass this bill it has power to set aside a State government at any time and on any pretext, for Congress is to be the sole judge of the sufficiency of the pretext. The power to set aside a State government for frauds in the election of State officers involves a power to investigate every State election and makes Congress a canvassing board for State elections and a court of last resort in all questions of contested elections arising in any of the States. It not only involves the power to set aside elections, but to abrogate State constitutions and to impose upon States officers not elected under the laws and constitutions of the States, but elected under Federal authority, and regulations unknown to the constitutions and laws of the States. It involves the power to supervise and regulate the administration of a State government, to suspend its operations, and set it aside and create a new one according to the caprices or passions or party interests of the hour. Under the pretense that an election has not been held according to the constitution and laws of a State, it sets aside the constitution and laws of the State entirely, and provides for the election and appointment of officers at times and by methods wholly unknown to the constitution and laws of the State.

If Congress possesses such a power as this, then the State governments exist only by sufferance, and may be changed by Congress from time to time according to its sovereign will and pleasure. While the sovereignty resides in the nation, yet it is a part of the theory of our Government and is intended by the Constitution that the State governments shall be independent in their spheres. The very idea of State government is destroyed, if Congress has the power to supervise and correct irregularities or errors in its administration. It is a delusion to call that a government if the ultimate power to determine who was elected governor or other State officers or members of the Legislature resides in an outside, superior, and independent authority. The very idea of a government carries with it the power to determine by its own laws and tribunals all questions of election of the persons who are to exercise its powers; and with this idea there was not the remotest intention to interfere by the provision in the Constitution of the United States.

At the end of the war the Southern States were without governments of any kind, and the interference of Congress for their reconstruction was a political and constitutional necessity. The power was deduced from the provision of the Constitution declaring that the United States should guarantee to each State in the Union a republican form of government, because it was said that a republican form of government could not be guaranteed to a State where there was no government at all, and that it was therefore clearly within the power of Congress to take such steps as would enable the people to establish a new government republican in its form. In the absence of this constitutional provision there would have been the same constitutional and political necessity for the existence of this power in Congress, and the power would have sprung *ex necessitate rei* from the whole nature of our government. The Constitution intended to give to Congress a protectorate over republican forms of government in the States against the encroachments of aristocracy or monarchy or anarchy which is the absence of government. To execute this power Congress was authorized to use all the means necessary to set up and establish a republican form of government and to impose conditions looking to its perpetuity, and may doubtless interfere with an existing State government to prevent changes in its constitution and nature by which it would cease to be in substance republican.

The power contended for by the Senator from Wisconsin would place the State governments as completely under the control of Congress as are the governments of the Territories.

Mr. CARPENTER. Are they not?

Mr. MORTON. Well, I say the Senator's argument does place all State governments as completely under the control of Congress as the government of a Territory.

Mr. CARPENTER. As a mere matter of fact, does the Senator doubt that Congress might to-morrow take the government of New York and supplant it and put another government there?

Mr. MORTON. It is not to be supposed that Congress would do a thing entirely outside of the Constitution and in gross violation of it

Mr. CARPENTER. I ask if the Constitution does not confer upon us that power?

Mr. MORTON. The Senator confounds physical might with constitutional power. If the Congress should exercise the power the State of New York might be helpless, but would it not be in gross violation of the Constitution of the United States? The question is not whether we have the physical power; nobody can prevent us; but the question is, have we the right to do it under the Constitution? That is the question.

The Senator interrupted me in the midst of a sentence. The power contended for by the Senator from Wisconsin would place State governments as completely under the control of Congress as are the governments of the Territories; would by a single principle centralize and consolidate all powers in the national Government, and leave the State governments as mere conveniences or expedients, to be continued, suspended, or altered at will. The constitution of Louisiana provides that the governor shall serve for four years, to be elected on the first Tuesday in November every fourth year; but if Congress has the power to turn the present governor out and provide for the election of a new one two years and a half in advance of the time, under regu-

lations to be prescribed by itself, it may equally provide that the election thereafter may be annual, or that the governor, instead of being elected by the people, may be appointed by the President, or chosen by lot, or selected in any other way. Under the provision to guarantee to each State a republican form of government the doctrine of the Senator confers upon Congress the power to destroy a republican State government and create another one in its stead.

The provisions of the Constitution should receive a reasonable construction, and should be read in the light of the history of the time when it was framed, and be construed with reference to the events and the opinions which are known to have then operated upon the minds of its framers.

The power to preserve republican forms of government in the States should not be converted into a power to destroy them; and the beneficent protectorate given to Congress over republican institutions in the States should not be perverted into a despotic authority with no limitations but the arbitrary will of a majority.

The Senator from Wisconsin, in his report from the majority of the Committee on Privileges and Elections and in all his speeches, has assumed that neither Kellogg nor McEnery was elected governor of Louisiana in 1872, but that the election was utterly null and void because of fraud and violence. If this proposition, so often asserted by him, be true, then Warmoth is to-day the legal and rightful governor of Louisiana, for by the constitution of that State he was to hold his office until his successor was duly elected and qualified. The Senator's bill, therefore, not only proposes to oust Governor Kellogg, to hold a new election for governor, State officers, and for the Legislature in violation of the constitution and laws of that State, and to force upon the State new officers chosen in defiance of its constitution and laws, but it deprives Warmoth of his rightful and lawful possession of the office of governor by overruling that part of the constitution of the State which declares that he shall hold his office until his successor shall have been duly elected and qualified—this, of course, upon the Senator's assumption that neither Kellogg nor McEnery was elected.

Mr. CARPENTER. Upon that assumption which the Senator points out we overrule them. Warmoth would remain governor by the Senator's theory until his successor was elected and qualified.

Mr. MORTON. Until he was elected and qualified under the constitution and laws of Louisiana, not under directions and the authority of the President of the United States. The constitution of Louisiana has no reference to an intervention of that kind; but that the governor shall hold his office until his successor shall have been duly elected and qualified under the constitution and laws of the State. That is what it means.

In concluding this branch of the discussion, it will be proper to refer to the admission running through the Senator's report and through all his speeches, that if the election had been fairly conducted, Kellogg would have been elected; that the republican party had a large majority in Louisiana at the time the election was held; that Kellogg in his politics and principles represented and does now represent a large majority of the people of the State. And it is proper here to repeat what I have said before, that what is known as the Kellogg government is to-day the choice not only of the republican party of the State, conceded to be in a majority, but that its removal by an act of Congress would be against the wishes of a very large part of the democratic party of the State, and especially that part which represents wealth, industry, and order.

Kellogg has been declared by the Legislature and the supreme court of the State its lawful governor. His authority as such has been acknowledged by all the subordinate courts and every department of the State government and is fully acquiesced in by the great body of the people. The Legislature has held two sessions, in which it has enacted numerous laws that are recognized and enforced by the courts, and to which submission is yielded by the people. The Legislature and State officers, who have been in the full exercise of all the powers belonging thereto, were declared to have been duly elected by a returning board created by the laws of the State and the legality of which was fully recognized by the supreme court of the State.

The preamble to this bill declares that Kellogg and the State officers and the members of the Legislature were not elected, and that the action of the returning board was without proper evidence and fraudulent. To all of this I answer, without here going into the facts, that Congress has no right to go behind the decisions of those courts, or behind the action of that returning board; that there is a necessity for State governments, and that this necessity involves a further necessity that each State shall have tribunals for deciding all questions of election arising under its constitution and laws; that the decisions of such tribunals shall be final and conclusive; that the mischief which would arise from allowing the decisions of such tribunals to be questioned or set aside would be infinitely greater than any benefits that could possibly accrue to the State or to the nation.

In the foregoing arguments I have proceeded upon the assumptions of fact made by the Senator from Wisconsin which I do not intend to be understood as admitting. I have on a former occasion discussed the history of the election in Louisiana in 1872 and of what is known as the Kellogg government and will not here repeat it.

There is a State government in Louisiana in full and successful operation, which claims to have been chosen by the people, and which has been decided, by the courts of the State and by that tribunal specially created by the laws of the State to determine questions of election, to be the lawfully chosen and constituted authorities of the State; and whatever may be the personal convictions of the Senator from Wisconsin as to the correctness of their decisions, he as a Senator has no jurisdiction or concern in the matter, and Congress has no more right to meddle with it than has the Legislature of New York.

Currency—Free Banking.

SPEECH OF HON. G. W. SCOFIELD,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

May 19, 1874.

On the bill (H. R. No. 1572) to amend the several acts providing a national currency, and to establish free banking, and for other purposes.

Mr. SCOFIELD. Mr. Speaker, in order to provide a proper remedy, if remedy is possible, for the business depression of the country, we should first endeavor to ascertain its cause. If we cannot agree as to what the cause is, we possibly may as to what it is not.

It certainly is not because of any scarcity. We have about as much food and clothing in the country in proportion to population as we ever had. We not only have more dwelling-houses, but more furniture and comforts in them than ever before. We have more and grander public edifices and business houses, more schools, school buildings, churches, and libraries, than ever before. Not only so, but within a few years the whole country has been very much developed by the opening of rivers and harbors, building of railroads, tunnels, bridges, and highways, and by the construction of every kind of city and village improvement, whereby the whole country is rendered more habitable and all our material wants better supplied, than ever before. As republicans we have been accustomed to boast, and with great truth, that the country was never so progressive, nor the people better clothed, fed, housed, and warmed, than under the administration of General Grant.

But in the midst of all this prosperity and progress a great many manufactories that had been running night and day to supply this large demand for consumption have suspended, and their laborers, clerks, and superintendents are left without employment. Why have they suspended? Have they been running at a loss? O, no. On the contrary, they have been making very large profits. The owners, as a general thing, are very rich, as they well deserve to be for their skill and enterprise. Why, then, do they not go on with business? Because consumption has suddenly fallen off. They cannot sell even their present stock. If they could sell their stock now on hand, and see a reasonable market for the future, they would revive at once. They need somebody to buy their productions. In other words, they want consumers. For the last five years there has been no such lack. All the old establishments and many new ones have been in full operation, and even then could scarcely keep up with the demand for all this construction, comfort, and luxury into which their products were turned. But this year consumption has fallen off very largely and very suddenly, especially of iron, lumber, and all articles of luxury.

Why is this? Why do not the people buy as heretofore? Where have the consumers disappeared? They have not been swept away by pestilence or war. Our population has not decreased. They have the same property, though not always of the same nominal value nor always in the same man's hands, but they have the same houses, lands, and chattels which they had last year; but somehow or other they have no stomach for consumption. If Congress could only give them an appetite, induce them to buy the coal, iron, lumber, oil, carriages, furniture, and the various luxurious fabrics now ever seeking a market, all these workshops would again be busy. Why, then, do they not buy? Why do they not consume?

"Because," we are told, "they have no currency with which to make the trade." "There is not currency enough in the country to do the business." The manufacturers are on hand, as we know, with their products to sell, and the former consumers are on hand, and as it is alleged with capital to buy; but the trade cannot be made because, as it is said, there is no currency, no bills, no medium by which the transfer can be effected. The suggestion that the consumers, that is the people, do not want to buy; that many of them have no capital with which to buy; and that all have come to the conclusion that they cannot afford to buy, is set aside as too absurd for consideration. There is nothing in the way, they insist, but a lack of currency. Now, if that is so, how did they manage to do so much business for the last five years? During that time the volume of currency has not materially changed. The 3 per cent. certificates were redeemed, but the fifty-odd millions of bank-notes much more than supplied their place. Besides, we have added within a year twenty-six millions of greenbacks to the circulation. So that on the whole the currency has been considerably enlarged. We now have in all $782,000,000, about four times the amount of paper currency before the war. This currency has not only been sufficient during all these five years to do the business of the country well, but by its redundancy to aid the vast in-

flation of commercial credit. Now, where has all this currency gone? It must be conceded on all hands that it was abundant for the large business we have been doing, and certainly, if we can find it and use it, it will be superabundant for the small business we are doing now. It is not in the Treasury. These vaults are uncommonly empty. Where is it?

Gentlemen see the necessity of answering this question. They cannot deny that we have had enough to do the business heretofore, and that we have a little more now than we had then. They see that these two facts, these two admissions, refute their allegation that trade has been suspended from lack of currency, unless they can show that it is destroyed or placed beyond our reach. Driven to this extremity, they gravely tell us that the freedmen have absorbed it! absorbed seven hundred and eighty-two millions, or a good part of it. But while we are wondering at the amazing thrift of these poor people and their extraordinary power of sudden absorption, Representatives of the South arise and demonstrate that there is very little currency in that section of the country, either among the whites or blacks. They complain that the North and East have monopolized it all, and demand legislation whereby they can secure their share.

Then, again, it is said that the currency has been hid away in old stockings all over the country. Seven hundred and eighty-two millions or a good part thereof—four times more than belonged to the whole country before the war—hid away in stockings! But this theory is scarcely advanced before up rise a dozen gentlemen on the same side of the main question, and attempt to demonstrate that this class of alleged hoarders are very poor, out of employment, out of money, and out of stockings, and give this as an argument in favor of printing more money.

Then it is said that it has all gone to Wall street. Money goes to New York, to be sure, and so do men, and both on the same errand. Men go to transact business there and return to transact business at home. Money goes and returns for the same purpose. It has respect to trade only and not to places. Leave it free, and no place can long retain more than the amount which its relative business requires.

Finally, when the freedmen, stocking-hoarding Wall street stories are exploded, it is alleged that the currency is hoarded by banks and other money-lenders. What a contradiction of assertions! Hoarders never lend and lenders cannot afford to hoard. That much of the currency lies in the vaults of banks and other money centers is doubtless true, but that it is hoarded there is absurd. To lend money is the business of a bank, and if it does not do it no dividends are earned. The money is in the banks because there is little for it to do outside. It is the sure evidence of plethora. There is but little trading going on. Producers want to sell, but consumers will not buy, and there being but little demand for a medium of exchange, it finds its way to the banks and lies there idle. Hoarding by banks and money-lenders is about as absurd as the negro and stocking-hoarding stories. You might as well expect a man in the livery business would fill his stable with horses and carriages and refuse to hire them to responsible people; or that an innkeeper would furnish and stock his house, supply it with clerks and attendants, and then close his doors to his guests. While it is plain that the producer is on hand with his unsold stock, and the consumers are on hand to buy if they had the disposition and capital, the currency that used to be employed to make the transfer is also on hand awaiting the revival of trade.

When trade ceased money became idle and was laid up in vaults. The idleness of the money did not cause the cessation of trade, but was the result of it. You might as well say that the workman who is idle because he has nothing to do is hoarded as to say that the currency which lies in vaults because there is no business to employ it is hoarded. The fact is that the mill, the workman, and the currency are all standing idle because there is nobody to buy and consume their products. We know where the mill is, where the workman is, and where the currency is. There is no hiding nor hoarding of either. They are all ready to go to work to perform their several duties in production so soon as reliable consumers will agree to purchase.

But suppose the currency has all disappeared in some or all of these several ways; consider your remedy. You propose to print, say one hundred millions more; would not that go where the seven hundred and eighty-two millions went? How can you stop it? "Keep on printing," we are told. That is pouring water in a sieve.

Again, it is asserted by those who think this falling off in consumption is caused by a deficiency in the currency that a certain amount of currency per head is at all times required to do the business of the country, and that we have not at this time that "certain amount." If this "per-head" theory were true, it would not help the argument; for whether we have more or less than that certain amount, we now have as much as we had during the period of the greatest consumption, so that the falling off in consumption could not be attributed to a deficiency of currency. Gentlemen who believe this theory have been trying to ascertain what that requisite certain amount is. Some fix it at fifteen dollars per head, some at twenty, and others at twenty-five. One gentleman, drawing a fine sight upon it, demonstrated that we needed exactly nineteen dollars, thirty-nine cents and four and one-fourth mills for every man, woman, and child within our borders. If Congress would print just that amount, buying and consuming, he thought, would again revive. No wonder that no two of these specific-amount theorists can agree. Their error lies in the supposition that there is or can be any such specific amount. Its advocates forget that, other things being equal, prices rise as the quality of the currency is depreciated by its enlarged quantity. So that as soon as business becomes settled upon the new basis the increased amount of currency will go no further in trade than did the smaller amount on the old scale of prices. If we would convert, by law, every one-dollar note, as has been proposed, into five dollars, and raise all other denominations in the same proportion, as soon as existing contracts were satisfied and prices adjusted to the change, your new five would buy no more than it did when it was called one, and of course could do no more business. It cannot be true, then, that a specific amount is required. The business could be done equally well by a large or small amount. The suffering comes from a change in either direction. By changing the volume of the currency, you change prices, and by changing prices you change the wealth of individuals. One class gains and another loses. The losers are the dull earning and saving class; the gainers, the sharp, speculative, money-making class, who alone anticipate the coming change, and bargain, buy, and sell accordingly.

But if further evidence is required to prove that the diminished consumption is not caused by insufficient currency, let the doubter compare the present amount of paper money with the amount existing before the war. Prior to that time the average amount of paper money was less than two hundred millions, and it ran but a little above these figures even during the great inflation of 1857. Now, it is seven hundred and eighty-two millions. Besides this the entire business of three or four States is done with coin or bank-notes redeemable in coin. The interest due from the United States, from many of the several States, and from divers railroads and other corporations is paid with coin. The customs are collected in coin and a large portion of private exchanges effected through the same medium. We have about four times as much paper money now as we had then; besides the vast increase of national, State, and corporate indebtedness which is more or less used for large transactions. After making all possible allowance for increased business, you still have surplus currency enough to more than double prices. I conclude, therefore, that the motive which induced people to stop buying all at once did not originate in the currency, and we must look for it elsewhere.

Again, it is said that the market was glutted by overproduction. That is hardly a correct statement of the case. Diminished consumption rather than increased production glutted the market and stopped the mills. For many years the production has been very large, but consumption has been equal to it. In fact the large demand coaxed the mills into operation, and when that demand suddenly fell off a portion of the workshops were compelled to stop or run at a heavy loss.

We come back to the unanswered question, Why did consumption fall off so suddenly? Because a large part of all this buying, constructing, building, and furnishing had been done upon credit, and some of the great bankers, numerous country investors, merchants, and manufacturers, who had been furnishing the credit, broke down or became unable or unwilling to advance any more. Loanable capital was exhausted but the currency was not diminished. When credit gave out, economy came in, and the buying, constructing, building, and furnishing was at once suspended.

A little review of what has been passing around us will show how credit came to be sought, how obtained, and how exhausted. During all these years of prosperity a great many people had been living beyond their means. Contrast the style of living before and since the war and you find careful earning and frugality on the one side, and extravagance and prodigality on the other. It is said that our resources kept pace with expenditure, and that our increased consumption no more than equaled our increased wealth. I know we thought so, and it was that belief that begat the extravagance which in turn begat the present trouble. Each person knew that he was not laboring any harder, nor laying by in purchasing power any more surplus, and that his items of property were about the same, and still he imagined that he was worth and could afford to spend a great deal more. The bulk of his estate was the same, the articles that composed it the same, the income from it the same in purchasing power, but in the inventory the figures were gloriously enlarged. With such an unexpected addition to his wealth, why should he not borrow a little money with which to enlarge his house, renew his furniture, and spend a few months abroad or at the springs? He thought as many gentlemen here argue, that a dollar was a dollar whether made of gold, leather, or paper, or whether it would buy a day's boarding or be all used up on a single breakfast. The owner of a small house worth a couple of thousand dollars found in the course of a few years that its nominal value had run up to five or six thousand dollars, and very naturally concluded that by a shrewd investment he had tripled his estate. In this delusion he enlarged his expenses to correspond. His money-lending neighbor took the same view of it, and loaned him money on the inflated prices. And in this way delusion was discounted, drawn upon, and mortgaged all over the land. We went on borrowing, buying, and consuming so rapidly that production could hardly keep up with the demand.

In the same way cities and villages, believing that their wealth had quadrupled and, in spite of the very accurate census which nobody would credit, that their population had doubled, and discounting corresponding growth for the future, borrowed money and entered upon improvements, very convenient and useful in themselves,

but far in advance of the real ability of the people. The same misconception of the growth and wants of commerce induced railroad men to believe, or enabled them to make other people believe, that large travel could be had where nobody lived and heavy freights where nothing was grown. Hundreds of these premature and at present non-paying enterprises were undertaken, and their construction furnished a market for labor, coal, iron, lumber, locomotives, cars, machinery, and tools of every kind. But all these improvements were made very largely upon credit. Municipal and railroad bonds floated like golden clouds all over the country, and the small surplus of every neighborhood as well as the small savings of the people in the banks were absorbed in these uncertain securities. So that while we really possessed all the improvements, comforts, and luxuries of which we had been accustomed to boast, they had yet in good part to be paid for from future earnings and savings.

We came to a realization of this ugly fact very suddenly. And we came to notice another ugly fact quite as suddenly, and that was that our property had not increased in value near as much as we had supposed, and that the apparent increase was largely owing to a depreciation in the standard of measurement. Unconsciously by that standard everything had been watered, inflated, or duplicated. The failure of a single firm opened our eyes, and we saw the mistake in our estimates, our expenditures, and our investments as plainly as if a streak of lightning had scrolled "Delusion" on the sky. Of course, we stopped constructing, building, buying and furnishing, at once. And now very few people are willing to buy, while a great many people are anxious to sell.

Congress is expected to persuade somebody to buy what somebody else offers for sale. That "revives trade;" that "starts business;" that "relieves the country." "Give us buyers," is the prayer of the manufacturers, producers, and venders, burdened with last year's stock or last speculation. I earnestly wish we could answer that prayer by furnishing purchasers for the surplus productions of those deserving manufacturers. Then they could manufacture more and thus give employment to the laboring people. But consumers say they have already bought too much, more than they could well afford to do; that they are somewhat in debt for what they have already consumed, and therefore they must economize and buy less until they catch up. The thoughtful manufacturer sees the situation and the helplessness of Congress in the premises and reduces his production, slowly and cautiously, to protect as far as possible his employés. I trust they may not have long to wait. Consumption by the economy and growth of the country will soon come up to its former demand, and then manufacturing will be as lively as ever.

But there is another class of vendors less reasonable and less deserving. They are speculators who have been caught with corner lots, city additions, land-grabs, timber monopolies, coal lands without coal, oil lands without oil, gold mines without gold, with railroad charters and paper towns, and with bonds and stocks in everything uncreated. They will tell you that if confidence had only held up for a day or a week or a month longer, they would have had their cash in hand, and then a great many confiding and honest people would have been caught in the crash instead of themselves. As it is, they have left many victims all over the land. These gentlemen, with an audacity that characterizes their calling, assume to be the people, and in their name keep up a steady "ding-dong" for the "restoration of confidence," and confidence they allege can only be restored by watering the currency.

Free banking, with a proper retirement of discredited paper, is in the line of correct financial principles and ought to be agreed to; but "expansion" pure and simple will impair rather than restore confidence in the honor of the Government and the stability of prices. It is at best a temporary remedy that must be yearly renewed and enlarged until we shall be overtaken with repudiation and national disgrace, to be followed possibly by revolution or disunion.

What do they mean by "restoring confidence?" Confidence in what? Confidence that a man has enlarged his wealth because it is valued by a lower standard, and that therefore he can afford to borrow, expend, and live extravagantly? Confidence that watered stocks and premature improvements are good investments for the hard earnings of the people, or a good bank collateral for a sixty-day note? Confidence that the wealth and population of your town is double what the census made it, and that it will again double in two or three years, and therefore you can afford to issue bonds, project extensive improvements, and convert farms into city additions?

This would rather be the restoration of the credulity, the delusion which is the cause of all our trouble. Who would be benefited by such a revival? It might enable one class of citizens to work off their unsuccessful enterprises, their unsalable property and bad speculations upon their neighbors, but those neighbors would be less able to bear the misfortune than those upon whom it originally fell. But you cannot revive "confidence" suddenly, even by order of Congress. You may shorten the measure so as to duplicate distance, but the deception in this day of inquiry will be suspected. Tell a prudent man, accustomed to keep a little surplus for emergencies, a pond into which the small accretions of his industry flows, and seeing that surplus half drawn off by the extravagance of the times, shuts down the waste-gate—tell him to open that gate again and go on expending, that Congress will fill the pond by providing that six inches shall make a foot, would he believe you? Would he act upon your advice? The speculator below the gate, hoping to acquire the prudent man's earnings, might listen to you, but the man above would suspect you for a rogue. Grown people, no more than children, play with fire while the old burn is smarting. I suppose this delusion, miscalled confidence, will come slowly back of itself. It takes time, but it will come. It is periodic like locusts, and epidemic like fanaticisms. In a few years we will again fall under the influence of expanded credit. We will again imagine we are getting rich without additions to our property, and again begin to borrow, expend, and speculate, and call it making money. But for the present the people will be distrustful, cautious, and frugal let Congress do what they will.

We ought to learn something of our duty, in this emergency, from past experience. Our condition is not unprecedented. The history of business in this country and the old is full of similar breakdowns. They were always preceded by delusive estimates of wealth, and corresponding extravagance both in private and public affairs; which delusion was caused by a wild expansion of commercial credit, aided in the beginning by a redundant paper currency. The collapse was always attributed to fright and panic, while in fact it was only a sudden comprehension of each one's own and his neighbor's condition. To restore confidence by legislation—that is, to blind the people to their real situation lest they should contract their purchases and thereby lessen trade and discourage production—has always been tried and always failed. Possibly we will try it again; but if so, it will again fail. Our experience will be like the past; we will have a year or two of reduced consumption, of caution, retrenchment, settlement, and dull times. It will be shorter and lighter than in other countries, because we grow more rapidly; shorter and lighter than in 1837, because the expansion of commercial credit and overestimate is less; and shorter and lighter than in 1857, because we have a much safer although an expanded and depreciated currency.

Consular and Diplomatic Service.

SPEECH OF HON. SAMUEL S. COX,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

May 16, 1874.

The House, as in Committee of the Whole, having under consideration the bill (H. R. No. 3095) making appropriations for the consular and diplomatic service of the Government for the year ending June 30, 1875, and for other purposes—

Mr. COX said:

Mr. CHAIRMAN: I am well aware of the generosity and courtesy of my friend from Maryland who introduces this bill. It is a diplomatic arrangement, by which so eminent a democrat becomes its reputed father. There is no man in the House who can make a more graceful and dignified kow tow before the head of the State Department and at the same time maintain his influence in this House. But, sir, I must be allowed to dissent from him on this matter.

The total amount appropriated by this bill is $3,347,304. There are amendments from my committee (Foreign Affairs) which would add $57,000 in one item; to say nothing of the increase incident to an adoption of the consular amendment. The bill will be over three and a half millions. Deducting the allowed claims of British subjects, which amount to $1,929,819, there is an excess of the appropriations of last year of over $150,000. Certainly the mysterious Brazilian item of $57,000 will be, must be, explained when we come to it in order.

INCREASE OF DIPLOMATIC APPROPRIATIONS.

It would be proper for me as a member of the opposition in challenging this bill to inquire why there has been such an increase in these appropriations from year to year. The reason of such an inquiry will be apparent when I say that whereas less than $1,000,000 very recently, sufficed for our foreign service, now we more than treble that sum! These items taken from the statutes are pertinent to my discussion:

Our diplomatic and consular expenses for the year ending June 30, 1859, were only $912,120; for the year ending June 30, 1860, they were $1,047,745; for the year ending June 30, 1861, they were $1,158,380; for the year ending June 30, 1862, they were $1,260,544.34; for the year ending June 30, 1863, they were $1,235,889.89; for the year ending June 30, 1864, they were $1,260,544.34; for the year ending June 30, 1865, they were $1,354,100; for the year ending June 30, 1870, they were $1,110,734; for the year ending June 30, 1871, they were $1,041,347. And now for this year, 1874, it bounds, like an India-rubber ball, high up to nearly three and a half millions!

I am sure that no one will claim special credit for the Department of State for the thorough thrashing we received in this city, from the British mixed commission award. We receive nothing, but we pay $1,929,819. The big bragging as to the Washington treaty requires much qualification when in the light of this item we consider how that treaty thundered its merits in the index and still rumbles in the air! After the extraordinary eulogy upon the State Department by the gentleman from Maryland, [Mr. SWANN,] I have been compelled

to show the expenditures for other years—what our diplomacy used to cost, and how it has gradually grown.

THE SAVING SPIRIT.

By the platforms of all parties, we are reformers in matters of economy. All reforms at this time gladden the people. Every effort for economy calls forth their gratitude. Much commendation follows those who practice the saving spirit. Not a sigh would escape if half our ministers abroad, with their inordinate salaries and platitudinous dispatches, were abolished.

When one's household expenses overrun the income, is it not wise to stop gratuities to our relations outside of the household? Surely, we must be just before we are generous. Especially should we be just when there is little consideration received for the generosity.

My colleague [Mr. ELLIS H. ROBERTS] proposed the other day to suspend the rules with reference to this bill so as to change the title of the representatives of the United States to Portugal, Switzerland, Greece, Belgium, the Netherlands, Denmark, Sweden, Norway, and Turkey. He desired that these ministers should be envoys extraordinary and ministers plenipotentiary. He did not require increase of pay. O, no. This increase of *pseudo*-dignity does not mean an increase of salary, neither *in esse* nor *in futuro*. The House did not agree to his proposition. My friend from Indiana, [Mr. HOLMAN,] always vigilant, said it looked toward an increase of salaries, if not in this Congress then in the next. And he intimated what I have often urged, and sometimes with success, that we might have consular or commercial agents in the place of many of these useless ministers.

MERGING AND DISMISSAL OF MINISTERS.

As to many of these ministers named by my colleague, we might so combine their functions as to make one officer serve for many at a decreased cost to the Government. It is inconsequential whether we have any minister at Portugal or Switzerland. Certainly the minister at Constantinople might do the work also for Greece. Belgium might well be united with the Netherlands; and the Scandinavian countries, Sweden, Norway, and Denmark, should be merged in one embassy. Telegraph, steam, with their prompt communications; newspaper enterprise ever in advance of diplomatic dispatch; these and other elements of progress, have rendered ministers abroad trifling, expensive, and useless for every purpose of national comity, interest, or glory.

In this connection it might be well for me to say that the dismissal of many of our ministers abroad is no new thought. It is certainly not novel even to the English legislature. May I be pardoned for referring to a debate in this House, in which I took some part?

On the 20th of February, 1872, in urging the union of the Central American missions, which carried, I said that "there were forty-five or fifty thousand dollars that could be saved without at all embarrassing the diplomatic service. I do not know but the nonsense, extravagance, and inutility of our diplomatic service is bringing us to the point to which the English government has been and is approaching. I mean the abolition of the whole diplomatic service. The Hansard Debates will show that in this age of steam and telegraphs, the English government, which rules the world of commerce, is considering how it may be rid of diplomatic business. It would have mere commercial agencies, or consuls, or special missions for the accomplishment of special purposes." (Globe, volume 88, page 1146.)

There has been no disadvantage to our country by reason of the merging of the Central American missions. It saved some $50,000, and it did no harm.

When we consider how distant our ministers are when they serve us, and therefore how irresponsible they become; how frivolous is their work and subservient and unrepublican their tone and habits, it is a shame to continue them, and it would be economy to dismiss them. If we had fewer irresponsible functionaries, local and foreign, we might better our interests and our position as a nation.

FOREIGN EXPERIENCES.

This idea of dispensing with foreign embassadors and, as I said in 1872, of remitting their business to commercial and consular agents, has been suggested not only by the progress of our age in international and material matters, but as the most amicable mode of closing complicated questions that might lead to war. Need I refer to special embassies? Need I refer to those of a commercial character, as that between France and England, when Cobden and Chevalier made the tariffs of two neighboring nations? Need I refer to the general congresses of European powers? Is it necessary to remind the House of the Ashburton treaty, or of the recent Washington treaty, as to which so much senseless eulogy has been pronounced? I venture to say that wherever there is a disagreeable complication that has in it a possible *casus belli*, there is likely to be a special commission to settle the vexed questions. The settlement of our northeastern as well as our northwestern boundary are evidences of this statement. In the English Parliament some of their wisest men have anticipated this advancement in the line of diplomatic obsoleteness. It has been proposed to disband the useless diplomatic retinue, and not without reason.

In 1870 Mr. Beaumont, in Parliament, said:

If the whole system of diplomacy were done away with, and we had no permanent representatives in Western Europe, our peaceable relations with continental powers would suffer no interruption, and our commercial interests would be as well looked after as they are now.—*Hansard*, 199, page 550.

In 1860, speaking in Parliament, Mr. Labouchere said:

There were a great many legations which with great advantage might be suppressed.

The Netherlands and Switzerland were instanced by him. He said further:

He had been at a great many of those missions; he knew what was done in them; and he could assure the House that it was absolutely nothing. It was supposed that a minister did a great deal of good by asking important personages to dinner. * * He had asked a friend of his, who was minister at one of those legations, one time what he was doing; and the reply, "Doing? What do you think is to be done in such a place as this."—*Hansard*, 192, page 930.

If this be true as to Great Britain, which commands the commerce of the world, whose ministers and consulates, and whose gun and flag follow the sun in its revolution, then *a fortiori* it might be true of this country, which is so crippled in commerce and so limited in continental area and influence. More especially should it be true with reference to a country which does not or should not make its *salaam* before the kings and kaisers of the world, and which should not beg the favor which it cannot grant without humiliation.

It is no agreeable duty to refer to our retrogression in shipping and commerce. We know how we have lost and who does our work of transportation. We know how Great Britain has grown while we have lost. The relation which Great Britain bears to commerce for these periods I have before me in Palgrave's Notes on Banking, page 50. The imports and exports in 1819 are only £69,000,000 sterling; in 1844, £144,000,000; in 1872, £608,000,000. The growth of France in spite of wars has been equally conspicuous. Compare our commerce, and the diplomatic expense which is supposed to be spent to foster and guard it! Then if you are content with your calculation, vote this and similar bills.

THE UTILITY OF OUR MINISTERS ABROAD.

Mr. Speaker, it is far from my purpose to dilate on the manner or character of appointments abroad; whether they be appointed for their intellectual or moral qualifications or for favor. The remark of Mr. Labouchere in Parliament adds fresh meaning applied to our appointees. It is perfectly well understood that in such affairs "kissing goes by favor." The favorites of the White House, or of the Department, or of Members and Senators, are the successful ones who see the world at the public expense. Political or partisan service thus hath its reward. An incompetent or unfragrant Cabinet officer, a defeated or *passé* Congressman, a vociferous stumper, or a potential editor, is the lucky man, regardless of his knowledge of foreign languages, of statistics, jurisprudence, or international law and customs. They do little harm, only because there are no opportunities; indeed, there is no opportunity for good either. A perusal of the volumes of our diplomatic correspondence (Executive Document No. 1, parts 1 and 3, of this Congress) will show the multifarious character of our embassadorial inutilities. One man writes home to glorify our arbitration with Great Britain, and another sends a package of public documents which the newspapers all have in advance.

The Austrian minister peddles scandal in dispatches against a Vienna commissioner, whom the President sends afterward to Japan and whom the Senate confirms. It is very gratifying to know from Brazil that the "Emperor is better, but cannot walk out yet;" to hear from Chili that Mr. Root, the minister, noticed an enormous whale disporting himself one morning near the tail end of this hemisphere, (page 111;) also that our "beloved President has endeared himself by recognizing our wild Indian as a brother man," (page 113;) that the Patagonians believe in two roads after death, one to the good and the other to the bad, preferring that to our religion. But why go over this voluminous correspondence? Much of it shows that our diplomats are not drones, as they work busily—at nothing. They have little or nothing of that employment which consists in making valuable treaties, or in that mystical equivocation which has made diplomacy the synonym of hypocrisy. It is only Mr. Bancroft, or some other minister, who in making treaties has gained for us the unenviable notoriety of unmaking citizens.

Besides, how few of our ministers really do the commercial work for what they claim and obtain credit. We vote $10,000, say, to send a minister to Paraguay. He never goes into Uruguay as is expected; but comes home to the stump, leaving a petty consul at Montevideo to do the work, while he inflicts on us at home his rhetoric and his consequence.

As this is a bill with some pretense in the way of economy, it might be well to compare our system of diplomatic economy with that of other nations. The State Department made its estimates for $3,688,524. This includes the printing of the "Diplomatic Correspondence" and "Commercial Relations." If we compare our economy with that of Great Britain, which has perhaps fourfold our relations with the world, commercial and otherwise, we find that we are the most extravagant of people with respect to our diplomacy.

The English estimates I find for 1873–'74 were £526,148—over $2,500,000. The French appropriations are about the same as that of Great Britain.

As to France, I refer to the *Bulletin des Lois* for 1872, the most convenient authority, which shows that all the expenses of foreign affairs, including that of the department itself, amounted to only 11,883,500 francs, or nearly $2,400,000. And this law, unlike most of our laws, gives a detail of the expenses in a sort of exhibit. The great body of this expense was for the regular appropriations and the rest for

what is called "*dépenses variables.*" This last is what we call a "contingent fund." Yet France, with all its continental relations and its traditionary relations, its necessity for keeping the peace amid continental foes, its complications as a propagandist through Europe and the world, and England, with all its extraordinary expenses, as the first and monopolizing commercial power, have an almost contemptibly cheap diplomatic system compared with ours!

How much more efficient they are than we. Where is our flag, (unless backed by other powers,) from the tropics to the poles, from the orient to the occident? Who gives heed to our claim for an outrage on our citizens or our flag? Who gave glory to Santiago? I do not say our ministers are worse trained, because they are politicians and partisans, than those of France or England. I scorn to refer to the traffic and professional work which our ministers abroad are accustomed to do.

I will not comment on the neutrality appropriation of $20,000 in the body of this bill. That bears its own comment. I have said so much on that and kindred topics, that some one might believe in this rude era that I was interested in something beyond the honor of my country.

Let us come down to something that will illustrate the wonderful utility of our diplomacy, for which we are asked three and a half millions. May I refer to the public documents now before the House to show how these millions are expended? May I contrast what they give us abroad? How timidly do our ships creep over the sea and wheedle and coax their way into ports; and how ignobly our citizens are thrust into prison, without redress and without reclamation. What, sir, is the value of our diplomacy to this land? Consider the way in which Mexico plays with us about our claims and the claims commission, breaking the treaty at pleasure.

Turn over those silly essays known as our diplomatic correspondence. Will our colored brothers look at Liberia first? It costs them something to keep up such wasteful officials. They pay for it when they buy a woolen suit or a hoe! What wonderful profundity is contained in the dispatches of our minister at that point! He has $4,000 per annum for his stuff. His confidential dispatches inform us that he has discovered by consultation that the coffee-tree is from six to seven years in attaining a mature growth. Goodness! Any encyclopedia tells us that. He does not know it even from personal inspection.

As a sample of the South America missions—that asylum of decayed and exiled patriots, go to Ecuador, where some man by the name of Rumsey Wing flies his embassadorial kite. He writes from Quito the day after the Fourth of July last—I hope it is because he celebrated the Fourth.

QUITO, *July* 5.

HAM. FISH:

I have the pleasure to report to you, sir, that our national anniversary, sir, was generally observed, sir, in this city, sir. I inclose dispatch.

I am, &c.,

RUMSEY WING.

Including exchange and contingencies Rumsey Wing's salary is $8,747 total, as per financial report for 1873, page 23. What a consideration for such information! Members will perhaps have observed a voluminous correspondence from a minister at Santiago by the name of Root. He is a doctor. Being thoroughly vaccinated he managed to catch the small-pox, got well easily, and turned his sanitary condition into the State Department. Although the press of Chili intimated that Mr. Root is radically wrong in intermeddling in their hospitals, yet I always forgive the physician when he has something to propose for the human race, especially in South America; for it is a sickly continent. In writing to Mr. Fish, he says that he performed the following remarkable marvel:

"I daily medicate great numbers by proxy." "My system of treatment is a great success." "The grand idea is to destroy the poison." "A new street has been named after me here." "I generally prefer an enema rather than a purge; a favorite one is composed of oil of turpentine," &c. "In case of constipation, lemonade or other acidulated drinks." "I forward to the Department directions for a purge." "When an alcoholic stimulant is indicated it should be one with as little acid as possible."

This gentleman has been considered the most remarkable plague in South America. Yet we pay for his performances, salary, exchange, and contingencies, over $11,000!

It would be impertinent for me to refer to a minister like Jay. He had an ancestor. He is very much like the bird of his name, in plumage and jabbering. His fume and fussiness in the Vienna matter is a simple scandal to our time and country. Let me skip these sedate, uniformed flunkeys of our ministerial system.

We come down to

ROMANTIC APPOINTEES.

This brings us to my friend Colonel Steinberger, and his report of the South Sea Islands. He is not a religious rover like Dr. Newman. I think nobody will suspect him of being particularly pious. He is a scientist, a man of observation, rhetoric, and enterprise.

In all that I say I mean to support him as the proper candidate for the governorship of the distant islands which he has surveyed. He is suddenly called from his duties at Washington to the South Sea; why, no one can guess.

We are told by Shakespeare that—

On such a full sea are we now afloat;
And we must take the current when it serves,
Or lose our ventures.

I suppose that on this authority the colonel sails to the south pole. As Great Britain is now annexing the Friendly Isles, must we be idle? Why may we not seek for the Navigator's Isles? Thus our old jealousies are aroused.

A NEW SOUTH SEA BUBBLE.

Well, sir, my interest in these South Sea Isles does not come out of the bubbles of history which the English missionaries and John Law blew in the last century. It has a gentler fountain. I once knew a girl whom I traveled with in Africa, from the Grisons in Switzerland, who told me her grandmother had a lover along with Captain Cook in the good ship Endeavor, and was eaten in the Friendly Islands by the gentle savage! Hence my absorbing and romantic interest in those lands.

But, Mr. Speaker, while I may have ideas inconsistent with those of my honorable friend [Mr. SWANN] as to the utility of the missions proposed by this bill, I think, as an old traveler into every continent, I ought not to object to the roving agents of the Department of State. The difference between them and myself is that I traveled at my own expense, and published my books at my own risk. Now, we have and vote a contingent fund. "Contingent" means depending on chance, *i. e.*, wherever there is a good chance to help a good gentleman of the church, like Dr. Newman, or a *chévalier d' industrie*, like Dr. Steinberger, we do it! Rev. Dr. Newman's observations are yet to be published. That good Methodist is now examining the Chinese wall for economical and architectural purposes. He will then skip over to the isle of Spitzbergen and describe the remarkable breed of dogs there, then flop into the equatorial regions, where—

Chimborazo stands sublime,
A land-mark on the sea of Time.

Before the interest of his exploration inundates the moral and pious mind, let us take a glance at Colonel Steinberger. This gentleman was sent to the Samoan, or the Navigator's Isles. His report is Executive Document No. 45, Forty-third Congress, first session. Our committee has a recommendation based on his report for a commissioner to be appointed, with a good salary, to those isles. This is done with a view to a protectorate or annexation. Its discussion, therefore, involves his report, and gives it an emphasis not belonging wholly to science or journeying. We must vote on it. The "contingent" fund is at stake. In this is involved its proper use. The hardy granger and laborious artisan, the drowned-out planter and the honest miner, desire to know that their money has been well invested in the South Sea. In other words, let us observe the prisms of this new South Sea bubble.

For myself, I have borne my share of the expenditure with joy. It is not much. My share is about one-ninetieth part of a mill. Especially is this interesting in view of the fact that England has just annexed the Feejee Islands in that quarter of the globe, and appointed Captain Grover, an Ashantee hero, as its ruler.

WHERE ARE THE SAMOAN ISLES?

Where, then, are these isles? I thought I had a map. But I have been hurried into the debate to-day, and my friend from Maryland [Mr. SWANN] must have captured my missionary volume. No? Some one has taken it, and hence I am embarrassed; but, Mr. Chairman, if I am called on in fancy to bound these isles, without my pious volume, I should point first to the isle of Juan Fernandez. Well, about eight thousand miles west just above the tropic of Capricorn, and forty degrees east of Australia, you will find them. Robinson Crusoe was one of the nearest neighbors, and Botany Bay another. The islands are considerably conducive to solitude, but not so much so as the isle of Crusoe. There are thirty-five thousand men and women of the Friday family on the islands. Already I seem to feel that we have annexed them. Contiguity of territory makes them so near in the light of humanity, yet so far, when we come to reflect. Cowper sang of Selkirk and his isle:

When I think of my own native land,
In a moment I seem to be there;
But alas! recollection at hand,
Soon hurries me back to despair.

I can only travel to these distant coralline shoals in these pages of the gallant colonel.

But how, sir, shall we bound them? On the north by the aurora borealis? On the east by sunrise? On the south by the south pole? On the west by——

A Voice. By Sunset.

Mr. COX. That is personal. No. By the Day of Judgment? Yes, that will do, as the map does so isolate them. They are situated in the midst of an inexpressible watery waste. They are, to be accurate, seventy-two hundred miles from Juan Fernandez, the same distance from San Francisco, and the same distance from Loo-Choo, and the same from the seat of the Achean war. What charms has this comparative solitude for our Crusoes of civilization. It is for these isles that the farmer burns his untransported corn in Illinois; for these the drayman or truckman "pays his shot" and starves in the eastern city. It is for these isles, to be acquired with a contingent fund, that the artisan labors and strikes in New England; and that the colored laborer, who picks cotton in the South, sickens to see, to love, and to annex. Regardless of expense he would like to see this quarter of a million of money for a contingent fund go out to the antipodes.

The rest of my speech will be in explanation of this remarkable fact. I know that I can only *half* tell it, and moieties always need an explanation.

It was not enough for the Administration to make an attempt on San Domingo. Failing in that they now reach out to the Polynesian group. That group is noted as having had in it the Botany Bay of England; ay, and within a few months, a recusant French democrat, Rochefort, escaped from one of the French islands by swimming through one mile of sharks. This illustrates the vigor of democracy against the ravenous shoal which lives to destroy.

OUR COMMISSIONER STARTS.

By an order of President Grant, Mr. A. B. Steinberger was appointed in March, 1873, special agent to visit and report upon these Samoan islands. The President was not satisfied with the juvenile romance entitled "The Swiss Family Robinson;" nor with Robinson Crusoe, with his dog, parrot, and man Friday, so interesting as a clever story for youth, by a persecuted Dissenter. He was not content with the various reports made by the missionaries from the Friendly and other adjacent islands. Captain Cook was to him a myth; and the men who ate other men were no less a myth.

A pilot-boat, called the Fanny, is chartered under the "contingent fund." It sails from San Francisco in June, 1873. But alas! for such expeditions! The San Francisco press anticipates it, and when our embassador reaches the Sandwich Islands, to use his own language, he assures "His Majesty King Lunalilo that he is in nowise accredited to his government, and that newsvenders in this as in many other cases are irresponsible agitators." The reporters' gallery will take notice and tremble!

In August, our commissioner reaches the eastern island of the Samoan group. The islands are called "Navigators" because, as our commissioner says, navigators have alway avoided them, just as the Friendly Islands are called friendly because everybody was eaten when they went there. This group which we seek to annex consists of nine islands.

As the question becomes one of economy in an appropriation of money, in order to impress the House against the appropriation I have thought of using three rhetorical modes: First, the scientific; second, the pietistic; and third, the simplicity of my own style.

SCIENTIFIC VIEW OF THE ISLES.

In order to develop the scientific view, I would say, irrespective of what our commissioner has said, that while there are evidences of craters in these islands, there are found ancient vesicular lava and amygdaloids, the olivine often disintegrated, and mountains of basaltic rock, against which the great swell of the ocean breaks with deafening roar. This will readily be understood by the House, and especially by the gentleman from Ohio, near me, [Mr. GARFIELD,] whose voice has in it many pleasant, if not deafening, associations.

Leaving for one moment the report of our commissioner, I would add that there are found there, in the circumjacent waters, round masses of mæandrina and astræa, contrasted with delicate leaf-like and cup-shaped expansions of explanaria, and with an infinite variety of branching madreporæ and seriatoporæ; some with mere finger-shaped projections, others with large branching stems, and others again exhibiting an elegant assemblage of interlacing twigs of the most exquisite workmanship. Their colors are unrivaled, vivid greens contrasting with more sober browns and yellows, mingled with rich shades of purple from pale pink to deep blue. Bright red, yellow, and peach-colored mulliporæ clothe those masses that are dead, mingled with beautiful, pearly flakes of eschara and retepora, the latter looking like lace-work in ivory. In among the branches of the corals, like birds among trees, float many beautiful fish, radiant with metallic greens or crimsons, or fantastically banded with black and yellow stripes. Patches of clear white sand are seen here and there for the floor, with dark hollows and recesses beneath overhanging masses and ledges. These bright creatures have not always peaceful lives. There are many kinds of sea animals that have holes in the corals, and take up their lodgings among them, while some kinds of fish prey upon them. I presume this is a political parable.

This will answer for the physical description. As a resort for coral, these island are a success. But why did not our commissioner describe in scientific phrase how the sweet little Simians, (ordinarily called monkeys,) with the prehensile grip of the extended *os coccyx*, swing from the *Callophyllum inophyllum*, in the sunshine upon the upper slopes of Upolu and Savaii? As they swing some eight thousand miles from us, and as a Darwinian, and a friend of man and science, why should we hinder them? Let them swing!

Still we should not complain, for has not our commissioner given us the yellow *Artocarpus* or bread-fruit tree, and the *Cocos nucifera* or cocoa-nut which the intelligent monkey drops upon the head of the juvenile islander?

SAMOANS AS CHRISTIANS.

The pietistic interest connected with these islands dates almost as early as Captain Cook's voyages. The first Sabbath spent in this land by the missionaries is memorable for a sermon, in English, from the words: "Behold, I am the Lord, the God of all flesh: is there anything too hard for me?" (Jeremiah, xxxii. 27.) The natives who understood little of the language, believing that all mankind were of one flesh, seized, cooked, and consumed the missionaries. They found them too hard for digestion, and were shortly after converted.

In handsome style, and at our expense, Colonel Steinberger relates the present pious condition of the natives. On page 21 of his report he shows that in 1869, when a religious census was taken, there were 35,107 of all religions; Independents, Presbyterians, Wesleyans, and Catholics. This makes a majority of 504 more religious people in the island than there are population. It is therefore a fair inference that everybody on the island belongs to some Christian persuasion. It is safe to say that there is not a single Samoan who has not accepted Christianity, though more devout and zealous in some districts than in others.

DAN AND JIMMY.

Aside from the missionary enterprises, it might be well to state, in the language of the commissioner, how this remarkable acquisition to the Christian religion took place. He says:

> Williams found, in 1830, that the natives knew something of Christianity, and readily accepted it. This knowledge evidently came from the rude teachings or influence of castaway sailors, as the natives still speak of the white men among them long before the arrival of missionaries. Of such was "Dan the Convict," who captured a vessel, the Roma, murdered the captain, burned the ship, and landed in Savaii. He could neither read nor write, yet taught the natives, through their superstition. Such another was "Jimmy the Sweet," who regularly preached to them. Many interesting stories are related of these characters by the natives.

It may be necessary to recall the fact that "Dan the Convict," who was a pirate and murderer, and "Jimmy the Sweet" likely came from Saint Giles and the Old Bailey. Their mode of propagating the Christian system must have been peculiar. How did they produce such a remarkable effect upon these simple South Sea islanders? Perhaps they related how Peter denied the Lord, the rooster crowed, and induced all the islanders to copy Peter's example. Or perhaps, following the text from Jeremiah, they taught them the necessity of consuming the missionaries without grace, in order to be full of the holy unction. Perhaps the story of Judas impressed them. Evidently "Jimmy the Sweet" and "Dan the Convict" left their impress upon these islands, which our Administration desires to annex. They pointed to the cross and to the impenitent thief. I can well imagine what sermons they could have preached to these heathens. Did they teach them to pray for their daily bread, with the bread-fruit tree, as our commissioner says, hanging around their houses? What a meaningless, wasteful excess of prayer, even for a South Sea islander!

SAMOAN MUSIC.

What songs did they sing? If I had before me the volume edited by a Miss Farmer, on the missionary history—but my friend [Mr. SWANN] who has urged this bill has doubtless purloined this volume, and still withholds it in my direst need—then I could show to the House, a picture of natives sitting in a ring round the missionary, either "Dan the Convict" or "Jimmy the Sweet." Near by the waves of the ocean lave the shore. The rude hut, surmounted by the cocoa-nut and the banyan tree, the bread-fruit and the palm, speak to us so touchingly. Each native sits squat, upon his sacred mat. The hymn is given out and lined. I had the music of that hymn in the volume referred to, and which my honorable friend continues to withhold. Captain Wilkes heard the same refrain. Its meaning is "Thanks," "Good evening," "How are you?" "Is your mother well?" &c. Beautiful salutations from Polynesian lyres! The language is "lelei," "lelei." I am inclined to ask my friend [Mr. SWANN] to join me in the song. His voice would add to the music. It is much the same as I have heard in the drawling songs of the barbarians of the South Mediterranean coast. Captain Cook, when he first heard it, said it was not entirely disagreeable. But the historian says that the captain was in a good humor that day. Delicious odors filled the air, and he had drunk high and full of the kava-bowl, and the music seemed not to be discordant. Yet our commissioner says in his report, from which I quote, that the Samoans are fond of music without melody. In church and school each child seems to outvie the other in vocal power and compass, that the instrumental music is confined to the beating of sticks upon mats and hollow logs. What kind of music this may be which exalts their pious enthusiasm is hard to determine. As a comely concordance is often helped by a convenient discord, even as affection is made more intense by disagreement; so when we annex this music of the Polynesian Pacific to that of the Atlantic—when it is accompanied by such prime donne as Nillson, Lucca, and Di Murska, the effect would be unexampled. When to the rich, intwisting golden threads of the grand organ of the minster, vibrating and swelling through gothic aisles, you add from these isles of the Southern Sea those dissonances which are recorded and set to music in this missionary volume, it would not be unlike adding to the lyric gush of the Stabat Mater, or to the mighty feather of the "Messiah," a roundelay from filing a New Hampshire saw on a frosty morning, or a refrain from an overloaded and underfed donkey.

To what sentiment should this Polynesian music respond? Ah! I understand it. By some preconception, they would sing from Watts—

> And are we rebels yet alive,
> And do we yet rebel,
> 'Tis wondrous, 'tis amazing grace,
> That we are out of hell!

POLYGAMY.

How far they have been converted to Christianity so as to be fit subjects for our rule may be learned further from the commissioner's report, from which I quote: "Polygamy is common on the part of

men, never on the part of women; two wives seldom live in the same house; a plurality of wives is not common, the husband usually sending his wife to her people when he takes a new one. Virtue in Samoa is predominant. The maiden of a village is reverenced more as a virgin than as a chief's daughter." So that when the House of Representatives shall vote the proposition of Secretary Fish for cordial relations and perhaps annexation of these islands to our country, I feel like calling the roll of gentlemen who voted the other day to investigate the heinous polygamy of Utah. And may I not ask that a commission be sent to Samoa before we annex?

WAR.

To show further the remarkable Christian principle of these islands, let us look at their manner of conducting war. Is not war a fair test of allegiance to the Prince of Peace? As to this, says the commissioner, "the Samoans are patient, earnest, easily controlled by their leader. While cruel to their enemies, they are never treacherous. Prisoners are never taken. The importance of a victory is measured by the number of heads taken. The head is publicly exposed and reviled; but never mutilated." This would seem to give a refinement to war to which our Modocs have never attained. Our Indians are actuated by the same refinement to take not only the scalp of a hairy but of a bald-headed man. No one escapes; but they only take the scalp. These Christian Arcadians in the South Sea Islands, whom we would annex under the orders of the Secretary of State, are never satisfied without having the whole head! I do not refer, as an evidence of Christianity, to the diseases prevalent in their midst. I might refer to the protuberances which surgeons are compelled to cut from the bodies of these self-indulgent islanders. The subject, however, is too nice for this delicate Congress. Besides there are diseases—elephantiasis, soriasis, &c.—which characterize these islanders. Before we annex them, it might be well to state that elephantiasis is not any disease connected with the *Pachydermata*, but it is a swelled leg; while soriasis is nothing more than the itch. This, however, is no special objection to annexation with our Administration.

THEIR DRESS.

If I referred, as the commissioner does, to their disposition to assume the dress of the whites—the white gloves, silk dresses, enormous crinoline, paniers, old-style bonnets for their May meetings—some one might say that I was making points against our revolutionary ancestors and ancestresses, who, as we were informed the other day, dressed in such *outre* habiliments.

LEGAL-TENDER "MATS."

It would be well, perhaps, in considering the financial condition of our country to quote from the commissioner with respect to the "sacred mats" produced there; not because they are sacred, but because they are regarded as a legal tender. Our commissioner says, on page 24, "that families count their wealth, and all personal and real estate is computed by 'fine mats.'" "For the secure establishment," says our commissioner," and maintenance of a home and foreign government in Samoa, the hereditary and fictitious value of 'fine mats' must be destroyed. This could best be done by affixing a Government stamp and making them a circulating medium subject to redemption, as is paper money." Was there ever so easy a solution of our troublesome problem? Besides giving us a fixed standard, it would energize and encourage a new branch of industry. It is especially encouraging and protective, as it is some seventy-two hundred miles from us!

Why not, then, send for the chief of Pago-Pago to settle our distressing questions of finance upon the principle of fine mats and redemption? And yet, on page 41, the commissioner says of the natives of those islands, "In theory they display some wisdom, but they must fail in practice. They fully realize that some government must aid." Let us rush to their assistance. They are only 7,200 miles off! Leaving, therefore, the report of the commissioner, and going to the appendix, it gives me a great deal of pleasure to say that our commissioner to Mauga, the chief of Pago-Pago, recognizes the intelligence and the financial supremacy of the United States, for this chief writes to President Grant that "his (the chief's) people are poor, and his finances are less; that the good teachers have taught us to be honest, observe your doctrine, and maintain your faith." What a satire on American legislation, after our legislation on polygamy and the President's veto!

Further, the chief says, if *he* himself ever said it at all: "We know you are a great people, with many ships and many warriors; that you are all united in peace."

This chief of Pago-Pago had not heard of our failures to revive shipping, or of Louisiana and reconstruction; South Carolina and taxation; and Brooks and Baxter were as unknown to him as Castor and Pollux. He says to President Grant: "We know that you cultivate the soil and build great houses." He had our grangers and architects in his mind. He says "You make great roads." He had a dim intimation of Credit Mobilier. He says "You talk to each other through the air." He had in mind Congress, and perhaps the remarkable speech of my friend, [Mr. SWANN,] who still insists on withholding my pious missionary volume. Or perhaps he had in mind the marvelous talk of the telegraph. He says "We want the same; and pray for aid and protection and friendship from the President of the United States." God help him! Poor simple Arcadian! He says "We are poor: but we are happy in our peaceful condition." Why, sir, should Colonel Steinberger disturb that felicity? Why did not they eat him, even if they could not digest?

OUR RED-MEN.

The second appendix to this remarkable report is a letter written from Pago-Pago in 1873 to this great chief, Mauga, by our commissioner. He tells the chief that he was impressed with the Christian character of the people he visited. Not even a nail was missing from his ship when he left the Samoan country. "In our country," says the commissioner to the great chief, "we have many tribes of natives, (referring to our Indians,) but they are not so peaceable or honest as yourselves." This was said before Shacknasty Jim or Captain Jack had succumbed to our military forces. "Only a few of these natives are Christians," he said. He could say that with truth. I look about me for my gallant friend from Indiana, (General SHANKS,) to verify this remark. Where is he?

A MEMBER. Here he is.

Mr. COX. Let him learn from what I shall read, what our commissioner told the Samoan chief and what the United States Government gives our red men. It gives lands, farmers, tools, teachers, clothing, and provisions, besides making laws for them. These remarks will commend themselves to the chairman of the Indian Committee, as well as to General SHANKS. The recent appropriations on Indian business have their finest commentary in this simple statement of our commissioner to the chief of Pago-Pago.

But why should I go through this whole report? Is it not enough to satisfy the hard-working people of this country that their money is well invested, that a "contingent fund" should always be applied to the furtherance of our projects for annexing the South Sea Islands?

FEMALE DISTILLATION.

Nay, I have omitted one thing we need; we seek for revenue and economy. The females of these islands are an incarnate distillery. No crusaders disturb their operations. There is a beautiful spreading shrub called the *Macropipii Methysticum*, the root of a kind of pepper-plant, a delightful soporific, properly administered, but through the abuses of men it has been transformed into an intoxicating beverage. Our commissioner says that he has seen no case of stupefaction or intoxication resulting from its use. How is it prepared, and in case of annexation how can we recover the internal-revenue tax?

Our commissioner says that the liquor is prepared from the dried root by a process of mastication by young girls, and strained through cocoa-nut fibres into a large bowl, hewn from the trunk of a tree. These young virginal distilleries "must be healthy, with sound, clean, teeth." According to another authority which I have before me, the root must be bitten carefully while in the mouth, with little moisture mixing with it. Then it is prepared for the Samoan festivity.* Captain Cook had a saturnalia with this remarkable liquor; and I am not sure but his final death was occasioned by a too free indulgence. One thing is sure, that never since the time of Spenser's Fairy Bower of Bliss, when his beauteous heroines pressed the grape between their pinky fingers, could it ever be said with truth that "So fair a wine-press made the wine more sweet."

Who that admires the beauty of the Samoan woman described by our commissioner, as having eyes black, soft, and pleasing, with melancholy air and meekness, with skin of polished copper, proud in bearing smooth, straight, erect, and symmetrical, including the tatooing so well pictured in this report, would be reluctant to drink the wine of so fair a wine-press? Where are your burgundies, sherries, clarets, champagnes, mantillados, and lachrymæ christæ—compared with this Samoan liquor! Let Lucullus dash the gemmed goblet from his luxurious board; let Bacchus reel under the burden of his vine-leaves and his bibulous excesses. Let Longfellow tune his lyre in praise of Longworth; let him chant, like an inspired Silenus, the praises of the creamy Verzenay. What are these to the original vintage of the Samoan Islands. No wonder women crusade against those liquors which are—

> Drugged in their juice
> For foreign use,
> When shipped o'er the reeling Atlantic,
> To rack our brains
> With the fever pains
> That have driven the old world frantic.

Let them annex Samoa, and pray no more.

Yet, Mr. Speaker, why should we annex these islands? Some harsh and crabbed person like my friend from Indiana [Mr. HOLMAN] or my friend from Vermont [Mr. WILLARD] will ask me why we want so distant and so extravagant a relation. Perhaps I am peculiar. We can have nothing worse than we now have. Almost anything would be better. It was Josh Billings who remarked:

I never owned a kammel-leopard yet, and hope I shan't; but if I should hav to take one in payment ov a det, I should konsider I had lost the det twice.

Perhaps he had this sort of acquisition in his eyes.

CUBA AND CIVIL RIGHTS.

Before entering upon the enormous travel and acquisition contemplated by this report, would it not be well to inquire why it is, when called upon to protect and annex such a people, thirty-five thousand strong, in the South Sea antipodes, some seventy-two thou-

* Sarah Farmer's Tonga, pages 48, 49.

sand miles afar, that we do not protect and enlarge into the light of liberty the thousands who are in slavery near us, on the Island of Cuba? It might also, perhaps, be well to consider, when we have so many local and domestic questions connected with our Indian and other colored races, growing out of their desire to live and to be buried equally with the whites, why their status is not fixed somehow, before we recognize and organize another race. Certainly our interests with Cuba involve in many ways our economics, not merely as to luxuries like cigars, but as to the necessaries like sugar. It involves the liberty of a race which made our civil war and cost us seven billions of money and a million of men. But I am growing serious. I meant only to present the best side of this remarkable foreign affair.

REASONS PRO AND CON FOR ANNEXATION.

When we consider the relative distances of these Samoan isles from our shores, and the fact that earthquakes and volcanoes have so abounded therein that the patient work of billions of coral has been distributed by the premature appearance of basalt and granite, it is clear that it comes within the limited powers of our Federal Government! Moreover, when we remember that our Bureaus are examining into our own faunæ and floræ; that we are making the Yosemite and Yellowstone Parks tributary to science by Federal exploration and publication; when even our Capitol is decorated with the birds and beasts and creeping things of our hemisphere; and as these matters are defended as within the purview of Federal authority, who does not rejoice in the discovery by our commissioner of the spotted snake that crows and the extinct dodo, which, like the phœnix and the griffin, are delivered from the unknown realms of fancy! Sir John Mandeville and Munchausen are not, for reasons unnecessary to rehearse, fit for publication by a veracious administration, but the luminous and unpleasant truths of this pamphlet are indispensable to Federal legislation and the average intelligence. For instance, we have long been discussing finances with their inflations and contractions. What a ray of light is cast upon these abstruse subjects by the discussion of our commissioner of the sacred mats!

Many reasons might be urged for the acquisition of these isles. Not because perpetual summer there simmers in the sunny air; not because bread-fruit is produced without planting, plowing, harrowing, or reaping; not because the cocoa gives from the fruitful bosom of mother earth its milk for young and old; not because our commissioner has discovered, as he thinks, the dodo——

A MEMBER. Tell us of that bird.

Mr. COX. I reserve the dodo. Not because polygamy there prevails and Christianity sings its hymns in discordant monotone; not because it recognizes caste and has "mats" for legal tender; not because it adopts the discarded toilettes of our civilized dames and demoiselles; but because the thirty-five thousand *indigènes* will, when annexed, become consumers of our products; and when they buy our hatchets and nails, our whisky and tobacco, our hair-pins and hoop-skirts, our hymn-books and bibles, will we not in this time of distress here add to our revenues? Hence, I am for Mr. Fish's proposition. Not, however, do I favor it on mercenary grounds! O, no. When Mark Twain received from the Persian Pasha his picture set in diamonds, he exclaimed, "O, sire, I do not care for the setting. It is only the portrait I crave."

Neither, sir, is it because I would have a convenient isle of refuge for those who may leave us in 1876. The good men who are as careful as they are honest in administration, the men of moieties and the Indian contractors, might find in these isles a happy refuge and resting-place, free from the persecutions of a venal press and the indictments of indignant grand juries.

Mr. Speaker, finding a contingent fund of $231,000 in this bill; knowing what contingencies are and how they grow and go; knowing the needs of the Treasury which is bankrupt, and the needs of the people who have to make up the deficiency, I should be derelict in my duty if I did not insist that we should cut off the large body of this expense growing out of our foreign relations in order to draw to us the polygamous and Christian and commercial people who live so many thousands of miles away from us; who are so near and yet so far.

I think, Mr. Speaker, these remarks will illustrate the remarkable comity, patriotism, and expeditions of the State Department. May their worst endeavors be better than that of San Domingo, and their best tend to the interest and honor of our country!

To conclude, Mr. Speaker: In these remarks I do not mean, by word or gesture, to extenuate or exaggerate the delinquencies of our foreign department. Whenever I can see that my Government defends the Flag, recognizes and protects my fellow-citizens abroad, does not yield its rights and interests to a foreign potentate, and holds aloft the scale of equity, it will be my pride and pleasure to support and defend it. During the civil war I never failed in that respect. In the coming years, if I shall serve here, I shall be more than usually observant of all those rules of comity which command respect from the world by granting and demanding justice. But may I not ask that such exhibitions of American enterprise as I have commented upon, for which we pay $213,000 contingent, and for islands so many thousand miles away, may become less frequent, and thereby save us from national humiliation?

Reciprocity with the Dominion of Canada.

SPEECH OF HON. E. CROSSLAND,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

May 19, 1874.

The House having under consideration the subject of reciprocity with the Dominion of Canada—

Mr. CROSSLAND said:

Mr. SPEAKER: It is known to Congress and to the country that negotiations are now pending for the renewal of the reciprocity treaty concluded in 1854 between Great Britain and this Government in regard to our commercial relations with the British North American provinces, the Dominion of Canada, and Newfoundland. And as legislation will doubtless be necessary to effectuate any agreement which may be made by the joint plenipotentiaries of Her Britannic Majesty and Mr. Secretary Fish, I desire to submit the reasons why I earnestly wish to see reciprocity of trade re-established between the two countries, and why I will heartily support any legislation needful to give validity to the agreement which may be arrived at. For proper reasons the terms proposed have not been made public, but I assume that they will be as liberal as the terms of the treaty of 1854, which I will ask the Clerk to read.

The Clerk read as follows:

The Government of the United States being equally desirous with Her Majesty the Queen of Great Britain to avoid further misunderstandings between their respective citizens and subjects, in regard to the extent of the right of fishing on the coasts of British North America, secured to each by article 1 of a convention between the United States and Great Britain, signed at London on the 20th day of October, 1818; and being also desirous to regulate the commerce and navigation between their respective territories and people, and more especially between Her Majesty's possessions in North America and the United States, in such manner as to render the same reciprocally beneficial and satisfactory, have respectively named plenipotentiaries to confer and agree thereupon—that is to say, the President of the United States of America, William L. Marcy, Secretary of State of the United States, and Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, James, Earl of Elgin and Kincardine, Lord Bruce and Elgin, a peer of the United Kingdom, knight of the Most Ancient and Most Noble Order of the Thistle and governor-general in and over all Her Britannic Majesty's provinces on the continent of North America and in and over the island of Prince Edward—who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon the following articles:

ARTICLE 1. It is agreed by the high contracting parties that, in addition to the liberty secured to the United States fishermen by the above-mentioned convention of October 20, 1818, of taking, curing, and drying fish on certain coasts of the British North American colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty to take fish of every kind except shell-fish, on the sea-coast and shores, and in the bays, harbors, and creeks of Canada, New Brunswick, Nova Scotia, Prince Edward's Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the coast and shores of those colonies and the islands thereof, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish: *Provided*, That in so doing they do not interfere with the rights of private property, or with British fishermen in the peaceable use of any part of the said coast in their occupancy for the same purpose. It is understood that the above-mentioned liberty applies solely to the sea fishery, and that the salmon and shad fisheries and all fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen. And it is further agreed that in order to prevent or settle any disputes as to the places to which the reservation of exclusive right to British fishermen, contained in this article, and that of fishermen of the United States, contained in the next succeeding article, apply, each of the high contracting parties, on the application of either to the other, shall within six months thereafter appoint a commissioner. The said commissioners before proceeding to any business shall make and subscribe a solemn declaration that they will impartially and carefully examine and decide to the best of their judgment, and according to justice and equity, without fear, favor, or affection to their own country, upon all such places as are intended to be reserved and excluded from the common liberty of fishing under this and the next succeeding article, and such declaration shall be entered on the record of their proceedings. The commissioners shall name some third person to act as an arbitrator or umpire in any case or cases on which they may themselves differ in opinion. If they should not be able to agree upon the name of such third person, they shall each name a person, and it shall be determined by lot which of the two persons so named shall be the arbitrator or umpire in cases of difference or disagreement between the commissioners. The person so to be chosen to be arbitrator or umpire shall, before proceeding to act as such in any case, make and subscribe a solemn declaration in a form similar to that which shall already have been made and subscribed by the commissioners, which shall be entered on the record of their proceedings. In the event of the death, absence, or incapacity of either of the commissioners, or of the arbitrator or umpire, or of their or his omitting declaring, or ceasing to act as such commissioner, arbitrator, or umpire, another and different person shall be appointed or named as aforesaid to act as such commissioner, arbitrator, or umpire in the place and stead of the person so originally appointed or named as aforesaid, and shall make and subscribe such declaration as aforesaid. Such commissioners shall proceed to examine the coasts of the North American provinces and of the United States embraced within the provisions of the first and second articles of this treaty, and shall designate the places reserved by the said articles from the common right of fishing thereon. The decision of the commissioners, and of the arbitrator or umpire, shall be given in writing in each case, and shall be signed by them respectively. The high contracting powers hereby solemnly engage to consider the decision of the commissioners conjointly, or of the arbitrator or umpire as the case may be, as absolutely final and conclusive in each case decided upon by them or him respectively.

ART. 2. It is agreed by the high contracting parties that British subjects shall have in common with the citizens of the United States the liberty to take fish of every kind, except shell-fish, on the eastern sea-coasts and shores of the United States north of the thirty-sixth parallel of north latitude, and on the shores of the several islands thereunto adjacent, and in the bays, harbors, and creeks of the said sea-coasts and shores of the United States, and of the said islands, without being restricted to any distance from the shore, with permission to land upon the said coasts of the United States, and of the islands aforesaid, for the purpose of drying their nets, and curing their fish: *Provided*, That in so doing they do not interfere

with the rights of private property, or with the fishermen of the United States, in the peaceable use of any part of the said coasts in their occupancy for the same purpose. It is understood that the above-mentioned liberty applies solely to the sea fishery, and that salmon and shad fisheries, and all fisheries in rivers and mouths of rivers, are hereby reserved for fishermen of the United States.

ART. 3. It is agreed that the articles enumerated in the schedule hereunto annexed, being the growth and produce of the aforesaid British colonies or of the United States, shall be admitted into each country, respectively, free of duty:

SCHEDULE.

Grain, flour, and breadstuffs, of all kinds.
Animals of all kinds.
Fresh, smoked, and salted meats.
Cotton, wool, seeds, and vegetables.
Undried fruits, dried fruits.
Fish of all kinds.
Products of fish, and of all other creatures living in the water.
Poultry, eggs.
Hides, furs, skins, or tails undressed.
Stone or marble in its crude or unwrought state.
Slate.
Butter, cheese, tallow.
Lard, horns, manures.
Ores of metals, of all kinds.
Coal.
Pitch, tar, turpentine, ashes.
Timber and lumber of all kinds, round, hewed, and sawed, unmanufactured in whole or in part.
Firewood.
Plants, shrubs, and trees.
Pelts, wool.
Fish oil.
Rice, broom-corn, and bark.
Gypsum, ground or unground.
Hewn or wrought, or unwrought burr or grind stones.
Dye-stuffs.
Flax, hemp, and tow, unmanufactured.
Unmanufactured tobacco.
Rags.

ART. 4. It is agreed that the citizens and inhabitants of the United States shall have the right to navigate the river Saint Lawrence and the canals in Canada used as the means of communicating between the great lakes and the Atlantic Ocean, with their vessels, boats, and crafts, as fully and freely as the subjects of Her Britannic Majesty, subject only to the same tolls and other assessments as now are, or may hereafter be, exacted of Her Majesty's said subjects; it being understood, however, that the British government retains the right of suspending this privilege on giving due notice thereof to the Government of the United States. It is further agreed that if at any time the British government should exercise the said reserved right, the Government of the United States shall have the right of suspending, if it think fit, the operation of article 3 of the present treaty, in so far as the province of Canada is affected thereby, for so long as the suspension of the free navigation of the river Saint Lawrence or the canals may continue. It is further agreed that British subjects shall have the right freely to navigate Lake Michigan with their vessels, boats, and crafts, so long as the privilege of navigating the river Saint Lawrence, secured to American citizens by the above clause of the present article, shall continue; and the Government of the United States further engages to urge upon the State governments to secure to the subjects of Her Britannic Majesty the use of the several State canals on terms of equality with the inhabitants of the United States. And it is further agreed that no export duty or other duty shall be levied on lumber or timber of any kind cut on that portion of the American territory in the State of Maine watered by the river Saint John and its tributaries, and floated down that river to the sea, when the same is shipped to the United States from the province of New Brunswick.

ART. 5. The present treaty shall take effect as soon as the laws required to carry it into operation shall have been passed by the Imperial Parliament of Great Britain and by the provincial parliaments of those of the British North American colonies which are affected by this treaty on the one hand and by the Congress of the United States on the other. Such assent having been given, the treaty shall remain in force for ten years from the date at which it may come into operation, and further until the expiration of twelve months after either of the high contracting parties shall give notice to the other of its wish to terminate the same; each of the high contracting parties being at liberty to give such notice to the other at the end of the said term of ten years, or at any time afterward. It is clearly understood, however, that this stipulation is not intended to affect the reservation made by article 4 of the present treaty with regard to the right of temporarily suspending the operation of articles 3 and 4 thereof.

ART. 6. And it is hereby further agreed that the provisions and stipulations of the foregoing articles shall be extended to the island of Newfoundland, so far as they are applicable to that colony. But if the Imperial Parliament, the provincial parliament of Newfoundland, or the Congress of the United States shall not embrace in their laws, enacted for carrying this treaty into effect, the colony of Newfoundland, then this article shall be of no effect; but the omission to make provision by law to give it effect by either of the legislative bodies aforesaid shall not in any way impair the remaining articles of this treaty.

ART. 7. The present treaty shall be duly ratified and the mutual exchange of ratifications shall take place in Washington within six months from the date hereof, or earlier if possible.

In fatth whereof we, the respective plenipotentiaries, have signed this treaty and have hereunto affixed our seals.

Done in triplicate at Washington, the 5th day of June, A. D. 1854.

W. L. MARCY.
ELGIN AND KINCARDINE.

Mr. CROSSLAND. In January, 1865, Congress passed a joint resolution directing the President of the United States to give the notice provided for in the fifth article of the treaty and terminate it. This the President did, and in 1866 it ceased to exist. Now, sir, I propose to examine the reasons that led our Government to adopt this treaty, the effect it wrought upon our trade, commerce, and the general interest of the country, and whether a renewal of it is demanded by the interest of the people we represent. I shall have little to say in regard to the reasons and causes that led Congress to order the suspension of the treaty. It occurred within a few months of the close of the war; at a time when slight circumstances were sufficient to kindle prejudices and arouse passions that often led men to acts and deeds that were unwise and hurtful. Time and truth have removed and allayed these, and in soberness we are called on to investigate the question pertinent to the day.

Let us examine the provisions of this treaty, and see what were the benefits secured to each country. Here, sir, I will say that I utterly repudiate the doctrine that our relations with other countries and governments, our intercourse with neighboring people, ought to be shaped by the narrow, selfish, venal idea of *gain* to us and injury to them—the old pagan principle, that no nation or individual can prosper except at the detriment or expense of some other. Such doctrine is too closely akin to that which Goethe put into the mouth of Mephistopheles, that trade and commerce are in all respects equivalent to war and piracy:

Having power, you have the right:
One asks but what you've got, not how.
Talk not to me of navigation,
For war and trade and piracy,
These are a trinity inseparable.

I invoke a higher sentiment in the consideration of this subject. I claim for my great Government and her enlightened people a desire to regulate our relations with other nations, and especially our neighbors, so as to render the same *reciprocally* beneficial and satisfactory, developing the natural geographical advantages of *each* for the *good of all*. But, Mr. Speaker, if there are any here whose support of this great measure can only be influenced by proof "that we get the best of the bargain," I am prepared to make that proof, and show that under the treaty of 1854 the most important advantages were derived by our Government. What are they? The first and second articles provide that the fishermen of the United States shall have the right to take fish at any distance from the shore on the coasts and in the bays, harbors, and creeks of Canada, New Brunswick, Nova Scotia, and Prince Edward's Island, with liberty to land and cure fish on all the shores and on the Magdalen Island. By the proposed treaty there is no doubt these rights and privileges will be permanently accorded to our fishermen on all the coasts, &c., of the Dominion of Canada free.

Sir, we are all familiar with the many vexations and irritating questions that have so often agitated both countries in regard to the construction of the treaties of 1783 and 1818 on the subject of the fisheries and the rights of our fishermen. We all remember how often these questions have threatened conflicts involving all the horrors of war, which was from time to time arrested by wise diplomacy. After the war of 1812 a controversy arose whether the stipulations of the treaty of 1783 upon the subject of the fisheries were abrogated by that war. It resulted in the convention of 1818, by which the liberty of taking and curing fish was yielded by Great Britain upon condition that the United States renounced forever the liberty to take, dry, or cure fish on or within *three marine miles* of any of the coasts, bays, creeks, or harbors of the British dominions. The people of the British colonies claimed that these marine miles were to be measured from headland to headland.

And the British government adopted this construction. On our side it was contended that American fishermen had a right to enter and fish in any of the bays which indent the shores, provided they did not go within three marine miles of the coasts that encompassed the bays, &c. It would have been difficult to devise a plan more likely to embroil the citizens and the subjects of the respective countries. The nature of the occupation and the natural character of those engaged in it caused frequent infringements of the rules. The precise distance of three miles can never be readily ascertained. The interest of men and the ardor of the chase caused different estimates to be made. While Mr. Webster was Secretary of State he conceded that by *strict* and *rigid* construction of the treaty the grounds taken by the British colonies were correct, and that by an oversight in the convention of 1818 our fishermen were excluded from fishing within the three marine miles of the British coasts, measuring from headland to headland.

The British authorities, at the instigation of the provinces, insisted upon the *strict* construction of the convention. A large number of armed vessels was sent by Great Britain to her colonial stations; an excited state of feeling ensued. Mr. Webster gave official information "that an American fishing-vessel had been captured and its crew carried as prisoners into a British port. An expedition of American vessels had hastily armed and forcibly retaken the captured vessel, and these events threatened to precipitate the two countries into war." The prudent statesmen of each nation sought to arrest the progress of these angry events and if possible prevent their recurrence in the future. The Secretary of State said there was only one way that Congress could act, and that was by *reciprocal* legislation with the British Parliament and the British colonies. That course was pursued, and led to the adoption of the treaty of 1854, and the dangers were wisely and honorably averted and our fishermen secured in all the rights and privileges claimed under their construction of the convention of 1818. All the causes of irritation were removed, all bad feeling allayed, and friendly intercourse and kindly relations inaugurated. Our fisheries have been styled the nursery of the Navy, and have given to conduct our foreign commerce the most skillful, enterprising captains; they have given cheap and useful food to thousands of our poor; and furnish a market for a large quantity of the beef, pork, and flour of the West. And under the advantages afforded by the treaty this industry was thrifty and prosperous, giving employment to thousands of men and building up an interest of the first importance.

In 1862 we had over two hundred and three tons of shipping engaged in the Saint Lawrence fisheries and twenty-eight thousand seamen; the

returns that year exceeded $14,000,000. Six hundred sail have in one season fished for mackerel in the Gulf of Saint Lawrence and taken fish to the value of $4,500,000, and from forty to fifty tons of our fishing fleet, worth from $5,000,000 to $7,000,000, annually fish near the three-mile line of the provinces.

But, sir, I will leave the fishermen and fisheries and turn to other important advantages derived by us from the treaty. The third article provides that the following articles, the growth and produce of the colonies or of the United States, shall be admitted into each country, respectively, free of duty, namely: Grain, flour, and breadstuffs animals of all kinds; ashes; fresh, smoked, and salted meats; timber and lumber of all kinds, round, hewed and sawed, and unmanufactured; cotton, wool, seeds, and vegetables; undried fruits, dried fruit; fish of all kinds; products of fish and all creatures living in the water; poultry, eggs; hides, furs, skins, or tails, undressed; stone or marble in its crude or unwrought state; butter, cheese, tallow; ores of metals, of all kinds; coal; unmanufactured tobacco; pitch, tar, turpentine; fire-wood; plants, shrubs, trees; pelts; fish-oil; rice; broom-corn, bark; gypsum, ground and unground; wool; wrought or unwrought burr and grindstones; dye-stuffs; flax, hemp, tow, and rags; slate. This article defining the free list is the most important in the treaty.

I have said that I attached no importance to the ancient theory of the balance of trade. The excess of imports over exports is no proof that commerce is unprofitable. The commerce of Great Britain for a series of years has shown a large excess of imports over exports attended by great progress in national wealth. But as that is a pet theory with many men and may be a controlling question with some here, I propose to show that during the existence of the treaty the balance of trade was largely in our favor and against us every year since it was abrogated. During the first ten years of the treaty the balance in our favor was $62,013,545. It has been about seven years since the treaty was terminated.

I have prepared the following tables showing the imports from and the exports to British North America during the first seven years of the treaty and the seven years since it was terminated:

Under reciprocity treaty.

Years.	Imports.	Exports.
1853–'54	$8,927,560	$24,566,860
1854–'55	15,136,734	27,806,020
1855–'56	21,310,421	29,029,349
1856–'57	22,124,295	24,262,482
1857–'58	15,806,519	23,651,727
1858–'59	19,727,551	28,154,174
1859–'60	23,851,381	22,706,328
Total	126,884,461	180,176,940

Total exports to British North America	$180,176,940
Total imports from British North America	126,884,461
Excess of exports	53,292,479

Thus we see that during the first seven years of the treaty we exported to the British North American provinces produce of the value of $180,176,940, and imported from the provinces produce of the value of $126,884,461, making the balance in our favor $53,292,479, or an average of $7,613,211 annually.

During the seven years since the abrogation of the treaty our imports from and exports to the provinces have been as shown in the table appended:

Years.	Imports.	Exports.
1866–'67	$33,604,178	$24,323,169
1867–'68	30,362,221	26,262,272
1868–'69	32,090,314	24,197,232
1869–'70	41,089,801	26,849,324
1870–'71	37,424,351	34,502,726
1871–'72	40,961,432	32,759,080
1872–'73	43,809,070	38,572,556
Total	259,341,367	207,466,359

Total imports from British North America	$259,341,367
Total exports to British North America	207,466,359
Excess of imports over exports	51,875,006

A cash balance against us of $51,875,006 in the seven years, and an average of $7,410,715 each year. And if we are seeking to arrange our relations so as to derive profit from our intercourse with our neighbors here we have undeniable proof that under reciprocity we sold them more than we bought from them, and that since reciprocity was abrogated we have bought more from them than we have sold them.

I continue the comparison and invite the attention of gentlemen to the following facts: During the thirteen years of "reciprocity" the British provinces purchased from this country commodities valued at (gold value) $359,667,257. During that time we purchased from them commodities valued at $263,768,268. The traffic between the two countries, amounting to $623,437,525 gold value, giving us a cash balance of $95,800,989 in gold. Can any enlightened Representative, can any sane man fail to see the almost incalculable benefit derived by us from this vast interchange of the products of the industries of the two countries? Is there a Representative here who would offer a word in favor of reducing this trade, or one who would withhold his support from a measure promoting and increasing it? Not one. Look back, then, and you will see that it was the result of the reciprocity treaty. Examine the statistics and you will find that the average annual value of articles interchanged between the two countries for eight years before the treaty was $14,230,763. The first year after the treaty was concluded it amounted to $33,494,754, gold value. The second year it went up to $42,942,754, the third year to $50,339,770, and in the last year it amounted to the sum of $84,070,955; rising under the influences of reciprocity from $14,230,763 to $84,070,955 per year.

In a conversation to-day with several of my western friends in regard to the importance of this measure I was asked what articles did the provinces buy of us? I referred to the statement following, which is made from official statistics, and shows that during the thirteen years of "reciprocity" the provinces bought of us animals, and products of, valued at $35,433,213; breadstuffs and other farm products, valued at $115,301,455; timber, valued at $8,511,488; manufactures, valued at $88,649,855; and various other products aggregating the immense sum before mentioned.

I fear I weary the intelligence of the House by arguments showing the good results derived by us from this reciprocal free trade, but before passing to the consideration of the next article I desire to call attention to the effect of the abrogation of the treaty on the price of lumber—building material. By clearing farms and the wanton waste of timber we are fast exhausting our forests and must soon look abroad for our building material, and no subject of commercial intercourse is fraught with more consequence than this indispensable *building material*. The great pineries of the Dominion occupy more than two hundred and eighty-seven thousand square miles, and are inexhaustible. The rapid exhaustion of our home supply is causing constant increase of prices. Under the treaty Canadian lumber was admitted free, and the table I hold in my hand exhibits the price in gold per one thousand feet of clear pine lumber, in the years named, in Toronto, under the treaty:

1857	$11 00
1858	11 50
1859	12 00
1860	11 50
1861	11 00
1862	11 75
1863	11 50
1864	14 50
1865	13 50

And this table will show how prices went up after the treaty expired:

1867	$21 50
1868	21 50
1869	21 00
1870	21 00
1871	22 00
1872	24 00
1873	26 00

Now observe the effect of the treaty on prices of lumber in this country. The table which I append will show the price of the same lumber per one thousend feet in Portland, Maine, under the treaty:

1857	$26 00
1858	27 00
1859	28 00
1860	30 00
1861	30 00
1862	32 00
1863	35 00

This covers a period of seven years under the treaty. Now see how prices stood during the seven years since the treaty expired:

1867	$50 00
1868	50 00
1869	50 00
1870	52 00
1871	54 00
1872	55 00
1873	55 00

Now, sir, I submit that no comment can be necessary to follow these tables. We must have this lumber, cost what it may. During the thirteen years under the treaty we imported from the British North American provinces into the United States $39,263,795 worth of lumber, an average annual importation of $3,020,292. In the seven years since the treaty expired we have imported $56,854,724, with an average annual importation of $8,122,103. Yet the record shows that the *quantity* imported last year was not greater than that imported during the last year of the treaty, and that the difference we see in the figures, but shows the increase of *price* and *cost*, by which an annual tax is levied on those who build houses to shelter their families of over $5,000,000.

The navigation of the Saint Lawrence and the Canadian canals was the subject of the fourth article, which reads as follows:

It is agreed that the citizens and inhabitants of the United States shall have the right to navigate the river Saint Lawrence and the canals in Canada, used as the means of communicating between the great lakes and the Atlantic Ocean, with their vessels, boats, and crafts as fully and freely as the subjects of Her Britannic

Majesty subject only to the same tolls and other assessments as now are or may hereafter be exacted of Her Majesty's said subjects, it being understood, however, that the British government retains the right of suspending this privilege on giving due notice thereof to the Government of the United States, &c.

In regard to the probable scope of the new treaty on this subject I read an article which appeared in the Chicago Tribune of the 13th of May:

The result of the negotiations will probably result in a treaty that shall comprehend—

1. The waiver of the money compensation by the United States for the fisheries under the Washington treaty.

2. That the Canadian canals, from Lake Erie to Montreal, shall be enlarged within three years, at the cost of Canada, so as to admit the passage of vessels two hundred and sixty feet in length and forty-five in breadth, and with a depth equal to the capacity of the lake harbors.

3. That during the continuance of the treaty all the Canadian canals, and the Erie, Whitehall, Sault Sainte Marie, and Lake Saint Clair Canals shall be opened to the vessels and boats of both countries on the same conditions and terms.

* * * * * * *

But the great and overwhelming consideration in favor of this treaty to the West is the agreement on the part of Canada to enlarge, at her own expense, the Welland and Saint Lawrence Canals within a specified time, and to permit the use of these canals to American vessels on the same terms as Canadian vessels. The importance of this concession cannot be overestimated. The cost of these works will not be less than $8,000,000, and when completed they will give the long-needed water-route to the ocean and to an eastern market. The opening of this route will inevitably be accompanied by the connection of the Saint Lawrence River with Lake Champlain, and thus during the whole season of navigation, there will be a continuous water-route of unlimited capacity from the lake ports to the interior of New England and New York. It will reduce freight from Chicago to the ocean market very largely, will shorten the time of the water route at least one week; and the capacity for transportation being unlimited, there will be no complaint of inability to move the productions of the West.

By the twenty-sixth article of the treaty of Washington, concluded on the 8th day of May, 1871, the navigation of the Saint Lawrence River from the forty-fifth parallel of north latitude, where it ceases to be the boundary between the two countries, was conceded to the United States forever; a right of inestimable value to the conterminus States; but this benefit reaches no further. We must obtain the permanent right to navigate the Canadian canals, the connecting links between the great lakes and the deep waters of the Saint Lawrence, before we can give national importance to the navigation of that river. This the Tribune suggests the Dominion offers to concede.

I have before me a map of the United States and the Dominion of Canada, and tracing the great water-route via Lakes Superior, Michigan, Huron, Erie, Ontario, the connecting canals and the Saint Lawrence stretching from Wisconsin to New Brunswick, from Lake Superior to the Atlantic Ocean, and then tracing the multiplied rivers, canals, and railroads that reach down from the lake shores and harbors away into the interior and to the southern boundaries of the States of Wisconsin, Illinois, Indiana, Michigan, Ohio, Pennsylvania, and New York, I see a more satisfactory solution of the vexed "cheap transportation question" than can be seen in the measure which passed this House a short time since.

The Dominion proposes to enlarge and deepen her canals, so that vessels of a thousand tons burden, carrying fifty thousand bushels of wheat and corn can pass through them. The Canadian canals on this route embrace the Welland Canal, twenty-seven miles long, connecting the waters of Lakes Erie and Ontario, and furnishing a navigable route around the Falls of Niagara, and the six canals around the rapids in the Saint Lawrence, namely: the Gallops Canal, the Rapide Plat Canal, the Ferrans Point Canal, the Cornwall Canal, the Beauharnois Canal, and the Lachine Canal. By the lakes, these artificial channels, and the Saint Lawrence an avenue of commerce is opened that enables vessels to take on cargoes of the fruits of our soil at Chicago, Milwaukee, Detroit, and other cities on the lakes, and carry them to the markets on our sea-board, to Liverpool, and to all the ports of the world. And it is estimated that the cereals and other products of the West and Northwest can reach the markets by this route at about half the railway cost. When we secure the right to this route and improve the mouth of the Mississippi River, we give two avenues through which the products of the Northwest, the West, and South can be cheaply floated to the markets of the world, saving to the producers millions of dollars by the so-much cheaper water transportation.

Mr. Speaker, there are reasons for the revival of the treaty that did not exist when it was adopted in 1854. I read from an Associated Press dispatch of the 15th May on our Canada relations, and on negotiations for the renewal of a reciprocity treaty:

WASHINGTON, *May* 15.

There seems to be some prospect that the negotiations now going on with a view to a new treaty of commercial reciprocity with the Dominion of Canada may terminate successfully. Under the Washington treaty the shore fisheries of the Saint Lawrence were leased to the United States for twelve years, on condition that their cash value during that term should be determined by arbitrators, and the amount paid over to Canada. A few months ago Mr. Rothery, an eminent English jurisconsult, was sent out by the British government to make the necessary arrangements for giving effect to this arbitration, and he was busy getting up facts and evidence when the Canadian government suggested how much more reasonable and profitable to both countries it would be were the use of their fisheries merged, as formerly, in a treaty of commercial reciprocity. Communications between our Government and that of Great Britain on this suggestion resulted in the present effort to ascertain if the substitution can be made on terms satisfactory to both parties. Mr. Fish, Secretary of State, conducts the negotiations on behalf of our Government, and Sir Edward Thornton, K. C. B., British minister here, and Hon. George Brown, senator of the Canadian Dominion, act as joint plenipotentiaries on the part of Great Britain. The negotiations have been going on for some months, and it is understood that a rough outline of a new treaty is now the subject of investigation and discussion. Mr. Rothery, the English law agent in the fishery arbitration, has gone to the Pacific until the result of the larger negotiation is determined; but should the treaty fail, the fishery arbitration will be at once proceeded with.

The Canadians put what is deemed a most exorbitant value on their fisheries. They quote the words of eminent American statesmen, from Benjamin Franklin downward, in support of their pretensions; and they cite the great sums annually paid for many years by our own and the French government in the shape of bounties to maintain their Saint Lawrence fishing trades as an invaluable training school for their respective navies. They produce statistics of all sorts in proof of the great value of the fish and fish products annually drawn from the great deep along their shores; and they show extracts from official reports of successive ministers and special commissioners of the United States Treasury, in proof of the large annual cash value of their fisheries to our country. Some of these extracts show that in 1862 we had over 203,000 tons of shipping engaged in the Saint Lawrence fisheries, and 28,000 seamen; that the returns that year considerably exceeded $14,000,000; that at least 5,000 new seamen are annually broken in for our marine service; that 600 sail have in one season fished for mackerel in the Gulf of Saint Lawrence, and taken fish to the value of $4,500,000; and that from 40,000 to 50,000 tons of our fishing fleet, worth from $5,000,000 to $7,000,000, annually fish near the three-mile line of the provinces. The Canadians assert that the profit from this large fishing interest depends on our fishermen having access to their shore fisheries, and they quote in support of this the statement of a special commissioner of the United States Treasury, that without this access our deep-sea fisheries in that region will become valueless. They also assert that within three years from the repeal of the reciprocity treaty, which deprived our fishermen of the shore privileges which they had enjoyed under the treaty, our tonnage in the trade had fallen from 203,000 tons in the year 1862, to 62,000 tons in 1869—a falling off of 70 per cent. They further assert that the reconcession of these shore privileges to us, under the Washington treaty, has already doubled the tonnage of our fishing fleet from what it was in 1869, and that it will soon exceed the tonnage of 1862. They insist that the result of arbitration must be an award in their favor equal to a very large rental for twelve years. An enthusiastic gentleman from one of the maritime provinces, who has been hunting up evidence for the arbitration, declares it will be established by irresistible evidence, based on the advantages accruing in past years to the United States, that the fair rental we ought to pay is $5,000,000 per annum. He cites in support of this modest estimate the vast sums now paid in various parts of the world for small fishing grounds of no moment in comparison with the Saint Lawrence fisheries.

Here we see, sir, that to restore our fishermen to the privileges that they enjoyed under the treaty of 1854, *free*, our Government has incurred a liability to Canada ranging from twenty to sixty million dollars, which is to be determined and adjusted in a manner that will create an additional heavy expense. Her Majesty's government and the Dominion of Canada, with characteristic liberality, generously offer to surrender this claim as one of the terms of a new reciprocity treaty. When the people understand the great good that resulted to them from the treaty, the detriment we have suffered by its abrogation, they will think strangely of statesmanship that would reject this generous overture, refuse to restore these benefits, and liquidate this claim of perhaps fifty million dollars which they will otherwise have to pay.

I am asked why it is that Canada is so desirous to secure this treaty if the balances of advantages and benefits are so largely in our favor. The advantage preponderates in our favor because it is the nature of commercial reciprocity to give the most benefit to the country which has most to exchange, but it does not follow that Canada is injured because her exchanges are worth less than ours. Under the treaty, when this interchange was free from tariff duties, she could purchase from us certain commodities cheaper than she could produce them. She could produce and sell us certain commodities cheaper than we could produce them.

The Canadian Dominion was established on the 1st of July, 1867, and consisted at first of four provinces—Ontario, Quebec, Nova Scotia, and New Brunswick. To these have since been added British Columbia, Manitoba, Prince Edward Island, and the whole of the Hudson Bay Territories. Newfoundland alone of all the British North American possessions remains out of the confederation, and negotiations for her addition to the Union are now pending. The extent of territory embraced in the Dominion is 3,581,704 square miles, and the entire population by the census of 1871 is 3,942,271.

We see, sir, that the Dominion comprises a territory larger than the United States and Territories; her people are industrious, enterprising, and prosperous; she is in every regard a "good neighbor." We maintain free trade over three-fourths of North America. Our States interchange their products free, and why not extend it to Canada? The greater part of the line between this country and the Dominion is, like many of the lines between the States, merely a surveyor's line.

I have presented the good results, the manifold benefits derived by the operation of the treaty, and I inquire if there are any good reasons that can be employed to convince us that we ought to permit the "Chinese wall" that was erected by the termination of it to stand, reject the generous propositions, and send Her Majesty's joint plenipotentiaries back home to say to their government that the United States does not desire to secure our fishermen the permanent enjoyment of the rights and benefits afforded by the proposed treaty; that we do not desire this question settled at once and forever and the peace and friendly relations of the two countries perpetuated, but prefer to leave it so that our ancient complications may be revived; that we do not desire to re-establish profitable trade with the Dominion of Canada, preferring to give her the benefit of the "balance of trade;" that we will not accept the proffered free navigation of her canals, and that we prefer to pay fifty or sixty million dollars for the lease of the shore fisheries rather than settle it with other terms of "reciprocity;" that we prefer to forego all the advantages, relinquish and renounce the benefits of the treaty, and continue to levy customs duties, tariff taxation on all commodities imported from the Dominion of Canada. Gentlemen need not tell us that the exigencies of the country are such as to require the revenues arising

from the Canadian imports. A conclusive answer to such a proposition is found in the fact that during the war, when demands for revenue were the most urgent, when the needs of the Government were sorest, when the wisdom and ingenuity of those who managed the fiscal affairs of the country were so severely perplexed as to proper subjects of taxation and sources of revenue, no one even suggested abolishing reciprocity and raising revenue by imposing taxation on the articles contained in the free list, and the treaty was not terminated until nearly twelve months after the close of the war. The prosperity promoted by the treaty was too well appreciated to be destroyed to obtain the small revenue that this free imporatation from Canada would contribute to the Treasury.

In conclusion, I will read a few extracts from speeches made in the Senate and House of Representatives on the joint resolution directing the termination of the treaty of 1854.

In the Senate Mr. Hale said:

I was one of those who at the time this treaty was adopted looked upon it with great favor. I looked upon it as a mark and a step in the right direction. I looked upon it as one of those healthful indications of the application of Christian principle to the legislation and diplomacy of nations. I believed it was an onward path in the march of national morals indicative of a better and a purer and higher state of things than that which had heretofore prevailed. I believed so then and I believe so now; and to my mind this proposition to abrogate the reciprocity treaty is a step back from the advancing civilization of the present age to the dark ages of restriction which so long hampered the progress of nations.

Mr. Sumner said:

The fisheries have been a source of anxiety throughout our history even from the beginning, and for several years before the reciprocity treaty they had been the occasion of mutual irritation, verging at times on positive outbreak. The treaty was followed by entire tranquillity, which has not been for a moment disturbed.

In the House of Representatives Mr. Ward, of New York, made an unusually able and exhaustive argument in opposition to the resolution. I read his closing remarks:

We are considering the commercial relations of one-eighth of the habitable surface of the earth. Of this vast region the United States and the people of the Provinces of Canada, subject to a beneficent Providence, control the present condition and shape the future history. It has been given to us in the maturity of human civilization as a new parchment, on which we may inscribe whatever characters we choose, and the opportunity will never return again in all the plentitude of the present time. We may differ with the people of the provinces in opinion as to the best form of government; but other nations can judge better for themselves than we can for them as to their own method of legislation. A prohibitory or exclusive system would be no less unnatural and injurious to every commercial, political, and moral result than if we separated New York from Massachusetts and both of these from Ohio, Illinois, or Iowa.

Let us, then, regulate our intercourse not by mutual fear or destruction, but by creating or rather by developing reciprocal benefits, in accordance with the manifest designs of Him who made the world, and who should never be mentioned except on occasions worthy of Him. Such a system is doubly beneficial—

> It droppeth as the gentle rain from heaven
> Upon the place beneath; it is twice blessed;
> It blesseth him that gives and him that takes.

Commending the elevated sentiments and the enlarged, liberal views of this earnest patriot and gifted statesman to the favorable consideration of the House, I sincerely trust that, imbued with his just and enlightened opinions, we may be influenced to legislate in the inspiration which, animating him, seemed to say:

> No pent-up Utica contracts our powers;
> But the whole boundless *continent* is ours.

Civil Rights.

SPEECH OF HON. OLIVER P. MORTON,

OF INDIANA,

IN THE UNITED STATES SENATE,

May 21, 1874.

The Senate having under consideration the bill (S. No. 1) supplementary to an act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication," passed April 9, 1861—

Mr. MORTON said:

Mr. PRESIDENT: I have but very little to say upon this bill. What I have to say is upon the question of the power of Congress to pass it.

The Senator from Ohio [Mr. THURMAN] yesterday declared this bill to be grossly unconstitutional. He said that the fifth section of the fourteenth amendment giving to Congress the power to enforce the amendment by appropriate legislation conveyed to Congress no power that did not already exist. I think that part of his discussion was unprofitable. It is not necessary to inquire whether this power existed before or in the absence of this fifth section of the amendment; it is enough for us to find it there, to find the amendment declaring in express terms that Congress shall have power by appropriate legislation to enforce the amendment. Who shall be the judge of what is the appropriate legislation? Congress only. It is not for the courts to judge and determine whether the legislation is appropriate. If it tends toward the end had in view in the Constitution, it is not for the courts to say that other and better means might have been adopted, because Congress is made the judge of the character of the means to be employed in the enforcement of the amendment.

The next point made by the Senator was that all that Congress could do was to take such steps as would prepare a case arising under any State law infringing this amendment for decision by the courts of the United States. That of course was assuming the very thing to be proved. He said that the prohibition in the amendment was not against individuals, but it was against States; that no State shall make or enforce any law abridging the franchises of citizens of the United States, and no State shall deny to any person the equal protection of the laws; and therefore that we could adopt no remedy, no law to enforce this amendment which operated upon individuals.

Now, Mr. President, we cannot operate upon the States as such. If a State by a law violates this amendment we cannot arrest the State; we cannot punish the State as such. With the State we can do nothing; but we can operate, and must operate, if at all, upon individuals. At the beginning of the war we were told by Mr. Buchanan and by other distinguished statesmen that we could not coerce a State to remain in the Union. We said, "Very well; we will try and coerce all the individuals in that State, and that will answer the same purpose." We cannot arrest or punish a State for the violation of this amendment, but we can punish any person who undertakes to violate the amendment under the cover of a State law. We take from any official, from any person who undertakes under cover of State authority or under any pretense to violate the right of any person under this amendment, all protection and cover of the State law and say to him, "That is no defense; you must stand upon your right."

What else is there left to us in the enforcement of these amendments? We pass a law by which it is a penal offense to take from any person any right guaranteed or secured by either of these three amendments. That person comes in and pleads a State law. We say, "That is unconstitutional; the State had no right to pass that law; you cannot defend yourself under that law; you must take notice that that law is invalid, and we shall punish you as though that law never existed;" and that is the whole of it.

The theory of our Government is that it acts upon individuals, and not upon the States or upon corporations; and in this respect it differs from the old Confederation, which was weak and defective in this, that it lacked the power to coerce individuals, but acted through the original thirteen States or Colonies. The whole theory of our Government goes upon the idea that it acts directly upon the individual, and holds him responsible to the Government of the United States for the violation of any right created, guaranteed, or secured by that Government.

Now, Mr. President, I desire to consider very briefly the fourteenth amendment:

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

I propose to consider the last clause of this section first:

Nor deny to any person within its jurisdiction the equal protection of the laws.

What is meant by "the equal protection of the laws?" Does it mean simply that every person shall be entitled to protection against an assault and battery or against personal violence, and stop there? It has no such limited meaning as that. The meaning is just the same as if it read "Every person shall be entitled to the equal benefit and protection of the laws." When it says "no person shall be denied the equal protection of the laws," it is exactly equivalent to saying that all persons shall be entitled to the equal protection of the laws. The word "protection" there is used in that sense. Law is made for protection; the protection of person, the protection of property, the definition and protection of civil and political rights. The whole body of the law is for protection in some form—the definition and protection of the rights of person and property; and when the fourteenth amendment declares that every person shall be entitled to the equal protection of the laws, it means to the equal benefit of the laws of the land. It forbids all discriminations of every character against any class of persons, being citizens of the United States.

In this sense, Mr. President, the Supreme Court refer to this amendment in the decision read from by the Senator from Ohio; and I beg leave to call the attention of the Senate (for I think the whole argument is in a nut-shell) to what the Supreme Court have said in regard to this very clause. I read from the Slaughter-house case, (16 Wallace.) The court quote this clause:

Nor shall any State deny to any person within its jurisdiction the equal protection of the laws.

Then the court go on and say:

In the light of the history of these amendments, and the pervading purpose of them, which we have already discussed, it is not difficult to give a meaning to this clause. The existence of laws in the States where the newly emancipated negroes resided, which discriminated with gross injustice and hardship against them as a class, was the evil to be remedied by this clause, and by it such laws are forbidden.

If, however, the States did not conform their laws to its requirements, then by the fifth section of the article of amendment Congress was authorized to enforce it by suitable legislation. We doubt very much whether any action of a State not directed by way of discrimination against the negroes as a class, or on account of their race, will ever be held to come within the purview of this provision. It is so clearly a provision for that race and that emergency, that a strong case would be necessary for its application to any other. But as it is a State that is to be dealt with, and not alone the validity of its laws, we may safely leave that matter until

Congress shall have exercised its power, or some case of State oppression, by denial of equal justice in its courts, shall have claimed a decision at our hands.

There is an express definition of it. It is not simply confined to protection of the person against assault and battery or violence, but protection against all unjust discriminations against the negroes as a class. Whether that shall pertain to personal safety or safety of property, or the equal enjoyment of rights, or the equal enjoyment of public institutions, makes no sort of difference. Every discrimination against the negro as a class is denying to them the equal protection of the laws. For example, if a State should pass a law forbidding to negroes the right to bring suits in court, to sue for debts, to prosecute for offenses against them or their families, forbidding them to act as witnesses, these things would be denying to them the equal protection of the laws. If the colored man has no right to bring a suit in court for the collection of a debt, a thing that does not pertain perhaps to his personal safety at all, yet it is denying to him the equal benefit, the equal protection of the laws.

Mr. MERRIMON. I desire to ask the Senator from Indiana a question or two before he departs from the branch of the subject which he is now discussing. Do I understand the Senator to say that a citizen of the United States as a citizen of the United States and by virtue of his rights under the Constitution of the United States, has a right to attend a public theater, that he has a right to be buried in a grave-yard, that he has a right to attend a particular class of schools? Does he derive that right from his citizenship as a citizen of the United States or from his citizenship as a citizen of the State?

Mr. MORTON. I can answer that question I think in the course of the general argument that I shall make, without turning aside from the particular point that I have in view. I will endeavor to answer the Senator's question before I get through.

Mr. MERRIMON. I will put another question, with the Senator's permission, before I take my seat. Suppose that a State shall see proper as a matter of police regulation to provide that females shall be educated in one school and males shall be educated in another school; do I understand the honorable Senator from Indiana to say that a State would not have power to make such a police regulation, and that the Federal Government, if a State should undertake to exercise such power, could upset it?

Mr. MORTON. No, sir; I do not mean to say that. I will tell the Senator what I do mean to say in regard to schools; but I will first conclude the point that I was on, that this phrase, "nor shall any State deny to any person within its jurisdiction the equal protection of the laws," denies to any State the power to make a discrimination against any class of men as a class. It denies the power to exclude negroes from courts of justice because they are negroes; it denies the power to exclude them from schools because they are negroes, because that would be a gross discrimination, in the language of the Supreme Court. The question of separating males and females into different schools does not come within the principle at all. The great object of the fourteenth amendment was to establish the equality of races, equality before the law. The separation of the sexes, putting male children into one school and females into another, does not violate that principle, provided it extends to all races. This amendment was intended to destroy caste, to put all races upon an equality. There is the point.

Mr. MERRIMON. Suppose the Chinese were here?

Mr. MORTON. The power of the States to establish different grades of schools and different courts and to give to each court separate and distinct jurisdiction remains just as it was, with this difference, that the power to discriminate between races is taken away. The States are not bound to establish common schools; but if the States do establish common schools to be supported at public expense, they cannot exclude the children of any race from those schools. They must be open to the children of all races upon precisely the same terms. They may say if they please—perhaps that is an extreme case—that none but male children shall attend; but they must be the males of all races. I will not go that far, but the law may say that no child shall attend a common school, if you please, over sixteen years of age.

Mr. MERRIMON. Why do you use the word "races?"

Mr. MORTON. I think it is very apparent that that is what is meant, and the Supreme Court have expressly said so. It is *res adjudicata*, so far as the court is concerned. I have already read to my friend what the Supreme Court say upon that point.

Mr. MERRIMON. The point I make is this: the Constitution does not say anything about "race" except in certain respects. It provides expressly that there shall be no discrimination on account of race or color as to the matter of voting; it does that in terms; but there is no such expression touching distinctions as to race in any other respect whatsoever.

Mr. MORTON. The Constitution in effect does say so. It says that no person shall be denied the equal protection of the laws; and if common schools are established and the children of colored men are excluded from those schools, I ask my friend—and he cannot deny it for a moment—if they are not denied the equal protection of the laws?

Mr. MERRIMON. I say they are not, if like provision is made for the education of colored children that is made for white children. And now with the Senator's permission I will put another question. Suppose the Chinese were to become very prevalent in the State of California, as they are likely to do, and the State of California should desire to make a system of schools for the Chinese and a system for the natives. Will the Senator contend that in that case it is not competent for the State of California to do that? Or suppose that a portion of the population of any State should be Indians, will the Senator contend that in such a case the State would not have power to provide one class of schools for the Indians and another for the white people, making their rights equal in reference to schools except as to the distinction on account of color and race?

Mr. MORTON. If I understand the scope of the Senator's question he now admits, in effect, as did the Senator from Ohio yesterday, that if the State law excludes the colored children from the schools entirely, that is a violation of the fourteenth amendment.

Mr. MERRIMON. I admit that with all its force. But the point I make is this, that it is competent for the State to make a distinction on account of race or color if it shall make the same provision for the black race that it makes for the white race, and it is as much in the power of the State as to provide that females shall be placed in one class of schools and males in another.

Mr. MORTON. When the Senator concedes that the exclusion of colored children from schools is a violation of the fourteenth amendment, it occurs to me that he has conceded all that we can ask. The argument of the Senator from Ohio is gone. The Senator then does concede the ground that the fourteenth amendment was intended to destroy all inequality among races to make all equal before the law.

Mr. MERRIMON. I do not concede that. The constitutional provision to which the Senator refers is intended to destroy all inequalities and the possibility of inequality between the races on account of race or color in so far as it pertains to voting, no further. There is no provision in any of the amendments to the Constitution that looks to the abrogation of any other distinction that a State may see proper to establish.

Mr. MORTON. That statement of my friend I think withdraws the statement he made awhile ago.

Mr. MERRIMON. I think not. I say that the State Legislature cannot pass a law providing that white children should be educated and that colored children should not be, because that would deny the equal protection of the laws. But when it affords the same provision, the same measure, the same character for the colored race that it afforded for the white race, there is no more discrimination against one race than there is against the other; and therefore it is competent for the Legislature to do it, there being no restriction on such a power in the Constitution of the United States.

Mr. MORTON. My friend's argument then comes to this, that under the fourteenth amendment the State must make equal provision for the children of both races, and if there be any inequality in the benefits, then it is a violation of the fourteenth amendment. It brings him down then to the possibility of making separate and distinct schools precisely equal in point of benefit.

Mr. President, to go on with the general argument, the common school is a public institution, as much so as the court of justice. It is supported at public expense; it is regulated by law; it is organized and conducted for the highest possible considerations. It is in every sense a public institution, and the benefit of that must be extended to the children of both races, or the Constitution is violated. So in regard to courts of justice; they must be open to suitors of all colors and of all races, or the Constitution is violated. As I said before, the States are left free to establish common schools or not; but if they do establish them at public expense they must extend their benefits equally and in common to the children of all races; and so with regard to courts. The States are not bound to establish courts; but if they do so they must extend the benefit of those courts to people of all colors and of all races. That is the great purpose, the spirit, and the body of the fourteenth amendment.

It is hardly necessary to protract the argument. If it be conceded now, as it must be on all hands, that colored children cannot be denied the benefit of common schools without a violation of the fourteenth amendment, and that Congress has the power to enforce that amendment by such legislation as in the judgment of Congress and not of the courts is suitable and proper for that purpose, then the argument is at an end, and there is no necessity for prosecuting it one minute further.

The fourteenth amendment declares that no State shall make or enforce any law which shall abridge the franchises of citizens of the United States. Now, sir, what are the franchises of citizens? The Senator from Ohio yesterday entered into a long and labored argument to prove that they were franchises belonging to citizens of the United States as such and to citizens of the State as such; that the United States could enforce and protect those that belonged to citizens of the United States as such, but that the States are left free and untrammeled to enforce or not those that belong to the citizens of the States as States. I do not dissent from his argument. I take the position upon which he places himself. He admits, as the Supreme Court says in the Slaughter-house cases, that Congress has the power to protect all citizens in the enjoyment of their franchises as citizens of the United States. What are those franchises? The right of a citizen of one State to go into another State and there to enjoy all the privileges and immunities of citizens of that State upon equal terms, is one of the highest franchises that belong to any man as a citizen of the United States.

Mr. MERRIMON. Just at that point I beg to renew the question I propounded a while ago, and which seems to me directly in point. Has a man by virtue of his rights as a citizen of the United States a right to go to a public theater?

Mr. MORTON. I should think he had.

Mr. MERRIMON. By virtue of his rights as a citizen of the United States?

Mr. MORTON. Yes, sir.

Mr. MERRIMON. I do not want to disturb my honorable friend, but suppose this case; suppose a State should prohibit theaters absolutely; then would a citizen of another State have the right to go there and establish a theater?

Mr. MORTON. A theater is a place of public amusement, licensed by law, carried on under the regulations according to which theaters or such places are generally conducted, and it is a place to which any decent, respectable, well-dressed person has a right to be admitted; and any discrimination against him on account of his color on the part of the State where that theater is located is a discrimination which that State is not allowed to make. So in regard to traveling in the stage-coach or upon the cars. If a State is at liberty to exclude a colored man from the cars on account of his color in traveling, then it has the power to make an odious discrimination because of race, the very thing that the fourteenth amendment intended to stamp out.

Mr. MERRIMON. Why did it not say so? The Constitution says the States shall not make discrimination as to the matter of voting, but does not say so as to anything else. I ask my honorable friend what provision in the Constitution of the United States he relies on to sustain his position in reference to theaters?

Mr. MORTON. It was well understood in the adoption of the fourteenth amendment that it was not intended to extend to or cover the right of suffrage. My friend, I think, will remember very readily by reference to the next section that the right of suffrage was not included in the fourteenth amendment. I will now read that section to show that that by intendment and by expression was left to the control of the States just as it had been before:

> Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

The original Constitution expressly recognized the right and power of the States to control the question of suffrage. This section of the fourteenth amendment recognizes the continuance of that right in the States and provides certain consequences to follow where the States exclude any class from the right of suffrage, that they shall not be counted in the ratio of representation. In other words, it was well understood that the fourteenth amendment was intended to secure equality in civil rights but not in political rights.

Mr. MERRIMON. I ask my friend, then, wherefore the provision in reference to voting and in reference to voting alone—"the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude?"

Mr. MORTON. I have just stated that the original Constitution recognizes expressly the rights of the States to control the question of suffrage. The fourteenth amendment recognizes it and regulates it. Then we come to the fifteenth amendment. That was found to be necessary. I shall read as a more particular answer to the Senator's question from the decision of the Supreme Court in the Slaughter-house cases, directly. The fifteenth amendment does not provide that any colored man shall have the right to vote; it makes no such provision; but it says that no man shall be denied the right of suffrage because of his color. In other words, the States may still prescribe a property qualification on the right of suffrage; the States may say that no man shall have the right to vote unless he has five hundred dollars' worth of property, or that no man shall have the right to vote unless he is twenty-five years of age, or, as they do in Massachusetts, that no man shall have the right to vote unless he can read and write. The States may still say that; but these conditions must be made applicable to men of all colors. There is the point.

What the fifteenth amendment says is that the conditions or restrictions upon suffrage, whatever they may be, must be equally applicable to all races. The State of North Carolina has a right now to provide in her constitution that no man shall have the right to vote unless he has $1,000 worth of property, but it cannot confine that to the colored race or the white race; it must be equally applicable to all. In other words, whatever may be the conditions of suffrage, either liberal or illiberal, it must not be made to depend upon color, and that is the whole of the fifteenth amendment.

Mr. MERRIMON. The point I make, and which my honorable friend does not get up to it seems to me, is this: While there is this constitutional restriction as to the matter of voting, there is no restriction in the Constitution touching any other matter whatsoever. For example, there is no restriction that prohibits the States from passing a law providing that colored people shall be educated in one school and white people in another; that women shall go to a theater and that men shall not, or that men shall go and women shall not, if a State shall in its wisdom see proper to do that. There is no restriction on that power by any provision in the Constitution of the United States. That is the point I make; and if the Senator says there is, I shall be obliged to him if he will point out the clause of the Constitution that does it.

Mr. MORTON. The Constitution must of necessity employ general terms. All constitutions must. They cannot specify particular cases. The substance and the body of the fourteenth amendment is that it establishes the equality of the races before the law, and in the language of the Supreme Court prevents any State from making any odious discrimination against any class of people. It was not necessary that the Constitution should mention the theater, or should mention the railroad car, or should mention the common school. It lays down the broad and general proposition that men of all races must be placed upon the same level of equality in the enjoyment of civil rights. The States have all the powers left them that they had before; they may make all the conditions of suffrage, make all the conditions in regard to travel, make all the conditions in regard to the courts that they ever could, with one single limitation, that these conditions shall not depend upon the question of race or color; and that is the whole of it.

Mr. SAULSBURY. Will my friend allow me to ask him a question?

Mr. MORTON. Yes, sir.

Mr. SAULSBURY. If that is the true purport and meaning of the fourteenth amendment to the Constitution as to the rights of the colored people in the theater, in the inn, in public conveyances, and in common schools and everywhere else, I ask the honorable Senator wherefore the necessity for the passage of the bill now under consideration? If the right is secured by the Constitution, any law that enforces that right can be tested in the courts and pronounced unconstitutional; and is not, therefore, the bill before the Senate wholly unnecessary?

Mr. MORTON. I will answer my friend. Rights are of no avail unless they are enforced. It is of no advantage to me theoretically to have a right which I cannot enforce, which I cannot secure the enjoyment of, my neighbor to the contrary notwithstanding. Now, a State may pass a law forbidding a colored man to go into the cars—I am supposing this case in answer to my friend's question. That law, if carried into the Supreme Court of the United States, would be held to be unconstitutional in the absence of this act. But that is not a thing perhaps which the party injured could do. That is a very imperfect form of remedy, simply to give the right of appeal from the State courts to the courts of the United States. That was not what was meant by this amendment. The framers of the amendment—and I know something about it—understood that a law passed by a State in contravention of it would be void, and the Supreme Court of the United States would so decide; but they did not intend to leave the victim to that roundabout and costly remedy. They intended to make it a penal offense for any man to violate the rights of another, so that if he did it he should do so at his peril. The State law could not cover him and protect him. The point made by my friend from Delaware is that if the rights of a citizen under the fourteenth amendment are violated he can take an appeal, and the State law authorizing that violation will be declared to be unconstitutional. True; but the perpetrator goes unpunished. He incurs no penalty. He may commit gross fraud, violence, and wrong at the time, but he does it with perfect impunity. The crime presents no terrors, no retribution to him. I ask what kind of protection that gives? O, no! Rights are protected by penal enactments, by punishing the violator of them. A State makes a law. Under cover of that law one man violates the rights of another. To simply have the law declared void is no vindication of the right. That is no punishment of the criminal. We desire to protect the right by punishing the wrong-doer; and all we say is that no law made by a State in violation of this amendment shall protect the criminal from punishment. And that is the only efficient and successful enjoyment of these amendments that the people can have. That was precisely what was intended at the time the fourteenth amendment was adopted, and the discussion will show it. And so in regard to the fifteenth amendment, in which I took a part; and so in regard to the thirteenth amendment. It was intended at at the time—and the debates will show it—to make a violation of these amendments a personal and criminal offense, and to punish the violator, because that is the only successful vindication of right, the only successful enforcement of the amendments that can be had. I think I have answered my friend from Delaware.

I said that in answer to the question of my friend from North Carolina I would read from the decision of the Supreme Court, and I do this not to inform him, because he is familiar with the decision, but to show the purpose of these amendments by the current history of their adoption. I ask the Secretary to read commencing at the top of page 70 of 16 Wallace and reading to the marked passage on page 71. Before the Secretary reads it I will state that the fourteenth amendment was called into existence, as stated by the Supreme Court, by the fact that in 1865 and 1866 some of the State governments organized by President Johnson passed laws making odious discriminations against the rights of the colored people in various respects; and to protect them against these discriminations in regard

to occupations, in regard to public conveyances, in regard to various things, the fourteenth amendment was adopted. It is so stated by the Supreme Court. After that had been adopted it was then believed by the same men who had called into existence the fourteenth amendment that this race still were not protected and never could be sufficiently protected until they were invested with the right of suffrage, and that belief called into existence the fifteenth amendment, connected with the other conviction also that they were entitled to the right of suffrage the same as white people, and that color should make no possible difference in the existence of this great right. Now I ask the Secretary to read what I have marked.

The Chief Clerk read as follows:

The process of restoring to their proper relations with the Federal Government and with the States those which had sided with the rebellion, undertaken under the proclamation of President Johnson in 1865 and before the assembling of Congress, developed the fact that, notwithstanding the formal recognition by those States of the abolition of slavery, the condition of the slave race would, without further protection of the Federal Government, be almost as bad as it was before. Among the first acts of legislation adopted by several of the States in the legislative bodies which claimed to be in their normal relations with the Federal Government were laws which imposed upon the colored race onerous disabilities and burdens, and curtailed their rights in the pursuit of life, liberty, and property to such an extent that their freedom was of little value, while they had lost the protection which they had received from their former owners from motives both of interest and humanity.

They were in some States forbidden to appear in the towns in any other character than menial servants. They were required to reside on and cultivate the soil without the right to purchase or own it. They were excluded from many occupations of gain, and were not permitted to give testimony in the courts in any case where a white man was a party. It was said that their lives were at the mercy of bad men, either because the laws for their protection were insufficient or were not enforced.

These circumstances, whatever of falsehood or misconception may have been mingled with their presentation, forced upon the statesmen who had conducted the Federal Government in safety through the crisis of the rebellion, and who supposed that by the thirteenth article of amendment they had secured the result of their labors, the conviction that something more was necessary in the way of constitutional protection to the unfortunate race who had suffered so much. They accordingly passed through Congress the proposition of the fourteenth amendment, and they declined to treat as restored to their full participation in the Government of the Union the States which had been in insurrection until they ratified that article by a formal vote of their legislative bodies.

Mr. MORTON. That shows that the very history and purpose that called the fourteenth amendment into existence was to protect the colored race from all unjust discriminations in the law, of whatsoever kind.

The Senator from Ohio said yesterday that these rights, the right to the school and other rights, belonged to the colored people as citizens of the State, and were not franchises belonging to them as citizens of the United States. It so happens that the Supreme Court has passed upon that very point, and has decided that all the rights guaranteed and secured by the fourteenth amendment belong to the people not as citizens of a State, but as citizens of the United States. That covers, I believe, the last point I intended to refer to. I now ask the Secretary to read, commencing with the last paragraph on page 79 of the same volume, down to where I have marked with pencil on page 80.

The Chief Clerk read as follows:

Another privilege of a citizen of the United States is to demand the care and protection of the Federal Government over his life, liberty, and property when on the high seas or within the jurisdiction of a foreign government. Of this there can be no doubt, nor that the right depends upon his character as a citizen of the United States. The right to peaceably assemble and petition for redress of grievances, the privilege of the writ of *habeas corpus*, are rights of the citizen guaranteed by the Federal Constitution. The right to use the navigable waters of the United States, however they may penetrate the territory of the several States, all rights secured to our citizens by treaties with foreign nations, are dependent upon citizenship of the United States, and not citizenship of a State. One of these privileges is conferred by the very article under consideration. It is that a citizen of the United States can of his own volition become a citizen of any State of the Union by a *bona fide* residence therein, with the same rights as other citizens of that State. To these may be added the rights secured by the thirteenth and fifteenth articles of amendment, and by the other clause of the fourteenth next to be considered.

Mr. MORTON. I simply refer to that to show that the Supreme Court here expressly declares that the rights secured by the thirteenth, fourteenth, and fifteenth amendments belong to citizens of the United States as such, and not simply to them as citizens of a State; and inasmuch as they belong to them as citizens of the United States, and not merely as citizens of a State, they are, from the other part of the decision, placed expressly under the protection of Congress.

Mr. MERRIMON. May I say a word?

Mr. MORTON. Yes, sir.

Mr. MERRIMON. What I understand the court to say is this: that if I should go to the State of Indiana I should have exactly the same rights and the same measure of those rights that any citizen of Indiana to-day has; and therefore if the laws of Indiana should provide that the colored children in that State shall be educated in one class of schools and the white children in another class of schools, I would have no right, being a white citizen, to send my children to a colored school; I could only send my children to a white school. Therefore if the State of Indiana should provide that no public theater should be kept open there, I should have no right to go there and establish one; I should have to abide by the rights established by the laws of the State of Indiana under the Constitution of the United States. That is what I mean, and that is what I say.

Mr. MORTON. I suggest to my friend that that is not the precise point. My point was that whatever rights were secured by the thirteenth, fourteenth, and fifteenth amendments had been by the court declared to be franchises of citizens of the United States as such, without regard to the States, and they expressly say so. After enumerating the franchises of citizens of the United States, they then say:

To these may be added the rights secured by the thirteenth and fifteenth articles of amendment and the other clause of the fourteenth next to be considered.

And the one next to be considered is the very one I have been considering.

Mr. MERRIMON. What are they?

Mr. MORTON. I think I have gone over that whole question. I will make just one remark in conclusion, that in my judgment the very highest franchise that belongs to any citizen of the United States as such is the right to go into any State and there to have the equal enjoyment of every public institution, whether it be the court, whether it be the school, or whether it be the public conveyance, or whether it be any other public institution, for pleasure, business, or enjoyment, created or regulated by law.

Mr. MERRIMON. Does my friend deny the right of the States to make police regulations?

Mr. MORTON. No, sir. The States have the same right they always had to make police regulations, with this single difference, that whatever regulations they may make must operate equally upon men of all colors coming within the same conditions. That is the answer.

Civil Rights.

SPEECH OF HON. W. T. HAMILTON,

OF MARYLAND,

IN THE UNITED STATES SENATE,

May 22, 1874.

The Senate having under consideration the bill (S. No. 1) to protect all citizens in their civil and legal rights—

Mr HAMILTON, of Maryland, said:

Mr. PRESIDENT: Although we are at this late hour of the night, I feel it to be my duty to trespass for some time on the attention of the Senate in submitting some observations upon the bill now under consideration. It is a bill so vitally affecting in my judgment my constituents, their interests, and if you please their prejudices, that it is proper that I should not omit on this occasion to express my views especially in regard to some of the provisions of the bill and urge what I can in the way of argument against its passage. I do this, not because I desire to consume time, but because I feel it to be my duty upon this floor, as a representative of a State having so large a portion of that class of population intended to be benefited by it, that I should undertake to say something in the interest of all.

It is the first time that the Congress of the United States—not that it has not undertaken it hitherto, but without the same hope of success—has undertaken to pass such a measure with a likelihood of success that is to deal with the private and social institutions and powers of the people of the States. This bill assumes to legislate directly upon almost all the relations of the people; to deal directly with inns, with theaters, with other places of public amusement, with common carriers, with common schools, with the regulation of cemeteries for the burial of the dead. Is there any subject beyond these, because some of them are very general in their nature, that this bill does not involve and pretend to regulate or manage? It is the first time, as I said, since the organization of this Government that Congress has undertaken in any degree of earnestness to deal with these relations of our people. The idea that this great Government formed for general purposes should at this day descend to the regulation of a theater, of an inn, of a common school, of common carriers within the limits of a State, is one of the most extraordinary spectacles I think that could be presented to the American citizen or to the reader of history wherever or whatever he may be.

I will not discuss at length the constitutional character of this bill, for that has been ably done by the gentlemen who have preceded me during the night; but I will only refer to the fact that all this power is derived by gentlemen who venture to maintain its validity from the fourteenth amendment and from no other. Surely it is not from the thirteenth; it is not from the fifteenth. The thirteenth simply abolishes slavery, and the fifteenth only provides that negroes shall not be deprived of the right of suffrage. The fourteenth amendment, and the fourteenth amendment alone, is the basis for this claim; and within the limits of that amendment or of the section of that amendment upon which these gentlemen rely for the power to pass this bill there is not one syllable in regard to race, color, or previous condition of servitude. It refers to nothing in respect to the African race, and if that race were not in existence, this clause in the fourteenth amendment could just as well apply to the subject-matter and receive an interpretation consistent with its true objects.

Now, by applying it to a color or to a race of people, they undertake, upon a constitutional amendment providing that no State shall abridge the privileges of citizens of the United States or deny to persons within its jurisdiction the equal protection of the laws, to

argue that by reason thereof and because of the fact that there are colored people in the States who may be deprived by local legislation of certain privileges, Congress asserts under these provisions of that amendment the right to go into the States and take possession of your inns, your theaters, and other places of public amusement and schools. Mr. President, can this be so? I ask you and each Senator present to read again the fourteenth amendment. It has not a reference to race; it has not a reference to color; it applies to all the people alike as citizens or persons only, and not in any other respect. If this bill is constitutional in its application to theaters and inns and common schools, common carriers and cemeteries, because there happens to be an African within the limits of the State, Congress is invested with the same power because of other classes of people dwelling in the States; and you can under that constitutional provision as well assume the power to apply it to the exclusion of a German, of an Irishman, a Frenchman, or any other nationality from a theater, from an inn, from any other place of public amusement, or from a cemetery. You can go into all the relations of society in the States, define the rights, duties, and obligations of its members, determine the classes of people and their relations to it, and how they shall all receive the equal protection of the laws.

So far, then, as the negro is concerned, so far as race or color is involved in this bill, and the power to pass it is claimed, it is simply this—there is not a word about either in the fourteenth amendment, and as specific matters for legislation has nothing whatever to do with the question. It is a question far beyond and outside of all that. Can the Congress of the United States go down into the States and take possession and control of all the places and subjects enumerated in this bill? And if they can do it in one instance, if they can do it for one purpose, they can do it for another; and it gives a jurisdiction which is limited only by the will of Congress. It is an unlimited power given to this Federal Government to determine the relations of the people in regard to all those matters so intimately connected with their enjoyments, and in fact their social being. It is a jurisdiction or power without limit and without qualification of any kind. It is not cared what the Supreme Court may say in its qualification of the power of this clause. If you pass this bill, you pass it in the face of the decision of the Supreme Court of the United States in the Slaughter-house case and in almost every other case determined by that court having reference to these late amendments of the Constitution. Upon this floor that decision is questioned by the honorable Senator who has charge of this bill, the Senator from New Jersey, [Mr. FRELINGHUYSEN;] for in the course of his speech on this bill the other day he did question the soundness of that decision. I am not here to say anything about that decision either in vindication of it or by way of criticism. It does not in all its aspects and in all its views meet my approbation. The court in that judgment have given a limit to these amendments; but that is rejected by the honorable Senator, and this bill, discarding all qualifications and limitations placed upon the powers conferred by the fourteenth amendment is an assumption that it is all-embracing. These gentlemen by one fell swoop would gather up every relation of life and transfer all, without qualification, without limitation, without any respect to the States, to the Congress of the United States. Against the exercise of such a power as this I am here to protest, and protest always.

This Federal Government has great objects to accomplish; it has certain duties prescribed by the Constitution to discharge. Those duties relate to our external and general affairs, depending upon the people of the localities to regulate their own domestic concerns. In that spirit our Government and institutions were formed, and in that spirit I desire that they shall be maintained so long as I can with my voice or by my vote maintain them.

But I now more particularly desire the attention of the Senate to one particular phase of this question, to the practical details of this bill. Have you observed these practical details? Do you know what it contains? Do you understand how far it may extend, how far it reaches down into the social relations of the people in the States? This is not simply a political question that it undertakes to handle; it comes right down to the social relations of the people in the States, and it assumes to regulate and direct them; and I desire to call the attention of the Senate particularly to this, so that the real character and objects of this bill may be understood.

I will speak of the details of the bill first before speaking of other matters connected with it. Let us see whether it is drawn definitely, as a law should be drawn for the purpose of protecting the people against a great central power, dangerous, as we all know it to be to the rights and to the liberties of the citizen:

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theaters, *and other places of public amusement;* and also of common schools and public institutions of learning or benevolence supported, in whole or in part, by general taxation; and of cemeteries so supported, subject only to the conditions and limitations established by law, and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

If the honorable gentleman from New Jersey [Mr. FRELINGHUYSEN] were here that I might speak to him directly on a question of this sort, I would ask him whether in a law that is to be criminal in its character, upon the violation of which the party offending may be subject to a forfeiture to the United States Government and a penalty besides to the party aggrieved, that is proper language to be put into a public statute—"other places of public amusement?" What does the honorable Senator mean by that? Is there a republican Senator on this floor who will undertake to tell me specifically what that means? Coming to the details of this bill, allowing him to reflect for one moment, is that honorable Senator in the passage of a law that is penal in all its provisions to allow a grand jury to determine what "a place of public amusement is?" Are the jury that is to try the citizen for the violation of this law in that respect to determine that, or should the law determine the fact itself? Gentlemen on the other side—I wish I could address myself to the gentleman having this bill in charge—speak about theaters, about inns, about common carriers, about cemeteries. We understand all that; they are specific occupations or things, and we know precisely how an indictment may be framed and how the penalty and forfeiture may be imposed or recovered. But what do you mean by "other places of public amusement?" Is it a menagerie? Is that one of the things embraced in the term? I am now talking about a law that is to be carried down to the hearthstones of the people of the States, under which law a citizen of a State may be seized in the mountains of Maryland and carried off to Baltimore to be tried by a Federal court, and by jurors unknown to him, away from home, his vicinage, his people, and taken among strangers a hundred miles distant, and it may be without means and without friends, there to be tried for what? Under that clause of the bill which refers to "other places of public amusement." Is it a menagerie? Is it a circus? What is it that this clause does embrace? Come, let us know. This part of the bill must mean something, or it ought to mean nothing. We ought to have definite, precise language by which people may understand whether persons can be excluded because of color or race when they apply for admission at places of resort. Is a presidential levee a public amusement? Are gambling-houses public amusements? Are societies of any kind? What does the language mean? What can it mean—"other places of public amusement?" A Fourth of July celebration, a barbecue, a harangue, an exhibition of large men, of small men, or of fat men? A large woman, a small woman, a fat woman? Or it may be a collection of monkeys, or a cage of snakes, and such like things. I have seen them all in the country. The exhibition of the Punch and Judy show too is for public amusement, is it not? If any one thinks proper to take a Punch and Judy around on exhibition and he excludes me, have I a remedy? But if he excludes an African, does he not come under the penalty and forfeiture of this bill? Is he to be arrested for so doing and taken off to the places where United States courts are held by a United States marshal because he happens to prevent an African from seeing the exhibition of his own Punch and Judy? You may go through the whole catalogue of amusements and any one of them may be brought within the provisions of the bill in the opinion of a United States marshal, or of a United States court, or of a United States grand jury or petit jury, and of the individual who thinks that he was aggrieved by being deprived of what he thinks a "public amusement," and not specified in this bill. Do you not think that is too indefinite for a bill involving penalties of this kind? Do you not think it is loose, imperfect in its details, when such language is used as that which nobody can precisely understand or define? If the honorable Senator from New Jersey was in his seat I would put the direct question to him, so that when these people travel through my State we may understand what kind of a construction a republican would give to these words in order that we may have some means of defense if any of them should be arrested for a violation of the provisions of this bill.

Now I ask gentlemen whether that is not most extraordinary language to be used in a bill of this kind—"theaters, and other places of public amusement?" Some people think one thing is an innocent amusement in one State that by others may be considered a crime in another State. One thinks that it is a matter of great merit to be engaged in one thing in one State that is a great offense to the people in another State. Instead of some things being amusements in one State, they would be grievous offenses in another, depending entirely upon the views held by the people in the respective localities, as is witnessed in the laws of the States. And so with the different communities in a State, that which may seem innocent to some is a sin to others. Therefore I think, without dwelling any longer here, that it all shows the character of this bill and its sweeping intention, its grasping spirit, that there is nothing in the comprehensive language of this bill that is to be left untouched in the discretion of the United States courts or of the individuals who may complain to them.

But, Mr. President, let us go back and look into the principles involved in this bill and into the propriety of such legislation. I said that never before in the Congress of the United States had there been such an earnest effort made to legislate upon these questions; nay, I go further, there has never been such an effort made in the States to do it.

Inns we understand. They come to us from the far past, whereof the memory of man runneth not to the contrary, defined and regulated by the common law. We understand the meaning of the term. Those peculiar legal characteristics of inns arose when countries were sparsely settled and when it was important that responsible individuals should at all times be prepared to receive the traveler, a stranger, weary and distant from home, it may be. The innkeeper held himself out to the public as a fit person to receive the traveler, and the law required that he be as good as his word. Not only did the

law do this for this purpose, but in taking cognizance of him in this respect it was directed to other purposes, that of raising revenue. Innkeepers were taxed, or licensed rather, not for the privileges only of accommodating guests, but for the privilege of selling spirits and other things out of which they chiefly made their money, and in this respect put upon the footing of any other licensed dealer.

Any one can establish an inn; any one can have his house upon the way-side. It is his common right as a citizen to do so. The idea that it requires the power of law that I may be permitted to take in the traveler in my house and charge him for it, that I am to be permitted by law to afford you board and lodging, the idea that it requires a law to establish in me a right of that kind, is perfectly absurd. I derive no such right or privilege from government. It is a natural right, and which is entitled to the protection of the Government and ought to receive it. It is my private right, and not being against public policy I am entitled to enjoy it. If there is a right that is natural and that belongs to me because I am a citizen and entitled to the protection of the laws, it is to transact my own private business in my own way without the interference of government so that I do no injury to others. Have you not a right, Mr. President, has not every person a right, to carry on his own occupation, to secure the fruits of his own industry, and appropriate them as best suits himself, as long as it is a legitimate exercise of this right and not vicious in itself, or against public policy, or morally wrong, or against the natural rights of others? As much so as for the shoemaker to make shoes or the blacksmith to shoe horses or make plows. There is no difference between the two. A man has an equal right to keep an inn; and when you undertake to say that because inns are licensed establishments they derive their existence from government and that therefore they are an institution under the regulation and control of government, is to me thoroughly absurd. Indeed I have always looked upon the common-law appanages—that is, the rights and responsibilities of inns and innkeepers—as by-gones, fit probably for the age which gave them origin, and seldom or never applied now. Your inns now, your hotels, your taverns now are licensed. But why? Not simply because it is an inn, hotel, or tavern. Not in order that the keeper may have the privilege of selling provisions or drink or providing lodging or of generally entertaining people; for these I think are not now, in this country, at all events held to be matters of government, and especially of the General Government. These are things that belong exclusively to the people and are of their own private concerns, but it is because the Government is interested in taxing this class of people for the purpose of raising revenue, and indeed many of the States raise the mass of their revenue from this sort of taxation. That is the whole of it; from antiquity to the present period of time the main object of the license system was revenue. It is not that the Government has conferred any right upon you by authorizing you to sell the articles of your own or other people's industry or the productions of your own farm. Government has nothing whatever to do with it other than to impose taxes upon your lands, your incomes, or your occupation, or whatever else it is authorized to tax, and in the manner it is authorized to levy it. The license system, in this country particularly, is for revenue, and has for its basis the objects of revenue; and this idea that because a theater is licensed, because a hotel or a saloon or an oyster-house or a store of any kind is licensed, therefore that the business is of such a nature that it cannot be carried on without the direct and written authority of government, with a license to do so, is a great mistake. This license is a device of the State or General Government to get revenue, and never before was it attempted to be used for any other purpose.

I can do all these things; I am entitled to do all these things by virtue of my natural rights; and when gentlemen assert that a license is a privilege, it is a great error in language and in fact. A license is a tax instead of a privilege; it is a restriction instead of a grant. I have a right to do these things, and Government interposes to restrict my right either for the purposes of revenue or otherwise; and because Government interposes to restrict my right in order to derive a revenue or for other purposes, if you please, from the occupation which I may think proper to pursue, Government undertakes to assume, as it does in this bill, to assert that because it does this it has therefore the right to regulate the details of my occupation or business. Because the Government imposes a tax upon a farm for the purpose of deriving a revenue, therefore the Government has a right to regulate the details of my farming operations! That is the force of the argument; and not only that, but these taxes for license are not imposed by the Federal Government nor intended for the benefit of the Federal Government; but are imposed by a State for its own subsistence or support and; because the State taxes these pursuits and issues licenses to them, not as theaters and inns, &c., and in this way takes public cognizance of them, it is contended that the Federal Government has the right to determine how these people shall conduct their institutions or places of business, how innkeepers shall receive guests, and of what kind, and how managers of theaters are to receive the pleasure-seekers who throng their doors, and of what kind.

So far as I am concerned, in reference to inns, I would brush away all the old common-law notions that attached to them hundreds of years ago and that gave to the books pages upon pages of law. The old common-law rights and responsibilities of innkeepers, while still in the law good and applicable, is being practically discarded every day; so that there is hardly a case known in the books at this day in which the responsibility of innkeepers has been involved in any suit for not receiving guests, except it may be under the kind of legislation now here attempted in this bill. It is a thing of the past; and if this bill is passed the States ought to change the common-law rule and put inns on the same footing with other common branches of business. Competition is the ruling spirit everywhere, and innkeepers and hotel-keepers now are only too anxious to get guests. In the days when those rules grew up, when they were situated on the by-ways and in the forests of England and of Italy, infested by brigands, it might be considered necessary for the state to superintend these establishments and see that responsible men were not only in this business, but that they were obliged to protect and secure travelers against the dangers and perils that beset them in making their slow progress, and in some degree upon the same principle that we have armies and forts in the Indian Territory or along the highways through the unsettled country. Things have altogether changed and we live in the period where motives mainly prompt, and not the enforcing power of law. I could appeal to any lawyer in this body whether he knows of a case in his own knowledge and experience involving the responsibilities of an innkeeper—not for losses by his guests when under his roof, those are questions that may arise as well in the case of individuals entertaining any one as to those cases arising against an innkeeper under the common law—but I mean a suit upon the ground that the innkeeper has refused to take in a guest, when according to the common-law principle he is obliged to take who comes in a fit condition and with means to pay. Competition has pretty well settled all these questions as practical questions. Hotel-keepers are anxious to get guests, and you have everywhere hotels and inns prepared to accommodate the traveling public. They, like all other classes in business and like all other occupations, are always too intent to accommodate one than so to involve themselves in trouble.

This bill directs that a person shall be responsible to the penalties and forfeitures under the law if he shall refuse a colored man the privileges of his inn. Even stringent as the common law was in regard to inns in the reception and entertainment of travelers generally, still the inns might take certain classes of people and refuse others. I have a small book here which I just got from the Library, from which I will read:

> The innkeeper may, however, set up an inn for the reception of particular classes of people and is only bound by what he publicly professes to do in this respect.

I read from the Innkeeper's Legal Guide, by Tidswell, page 8, a standard work; it is true, very small, but that should not detract from its merits. Our hotel and inn-keepers everywhere have, if not expressly, impliedly set themselves up as entertaining classes of people. You undertake now to change all that; you undertake to say the common law shall be changed in that respect, that a man shall not keep an inn which shall only accommodate classes of people. We have inns that specially entertain Germans, others Irish, others French, others Italians, some sailors, and again others African. I know myself of an inn specially for colored people. There are in my own town churches for colored people, schools for colored people, masonic, Odd-Fellows, and other societies of colored people. Having their inn, should it be offensive to the white man that it is so? The white man does not feel aggrieved. There is not one who ought to feel aggrieved that there is a hotel for the colored man exclusively. He is there in his own hotel free in his own enjoyments, secure in all his rights as any other in any other hotel under the law, and better off in every respect in accommodating himself to his wants and comforts without the restraining presence of white men. He can enjoy more of his own kind of comforts in a hotel of his own race, color, and current of thought and of feeling than he could possibly in the hotel of the white man; and it is a somewhat remarkable fact to me that there are four millions of these people, many thousands of them in this city, thousands of them in New York, Philadelphia, and Baltimore, many of them intelligent and industrious, and naturally apt in such occupations, and yet that they have no first-class inns or hotels for themselves. I know of none even in this city exclusively or even partially appropriated to their use, where, if anywhere, the experiment could be made with success. There are colored men in this city—one I know—who keep hotels, but not for their own class or race, as I understand. My surprise is that some of our white brethren in the North who have such a strong affection apparently for these people do not concern themselves in the establishment of some good houses for their reception and accommodation. It would afford them more facilities for travel, add very much to their comfort and enjoyment, and establish a self-respect for themselves by feeling that for such things they could not only depend upon themselves, but be free from a contact in mixed hotels that would be equally disagreeable to both white and black.

In speaking against this bill I do not speak against that race, understand me. I do not want to deprive them of a single comfort or of a single right. If instead of undertaking to enforce upon white people the association of the blacks, we would as good, well-disposed citizens of the States make the effort to introduce and encourage separate establishments for these people, the creation of schools, the building of churches, the establishment of hotels, and so on, how much more would their comfort and peace of mind be everywhere increased! You will not do that; you will not spend a dollar to help them build or to encourage them to build a respectable hotel, for illustration in

New York, for their accommodation. You will not spend a dollar for the establishment of independent schools for them anywhere, either North or South. Upon the contrary, you must force them upon white people and the white people upon them where their incompatibility of temper, culture, views, notions, and prejudices comes in hourly conflict, and which does good to neither, but injury to both.

If we would look at this subject calmly, dispassionately, and from the proper stand-point, there could be no trouble in securing, I believe, the welfare of the colored race far, far beyond anything that forced association and contact can ever do, and especially by the imposition of fines and forfeitures, and more particularly still by placing it in their power under the law to sue upon every fancied or real grievance of this kind that they may endure, from time to time, at the hands of the people among whom they live.

But I was speaking about inns. Why limit this bill to inns? Why is an inn that extraordinary thing which requires legislation here? Everywhere in your counties, in your towns, in your cities, you see hotels and inns, and everywhere they hold out an earnest desire for guests. Why limit a bill of this character to inns? Why not go a step further and apply the principles of this bill to other like occupations? Why not apply it to eating-houses? An inn, a lodging, you may get anywhere; and without any intention to reflect on the colored people, it is not lodging they care so much for; lodging is a small matter to them compared to other things. Give the genuine negro a bench, or if not that the floor, and, with his feet to the fire, he will sleep and be content. But food is the first thing; without that he wastes, and fades, and wilts. You have eating-houses elsewhere. He cannot go to an eating-house under this bill unless it comes under the general generic words "other places of public amusement." Then oyster-saloons you have everywhere along your streets. Colored friends are as fond of oysters as other people. They are not allowed to go into oyster saloons under this bill. Why not, I would ask my honorable friend from Indiana [Mr. PRATT] who undertook to advocate the provisions of the bill the other day? But stores, grocery stores, where they can get bacon, and flour, and lard, and whisky—that is in the days of whisky—and tobacco, and sugar, and molasses—why not include grocery stores? You have them all along your streets. An inn, an innkeeper is picked out by this bill, the last place in the world that colored men would think about when seeking their creature comforts—and it is no reflection upon them in saying this, for I do not desire to reflect upon them; the race is not offensive to me let me say, and I desire their comfort as much as you do, and their happiness, and the security of their life, liberty, and property, and I never in the days when they were bondmen failed in any act of justice or of humanity to them. A colored man may go to a store, and the store-keeper can say, "I do not want your custom; I will not sell to you. To your race and color I object, and you must leave my store." Why is this? The store-keeper is not embraced in the provisions of the bill. Are not stores licensed as well as inns? There is not I presume a store in any State that is not licensed by the State—not, let me again observe, to give them the privilege thereby of disposing of their wares, but with the object of securing revenue to the State upon trade; not a right granted or conferred.

Then your shoemakers. Negroes want shoes; the shoemaker may decline to sell them shoes, and the tailor may decline to make clothes for them. Are not these things as important as lodging in an inn? Butchers may decline selling them meat. And yet none of these are embraced in the law, and from these the colored man is to get the very things he most wants and must have; but the poor, isolated, generally good-natured innkeeper, out of all the numerous businesses and occupations going to the support of life, is to be picked out by this great General Government; and upon whom is to be exhausted its mighty power, and with what result? Some pestiferous creature in the neighborhood after this bill is passed, takes offense at an innkeeper and he puts some mischievous negro on him for lodging, and when there are other guests in the house he of course refuses, and is arrested and must pay the penalty of the law. And these are the only kind of cases that will occur; for a well-raised negro, as a general thing, knows his place and will not obtrude where he may not be welcome or desired, and exhibits in this respect more consideration and good sense than those who by such legislation incite him to different conduct. Very few cases of this kind in good faith will ever happen. But in the other things I have referred to, and where there may be a necessity for life itself, all these are left upon the outside of the bill. Do not these come within the province of the fourteenth amendment just as well as inns? Why not make your bill coextensive with the needs of the existence of the colored man, commencing with the shoemaker or butcher if you please, and going up to the inn, which at best is but a comfort and not a necessity?

Furthermore, the colored man has a right to live in a house, that is if he can get one. One may refuse to rent him a house because he is a colored man. Why not make that an offense? Though the house is taxed, yet may it be refused. A colored man may call on you, Mr. President, to rent to him your house; it is known to be for rent; it may be advertised in the paper for rent; and you may tell that colored man, "You cannot have my house because you are a colored man," and the fourteenth amendment leaves him helpless as against you, that is, so far as this bill is concerned, for it does not deign to notice this kind of injury. But in the case of an innkeeper refusing to admit or receive this colored man the fourteenth amendment by virtue of this bill takes possession of him and hands him over to a United States marshal and to the Federal power.

This is the first time in history—it will be a matter of history—that the idea has been presented here that this great Government has got to go down into the States and take charge of the innkeepers and see that they demean themselves as directed by the high and potent powers here toward such a class, whether it be African or Chinese or European or any other. It is the most extraordinary thing not only in our political history but in our national history, for this sort of legislation will not only induce new thoughts in American politics but will oblige our people to enter into the study of the races and color of men.

Now we leave inns—and into all the substantials of life, from and down through butchers, shoemakers, tailors, store-keepers, to tenements, through all these in detail we have gone—and you only reach one by your bill, and that one the least important of all to the colored man.

And now let us come to the next thing in this bill, "theaters." Now we come upon a different theater of thought. A theater is not, and it must be confessed by the friends of this bill, a substantial of life. Nobody depends upon a theater as he does upon a butcher or upon a tailor or upon a shoemaker or upon a roof to cover him from the inclemency of winter or the heat of summer. The theater is for amusement. The theater only came under the regulations of law because at one time it became so licentious in the opinion of moralists of the day that it was thought to be necessary to make theaters the subject of legislation in that respect, but in no other. They were at that day and are still discouraged and discountenanced by a great many people who think no good of them. I might be induced to discuss that question of morals with the honorable Senator from New Jersey. My understanding is that he is a strict churchman; he has the reputation of being so, and very confirmed in his religious views and notions of religious duty; and with this understanding I might ask of him, does he think it an advantage to the colored race to force them by law into theaters, and for the only reason that white men can go to them? A great many Christian people, I apprehend, when the time comes for discussion—I know there are some Christian people in my neighborhood who, I do not doubt, would consider it a very great advantage if there should be a law passed where it could be legally done, to prevent any one, white or black, from going to a theater. The honorable Senator from New Jersey, a Christian gentleman, undertakes, on the contrary, to put into the form of a United States law that is intended to be the paramount law in the thirty-seven States, and in every part of them, to be enforced by the whole power of this Government, the legal sanction of this great Government that theaters are great public institutions, and that the negro must and shall possess the same right to equal admission into them that white men enjoy. I know there are Methodists, Methodist preachers, who will not approve this part of the bill even though it be intended to favor the colored man. I have been at many camp-meetings n my day, and in Methodist churches, and have too often heard theaters denounced to suppose that this part of this bill will ever receive the sanction of that class of the community. What is being done in a theater? What do you call a theater? What kind of a theater is it to be? Is it of the kind in which Booth is now performing, or is it of another kind? There are many kinds of theaters—as various as there are tastes and fancies, and to suit all tastes, high and low, pure and vulgar.

What kind of theater does my honorable friend mean that he intends his unsophisticated colored friends to attend by making it a high crime against the Government for excluding them from a theater that perhaps even a vulgar white man might be too decent to attend? In opening theaters by law to the colored man, I would suggest to the honorable Senator that the law ought to define the kind of theaters.

Think of it. Why, Mr. President, this is trifling with great subjects. Theaters! Here is a bill providing that our colored friends be protected in the enjoyment of theaters. I would advise them better. I would advise that they had better stay away from them altogether, save their money, expend it on their education, on their families, and in the acquisition of property. If you wish to go anywhere, go to churches; there is your natural place. I do occasionally go to theaters, and I am not one of those disposed to condemn them in gross; many of them, the most of them no doubt, are of a high order, but on the other hand some are not fit to be attended; and my honorable friend from New Jersey does not undertake to prescribe in his bill for the difference or even recommend what kind his colored friends should patronize. It should be confined to theaters of course inculcating moral influences. If this bill passes, I shall probably take occasion to talk to some of our Methodist and Presbyterian friends and friends of other religious denominations upon this subject. Why do you not, I inquire, force the colored people into churches? Churches are not mentioned in this bill. The sexton at the church door may exclude people of color. He can tell them at the threshold: "You cannot enter; your color and your race is the objection, and you cannot enter this church." Well, that in such a case would seem hard indeed; but still it may be done. This can be done with impunity under your law. You do not undertake to punish in such a case, do you? No; churches are not within the comprehensive spirit of the fourteenth amendment, but theaters are. Churches, Sunday-schools, are

not embraced in it. Have you provided for Sunday-schools? We know you have Sunday-schools in this city, everywhere, with competent and zealous teachers, and every assortment of books. Yes, magnificent Sunday-schools. Does the colored child go there? Is it received there? Admission can be and is often not allowed. This bill does not provide for Sunday-schools, nor law schools, medical schools, agricultural schools, and societies of any kind, literary, scientific, and others. The places where the colored man could be edified, where he might receive some kind of moral and intelligent instruction, where he might derive some general or specific good, are not to be opened to him by the fourteenth amendment. These are not worth your consideration; but, if you can, only get him into some outside theater, under the terror of your bill; not such where Booth or Salvini plays, for there he will not get, as there never will be room enough found for him there under the fourteenth amendment. He may under this amendment be able to get into some of the variety theaters—theaters comique and such like theaters—where the pressure of the fourteenth amendment might be more sensibly felt.

This is a very strange subject, and we must see the folly of the bill in its thorough absurdity. You may under this bill be able to force him into these variety theaters. The people at the head of these theaters might have a greater moral sense in regard to their duty than even Congress itself as developed by its legislation in this bill, and might think that they were not fit places for the congregation of people of color, and they might be disposed to refuse admission to them upon the highest plane of motive. But no! You say in your bill that the negro must go where any white man is allowed to go, however vulgar and indecent that white man may be. You do not say that a colored man shall go where a moral, delicate, sensitive white man would go, but you declare that he shall go wherever any immodest, impure, white man can go. The proprietor of such a theater might be disposed to say when a colored man comes for admission, "You are a colored man; you ought not to come here; I will not allow you to come in; it is not a fit place for you." But this bill announces in unmistakable words that he shall go in or the proprietor shall be liable to pay $1,000 to the Government and $500 to the individual for refusing to him admission. And this is the kind of legislation proposed by the honorable Senator under the fourteenth amendment. That is wielding the fourteenth amendment to some purpose. Was the honorable Senator here when that fourteenth amendment was passed? Did ever such a range of discussion take place in the debate upon that question? Inns and theaters! I am sure that the men of that day would have made some provision in the fourteenth amendment to protect the colored people and would not have left them defenseless against the vices of the whites, instead of attempting to force them upon the association of the white man in his own selected enjoyments or amusements.

Elijah passed by him—Elisha—and cast his mantle upon him. The Senator stands here with this bill in his charge. I observe the beginning of his speech in which he regrets that the master spirit of this bill had departed to the eternal world and was not now here to witness the final triumph. The mantle of Elijah was cast upon the honorable Senator from New Jersey, and this bill, changed though from the original bill in every word nearly, from the enacting clause throughout all stricken out, is thus attributed to the paternity of the deceased Senator Sumner. I regret much, Mr. President, that my honorable friend from New Jersey took upon himself the championship of this bill. I regret it because I do not believe that he is a fanatic. I do not think he is because he comes from the State of New Jersey. New Jersey lies in a liberal latitude. Men, ambitious men, cannot well afford to be fanatics in New Jersey. If they should come into the Senate of the United States and here betray an ill-timed fanaticism the people at home would mark it and soon close their career. The people of New Jersey are held to be a liberal, enlightened people and far removed from all species of fanaticism. I am not going much further North for people free from such a political vice.

This is the bill, Mr. President. It is now near three o'clock in the morning.

Mr. CONKLING. Is that in the bill?

Mr. HAMILTON, of Maryland. That is not in the bill, but it should be, so as to have it appear that at three o'clock in the morning, or thereabout, a bill was being passed by the Senate of the United States, by the Senators from thirty-seven sovereign States, to enforce, among other equally strange things upon proprietors and citizens in the States the obligation of admitting people of color into their own theaters; their own private property, dedicated to their own purposes, and used for their own private ends.

Mr. President, it is all wrong. Let these people attend to their own theaters and their own business, and let them admit whom they please, or no one if they please. I am sure I would take it as no offense to me personally or as a wrong done to me in law, for certainly there must be a reason for such a course. If I went to one of them and should be refused admission, I do not think I would resort to the fourteenth amendment to avenge such a wrong. I think I would rather say, "Well, if you do not desire my money or my presence you can get along without either, and I will keep the one, and dispose of the other possibly in a more comfortable way." Why should we be sitting here to-night attempting to enforce upon theaters the admission of our colored friends, when our real desire ought to be to keep them away generally from such places? I believe the honorable Senator himself would sooner meet them at church than there. I would sooner see them at a camp-meeting, for I like to see them enjoy themselves, and they can do it to perfection at a camp-meeting, and with no harm to any one and with possible good to them.

I am opposed to all this. I think it all wrong. I now see the honorable Senator from New Jersey in his seat, and as I had not the opportunity before I wish to direct a question to him, and I desire him to respond if he will be pleased to do so, for this is an important matter to the people everywhere and in Maryland particularly. He is off living a considerable distance from the Capitol, but we live right here under the shadow of its stately dome, and we have radiating influences penetrating from this capital to our colored people. What our colored people may not know or think of in Maryland is soon taught them by the influences here, and especially if it be for mischief. Emissaries from here are not wanting, both white and black, to impress that class of our population against us and to put notions into them that end in no good to any and give to all a deal of trouble.

We try to protect our colored people against wrong. They are generally an orderly people. I appeal to Senators whether they ever heard since the war or before that the people of Maryland ever denied any right secured to the colored men by law. There they are just beyond the line, within the view of your Capitol, in close contact with your people here, hearing continually the inflammatory harangues of their pretended friends, besides emissaries from here traversing the State and making all kinds of speeches to mislead their minds and inflame their passions. Yet did you ever hear of any studied attempt to make trouble in which the right of the colored man was ever infringed? No; he is there as secure as he is in the State of Massachusetts; he is there secure in the enjoyment of his churches, his schools, his societies, his hotels, and of his cemeteries too. He is there as secure in his life, liberty, and property as any man on earth. But turning from this and returning to a provision of the bill upon which I commented before, I wish to ask the honorable Senator, as I now see him in his seat, a question for general information, for we live, as I have already said, in the power of the people who are to execute the provisions of this bill. I wish to ask him again what the bill means in this respect. It says:

Accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theaters and *other places of public amusement.*

Will my honorable friend be pleased to define what those "other places of public amusement" are? Will he not deign to answer? That is in the bill, and it was put there for something. Let us know what it means, for the benefit of my own constituents if for none other, for it is my wish that they be put upon their guard. I would not that any of my people should violate the law with their eyes open, nor that they should do it unwittingly. I do wish that the Senator would give us the benefit of his construction of this provision, so that when our people shall be disposed to get up any amusement they shall at the same time be more able to know whether the exclusion of the colored man would make them liable to the penalties and foreitures of the bill. What is a "public amusement?" Why have the words there, unless you know what they mean or unless they bear a precise meaning? Is it a menagerie, I would inquire? Is that a public amusement? True it must have generally a license to exhibit. The license, however, is intended for revenue to the State, not to add to the natural right to follow a lawful calling. The honorable Senator from New Jersey in his speech has impliedly if not directly said that because a theater is licensed by the State, it is therefore a public institution and has its being given to it, and being a public institution and existing by virtue of State authority the United States can embrace it in its legislation under the fourteenth amendment.

Not so; they are no less private enterprises because they may be taxed or licensed, and especially when licensed for the purposes of revenue.

Menageries may be licensed, but should this prevent one from taking around his lions or tigers or zebras or monkeys, and admit whom he pleases to see them, or no one if he so chooses? He can do the latter if he chooses, but if he should exclude a negro and admit others he is to be brought under the provisions of this bill and is to be made liable to all its penalities. Take Ward's famous wax-work show. That might be considered, especially in Georgia, a public amusement, and yet exclusively his own property; but is it not embraced in the fourteenth amendment if anything of the kind could be?

Mr. President, I want to know what is the meaning of this phrase, "and other places of public amusement," because our people are in the habit of attending the menagerie when it comes to our part of the country, and particularly the circus. If there is anything on earth that will bring out the people it is a circus. Politics may not do it; religion may not do it; but a circus never fails to do it. You find the people there from all quarters of the county. Now we ought to deal fairly with the persons who come round periodically for the amusement of our people by advising them clearly whether they would get into trouble by refusing to admit our African friends to a circus, and be liable to the provisions of this law. I do not want it to depend upon a United States marshal, or a United States grand jury, or a United States petit jury. I want some construction placed upon this language by the honorable Senator from New Jersey, who is the champion of this measure and understands all about it. He

changed the whole Sumner bill and put this in his own words; and he did it for a purpose surely. And I want the purpose; I want the intent. Does it mean a menagerie? Does it mean a circus? Can it mean anything else? Are there any other places of public amusement in the country to which it would apply? If there are I would like the Senator to name them. In my part of the country cock-fights and horse-races at one time were carried on and were places of great popular resort. They both flourish in certain parts of the country, and the latter you may say everywhere. Are they public? You have generally to pay admission to either. Are those "public amusements?' Does the honorable Senator think that both or either are embraced in the fourteenth amendment and comprehended under the term "public amusements" in the bill? If so, why not say so? They certainly are as much so as theaters.

My honorable friend from New Jersey considers it a very great hardship for an African to be excluded from such places, and he proposes to impose penalities upon those who exclude him because white men may go to them. I am satisfied that a religious community would rather say that both races had better be excluded from such places; that if Congress did undertake to exercise any power over the subject under the fourteenth amendment, it should be rather to exclude both than to force either into them. But no; you say we care not what kind of amusement it is, if it is a "public amusement," whatever that may be in all its various moods and tenses, and a white man goes there, a negro is bound to go.

What else? Are gambling-houses "places of public amusement?" They were so considered at one time, and until very recently held in high esteem at watering places in Germany. They paid immense revenues there, and were licensed in this country at one time, though now generally suppressed by statute. Why, sir, you remember when a boy that your race-courses were filled with gambling-booths and the town full of embellished gambling-houses. They are under the ban now, and open now only at certain places, and therefore I suppose the Senator from New Jersey would say that they were not legal "places of public amusement," and not therefore within the fourteenth amendment and the provisions of this bill, so that exclusion from them would not be obnoxious to the law. But all this depends upon the sentiment of the times, and what to-day may be within the fourteenth amendment may on to-morrow be free from its power, for nothing has changed so much as the character of "public amusements." Therefore the importance of specific definition in order to show what these "other places" are, the refusal to admit a negro to which a penalty is imposed, not one but two. He has his own private grievance to redress, and then the Government has its power and dignity to maintain. The party convicted may be made to pay $500 to one and $1,000 to the other, and be imprisoned besides. Think of it! If Senators around me know of any other places of public amusement than those I have mentioned I would that they name them, for a debate sometimes is used to illustrate the objects of the bill, and then, too, we may be able to be more definite by adding to "theaters" these other places by name. If the honorable Senator from New Jersey knows of one, I should be glad if he would name it.

My honorable friend knows what theaters are. He has them in this bill. He understands the meaning of that word, and it is defined. He has been to theaters. But I think it will give him some trouble to specify these "other places of public amusement." They should be specified in a fair bill.

I want to see some of the indictments, when they are drawn under this bill, against persons charged with refusing admission "to other places of public amusement" to persons of color. If any indictments are ever drawn under this bill I should like to see one, so that I might have the satisfaction of knowing what kind of amusements they were prevented from seeing and which the law enjoined they should see.

But, Mr. President, "cemeteries," it appears, are within the purview of the fourteenth amendment. My honorable friend from New Jersey understands all about cemeteries, and so do I. We all know something about cemeteries and appreciate what they are. They are awaiting the whole of us. They have embraced the generations that have passed and will receive those that are to come. As there is trouble about everything, so there is beginning to be a little trouble on this subject in the city of New York. There are people there who are for dispensing with cemeteries entirely—cremation is to supply their place. My honorable friend, from his pertinacity in pressing this bill, does not anticipate that that process will supersede cemeteries, for the present at least. But as general legislation as to private matters generally destroys or injures the subject, it would not be surprising to see a resort to cremation; for I question whether the gentleman could, with all his legal skill and attainment, bring it within the fourteenth amendment. I believe there has never been a complaint by a human being on earth that he could not or would not be buried. [Laughter.] My honorable friend from Mississippi [Mr. ALCORN] to-day—Senators will bear me witness—for nearly half an hour was complaining about the trouble that one of our African fellow-citizens might have in obtaining burial. It grieved the honorable Senator to think that a colored citizen might be denied burial, and no remedy for it under the law. Sir, I think we are often in too big a hurry to bury. Instead of denying burial, we sometimes overhurry ourselves in the duty, and bury people alive! Dead people are the last on earth that we want around us. Mr. Laurens, of South Carolina—I think the Laurens who was one of the negotiators of the first treaty with Great Britain—was so fearful that he might be buried before he was really dead that he required in his last will and testament that his body should be burned; and it was burned. No, gentlemen, do not be alarmed; I assure my honorable friend from Mississippi [Mr. ALCORN] that our African fellow-citizens will find room for burial. I assure him that they will find ground for burial. You need not pass any law by the Government of the United States to impose a forfeiture upon any community or upon any one for refusing to bury anybody. They will all be buried.

But my honorable friend from Mississippi is afraid they are not going to be buried in the right place; he is tenacious upon that point. He speaks feelingly about his own former servants. I know the relations that exist between servants and masters in the South; I know it from experience and observation both. The Senator is fearful that possibly his servants might not be permitted to be buried in the same grave-yard with himself. In that there appears to be trouble. It is not so much that you are to refuse burial, for nobody is going to do that, but that he may not be buried with white people. My honorable friend will not leave a dead slave any more than he would leave a dead freeman in his house very long unburied; nor would any one else. But my honorable friend is afraid that he is not to be buried at the right place to suit either himself living or the African dead. He wants to be buried in a cemetery, and in a cemetery, too, where white men are buried. He has picked out his burial-ground. Some men do pick out their burial places before they are dead and erect their monuments, and commemorate their achievements, for while living it can be done accurately, and one is expected then, if ever, to tell the simple truth. I am not one of that class, Mr. President. I leave that to others who will attend to it. I have no doubt the honorable Senator from New Jersey, although much moved for the African in this matter, even so much that common admonition to the people will not do, but the force of law must be interposed, will leave all this to his surviving friends. But the colored individual is to be cared for; he is to select his own burial place in some cemetery, or his surviving friends for him, and if it be refused and he be not buried in that cemetery but in some other portion of mother-earth, under this bill then what? The United States Government is to get $1,000 and the heirs of the colored individual are to get $500; $1,500 involved in this single act! You do not make any provision for digging that individual up and interring him in the cemetery where he wanted to lie. The wishes—it may be the solace—of the immured are to pass for nothing; the indignity of refusal and the contempt of color or race are to pass for nothing.

There is to be no redress for all this by the interment by force and at the bayonet's point just where the deceased or his surviving friends fixed his place of burial, but as the equivalent for all is the Government to get $1,000 and the heirs $500? Why so eager for money and with so little regard for the wishes of the deceased? Why not the United States take enough of the penalty to disinter the deceased and bury him where you say he should lie in the cemetery? Bury him, if need be, in that cemetery with United States soldiers forcing the gates, and with drums beating and with colors flying. You can do this as well, and it is in just as good taste and is just as much within the fourteenth amendment and certainly more in the interests of equality before the law, for then he will lie as low among white people as death can bring him down, as that you shall require United States courts, United States juries, United States marshals, and United States penalties and forfeitures and imprisonments to compel others to do it. Do this and vindicate practically the dignity of equality in burial—not put your $1,000 in the Treasury and $500 in the pockets of the aggrieved heirs and leave the deceased to repose in unbidden ground and his ashes to commingle with earth not consecrated to liberty and equality. Could a more honorable duty be assigned to the United States soldiery than this? As it is certainly more martial and stirring and therefore the more desirable to our colored friends than the paltry resources of penalties to effect the same thing, I assure my honorable friend from Mississippi again that there is no trouble in the final thought. We will all be buried, and sooner than we want to be probably. There has been no trouble in the past, there is no trouble in the present, there will be no trouble in the future; and the Government of the United States might as well leave the whole subject to the people who are to deal with men as they die and attend to it all in a manner satisfactory to themselves and to the friends of the deceased, from the burial to the settlement of the estate and the final distribution of his effects, and the Government will not be the worse for it.

Now, Mr. President, I ask you, is it not absurd for the Senate of the United States, at half past three o'clock in the morning, after a long day's session, to be sitting here and discussing the subject of burial, and that, too, under the fourteenth amendment, which has not the word "race" or "color" or "servitude" in it? This whole provision on the subject of burial is based upon that amendment and upon nothing else, and which from beginning to end does not contain the term "African" or "color" or "race" or "previous condition of servitude;" and yet here we are at this hour of the morning discussing the burial of an African who may be alive now in the gallery and now listening to us, and in his untutored mind with what kind of feelings you may well

imagine? The Senate of the United States to be engaged upon such a subject! It is a grave subject, true, especially this portion of it; but here we are seriously engaged upon the details of such a bill.

Now, sir, I speak upon this question just as I think it is right for me to speak. I speak about these matters now, and I am going to talk about them upon proper occasion when I gather my constituents around me at home in my State. I can talk to them upon this question probably better and more effectively than I can here. I shall take up this bill and look over it with them, and I know I can talk to my African fellow-citizens as well as to my white brethren upon some of the details of this bill.

Mr. CONKLING. You will be obliged to do that, because that will be a place of amusement when you come to do that. [Laughter.]

Mr. HAMILTON, of Maryland. Then I suppose if I should make any distinction or show any favor at all in my remarks to my white brethren as against my African fellow-citizens I would be at once grasped by the strong arm of the Government of the United States, if not under the provisions of this bill under the provisions of some other bill that may with just as much propriety be passed under the fourteenth amendment as the bill under consideration.

Now, Mr. President, these people, our colored friends, are not a bad kind of people. The trouble has been that the carpet-baggers and such sort of persons have succeeded in arraying them against the mass of the white people; and there lies the serious difficulty. Let us alone, and we will get along well enough ourselves. It is our interest that they should be made valuable to us; it is our interest that they should become expert laborers; it is our interest that they should be educated; it is our interest that they should be moral and industrious and prosperous. No one can doubt this, and feel it all, and will act in the end accordingly. We have one hundred and seventy thousand of this race in my State. We get along very well together. They have their separate schools, their separate societies, their separate social gatherings, their separate churches, their separate cemeteries. There is no abrasion, there is no collision between white and black; but if this bill should become a law, and this social contact is forced upon us, then comes trouble, and it may be with it wrong-doing; but surely the peace and order and the fitness of things now prevailing between the races will be disturbed if not entirely broken up, and to the detriment of the public weal and to the people of all classes and colors.

But my honorable friend from Mississippi [Mr. ALCORN] promised to do another thing in his speech this afternoon. I listened to that speech with a great deal of interest; it was an extraordinary one. It promised extraordinary results. In the first place, my honorable friend has announced upon this floor to the people of the North that unless they admitted the colored man into their famous colleges and schools he would march to the North at the head of eight hundred thousand of them—eight hundred thousand strong. I should like to see that array. Marshaled by my friend, I should like to see them march to the North on the high mission to take possession of Cambridge and Dartmouth and Yale! That would be a march indeed, and worthy the pen of Xenophon!

Mr. CONKLING. That would be a place of public amusement. [Laughter.]

Mr. HAMILTON, of Maryland. Yes, sir; the whole line of march I doubt not would be a place of public amusement. I wish my honorable friend from Mississippi, possessing the descriptive talents he does, had given us a description of his array. I know he would look well enough with a sword buckled to his side, and as marshal of the array. Falstaff at the head of his small array, upon another memorable occasion, "flatly" refused to march through "Coventry," an insignificant place; but how would it be with my honorable friend with his array of eight hundred thousand as he approaches the sacred precincts and sees in the distance the venerable piles of Harvard and Yale?

My honorable friend says that he wants all this accomplished and this bill passed in order that universal peace may reign in the land. Then we would have peace, he tells us. I should like to see these eight hundred thousand giving peace to the North; I should like to see them take possession of the colleges and institutions of learning there, in order just to see the sort of peace that would then prevail in that restless section. But we have another and a peculiar species of peace in the State represented so ably by the honorable Senator. He tells us they have equality before the law in that State; that they have there the very system which it is now proposed to impose upon the people everywhere by this bill. Has he peace in Mississippi?

Mr. McCREERY. "Peace reigns throughout the borders."

Mr. HAMILTON, of Maryland. Yes; peace reigns throughout the borders, but it is the peace of death. We have all heard the lamentations of the honorable Senator from Mississippi upon this floor before in regard to the condition of the State of Mississippi. I want no such peace. There they enjoy equality before the law; they have their mixed-school system; they have their theaters open to all; wherever the white man can go the colored man can equally go; the dominance of the colored race in that State secures this liberty and equality, and would therefore secure if at all practicable this universal peace held up by the honorable Senator to our admiration. With this kind of peace, painted as it is in the brightest colors, we will have nothing whatever to do, if we can at all help it: neither white nor black with us covet any such peace as now prevails in Mississippi.

Sir, we have peace in Maryland. Not the peace they have in Mississippi, in Louisiana, or South Carolina. Yes, this reminds me that there is peace too in South Carolina. The colored man has dominance there, and they have the peace he can give. He has everything in that unhappy State; he has power; he has control; he uses both, and with what results we all see. I suppose the man of color there has more peace than the governor of that State at the present time, though he be white as snow. There you see the governor surrounded by companies of colored troops, commanded by a certain Brigadier-General Nash, to protect him against officers of the State who would arrest him on the charge of embezzling the public funds, and of doing other things not less creditable! I call the attention of the Senator from Mississippi to the kind of peace that exists in South Carolina. We have no such peace in Maryland, where white men still bear rule; neither white nor black among us desire any such peace.

We live well together in Maryland; better than one would have thought. We have our separate schools, separate churches, separate cemeteries, separate inns, separate societies of all kinds. The State has appropriated, and with munificence, a large sum of money to colored schools, and sees to their organization and establishment. Our people, our democratic people—because I would that you remember Maryland is democratic—made a large appropriation for that purpose last winter. We live in peace with the negro, because we understand him and he understands us. He seems disposed to treat the white man with respect, and all concede to him his rights. As an almost universal thing he votes against us, it is true.

Mr. CONKLING. Then it appears he understands himself also.

Mr. HAMILTON, of Maryland. Yes; he understands himself as well as he can and as well as mischievous people will allow. But when we come to the other relations of society and life among us, as democrats we have no cause to complain. As a general thing he is orderly, obedient to the law, observes the decorums of society, and continues in the old way to make himself pleasant and polite; and here I must take the liberty to say a word to the credit of the colored people of my State as a class. We have quite a large number of them in my county, and I do not know of a single instance that I can now recall where any one behaving toward the negro as a gentleman was not in turn treated as a gentleman by him. I say that to the credit of our colored population. At the polls they vote as a mass against us. Their prejudices are inflamed against us and their fears excited. They are told by those who should do better that we are not their political friends, whatever else we might be in other respects; that we would reduce them to slavery again if we had the power; that we would limit and curtail their civil and political rights; that we are not willing to extend them political distinction and the honors of office; but with all I can say nothing against them, for their vote in the condition of the times is a fair one though it be a mistaken one against us; and they will continue to vote against us until they may, in the practical operation of the measures that their pretended friends have been and are now engaged in inaugurating, discover in the evils of such ill-timed and ill-starred legislation that their best and truest friends were those who now would seem to oppose them and their rights and interests.

The influences of this Capitol are great; its radiating influences are great. Why, sir, its towering Dome can be seen from nearly every part of my State; and yet with all the influences at work here, with all the blandishments of office and of place, with all the power of office-holders both here and in the State, with threatened violence and always with impending intervention by the Federal Government, when we had the opportunity of voting at the first election, when we were, in fact, really free and permitted to vote, the people of that State turned their backs upon all and demonstrated their love for constitutional liberty. Being democrats, of course, according to the rule laid down by the worshipers of Federal power, we were disloyal during the war, and for any time thereafter that such a charge was able to accomplish any party purpose; but finally the day of deliverance came, we all know with what pain and travail, but it came in the quiet, silent ballot, the weapon of a freeman's will. The freedom of that was sufficient to save the State where intelligent men could direct and control. Out of seventy thousand votes polled at the election the democrats had nearly forty thousand majority; and there was not a republican official from the highest to the lowest officer elected from one end of the State to the other. It was all done in peace and in good temper and for the public good and to save a State. And now, sir, on the day of an election, as the colored people are massed against us, thirty-five thousand white men must vote to neutralize this massive vote before we can begin to meet white men on a fair field for contest. We have got to beat thirty-five thousand colored votes before we come in actual conflict with white men. In so small a State and located as we are, it would appear hard to do, but we do it, and we have peace. We have peace in the broad sense of that term. Here you are right by us, within your sight and hearing almost. Do you hear of any trouble like that in Mississippi, South Carolina, or Louisiana? Do you hear of any trouble at all?

Democratic legislation has been just. The rights of all have been observed; and the just and natural relations of all classes have been regarded, and not a single wrong done to any. We have established our common-school system. We are just getting it fairly into operation. We have the experience of but some years. We commenced it before the war, and we continued it during the war the best way we could.

We are now expanding and improving it and supporting it liberally, indeed munificently. The Legislature at its last session appropriated $100,000 of the general fund derived from direct taxation to the education of colored children.

Now, I beg of you let us get along as we are, and as we best can; for we know better than you what should be done. All are satisfied. Has a petition from Maryland asking you for the passage of this bill been laid upon your table? There has not been a remonstrance presented here against any acts of injustice or of wrong done to anybody in that State. There is not upon earth a purer administration of justice than there is in Maryland. You have not got a single petition asking for this change in the school system there. Our people feel delicately on this subject, both white and black, where the latter understand it and are not moved by bad men. If you will go down among our disinterested colored people they will tell you that they do not want to be disturbed by such agitation. I know they enjoy the idea of having political power. They are impressed with the belief that if the republicans get power in my State they are to be elevated to office. They have got the idea, with only too many white people, that office-holding is a wonderful thing; that it not only pays well but that there is nothing or little to do, while it breeds importance and clothes with dignity, and that the great inspiration of man should be for office. Demagogues have instilled this into the minds of the colored people to hold their votes. They have thirty-five thousand votes in the State, a majority of the voters of the republican party, and they are made believe that they are to share the blessings of office in that State when republicans get into power there. They are now held to this party as almost with the chains of slavery; but the day, I trust, is not far distant when for their own sake and out of a manly pride for their own race, which they ought to be the last to despise, they will break the chains that bind them to their party-masters, more strongly in one sense than they were ever bound in their days of real slavery to their real masters.

Now, Mr. President, I propose turning my attention to the question of common schools. That is the serious matter of this bill. It is the one that affects us so much. I do not want the sentiments and principles enunciated by the Senator from Massachusetts [Mr. BOUTWELL] to be applied to our people and forced upon us. The policy of forcing mixed schools upon us, of forcing our children into schools with colored children, is publicly avowed. There is to be no choice. If desired by neither race it must still be done, says the Senator, to perpetuate or establish a principle. I care not whether it be right or wrong in sentiment, whether it should or should not be done as matter of principle; I say as a matter of policy and of philosophy the men who would do this are blind to the interests of both races. You can force this upon us; we can abolish our school system, and there comes the danger to all. The people will refuse to appropriate money to support the schools, and the consequence will be that our whole system will be destroyed and neither race will be educated. The poor children are obliged to go to these schools. Many of our people who have a competence send their children to private schools or have their own tutors. The mass of the people who send their children to these schools are poor.

These prejudices of race exist, and in the nature of things it ought to exist, as much upon the part of colored men as upon the part of white men. As I said before I neither hate nor despise nor depreciate the African race. It is a great race. My honorable friend from Indiana in his speech the other day spoke about these Africans as being pretty well off except as they were dwarfed by slavery! Was my honorable friend ever in Africa, so as to be able to distinguish between their condition there and here? They were two hundred years in slavery. I should like my honorable friend to go to Africa and see the difference between the people there even at this day and their African descendants in this country. They passed through the trying ordeal of centuries, but still I think the Senator would discover that it was to their advantage in making them in every respect better than their ancestors. They have emerged from rude barbarians to a civilized people, with all the aspirations of humanity now around and directing them in the world's being. That they have been an active power in the land no one can deny. They have rescued your swamps and peopled the South; they gave you at one time the control of the cotton market of the world. Their labor gave you power and wealth and enjoyment of every kind; they made the southern fields bloom in their luxuriant but subdued fertility.

Sir, I do not detract from that race. I would protect them and take care of them and of all their just rights; but the white man only can do it as it should be done. He is the moral agent to do it, and it is his highest duty to do it. He is their guardian, he is their protector, and ought to be. It is not to be expected that the black race in South Carolina, for example, can safely carry that State through her present ills and lead her on to her former prosperity and renown. I am for protecting these people against the blandishments of pretended friends or the encroachments of avowed enemies. We do it in Maryland, and I would that it was done elsewhere. They should be proud of their race and have respect for it in their conduct. They should not want—and they will not, I trust, when reason once more asserts its authority; they have too much inbred politeness; they have been raised differently by their former masters—ever to attempt to push themselves into association with white people, where the pride and instinct of race would repel upon the part of both. It is only those who are bent upon mischief that will do it. They will prove too sensible in the end, I hope, to press themselves upon white people when it is not in the fitness of things proper. They were taught the sentiments of men, and they possess the instincts of race, and therefore there is no danger in them, unless they are spoiled by the men who would use them for their own selfish purposes.

This bill would assert the dogmatic sentiment to them, "You must be as white men." If I were an African I would say no, just as being a white man I say, no. The Africans have the majority in South Carolina; they have the dominance in Mississippi, they have the dominance in the interior of Louisiana outside of New Orleans. They can control the public schools there. Suppose they exclude the whites and establish separate schools, would the white man complain? Would it be offensive to him? If they had the dominance in my State and should say to me, "You shall have the equal protection of the law, you shall have separate schools for your children, and your own teachers," do you suppose we would complain? But suppose on the other hand the negro should insist, "You shall go to our school; will be supplied with our own teachers;" teachers it may be of their own color and for your own white children; how could you feel, how should you feel in this condition? They can do that in South Carolina, in Mississippi, and in Louisiana to-day. Your pride of race would revolt. You would say "Give us our own schools, our own teachers, our own system." And why not so on the other hand with the negro? Does not his pride of race revolt when forced into schools where there may be no sympathy, no community of feeling, and consequently no progress in knowledge? So let the negro, no less than the white man, insist upon his own schools and his own teachers.

Let the colored people have their separate societies, let them have their separate schools, let them have their churches. We are not now considering any question of caste, but of race. When we speak of race, we mean the descendants of a common ancestry; caste refers to distinctions in society—two different things entirely. The spirit of race is a thing that goes back to the beginning of the world, and will continue down to the end; it is ineradicable; and upon principle it can be well sustained that race should be kept distinct and pure. The two races can pass along side by side in this country in their allotted spheres, and no trouble can ensue if the laws of nature be regarded at all. I was opposed to the acquisition of the islands of Saint Domingo and others by the Government of the United States, because I thought that as generations rolled by it might yet be that those islands will at last be an empire for the race on this continent, improved and cultivated as they will be by their contact with us in the peaceful relations of life, for it may be generations yet to come. They may there establish a government for themselves and among themselves, and thus become the redeeming agents of the tropics of this hemisphere. I look to the future for that result; and for that reason among others I was opposed to the present acquisition of any of these islands. By and by, when they are prepared to enter upon this mission, it may be that this population will secure the fruits of a tutelage, at times probably severe and repulsive to many, yet beneficial to the moral and physical world, and of infinite value to the race as a people.

I appeal to Senators to reflect upon what I say. I speak from no ill-will to this race, from no prejudice against them, but with a prejudice, if it can be called a prejudice, in their favor. It is demonstrated that we can get along peaceably and quietly together. Their conduct in the South during the whole war shows it. Let them have their social and other societies; let them have their fandangoes and their places of public amusement; let them have their hotels; let them have their own grave-yards; let them have their own churches; let them have their common schools. Why, sir, in my State there is a normal school for the instruction of colored people, so that they may be enabled to go among their own people, and educate them. We do not want colored teachers to teach white children; nor do you gentlemen of the North; nor will the colored people when they have their own competent teachers want white teachers to teach their own children.

Senators, you will never get the States of the South thoroughly redeemed, you will never get white emigration to go there, until you have this line of policy well established, that the two races shall go along together each in its appropriate sphere and as allotted by nature itself. Our experience in Maryland, the experience in Virginia, the experience in Georgia, all experience confirms the evident truth that there is no danger of friction in getting along in this way, each race satisfied with its own being; the white man proud of his, the African no less so, and if not really so, he ought to be as proud of his own. He has a direct line of generations going back almost beyond the sun, and marking him a distinct race as irrevocably fixed as that of the white man or that of the copper-colored race. Why should there be a quarrel between us? The highest interests of both are in peace! Why should you be now engaged at four o'clock in the morning, not to press our people upon them, but to press them upon us? It is all wrong, and I appeal to Senators to reflect before they do it. It is alike against the laws of man, of philosophy, and of nature.

I know one thing. All you can do by such a measure as this, in your utmost stretch of mistaken zeal or malign policy, is to give us trouble. You may annoy us; you may inflict wrong and injury.

You can do all that; but you cannot change human nature by legislation, thanks to its immutable laws; and you cannot change the reality of facts. You may give us trouble; you may send your marshals among us; you may arrest us, try us, convict us, and fine and imprison. You may make some if not many of our colored people mischievous and badly disposed. You may come among us armed with the authority of a great Government, seize and drag off our people to distant places, try them before a jury that they do not know, got together by United States marshals, summoned it may be for the purposes of this trial, and put them to enormous expense that will exhaust all their property. You can do all that; but your policy will never succeed. Neither race is prepared for the doctrines of the Senator from Massachusetts, [Mr. BOUTWELL.] These two races if let alone will march in parallel columns right straight forward and until the mission of one or both is ended, only coming in contact here and there whenever their feelings will justify or their interests require it; and there is no use in your undertaking, as these two great columns are marching on, with a law here or a United States bayonet there, to drive an African over into the white column or a white man over into the African column. There is no use, no sense, no propriety in any of it. Let them march forward toward the great ends of life. Do not obstruct the march of their columns; do not break them or attempt to misdirect either. You cannot break those columns if you would; you cannot intermingle them if you would; but you can create disorder, make confusion, and interrupt peaceful and beneficial progress.

If there were Africans upon this floor now I would appeal to them and tell them to depend rather upon their old masters at home in their own localities than upon the thirty-five million white people spread throughout the country, as represented here in this Capitol. I was struck most forcibly with the just remark made by the honorable Senator from Tennessee, [Mr. COOPER,] that by this bill and by this policy four million eight hundred thousand colored people are going to place their destinies in the hands of thirty-five million white people who do not really know them as they should be known, for the purposes of legislation or the establishment of relations with them. They are not familiar with their current of thought or peculiarities of notion. Those thirty-five million white people represented here in this Capitol may pass this law to-day, but they may pass another to-morrow, just as their public sentiment may vary or demand; and we know that it is at times as unstable as the waters. I would say to the colored people, that in giving countenance to such a measure as this you are depending alone on white legislation in Congress, which to-day may be in your favor but to-morrow against you; but depending upon your own localities, when you come to your own States, to your own localities, you have your local influences, in many you have dominance in power. You have dominance in South Carolina, you have practical dominance in Louisiana and Mississippi, you have large influences in North Carolina, Georgia, Maryland, Virginia, Tennessee, and other States. Those influences radiate among the white people, and will be favorable or unfavorable as your conduct may be, and you may much more surely depend upon your power there and upon those influences than you can upon the material interests or caprices of thirty-five million white people as represented here. If I could speak to the African race to-night I would say to them, whenever the time comes that you vote against the material interests of the North, look to it; they never surrender their interests; they take care of them; they have the intelligence in the first place to understand their interests, and they have the power to maintain them, and they will do it. There is the danger to these people. I say to them, depend upon your own people, depend upon your own State governments, depend upon your local organizations. There lies your safety in the future. The novelty of the contest now being waged will soon wear off and disappear.

The realities of life and the hard-pan of self-interest will be reached in the end, and sentimentalism, however just or kindly it may be, must yield to their necessities. Race and color if either or both stand in the way will go down before it. Do not depend upon any central government when you stand but four millions against thirty-five millions. Rather curtail its power than advance its authority.

I know there is a number of white people in the South now who would prefer a strong government. They would prefer surrendering the government of South Carolina, as it now exists, into your hands; they would prefer to surrender the governments of Mississippi and Louisiana into your hands and become Territories, in order that they might have a power to control both. That sentiment is growing day by day, having its origin in the unmixed evils they endure. Sir, we should correct that sentiment. We ought to correct the feeling of these people by correcting the systems we have forced upon them by our legislation and once more win their affections to their own localities by inaugurating local self-government, in order that our great system of government may be maintained forever; for as soon as the minds of the people become imbued with the notion of surrendering their local government, away goes all, and the Dome that is constructed upon the pillars of the Capitol as the Union upon the pillars of States will fall and crush us all. It may not destroy our material wealth. You cannot destroy the material power and the material wealth of this favored land, that is beyond destruction; but you can impair and destroy the moral power of the people; you can destroy its political well-being; you can destroy their localized liberty; you can swallow up all in a centralized government, which, while radiating splendor all over the land, is at the same time absorbing the local virtues of the people.

For all these reasons, Mr. President, I oppose this bill. I oppose it in every sense and in every view. There is nothing practically good nor theoretically good in it.

I have already spoken longer than I anticipated; but there is another provision in the bill to which I desire to call attention, and to which attention has not been properly directed, I think; and that is the section in respect to the selection of juries in State courts. I call the attention of all, but especially the lawyers in this body, to that provision of the bill:

> That no citizen possessing all other qualifications which are or may be prescribed by law shall be disqualified for service as grand or petit juror in any court of the United States, or of any State, on account of race, color, or previous condition of servitude; and any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not more than $5,000.

Let me in a hurried way call your attention to the practical effect of that section. I do not know whether it is so in all the New England States; but in some the jurors are selected by the selectmen and in other States elected by the people or selected by the sheriffs. In my own State they are now selected by the judges of the courts. Since the war, because of the trouble we experienced during the war in having purely political juries, the judges are required to take a special oath in reference to the selection of jurors; in my own county they are required before the meeting of each court to select from the list of voters and taxpayers of the county two hundred of the men best qualified in their judgment to act as jurors and without regard to their political principles or party affiliations, and from the two hundred names which are put in a box the clerk of the court, in the presence of the judge, draws the panel of grand and petit jurors for that court. Under the law of the State, then, the judge of the court is required under his official oath and in the discharge of his official duty to select jurors which in his judgment are best qualified for that position. Is the judge of the court or anybody else selecting jurors to be responsible to the Government of the United States in the exercise of a duty imposed by the State in the selection of those jurors for the purposes of the State? An elector can vote for a delegate to the Legislature; he can vote for a member of the House of Representatives; he can vote for any other officer to be elected by the people; he can publicly declare that he voted against a candidate for any of these positions upon the ground that he was a man of color. He can go upon the highways, upon the hustings—everywhere he can proclaim the fact that he voted against that candidate because he was a man of color; and not only that, but he can persuade others to do the same thing. Do you pretend to interfere with that right? Do you propose to punish the voter thus declaring his hostility to the negro and thus making a distinction because of race and color? You do not! Why not, I inquire? Is not this open war upon race and color embraced in the fourteenth amendment? You have no punishment for this in the bill! You hear this proclaimed everywhere at elections, when negroes are candidates or have white friends as candidates. Not only that, but in many parts of the country and I doubt not in New Jersey itself, there are thousands of voters, nay hundreds of thousands, who will not only vote against a negro because he is a negro, but will not vote for any white man because he may be even partial to the negro. They openly and unsparingly denounce both! And the Senator himself may have the experience of all this and may be made to feel it in the vote of the people because of his paternity of this very bill. You cannot punish them for this, can you? The fourteenth amendment does not appear to embrace this case, or else I should presume that this bill would have provided against this, as it did in the case of theaters, of schools, and of cemeteries. It appears to me that it is much more important to the negro to be deprived of a vote for an office because of his race and color than that he should be refused admission to a theater, a school, and above all a cemetery. Neither does it embrace the member of a Legislature for voting against a candidate for a seat in this body, though he should expressly announce that he votes against him because of his color.

Let me ask the Senator from New Jersey whether he has not in his State some colored men fit to hold office or place at the hands of the people or otherwise? Then why have not some of them got offices? I see no colored Representative in the other House from the North. I see no colored Senator here from the North. Have you got no colored men among you capable to fill these places? You have, no doubt. Why not send one of the race, if for nothing else just to show that you have no prejudices against the colored man? No; you will not! You cannot! Your people would revolt, and because he is a colored man, and it will be so declared and justified. Is there no law to take hold of you for doing that? Does not the fourteenth amendment extend to the voter? Why not? You may say that the voter must be free both in the expression of his opinion and in casting his vote. He is required as a citizen to discharge this high duty, and as a citizen he must not be trammeled in the unlimited discretion of a voter. You are right. It is sound sense and infallible policy. But not so with the people in the discharge of a duty involving the same discretion! No; he is held—his discretion, his judgment is held—by the fourteenth amendment and the provisions of this bill. How absurd. There is a superior judge, one of the highest

officers of the State, required by the constitution and laws of the State to select upon his official oath and by his official action two hundred men, from whom jurors are to be drawn; and in what position do you place him by this measure? We have colored men in my county, but the judge has not selected any for jurors. White men are selected. The judge has the right under the limitations of law to select whom he pleases, and without regard to color or race. Then comes the arresting, indicting, and trying a judge; how are you to convict him under this provision? Upon what evidence is it to be done? There are seventy-five hundred voters in my county, and a thousand or twelve hundred of them perhaps are colored men. How are you to sustain the charge? The judge of course in making his selection will not announce that he selects the jurors for the reason that they are white men, or does not select others because they are black men. How are you to get up a case? Is it to be based upon the one single fact that you did not select colored men when you could have done so? No; the only result of all is that you may get him into trouble, and without any avail to your theories. You propose a fine of $5,000 for this offense. Look at the offense. Look at the penalty. It will be said—no, it is to be inferred—when a judge selects men for the jury, and does not select any colored men, that it was because they were colored men. You have colored men in your States. I will not be so uncharitable as to infer that the honorable Senator does not give them office, or help send them to Congress, or to the Legislature, because they are colored men. In the whole North there is not one. You have colored men there, and you are the recognized special, enduring friends of the colored man; but you do not put one in position. Shall I infer against you, or shall I rather decide, that you have better white men and enough of them to fill all positions? How are you to carry it out with any decent regard for the right of judgment? You would punish if you could is made most manifest by the bill. You show your gnashing teeth, but happily cannot bite. It is true you may give the judge a great deal of trouble; but why threaten with heavy, savage penalties, without the danger of positive harm, and yet with the tendency to impair the independence of the judge.

Sir, such a bill as this ought not to pass. We ought to have something definite in detail, something to be definite in result. We should not pass a bill so open to exception as this is; and I think it in the highest degree important that we should religiously abstain from all interference with the action of the judicial officers, and in the administration of public justice in the States and under State laws.

Why do you not include the governor of a State? He has the appointment of many officers. Why not say that if the governor of a State in making his executive appointments in the State shall make any discrimination on account of color or race he shall be fined $5,000? Why not put that in your bill? You might just as well put this penalty upon him for his appointments as upon the judge for selecting jurors. Why not make the President of the United States liable to a fine of $5,000 for not selecting colored men to office? There are colored men in the land competent to fill office. He does not select any, or very few. Why not fine him where he may refuse to appoint because of race or color?

But the question is a question of trial and conviction. How are you to have a case? I want to show that the whole thing is not only a crime but a blunder. You must get somebody to go, for illustration, to the President or to the governor and say here is a colored man who is fit to fill such an office; or in the case of a judge, say to him, here is a colored man fit, take him for a juror. He may reply, "Your recommendation is by law a preclusion; I have others from whom to appoint." The judge reasonably may not say that he will not select him because of his color or race; he would hardly assign that for a reason, that the law, good or bad, valid or invalid, denounces with penalties, and officious and mischievous persons may try to make a case in this way, and may succeed in the first instance and before the tribunal to which he is to resort, and with what results? The judge of your court is dragged off to one of the distant cities where United States courts are held and be indicted and tried before these courts by a United States jury, selected by a United States marshal appointed because of his partisan character, and the jurors selected because of their political status, and the whole based upon the single fact that he had colored voters and tax-payers in the county and did not upon his judgment and in his discretion select any for jurors. The partisan character of the jury, their deep-down prejudices, their ignorance of law and disregard of fact, might get a verdict of gui y. If judges are to run such risks under the fourteenth amendment why not the President of the United States, the governor of a State, the Legislature electing a Senator of the United States; indeed, why not the voter himself, the beginning of all power? Why not try the experiment upon governors? I would like to see the governor of New York in the fond embraces of this bill and of its putative father the fourteenth amendment. I ask my honorable friend from New York whether the governor of New York has appointed any colored man to office in that State?

Mr. CONKLING. I think so.

Mr. HAMILTON, of Maryland. You think he has. Do you know of one?

Mr. CONKLING. Yes, sir.

Mr. HAMILTON, of Maryland. Well, that is one. I will ask my honorable friend from Wisconsin [Mr. CARPENTER] whether the governor of his State has appointed any colored men in that State?

Mr. CARPENTER. We have not many there, but we will appoint them as soon as they come.

Mr. HAMILTON, of Maryland. Then I hope my honorable friend from Mississippi will remember this, and on his march to the North he will make a diversion in that direction and leave a few as he passes along, in order that our friends there may have an opportunity of illustrating and perpetuating the pure principles of republicanism, as explained by the Senator from Massachusetts.

Sir, why not impose these same fines and penalties upon everybody having the power to appoint to office or place? Is not the office of sheriff, or collector, or marshal just as important as the office of juror? An executive officer is just as important as a judicial one; and why not impose upon the appointing power the equal necessity under the same penalty—the duty of selection without distinction of race or color?

Mr. President, this is all vicious legislation. The Government of the United States ought to be above all this if it even formed an admitted power. Let the people attend to this and they will do right. The idea that we are legislating on matters of this kind is so astonishing to me, a State-rights democrat, that I can hardly realize that it is intended as earnest work. Sir, I used to think that the Government of the United States had about three or four things to attend to; that it was to keep up a general government to attend to our general concerns, collect the smallest possible amount of revenue to support it, keep a small Navy and a small Army if need be for local purposes, have a few ministers abroad to attend to our relations there, maintain the general peace of the country, and in all things to conform to what is written in the Constitution; the great residuum of rights and powers being left to the people and to the States, who are from interest and ability both obliged and able to attend to all the requirements of society and of the country. Congress, how little to do! and doing that well, go to their homes, and for the balance of the year devote themselves to private pursuits, or it may be to the public interests of their States, and think no more of Washington. That used to be the Government of the United States. But how changed! Everything is to be governed here and from here, and having absorbed all power, governing everything, we have the gigantic and natural results in millions and millions of debt, large armies, large navies, innumerable officers, ministers everywhere abroad. There is hardly a country in Europe, Asia, or Africa that has not got some accredited minister or consul or something to get us into trouble. Here are your appropriation bills. It cost less forty years ago to maintain our Army and Navy than it now costs the Government for these ministers alone, and who, in their ambition for fame or in their own rivalry, give infinite trouble to our President and distinguished Secretary of State.

Mr. President, let the people attend to all their local concerns and we shall be a contented and happy people; we shall be a government entitled to the emulation and admiration of all. We must get back to the old foundations again and rebuild a superstructure in harmony with vital republicanism. Never again abase the powers of a great Government like this by going down into the States and upon a morbid sentimentalism look up in a few little country villages plain innkeepers, show people, who probably did on account of his prejudices refuse a colored man the privileges that he allowed to his brother white man, although they may have done so, and it may be in fear that it would destroy their custom and injure their private interests; for let it once be known that colored people do indiscriminately go to these places, and that ends their business for white people. Why, sir, if it were known that colored people could go indiscriminately to the Arlington or Willard's in this city, and be accommodated there just as others and upon the same footing, do you not think it would affect those establishments? Do you think the mass of white people would go there? And yet if a poor, miserable innkeeper should refuse admission to a colored person, or did not lodge him in his best apartments for fear that if it were known he would lose the custom of white people, or who might refuse because of his interest in other respects, or of his prejudice, you say this great Government is to intervene with its mighty power, arrest him and march him off to distant places, far from home and friends, and if found guilty by its courts, then this beneficent Government is further to take from him and from his family $1,000 because he did that, and no more, besides $500 to the person aggrieved; and further still, you propose to go to the theater and do the same with the proprietor for refusing admission to a colored man; and further, you propose to go to the cemetery and do the same to the keeper of it—carry them off to your courts, try them, and fine and imprison them.

Sir, that is far from either the duty or the right of this Government. We have the common law of the land for the vindication of every right, whether belonging to black or white. Let us depend upon that and upon the local governments of our people, and there will be peace in the land. We will get along in a better spirit; we will come together in a better temper, and all uniting together in a common purpose to make this General Government what it should be and as it was originally intended; under whatever name parties may assist and come into power and again leave it, all will be satisfied and all in time will rejoice again in a common country and in the prosperity of all enjoying its free institutions.

Civil Rights.

SPEECH OF HON. J. W. FLANAGAN,

OF TEXAS,

IN THE UNITED STATES SENATE,

May 20, 1874.

The Senate having under consideration the bill (S. No. 1) supplementary to the act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication," passed April 9, 1866—

Mr. FLANAGAN said:

Mr. PRESIDENT: I confess that I approach this subject almost with fear and trembling. It is assuredly a question of great magnitude. There is great interest felt throughout this broad Union upon this question, more perhaps than upon any other that is claiming the attention of the citizens of the United States. The South feel themselves to be more directly interested in the measure than any other portion of the United States. I hold, however, that the interests are the same in any and every section of this broad Union.

But, sir, the difficulty with me in expressing my candid views on this subject can readily be appreciated by every Senator who hears me or anybody else who is informed on the subject. I was born in the South and have lived in it. I have never lived out of it, and I never expect to do so. I love my native State; I love my adopted State; I love the sunny South; I love this great Union. Therefore, as a citizen of the United States clothed with authority as one of the representatives of the State of Texas, I avail myself of this opportunity to express my sentiments on this subject clearly and candidly, so far as I have the ability to do so, and, permit me to say further, not in malice to mortal man. The man does not breathe out of whose head I would pull one hair in prejudice had I the power to do so.

I am well aware, Mr. President, that this bill is a bitter pill to the democracy. I blame them not for thus accepting and realizing it, for surely it is not in their interest that it is proposed to be enacted by the Congress of the United States. They have met it at every point, and they will continue to do so with great ability and zeal. The last argument that we heard on the subject came from the distinguished Senator from Georgia, my particular friend, [Mr. NORWOOD,] who discussed it with great ability. Would that I were able to acquit myself as well as he did. I am not, however; but I have honesty on my side of the question, and feel it as clearly and conclusively as he can, according him the same in the most extreme sense. The remarks of the distinguished Senator were beautiful, poetical, and eloquently delivered, and evidently the result of mature deliberation. Everything in his speech tends to enable me to compliment him upon it. He commenced thus:

Mr. President, believing in the "eternal fitness of things," and that everything should be done "decently and in order"—

I indorse all that—

I have always endeavored to adapt my speech to the solemnity of the occasion and the dignity of the subject to be considered. And though I shall faithfully attempt to adhere to this salutary rule, it is with a painful consciousness that it is impossible for me to rise to the grandeur of either the occasion or the subject.

I think the Senator did himself injustice in that particular. I think he did rise to it most happily, and in his rising he soared so high, that he never was able to come down very satisfactorily to himself. [Laughter.] But he continued:

And nothing sustains me but the ambition to share with the Senator from New Jersey the imperishable honor of bringing about the happy consummation foreshadowed by him on yesterday, when the white man and black, the mulatto and quadroon, the coolie and Digger Indian, shall be gathered together, a united family, in one unbroken circle, around one common soup-bowl and using the same spoon, while shielded by the Stars and Stripes and regaled by the martial measure and inspiring strain of—

"John Brown's soul is marching on."

That flight I do not pretend to be able to compete with. It surpasses anything that has been witnessed here heretofore, if I may take the liberty with my brother Senators thus to declare without being invidious. The distinguished Senator from Georgia presents to us in this argument the mighty names of a Clay and a Calhoun and a host of other men. He speaks of the morning stars, &c., when they sang together so happily; but, sir, permit me to introduce to you upon this occasion a bright star, a grand luminary, that has recently presented itself to the Senate of the United States, not the star of the East that we have read of since our boyhood, but a glorious star that has sprung up from the good old State of Georgia—a southern planet, but no less noble than if it had come from the North. He is a citizen of this proud Union. I am gratified to know that we have citizens of such ability as the distinguished gentleman.

I was very much amused when I heard the distinguished Senator's speech upon a subject that he was very familiar with. I love lecturers, and I like to sit and hear them for indefinite periods when they understand their subjects and have the ability to treat them in fine style, as my distinguished friend, the lecturer, so clearly evidenced to the Senate the other day in his lecture upon hair-splitting. I do not think I ever heard a gentleman, first or last, upon that subject who could claim to have equaled my friend. He handled the subject eloquently. Hair-splitting, hair-combing, and hair-parting in the middle are all familiar to him in every sense of the word, and well they may have been; surely it could not have been otherwise. He speaks of the six hundred thousand children of Israel crossing the Red Sea and being led out by Moses. We are familiar with that subject, and we believe it all. I do, every word of it. [Laughter.] But the fact upon the subject of hair-splitting is this: You may look not only to divers individuals within the Senate here, and complimentary to them too, but whenever you look to my friend, NORWOOD, you will see that the God of nature has done for him that which he was lecturing about—his hair is split beautifully; just as clearly as the walls were thrown up on the one side and the other of the Red Sea for the children of Israel to march through. [Laughter.] It is so beautifully split, that if a fly were to light upon it he would lose his heels in an instant and away he would go. [Laughter.] The Senator splits hair most elegantly, he understands that subject; he does it so nicely that he can string out many lines of select commanding words, and when read the reader is reminded of his boyhood in studying riddles, for he finds that it all means anything or nothing; thus the hairs are split; his much learning makes him mad; he is as bitter against the colored race as good old Paul was in his day against the Christians until the scales fell from his eyes. I hope they will soon fall from the Senator's.

But, Mr. President, I wish to invite the attention of my fried not the subject to which he alluded directly, to wit: "this united family, in one unbroken circle, around one common soup-bowl." That is a very happy idea. I might go on and make a speech on that branch of the subject had I the time. If it was early in the session I would do so. I am reminded that the same book that he invoked upon this occasion (there were few books that he did not invoke) tells us about a party once sitting around at the table and one put his hand into the bowl; it was Judas. I do not say that there is any application in that particular, I waive that; but there is the "soup-bowl" argument, and let it go for what it is worth. I incline to the opinion that my friend will learn to use it freely, and perhaps fondly, at some day not far distant.

I wish to call my friend's attention particularly to that which he has invoked elaborately, to wit, the Constitution of the United States. I do not propose to enter into a constitutional argument. I deem that unnecessary, particularly when I know that this bill is in the hands of good constitutional lawyers. They have given us their views, and we have heard them upon many occasions. I have long since declared upon this floor that I had made up my mind upon this subject, and I am entirely, and in the absence of a scruple, satisfied that this bill would be constitutional if enacted by the Congress of the United States, and I have no hesitancy in saying they will do so.

But, sir, the peculiar features of this speech that I wish to call attention to are these: The African is directly attacked here, and I propose, Scipio-like, if you please, to carry the war into Africa. In doing so I simply call attention to the Constitution, and the preamble will be sufficient for me upon this occasion:

We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and—

Mr. President, you have already in your mind read the next two words that I intend to comment upon to some extent. I am anticipated by everybody here, particularly a Senator of the United States—

and our posterity—

"our posterity" are to be the beneficiaries of these blessings—

do ordain and establish this Constitution for the United States of America.

Now, I leave not that subject yet. In our day, a very recent period having elapsed since, another little constitution was gotten up. How does it read? Here it is:

Constitution of the Confederate States of America.

Now mark; I beg attention here:

We, the people of the Confederate States, each State acting in its sovereign and independent character—

O, of course. [Laughter.] I have not time, however, to discuss that branch of the subject—

in order to form a permanent federal government, establish justice, insure domestic tranquillity, and secure the blessings of liberty to ourselves—

and then follow the same words that I have just read in the preamble of the Constitution of the United States—

and our posterity—

Further—

invoking the favor and guidance of Almighty God, do ordain and establish this constitution for the Confederate States of America.

Now, then, the simple question, well recognized, unmistakably declared, is from whence comes this posterity? "Posterity" is a pretty name. The invocation of God, too, in the confederate constitution, thereby going a degree beyond anything that had been conceived by our forefathers, is very good; and this being a day of progress, well might they have done so; and they did do so, and endeavored to perpetuate slavery, and of the posterity that they invoked God to bless. Strange, indeed! But what says my friend? I should like to read after him, but it would be very tedious, from point to point. He says briefly that the republican party has no genealogy. Mr. President, I insist upon the fact that he who lives in a glass house should not throw stones. He is one of the democrats. I love them as gentlemen; I love them as high-toned gentlemen,

socially agreeable; and I am happy to be with them on all occasions. They are like us except when you draw the line between a democrat and anything else, except it be "anything to beat Grant." Then they are for anything. But, sir, what is the meaning of "posterity?" No genealogy has the republican party. Are they Melchisedecs? Did they come into existence without father or mother? That idea would be very remarkable.

Then I come down to the simple, plain fact and illustrate it thus: In the happy South the cotton-planter plants his seed, or he who grows corn puts the corn in the ground, or he who cultivates his rye and his wheat and all cereals plants the seed; and now I ask, without pursuing that idea further, are the mulattoes, quadroons, and everything else that he invoked so beautifully, indigenous? If not, it is unnecessary for me to elaborate that branch of the question further. There must have been some planting; yes, and by democrats principally, for until the war the great majority were democrats, and they of course did the largest planting.

Then if there be no genealogy in that particular, and in line with the beautiful ideas of my distinguished friend from Georgia, I do think he ought to put in a plea of "not guilty," and plead for the democracy, but no more readily than for the republican party, because they are all mixed up in that particular. No genealogy! That is very remarkable. There is the "posterity." I think I have indicated on that line something about the different parties.

My friend goes on, and he speaks largely again and beautifully rounds his periods so as to make a fine laugh upon many of his beautiful points, and speaks of steamboats, hotels, and every kind of conveyance, churches, cemeteries, &c. What is to be done with these people, he asks. Most remarkable, it will not do to admit them where a white man is, notwithstanding their solemn pledge and invocation to God to protect their posterity, because they are bound to trace them to democracy, for really in those States where they abound more largely than they do broadcast in the Union, they scarcely have anything else but democrats. The republicans are not there; they did not do the planting. Upon that branch of the subject I might go further.

In the Senator's beautiful theory he speaks of the grand inaugural ball here; that Miss Angelina and others were not invited. That may all be; but what did that amount to? They might or might not have been invited. That changes no fact. He speaks about legislation and as to what the Congress of the United States cannot legislate upon. I tell you one thing that would not look very comely for them to legislate against, and perhaps it is one of the most potent subjects that could be introduced upon this occasion. With all the strictures as to cemeteries, hotels, palace-cars upon railroads, and steamboats on rivers and seas, and everything else, the Congress of the United States never yet has undertaken to enact a law against going to a fodder-stack. My friend says it is moonshine. Yes, moonshine. I take it for granted he understands that exactly. When the moon is shining the eyes of the world are not upon the acts of A, B, and C. The races get along very well then. But I want to call the attention of the Senate directly upon this line, and I am very much gratified to be able to announce it too, that recently in the State of Texas there has been a large convention held, a Baptist convention, at Jefferson, in the immediate neighborhood of my home. There were about two hundred and fifty ministers there. This was a Baptist convention. I love all denominations, but particularly a Baptist. I believe in going down into and coming up out of the water.

JEFFERSON, *May* 9, 1874.

At the devotional exercises this morning it was evident that standing room would be in demand during the entire session.

After the adoption of the minutes of yesterday the reports of various committees were called in regular order.

The report of the committee on African missions advocated the resumption of the work by sending colored brethren to that field as soon as practicable, and that some man of European extraction should also be sent to that country; but the evangelization of Africa should mainly be done by those of their own race.

Rev. Mr. Reid, formerly for seven years of the African mission, approved of the suggestions of the report, confirming them by his own experience.

Rev. Dr. Crane, of Texas—

A distinguished divine that I am acquainted with—

said that when a mere boy—

He was raised in Virginia, too, according to my recollection—

he remembered that a number of colored men were invited into his father's parlor. He did not then nor for many years understand it, but it was to organize the first Baptist church established at Monrovia, on the coast of Africa. He was going home to preach and advocate the dissemination of the Gospel to Africa, China, and to all the dwellers in all the world.

Dr. T. G. Jones, of Tennessee, said that the idea probably was true that Europeans could not live in Africa. If there was no other way of carrying the Gospel into Africa, it should be done even if the missionary could live but one year. God, however, had provided the way in the African now living on our shores. That he had lately witnessed at Nashville an examination of colored youths that would be highly creditable to any class in any land. He felt that to such men, so educated, we could trust the evangelization of Africa or the progress of the race in our own land.

Brother Gano, of Kentucky, said that he approved of Dr. Jones's remarks; that he knew of colored ministers in Kentucky that were to-day prepared to take the work into their hands, and they could carry it on at less expense, and raise far more money than could be done in any other manner.

Mr. President, I read that to show that at this day the religious denominations through this Union are simply doing that which they did a number of years age. I recollect from my infancy, time and again, when sitting under the eloquent appeals made by missionaries for contributions to send to Africa, to the jungles of that country, to let them have the blessed Gospel, thereby enlightening them and christianizing them. What an idea that seems to prevail with the opponents of the bill before the Senate! Send money to Africa to give an African a ticket for a seat in heaven? Why, great God, that is a very premature act, most assuredly! Perhaps some white man will want to get there and get that seat himself; and those seats must not be occupied in that way. That was not the doctrine that I was taught to love—not a word of it; and to-day what is to be done with them? Are they to be permitted to travel the same road to heaven? You say they shall not start on the steamboat; and so, assuredly, they shall not rise, when Gabriel blows his trump, from the cemeteries of the country and start side by side with the white man, ignoring everything that has been said in the preamble of the Constitution. What an idea! And yet, certainly, such is the fact, and I would say to my friend, who feels a great deal of interest in that branch of the subject as to cemeteries, that there is a doctrine likely to prevail—it has many strong advocates to say the least of it—that they can take the corpses and burn them when they die; and therefore no conflict will arise on that branch of the subject. One or the other can be disposed of very readily. But otherwise it is a question that you cannot reconcile unless you do it in the spirit which has been promulgated by man. "Go ye to all the ends of the earth." Africa is not excluded from that, nor the mulatto that is dwelt upon so eloquently here.

O, but, says my friend in going on so finely, look at the awful state of things that is abroad now overriding all other considerations and everything that has been spoken of, and he brings to your view vividly the great States of South Carolina and Louisiana. They are in a woful condition, South Carolina and Louisiana! What is the difficulty there? I may illustrate by a very brief anecdote. I can sum that whole matter up; it is in a nut-shell. Louisiana and South Carolina are culled from the balance of the old slave States, and why? Because they are represented now by distinguished republican Senators and Representatives in the one and the other branch of Congress. The democracy do not prevail at this time in those States; and that is the only trouble, that is the reason why those States are selected and made profert of here. This is the story which I heard when a boy: There were a father and a son who were traveling in a cart. The horse ran away; the boy jumped out; he was frightened and very soon jumped out. Away went the horse and the father and the cart. The boy put on all the speed he could possibly bring to bear; and behold, after making a turn in the road very hurriedly, he saw the cart and the horse and everything torn to pieces. "Well," says he, "that is all trifling." A little further on lay the old father; and said he, "Ah! there lies the devil." [Laughter.] That was the father. He could stand the loss of the cart and the horse, that was a trifling matter; but when he saw the father there, it was a very serious matter.

The other States could be gotten over very readily; they have no very serious objection to them because they have got them in the iron clutches of democracy, and if they had South Carolina and Louisiana they would be perfectly happy and all would be right. Anything then to mold the republicans so as to get their votes, and to get their votes they would be willing to ride with them in carriages, coaches, steamboats, or go to church with them, or anything else to succeed. I will prove that before I get through by some of the leading stars of the democracy. They are willing to compromise any moment in the world whenever they can appropriate the colored vote. What is it the democracy have not appropriated? They have appropriated everything under God's heavens that they could; and they are ready and willing and try daily to appropriate the republican party, and in some instances they have succeeded. But said my friend, on the subject of the republican party, when man was created—O, most happily—I think I had better read that, it reads so fine.

"When the morning stars first sang together for joy" it might have been worth some dollars to the American people and the balance of mankind—

That would have included our posterity, my friend—

if there be any—

Yes, if there be any posterity. I think there is—and in many instances the mother could tell who the fathers are—

had the republican party been present. And though a matter of minor consideration, perhaps, it might have also saved much blood. For when the Almighty said, "Let us make man," this Senate would have given its advice, and with equal certainty would never have consented to man's creation, except in accordance with the Declaration of Independence.

Yes, Mr. President, I accept that as the highest eulogium, the highest compliment that could be paid to us by our friend or any other distinguished individual of his party. They would then have been for what this bill now contemplates, the freedom of man throughout creation. But methinks—it flashed upon my mind in an instant when the gentleman was making this distinguished voyage—that if the democracy had been there, and my distinguished friend as one of their proud leaders had been there, he would have put in a little objection to the formation of man and of the republican party, and he would have said that minorities should rule and appealed to the ballot-box, saying all should vote excepting his posterity; they should be excluded. What further would they have done? They would have staked their judges just as they could rely upon them; they would have stuffed the ballot-box before that matter could have been considered; and if objection had been interposed, they would simply have said, "Anything to beat the republican party."

Mr. President, much is said upon the subject of labor. There are about four million bales of cotton raised annually in the United States. I think there is no gentleman who will raise any question on the fact that three-fourths of that crop is raised by black men, by colored people. If so, they contribute by the sweat of their brows $225,000,000 annually to the United States; no inconsiderable matter. But upon the subject of labor which does not suit the South at this time here is a small article that met my eye the other day, and I thought I would preserve it, directly on this subject:

All over the South we hear the cry that the colored laborers have been and are still going to the Southwestern States, because they can find no employment to earn a living. Whether there was no work to be done, or that the planters would not give them employment, was a question upon which we were undecided for some time, but we are inclined to believe that the latter is the case not only in Alabama but in Georgia, for recently over five hundred convicts were hired out by the State to planters, and the bidding was very spirited. In Washington County alone over one hundred were employed. Now, it is remarkable that these planters, who have so abused the colored laborer and declared that he was indolent, ignorant, and prone to dishonesty, should take penitentiary convicts indiscriminately, those convicted of the lowest as well as the highest crimes, and put them to work on the plantations upon which their wives, sisters, and little ones are living. There is some reason for it, and we can see no other than that this system of labor approximates the slavery of ante-bellum days more nearly than any other system of labor. It certainly is not because those convicts are more honest, nor because they work better, for forced labor is unsatisfactory in these days of freedom; it is not cheaper, for the cost of guards, food, clothes, &c., will amount to as much as good laborers can be employed for who have not the brand of thief or murderer upon them.

That is from the Montgomery, Alabama, Journal, a southern paper, and one that portrays facts in that case unmistakably. When you weigh prejudices with dollars and cents, what are they? If the dollars predominate, all other things are equal. That is the difference, and you can easily see that if they could appropriate the labor of the colored man as in by-gone days, this prejudice would yield directly. One of the most distinguished generals who were upon the battle-fields during the days of the confederacy, General Beauregard, only about twelve months ago set forth in Louisiana as the Moses that was ready to lead on the black men to equal rights in every sense of the word. They put him down, and General Beauregard shrank from the observation of almost all men on that occasion as he did when he left the army that he was at the head of while the battles were raging, going off for a time to regain his health. All very well; but anything upon that line whenever the opportunity presents itself they will always avail themselves of.

Before I proceed further, I ask the goodness of the Secretary to read a portion of the speech of President Davis, delivered at Jackson, Mississippi, contained in the paper which I have marked and send to the desk.

The Chief Clerk read as follows:

Address of President Davis, delivered in the hall of representatives, Jackson, Mississippi, December 26, 1862.

Friends and fellow-citizens, gentlemen of the house of representatives and senate of the State of Mississippi, after an absence of nearly two years I again find myself among those who from the days of my childhood have ever been the trusted objects of my affections, those for whose good I have ever striven, and whose interests I have sometimes hoped I may have contributed to subserve. Whatever fortunes I may have achieved in life have been gained as a representative of Mississippi, and before all I have labored for the advancement of her glory and honor.

I now for the first time in my career find myself the representative of a wider circle of interests; but a circle in which the interests of Mississippi are still embraced. Two years ago nearly I left you to assume the duties which had devolved on me as the representative of the new confederacy. The responsibilities of this position have occupied all my time, and have left me no opportunity for mingling with my friends in Mississippi, or for sharing the dangers which have menaced them. But wherever duty may have called me my heart has been with you, and the success of the cause in which we are all engaged has been first in my thoughts and in my prayers. I thought when I left Mississippi that the service to which I was called would prove to be but temporary. The last time I had the honor of addressing you from this stand I was influenced by that idea. I then imagined that it might be my fortune again to lead Mississippians in the field, and to be with them where danger was to be braved and glory won. I thought to find that place which I believed to be suited to my capacity, that of an officer in the service of the State of Mississippi. For although in the discharge of my duties as president of the Confederate States, I had determined to make no distinction between the various parts of the country—to know no separate State—yet my heart has always beat more warmly for Mississippi, and I have looked on Mississippi soldiers with a pride of emotion such as no others inspired. But it was decided differently; I was called to another sphere of action. How in that sphere I have discharged the duties and obligations imposed on me it does not become we to constitute myself the judge. It is for others to decide that question. But, speaking to you with that frankness and that confidence with which I have always spoken to you, and which partakes of the nature of thinking aloud, I can say, with my hand upon my heart, that whatever I have done has been done with the sincere purpose of promoting the noble cause in which we are engaged.

The period which has elapsed since I left you is short; for the time which may appear long in the life of a man is short in the history of a nation. And in that short period remarkable changes have been wrought in all the circumstances by which we are surrounded. At the time of which I speak the question presented to our people was "will there be war." This was the subject of universal speculation. We had chosen to exercise an indisputable right—the right to separate from those with whom we conceived association to be no longer possible, and to establish a government of our own. I was among those who from the beginning predicted war as the consequence of secession, although I must admit that the contest has assumed proportions more gigantic than I had anticipated. I predicted war, not because our right to secede and to form a government of our own was not indisputable and clearly defined in the spirit of that declaration which rests the right to govern on the consent of the governed, but because I foresaw that the wickedness of the North would precipitate a war upon us. Those who supposed that the exercise of this right of separation could not produce war have had cause to be convinced that they had credited their recent associates of the North with a moderation, a sagacity, a morality they did not possess. You have been involved in a war waged for the gratification of the lust of power and aggrandizement, for your conquest and your subjugation, with a malignant ferocity and with a disregard and a contempt for the usages of civilization entirely unequaled in history. Such, I have ever warned you, were the characteristics of the northern people—of those with whom our ancestors entered into a union of consent and with whom they formed a constitutional compact. And yet such was the attachment of our people for that Union, such their devotion to it, that those who desired preparation to be made for the inevitable conflict were denounced as men who only wished to destroy the Union. After what has happened during the past two years my only wonder is that we consented to live for so long a time in association with such miscreants, and have loved so much a government rotten to the core. Were it ever to be proposed again to enter into a union with such a people, I could no more consent to do it than to trust myself in a den of thieves.

You in Mississippi have but little experienced as yet the horrors of the war. You have seen but little of the savage manner in which it is waged by your barbarous enemies. It has been my fortune to witness it in all its terrors; in a part of the country where old men have been torn from their homes, carried into captivity and immured in distant dungeons, and where delicate women have been insulted by a brutal soldiery, and forced even to cook for the dirty Yankee invaders; where property has been wantonly destroyed, the country ravaged, and every outrage committed. And it is with these people that our fathers formed a Union and a solemn compact. There is indeed a difference between the two peoples. Let no man hug the delusion that there can be renewed associations between them. Our enemies are a traditionless and a homeless race. From the time of Cromwell to the present moment they have been disturbers of the peace of the world. Gathered together by Cromwell from the bogs and fens of the north of Ireland and of England, they commenced by disturbing the peace of their own country; they disturbed Holland, to which they fled, and they disturbed England on their return. They persecuted Catholics in England, and they hung Quakers and witches in America.

Having been hurried into a war with a people so devoid of every mark of civilization, you have no doubt wondered that I have not carried out the policy, which I intended should be our policy, of fighting our battles on the fields of the enemy, instead of suffering him to fight them on ours. This was not the result of my will, but of the power of the enemy. They had at their command all the accumulated wealth of seventy years; the military stores which had been laid up during that time. They had grown rich from the taxes wrung from you for the establishing and supporting of their manufacturing institutions. We have entered upon a conflict with a nation contiguous to us in territory and vastly superior to us in numbers. In the face of these facts the wonder is not that we have done little, but that we have done so much. In the first year of the war our forces were sent into the field poorly armed and were far inferior in numbers to the enemy. We were compelled even to arm ourselves by the capture of weapons taken from the foe on the battle-field. Thus in every battle we exchanged our arms for those of the invaders. At the end of twelve months of the war it was still necessary for us to adopt some expedient to enable us to maintain our ground. The only expedient remaining to us was to call on those brave men who had entered the service of their country at the beginning of the war, supposing that the conflict was to last but a short time and that they would not be long absent from their homes. The only expedient, I say, was to call on these gallant men; to ask them to maintain their position in front of the enemy, and to surrender for a time their hopes of soon returning to their families and their friends.

Mr. FLANAGAN. My object in having that extract read from the address of the president of the Confederate States in his own loved State, as he declares, was to invite the attention of the Senate, and of those who may read it, no matter whence they come, to this fact: Was President Davis candid when he made those remarks? He said that he was. We have no right, in my opinion, to raise an issue with him upon that branch of the subject. Then, extending that view, according to President Davis's candor, are we to stop there? No, sir. I propose to speak likewise in direct connection with thousands of high-toned, good democrats broadcast in the South. Admitting that they were sincere—and it is proper that we do so—when will they be satisfied that they were in error? How many can you enumerate in that category who have taken the high ground, as I would recognize it, to say that they did err? I might enumerate a few. I might suggest the name of the distinguished General Longstreet; and but few others am I enabled to present. Then they are of the same opinion to-day that they were in those days. Mr. Davis's utterances, whenever he has made any, have been directed to that point. It is manifest around us on all occasions, I tell you, that the republican party has got to look to those facts. They are upon them, and they must look them straight in the face or they will have to yield and beg the question. Although groping for an indefinite period as the democrats did for a time, they are looming up now. What authority have I for saying that? I send to the desk in connection with that idea a letter written by a distinguished gentleman whose name will be observed when the extract is read.

The Chief Clerk read as follows:

The Tennessee elections are coming on, and the papers of the State unite in deprecating a long canvass. They urge that the condition of business and crop prospects are of such a character that the least amount of political agitation will be best for all parties.

At a meeting of democrats from all parts of the country, at New York, on Thursday, Augustus Schell, who presided, stated the object of the gathering was to rejoice over the late triumphs of the democrats in various parts of the country, and expressed the conviction that before another presidential election shall have passed we shall not only be represented in States, but in the presidential chair, by democrats of virtue and ability.

A letter was read from Hon. Montgomery Blair, of Missouri, in which he says that the democracy have another contest to wage with the great money power, in the form of rings and corporations, and that the contest will be hot and strong. He says that Greeley was defeated by the free use of money; but that the expenditure bankrupted some of the leading managers, as Jay Cooke & Co. and their associates; "and," he adds, "we have only to continue to force on the issue against class government, to be sustained by a corrupt use of public money, to overthrow it and redeem our country from the corruption which is degrading it in the eyes of the whole world." He concludes as follows:

"And when we see the Supreme Court packed at the dictation of one of these great corporations to have the legal-tender decisions revoked and suspension thus perpetrated in order to relieve it of its pecuniary obligations, and this by a President who is so strenuous for resumption, no one can fail to see in whose hands all real power over the Government is lodged, and whence all the corruption comes that is eating out the heart of our free institutions. The first thing to be done therefore is to rescue this Government from irresponsible power. For this we want a people's party, in which resumptionists and inflationists, protectionists and free-traders, republicans and democrats, black people and white—in a word all sincere believers in popular government—may join to reclaim this Government for the people.

A party so organized would give us an honest and economical administration, under

whose benign influences industrial interests would revive and the dissensions of race and sections disappear.

Mr. FLANAGAN. It will be seen that they invoke the vote of the colored man there. All is right and harmonious if they can only appropriate that vote. So says this distinguished leader, Mr. Blair. So they all say. This they will all act upon, in every occasion. Success is the great matter with them.

But, sir, my distinguished friend from Georgia alludes to the President of the United States. I shall touch that question very briefly. It is unnecessary for me to do so. Forty millions of people have passed upon the President of the United States upon two but recent occasions. They have placed him upon that high pinnacle, as high as man ever reached so far as known to me. Proudly and well has he acquitted himself. There is one little circumstance that made a deep impression upon my mind, and I recollect it with delight. It was my fortune before I was elected to the Senate of the United States to be chosen as a delegate to visit the Congress of the United States to look to some satisfactory arrangement by which Texas might once more be taken into this proud Union. I was here when the President of the United States was inaugurated. I saw him, for I had gotten a position not very remote. Just at the time of his taking the oath and before he took his seat, his sweet little daughter having worked her way among the Senators and the proud dignitaries of the land, the judges of the Supreme Court, &c., was caught and held by one of those distinguished individuals, and just as the President got through the oath which had been presented to him in accordance with the Constitution of the land, the little girl reached him and he fondly caught her up and kissed her. O, it was delightful to see that parental affection, the President of the United States not so much elevated as to forget the little children who were around him of his household. A happy thing it was to me, and what a contrast would it present particularly to my distinguished friend from Georgia to invite his attention to go back to about the middle of the history of the American nation, to wit, to the great hero of New Orleans who sent back Lord Pakenham and General Lambert to England "from whence they had come in hogsheads of rum." That act made him President of the United States, and who was his right-hand man? A high-toned Kentuckian. I never agreed with him politically, for he was a democrat and I belonged to the Clay stripe. I love the name of an old whig yet, anything that has clay about is, I am partial to. But Richard M. Johnson, the Tecumseh-killer as it was told—and I make no issue on that point, although many parties claim to have done that killing—was Vice-President of the United States, elected by the democracy. It would have ruined my friend from Georgia particularly to have seen upon such an occasion Richard M. Johnson kiss one of his girls, because she comes in his category of mulatto. That would not have answered his purpose. Yet he was Vice-President of the United States and had just exactly such children.

I am opposed to the Mormon doctrine; I am opposed to a man having more than one wife; one I think is enough; but would it not be better even to have forty, if you please, and marry them in good faith, and recognize them as one, two, three, and up to twenty if you like, rather than to have them broadcast throughout the country recognizing one but repudiating the rest and saying that republicans have no genealogy; they cannot trace their fathers!

These are stubborn facts. I dislike to see them, but they are historical. They are true; and we had as well meet truth and prepare to do it.

Now, sir, what is done by this bill with all its terror to my democratic friends, and many republican friends, too? I may say in candor their prejudices are such that they are not prepared to recognize it. What does it do? The poor man is held up here. A man at a cross-roads grog-shop would talk about a poor man and the rich man, when it ought not to be lugged into this elevated, high body of American Senators. Still it sometimes gets in here; and in the discussion of this bill I have found it flippantly stated that this is a bill that directly tends to equalization, or, indeed, to prefer the black man over the white, thereby endeavoring to create or to continue that prejudice and to perpetuate it forever. This bill does not contemplate that. To me it has no such horrors. The humble citizen of the country, I do not care who he may be; he may have domiciled in the first instance in a large, hollow sycamore tree; he may be in his humble cot made out of pine poles, or he may be in his mansion, worth his millions of dollars, if you like, the proprietor, the lord of that castle, and he has a right to select his company. He invites in A, B, or C, high or low, just as he may see proper to do; and this bill does not interfere, as I understand it, with that privilege. Therefore it is not objectionable.

But when you come to taxation and think of all the millions of dollars that are raised annually by this labor, when they are taxed as they are broadcast throughout the country, why should they be deprived of privileges accorded to others? It would be unnatural and tend to keep up the prejudices that so unhappily surround us at this day. Now I want to call your attention by way of illustration to a little matter that meets my observation this morning. It is so short that I will not send it to the Secretary but read it myself; it is from the Chronicle:

The passengers on the western-bound passenger train on the Chesapeake and Ohio Railroad were somewhat astonished Wednesday morning to see a couple—a negro and a white woman—get aboard at Lewisburgh, West Virginia, on their way to Ohio to get married. The man was of gingerbread color.

This struck me with some force from one peculiar circumstance. My distinguished friend from Georgia, I thought from reading and hearing his speech delivered, had looked in all the dictionaries that I had ever heard of, and there was no peculiar name that he had not found out; he had A, B, C all elegantly named this, that, and the other; but he had not found the gingerbread gentleman and here he is, and therefore I present it:

The man was of gingerbread color, about twenty years of age, and the woman was a good-looking young girl, recently from England, and about thirty years of age.

Now I have this to say on that matter: The English woman, mind you, was thirty, the boy was only twenty. She had crossed the Atlantic; she had seen much of the world. The boy had seen but little. If there was any running off between the two, which ran off with the other, the white woman with the black boy, or the black boy with the old white woman? [Laughter.] Social equality! It is hard to say whether it preponderates upon the side of the woman or the man, the gingerbread man or the white woman. If I could guess, I should say that the gingerbread boy got the worst of that bargain. I should say the twenty-year old boy got the worst when that woman took him up and ran off with him. [Laughter.]

Mr. President, let my expressions go for what they are worth, and that may be very little; I will not undertake to put an estimate upon them; but one thing I well know: Sleeping or waking, standing or lying, living or dying, I stand forth in defense of five millions of people who have recently been emancipated, and I will ever stand by them, so far as my vote or influence can go, for perpetual and eternal freedom.

Here is a thrilling circumstance which speaks volumes upon the subject. I send to the desk and ask to have read an extract.

The Chief Clerk read as follows:

Twenty-eight years ago Mary Stowers, a slave woman, belonging to Harrison Stowers, of Owensborough, was sold to parties living in Shelby County, Kentucky, and was, with her little girl of two years, taken away, leaving her boy, Willis Green, then four years old, with her former master, John Stowers, who had sold her to his brother. For some time after her sale she managed to send word to her boy occasionally, but after a couple of years she was sold to the dreaded negro-traders and was taken South, after which all trace of her was lost. The boy Willis grew to manhood, and by the events of the war became free and came to Evansville. During all these years, not having heard of his mother, he supposed her dead; but her memory was still bright, and he often thought of her as she must have suffered in the cotton-field under the lash of the cruel task-master.

On Monday he was almost electrified at being told that an old woman, claiming to be his mother, was in the city in search of him, but the lapse of time had been so great that he was incredulous; but faint as the hope was, he determined to follow it and see if it should prove delusive. He went, as directed, to the house of his uncle, Ed. Davis, and there met an old woman who clasped him in her arms, and wept over him as her son. To test the genuineness of her claim, Willis asked, "How do you know I am your son?" And the old woman gave her reasons, detailing facts that were known to him as having occurred. He then showed her his right hand and asked, "Can you tell how I lost that little finger?"

"Yes," replied she, "your young master cut it off while chopping a trough," and Willis accepted the evidence as much stronger than that of the traditional strawberry-mark.

The aged woman, after being sold to Alabama, was placed on a cotton farm, and worked as a field hand until the close of the war extinguished slavery. As soon as free she determined to return, and worked to that end, but ill-health several times interfered to prevent, and it was not until two weeks ago that she found her way to Lewisport, and subsequently to Owensborough, where she heard that her daughter was dead and her son and brother (Ed. Davis) were in Evansville; and now, after a separation of twenty-eight years, the old and broken-down woman has found her son, who rejoices at the reunion and welcomes her to his humble home.—*Evansville Journal*, April 29.

Mr. FLANAGAN. Mr. President, such instances frequently present themselves, and they speak volumes. They show that there is an all-wise and controlling Power that protects these people. The lesson taught by that incident cannot be misunderstood. With that race day has dawned, and who can say that Heaven is against them? I cannot; I shall not.

My friend from Georgia compliments, left-sidedly if you please, the republican party by saying that they have been able to do in the twinkling of an eye more than the Creator could do in years; that He was forty years in leading Moses and the six hundred thousand children of Israel out of Egypt, while in the twinkling of an eye these people have been made freemen, voters, and rulers by the republican party. But my friend will recollect that the present is no greater miracle than the other one was. If there was no Moses, there was unmistakably an Abraham Lincoln. Abraham Lincoln was the Moses of his day. This great work was consummated by his proclamation, his bold and determined stand, and the stubbornness exhibited on all occasions by Jeff. Davis. There was nothing he could see, nothing that he could realize, just as it was in the days of the Egyptians. Like Pharaoh, he was hardened, and perhaps he could not have done otherwise. It is sufficient for us to know that that all-wise Being, who regulates and controls all things, works in His own time and way, and we realize these things, and we have to take them; and if they are not pleasant, if they are bad, we must philosophically make the best of a bad matter. They have happened to man from the earliest period, and they will continue down to the last day.

I might go on, sir, and introduce a great many little matters that I have picked up. Here is a very small one in connection with my argument which I ask to have read.

The Chief Clerk read as follows:

It was some time ago announced that Matt Morgan, the designer of the cartoons in Frank Leslie's Illustrated Newspaper, was engaged on a painting called "The Last Hours of Charles Sumner." It has just been finished, and will be placed on exhibition in one of the rooms of Tremont Temple to-day, where it will doubtless be visited with interest by many. The picture is large, occupying almost the entire end of the room. A great merit of Mr. Morgan's cartoons has been their excellent drawing, and the same feature is seen in the picture. There is none of the ghastly horror about the work which marks most death-bed scenes. The great statesman is seen lying pale and peaceful, while around are grouped naturally and in sorrow many of his most intimate friends, among whom will be easily recognized the faces of CARL SCHURZ, Senator ANTHONY, the brothers E. ROCKWOOD and GEORGE F. HOAR, and seated at the foot of the bed, with face buried in his hands, Mr. Downing, the faithful colored friend of Mr. Sumner.—*Boston Advertiser.*

Mr. FLANAGAN. Mr. President, how natural that scene is. Who is Mr. Downing? Everybody knows who he is. He is a colored gentleman of high standing. There he was at the death-bed of that great statesman, his face buried in his hands, not hypocritically, but sincerely mourning the loss of the great leader of emancipation in the United States, whose fame was spread throughout the civilized world. At his death-bed there was that man Downing, where he was well placed, vindicating the race to which he belonged.

I have another little extract here which I will ask the Clerk to read, a dispatch to the Galveston News, dated San Antonio, April 22.

The Chief Clerk read as follows:

The Herald publishes the particulars of another daring attempt at highway robbery. Mr. Miltback, a commercial traveler, *en route* from Goliad to Beeville in an ambulance, accompanied by a negro driver, was attacked by three banditti, one of whom got into the ambulance and tied the former. While the would-be robbers were rumaging around, Mr. Miltback succeeded in getting one arm loose, and obtaining a pistol concealed under the seat he killed two of the highwaymen, but was himself killed by the third. The negro driver managed to escape with the money, amounting to several thousand dollars.

Mr. FLANAGAN. Now, Mr. President, I might well ask in all candor whether that black man, the driver of the ambulance on that occasion, in which there were thousands of dollars, in the attack upon which three men lost their lives, who took care of the money and delivered it to the proper representatives of the owner or to the officers of the law—I ask was not that man entitled to vote? Was he not an honest man? Was he not a brave man? I think no one will raise an issue upon that branch of the subject.

Now, my friend from Georgia comes forward here, speaking in behalf of the colored man, and asks:

Is it because the colored man can boast no genealogy; or can display no family tree; or wears no coat of heraldry? Certainly not. It is the pride and boast of every true republican that he has no genealogy.

I have discussed that branch of the subject, but I have never heard any true republican thus declare, as my friend states. It may be very familiar and proper with him; I raise no issue upon that point. It has escaped my observation, however, because they in the general way perhaps would not be so ready to repudiate their fathers. However, when the fathers discard their children I think it is proper for the children to act independently and get along as best they can. But, sir, he continued:

And it requires a trip across the Atlantic, at the public expense, to subdue his contempt for all armorial distinction.
Is it because there are none brave among them?

I have just shown, I think, that there was one brave man among them. That was a brave man who saved that money.

The republican party has often assured us that in the late war "the colored troops fought nobly," and the Senator from New Jersey repeated the declaration in our hearing on yesterday. It is true that, interwoven with the dreadful realities of that struggle, there is much of fiction and romantic episode; many imaginary instances of inspiring heroism displayed by the colored troops. Fact and fiction are lamentably mingled in inextricable confusion.

I admit that.

But there is one exceptionable instance of daring and of death, and so notably established on the testimony of a single eye-witness that the Senate must remember it, and it is worthy of recounting even in this august presence. I see that the quick perception and historic learning of this body have already anticipated my discovery, and I would even now forego the thrilling narration, but for the fear that some future Munchausen might charge me with prejudice against the objects of the Judiciary Committee's special devotion should I decline to furnish so valuable a contribution to his peculiar style and school of history. I refer, as you know, to the Balaklava-charge made by the colored troops, at the witching hour of dawn, on empty stomachs, bayonets fixed, nipples uncovered, and under command of a general of renown, on the 29th of September, 1864, at New Market Heights. The historian, who was the general then commanding, and who seems to have been the only survivor of those colored troops, tells us the story with charming simplicity and with the eloquence of unbridled fancy, * * * being himself in the rear, where he intended to remain, and wholly uncertain whether the charge would be feebly to the front or with frantic heroism to the rear.

Mr. President, I have only a remark or two to submit upon that branch of the very eloquent and beautiful speech of my distinguished friend. He says this distinguished general had intended to securely place himself in the rear. That may have all been. I am not called upon to vindicate the character of that distinguished gentleman. He has done it himself time and again upon the battle-field and in the forum of the country. He is an able man; and when I see gentlemen rising and criticising the chivalry, the bravery, and the ability of that distinguished gentleman, it reminds me of a tom-tit sitting upon an eagle's beak. [Laughter.] I make no application.

Then in this beautiful speech the Senator goes further, and while upon that branch of the subject fluently and with great ability, beautifully arranged, hurls Munchausen at us. In his speech he has invoked all the heathen gods that I have ever read of; I think they are pretty much all enumerated here. He has invoked history to make this beautiful edifice. It is finely done, in a scholarly manner. Would that I could do the like. But when he hurled Munchausen at us, I was reminded of the anecdote of a battle that once took place between the Indians and Americans. There was a battle going on and the Americans had a cannon. They were short of ammunition; the balls had given out. Upon this occasion the whites took the trace-chains from the horses and wagons and loaded up the cannon and discharged them at the Indians, and it was a new thing to them. They saw their men falling right and left and all around, and when they came to look they found horse-chains lying about in every direction. There was perfect consternation among them. They waited a little while and they saw that the whites were about bringing the cannon to bear upon them again, whereupon one of them, a leader, exclaimed, "Run, run. run; here come the mortar and the wagons and the whole concern;" and away they went. He came to the conclusion, seeing the mortar and knowing nothing about a cannon, that everything was coming and they would all be killed, and they fled from the field. I was very much in that predicament when my distinguished friend hurled Munchausen at us. Thinks I, "Great God, here will come Gulliver, and Sinbad the Sailor, and all the contents of Pandora's box; they will be hurled at us and we will be forever slain." [Laughter.] It was an enormous idea, but such were the facts. We had to resist them, and yet the civil-rights bill is in a good condition after all those forces that have been hurled at us.

Mr. President, the great General Cromwell was approached by his courtiers upon one occasion and he was told that he was secure in his mighty struggles; that the Lord was upon his side of the question. "Well," said he, "my friends, that may be, but I advise you to keep your powder dry." The great Napoleon, similarly situated, was advised by his courtiers that the Lord was on his side and that victory would be his from time to time. "Well, now," said he, "I tell you what are the facts about this matter. That all may be, I hope it is, but I see that the Lord generally blesses the heaviest artillery." Now, Senators, I will tell you what we have got to do. The republican party may think the Lord is upon their side. I hope He is. They have power beyond question; but they must keep their powder dry, for I tell you democracy is knocking at the door. The republicans have not one to spare, no matter how many thousands they may have in the majority. The democrats tell us in this body, and particularly in the letter that I have read from Mr. Blair, that money will do thus and so. If money is potent and if it has carried the republican party triumphantly through, upon whom was that money brought to bear? Not upon republicans, because they were already initiated. It was used in buying democrats. That is a self-evident proposition. They present the question. I make no such charge, but I accept it as a fact. Now you must look at those things; you must hold the purse; keep your powder dry and recollect that the Lord blesses the heaviest artillery. You must be vigilant, and in being vigilant you must protect these five million people that the democrats are after now in every sense of the word.

I have sent up so many extracts to be read that I am ashamed to present any more, and I shall not do so; but I will refer to an article I saw the other day in a paper from my own State. A white man had been put upon trial and tried and convicted as a horse-thief, and he was sentenced to the penitentiary for two years for stealing a horse. A black man was put upon trial directly afterward and they proved that he had stolen two pieces of bacon—I have given the full amount, not one but two—and he was sentenced for eight years. That illustrates the feeling toward the colored people in the Southern States. I belong to one of them, and therefore I speak of my friends. If I cannot speak of them, whom can I speak of? I ought to be permitted to speak as freely of them as I do of my democratic friends, whom I love so much; but you must have a sharp eye upon them. You must have one eye cocked upon them as my friend from Georgia had upon General BUTLER in his remarks here. You must keep one eye closed upon them, because they will beat you whenever they can. It is true down to this time, in all their silly compliments, they cannot show as great an amount taken by any whig or republican since the formation of the Government as the $840,000 as appropriated by the Secretary, General Floyd, as seen by the reports investigating the same.

There is nothing they will not do. Why, sir, in two years to come, if they could do it, no civil-rights bill being placed upon them, you would never hear of a colored man sitting upon a jury in a Southern State, unless it be that Louisiana and glorious old South Carolina with Mississippi may be enabled to hold their own. In my State they could not. Not one of them would be permitted under any circumstances, in my humble opinion, to go upon a jury there, although the democrats there talk about equal rights before the law. I have papers here that I could read if I did not think it would be imposing upon the Senate too long, records that I brought with me from Texas, showing that they have no respect for the rights of the colored people in many instances. We have good judges there. We have a judge in my district who I believe would rule fairly; but many of them will not, to my certain knowledge. Their prejudices and surroundings are such that they cannot well do so. They have not

nerve to combat and resist them, and therefore they fall by the wayside. Are these men to be thus used and abused? I tell you they cannot have justice now, and I say upon principle that it is in the interest of all white and colored that justice should prevail. It purifies the morals of all, and makes all surroundings much more pleasant and secure for life and property, and everything that is sacred to man.

Let me mention a case the record of which I have before me. A colored man had rented a piece of land for which he was to give at the close of the season one bale of cotton weighing five hundred pounds. In the mean time the colored man was murdered, killed in the fields. This occurred not ten miles from me, in an adjoining county, in a county where fifteen hundred and ninety-nine majority was polled for Grant at the last presidential election, being the largest given by any county in the State. This man was killed there, and he left a wife who went forward in good faith and cultivated the crop and paid up the bale of cotton. I have the contract here. It reads beautifully. It speaks of "a free man of color." It is not a contract between A and B, between lessor and lessee, or anything of that kind. They have not got to that point yet. But it speaks of "a free man of color." The contract was complied with, but the landlord was not satisfied. The woman had a little cotton left, about six hundred pounds. The landlord went and procured an attachment and levied upon her six hundred pounds of cotton and ran it right off the plantation and took possession, notwithstanding our statute says that a suit cannot be entertained against a woman under those circumstances without going into court and asking for an administration. But they paid no attention to that, and in the process lying on my table from the justice of the peace he commands the constable to serve the notice on the dead man and the woman, and on that they acted; they went and took the little pittance. We have a statute there and a constitutional provision exempting and protecting families in two cows, two horses, a wagon, twenty head of hogs, and corn and subsistence enough for the family. I tell you, and I tell you not with pleasure, I regret that it is so, but I state it as a matter of fact, that the letter of the law is not respected in those particulars. There are good men through the county who would not do such a thing under any circumstances; but there are sharks who are doing it continually. There is no protection under the present statutes; and in the absence of this law there will be at an early day in all those States conventions held, and there will be democratic State constitutions that will ignore and repudiate the black man's interest in every sense of the word. The Legislature of my own State but recently enacted a landlord and tenant law which by the way fastens down upon the rent to the very last dime, protects the one but not the other. That is the history of the whole tendency of southern legislation. These are stubborn facts.

I am sorry that it is necessary as I conceive to speak of these things. But the republican party had just as well understand them, and if they are tired of the reconstruction laws as they were originally framed, better it is that they had never framed them in the first instance; better have let them go by the board. The Ku-Klux law was a good one, but the republican party shrank from it. The investigation was had, and the reports you are familiar with. Yet they played left and right on all hands and they went down into the border States. There they are and thus they are strengthened. I am sure it would have been much better for all law-breakers to have been more strict; yet I have always been on the side of mercy, but the bitterness of thousands will not permit them to appreciate any kindness of the Government or the republican party.

My friend, in his speech the other day, charged the republican party with having acted insincerely to the colored people, playing upon the old harp of a thousand strings on the subject of the mule and forty acres of land. That is very good for a Senator to send out the idea of a mule and forty acres. Everybody understands that. But I will tell you what is a fact, and I hope my friend will recollect it, that the constitution of Texas gives every head of a family one hundred and sixty acres of land, and every single man eighty acres, and if they wish to dissolve partnership, the mulatto, the negro, the gingerbread man, and all the balance of them, if they will come down to Texas, can there find their homesteads. I wish to God they would come. I do not wish Georgia any harm, but if they are so much in their way there, we would thankfully receive them, hoping thereby at an early period that we might get a republican State. I want that order of things. I say that, and I hope it will be communicated to his constituents at large, that if they wish to emigrate from Georgia Texas is open to them.

I will say, further, that I have about twenty thousand acres of land in my county where I am living, fine land, well watered, finely timbered, and I will give every one that can settle upon that land one hundred and sixty acres. I will give every such settler a home for an indefinite period. Many are settling there now. I will go further. I will do that which I have been doing; I will furnish them mules, I will furnish them cows, I will furnish them subsistence, and we will share and share alike at gathering times in good faith. That is all open to them. Then to some extent I will redeem the pledge that is thrown on the republican party as to the land and the mules.

I say, further, that I built the first school-house in that region of country when my friends were opposed to me bitterly, but I started my own mill and put up a good frame house, put in two good stoves, took a teacher from Washington City to my county, and he opened a black school. He soon had a hundred scholars, and the little fellows learned as by magic. That school is yet progressing. Therefore I am not so much opposed to schools as might be supposed.

Looking to all the surroundings, I have no hesitancy in saying that the republican party has a duty to perform, and they cannot protect themselves against the passage of this bill. It must be done. Why talk to me about social equality and about the rights of the black man? Mr. President, it might be well recollected that that question has long since been settled. It was settled in the repeal of the Missouri compromise when the struggle came up in the Congress of the United States on the question of the annexation of Texas. How was that compromise repealed? It was repealed by the vote of every southern Senator save Sam Houston and John Bell. They voted against it, but they were politically condemned and executed politically in their respective States in the South for going against the bill. It was the only thing that then kept the mighty weight that was suspended over them falling and crushing them. The North met them on that branch of the subject; the North had more brains than they had in that particular. They were determined to hold on and perpetuate slavery by bullying. They had failed to do it, and on that they lost all.

If a lingering doubt still existed it was settled when they sent the boy Smith—I believe it was Smith—to West Point, there putting on the blue uniform of the United States Government, to give him an American education to prepare him to command ten or any thousands of troops of the American stock. There is the boy. Who knows what he may do? He may prove to be a Hannibal of his race in the mighty and enlightened nation of the United States at no distant day.

These are all stubborn facts. They have gone so far that you cannot rest now; you cannot halt between two opinions. That is why I have presented the Constitution of the United States and that of the confederacy. I for one never swore allegiance to the confederate constitution first or last. Whether my distinguished friend from Georgia did, whether he then stood by the Constitution of the United States as he does now or not, I do not know; but speaking of the valiant display of the heroes of the battle-field, I do not know what his category is. I am not familiar with his history. I do not know whether he went to the front of the battle or not. This I can say, however, that so far as southern soldiers were concerned, better and braver men never drew breath than they; but they fought in an unrighteous cause as I always held, and I never did take an oath to support the constitution of the southern confederacy. I ever stood by the old Constitution that I had believed from my very boyhood was the most sacred instrument known to man save the blessed Gospel. That has been my stand-point; and I expect to live and die in the support, feeble though it may be, of the "Stars and Stripes" of the proud and great American nation, and hoping at an early day they may wave over the gem of the Antilles.

Mr. President, I recollect an anecdote told about Joseph E. Johnston, by the way a county-man of mine. He was raised in Albemarle County, Virginia. Joseph E. Johnston was walking the streets of Philadelphia and met an old friend. The old friend took him by the hand, and said he, "General, I am glad to see you; I have not seen you for a great while, General; General, we are not whipped yet." "Well," said the general, "I do not know; but I think I am. I have been in the war, but I believe you have not." [Laughter.] My friend is able to fight the battles now; but I say, broadcast throughout the South, the most bitter men now to anything that tends to progress, purification, and the perpetuity of this great nation are men who did no fighting. Whenever you show me a man who was not in the army, I will show you a man now that is ready to fight like the man who fought the Indian at Tippecanoe. The story was told by old General Coombs. I have heard him tell it. He was a commander in 1812 of a valiant Kentucky company. He fought the Indians, and after the Indians were vanquished and whipped and the whites had withdrawn, there was a soldier who had early in the action found a secure place and gotten into it, and he lay there quietly until the battle was all over, but nothing being heard for a considerable time, he began to look about. He looked all around, and at length his head emerged like a turtle and out he came. He looked around and saw no eye upon him. He saw a musket hard by with a bayonet, lying by a dead man. He ran to it and took hold of it and ran it through the first dead Indian he came across, saying, "I will let you know, Mr. Indian, that I'm some pumpkins, too." Now these gentlemen who were never in the war first or last are some pumpkins. They come forward now and they are leaders. That is human. Such things have prevailed since man was created, and they will continue. Therefore I invoke vigilance on the part of the republican party. They know what they have to contend against, and if they are not vigilant they will be borne down.

Mr. President, there is much more that in my broken manner I would be disposed to say on this subject, but knowing that I am trespassing upon the Senate I will bring my remarks to a conclusion, impressing it upon the American Congress to come up to the dying wishes of the great statesman on the subject of the civil-rights bill. He lived and died invoking the power of the Government with its vast and untold blessings in protection of the rights of the colored man. I hope they will be protected.

Sanborn Contracts.

SPEECH OF HON. HIESTER CLYMER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

May 27, 1874,

The House having under consideration the bill (H. R. No. 3256) to repeal so much of the act of May 8, 1872, entitled "An act making appropriations for the legislative, executive, and judicial expenses of the Government for the year ending June 30, 1873, and for other purposes," as provides for the employment of persons to assist the proper officers of the Government in discovering and collecting money withheld, and for other purposes—

Mr. CLYMER said:

Mr. SPEAKER: Actuated by a desire which is general here and elsewhere, to understand the matter of the "Sanborn contracts," I have read most attentively all the evidence reported by the Committee on Ways and Means relating to them. It is a continuous record of amazing imbecility and incapacity on the part of certain persons and of unblushing and unvarnished crime on the part of others. It would require hours fittingly to expose the fraud, villainy, and rapacity which are recorded on almost every page of the testimony. This time cannot be allowed me at the close of this discussion, and I have to thank the gentleman from Ohio, [Mr. FOSTER,] who has charge of the bill, for his courtesy in affording me an opportunity to be heard at all on the subject.

It would be both curious and instructive, did time permit, to inquire fully into the history of the passage of the enactment of May 8, 1872, under which John D. Sanborn was enabled to commit his depredations on individuals and on the Treasury. Who was the author of it does not clearly appear, yet it is certain that it was first adopted in the meeting of the conference committee on the judicial, executive, and legislative appropriation bill, during the expiring hours of the second session of the Forty-second Congress. This House twice rejected the report of the conference committee on the ground that it contained this objectionable provision. The committee met a third time, and the members on the part of the Senate, consisting of Messrs. Sawyer, the present Assistant Secretary of the Treasury, MORRILL of Vermont, and Cole of California, still insisting on the paragraph, the members of the committee on the part of this House were forced to yield their objections and implied instructions, in order to save the bill, and the report was finally adopted by the House by the meager majority of ten votes.

The only persons who were *avowedly* in favor of the enactment appear to have been Mr. W. H. Kelsey, a former member of Congress from New York, who within a month obtained a contract under it, and Mr. Sawyer, who subsequently was appointed Assistant Secretary of the Treasury, thereby enabling him by his official position to aid, promote, and screen the villainies committed under it. The astonishing fact remains that at this day only two persons can be found who seem ever to have been in favor of the enactment, although the pertinacity with which it was adhered to on the part of the Senate nearly resulted in the defeat of the greatest and most important of the appropriation bills. It may not be doubted that some great "outside pressure" existed to have it passed, and that it was the culmination of a well-matured and long-considered plan, by which, under the guise of collecting revenues withheld from the Treasury, the "inside ring" were to rob and deplete it. No one may read the evidence and come to any other conclusion. The enactment is in the following words:

And from and after the passage of this act the Secretary of the Treasury shall have power to employ not more than three persons to assist the proper officers of the Government in discovering and collecting any money belonging to the United States whenever the same shall be withheld by any person or corporation, upon such terms and conditions as he shall deem best for the interests of the United States; but no compensation shall be paid to such persons except out of the money and property so secured; and no person shall be employed under the provisions of this clause who shall not have fully set forth in a written statement, under oath, addressed to the Secretary of the Treasury, the character of the claim out of which he proposes to recover, or assist in recovering, moneys for the United States, the laws by the violation of which the same have been withheld, and the name of the person, firm, or corporation having thus withheld such moneys; and if any person so employed shall receive or attempt to receive any money or other consideration from any person, firm, or corporation alleged thus to have withheld money from the United States, except in pursuance of the written contract made in relation thereto with the Secretary of the Treasury, such person shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than $1,000 or imprisoned not less than two years, or both, in the discretion of any court of the United States having jurisdiction; and the person so employed shall be required to make report of his proceedings under such contract at any time when required to do so by the Secretary of the Treasury.

The same Congress, at the same session, had repealed all laws which provided payment of moieties to informers, so far as related to internal-revenue taxes. The new enactment included not only internal-revenue taxes, but all moneys, from whatever source, belonging to the United States, withheld by any person, firm, or corporation, and concentrated the power to collect the same in the hands of three persons, to be appointed by the Secretary of the Treasury. In the words of Hon. J. W. Douglass, the Commissioner of Internal Revenue:

The first (the law repealed) was democratic, for the whole country, and the other was a monopoly for three men. I think it concentrated its meanness, granting that the moiety system is mean. The one was general, the other was personal and invidious, confined to a favored few (three.)

The evident design, therefore, of those who procured the legislation was to create a "close corporation," which was to monopolize all the meanness and all the rascality and all the profits of the former moiety system.

How well these ends were subserved and accomplished by it a brief history of John D. Sanborn, one of the contractors under it, will clearly illustrate.

His fitness for the duties imposed by it, and his capacity for its "concentrated meanness," will be better appreciated by briefly narrating the past history of the man.

For more than eighteen years he has been a general agent and detective of the Adams Express Company, and during the war for some time he found a field of labor congenial to his tastes, natural and acquired, by becoming a provost messenger on a boat plying between Baltimore and Fortress Monroe. He varied the monotony of his life at this time (1864, 1865) by engaging with one G. W. Lane, "a person entitled to the confidence of the Government, and allowed to carry into North Carolina and sell to its citizens cordage, chains, agricultural instruments, &c., to be exchanged for cotton, &c., and to ship these articles to northern ports." Although by the terms of his permit granted by Mr. Lincoln, at the request of the general then commanding in those parts, Lane was restricted to dealing in cordage, chains, &c., his humane feelings prompted him to furnish our southern brethren, then in rebellion, with other necessaries and luxuries, such as coffee and molasses, receiving in return for a pound of the former or a gallon of the latter three pounds of cotton, which was worth not less than sixty cents a pound! He was not unmindful of the scriptural injunction to "despoil your enemies," especially when by so doing he could enrich himself. There were divers other persons, military and civil, who were also partners of Lane and Sanborn in these transactions. If particulars are desired, I would refer the curious or inquiring to a report made during the second session of the Thirty-eighth Congress by Hon. Elihu B. Washburne on "Trade in the rebellious States."

After the war closed Sanborn was engaged in the detective service of the Adams Express Company until 1869, when Mr. BOUTWELL, then Secretary, appointed him a "special agent," that, is a detective in the Treasury Department. His undoubted fitness and qualifications for that place are attested by William A. Simmons, formerly supervisor of the revenue in New England and now collector of the port at Boston. He testifies "that Sanborn is generally known in Massachusetts as the mysterious man; that he is the sharpest railroad manager in New England; that he was never able to get much out of him, and never knew any one who did;" (I fear there is a mistake here, as Sanborn swears he always subscribes liberally to the party fund in Massachusetts, doing so on occasions even before the nominations are made;) "that he knows every member of the Legislatures of Maine, New Hampshire, and Massachusetts; and that he is a member of the third house."

To these high and admirable qualities is added the fact, to which he himself testifies, "that he knew Mr. Boutwell as well as any man in Massachusetts, and did not need any introduction to him." In justice to Mr. BOUTWELL it must be remarked, that just at this time he does not remember "that he ever had any personal relations with Mr. Sanborn in any way or form," but he did know "that he belonged to Massachusetts;" although he pointedly and rather severely remarks that Sanborn "had no right to assume anything on his friendship for him one way or other." Mr. Sanborn may have been mistaken in saying he "knew Mr. BOUTWELL as well as any man in Massachusetts," but he said it under oath, and as Mr. BOUTWELL merely "made a statement" before the committee, the discrepancy may be accounted for. Then again Mr. Sanborn is slightly under a cloud, and it is not so profitable to know him now as when his money is needed, even before nominations are made, in the Old Bay State.

So much for the man; now for his connection with the subject under discussion.

On the 15th of July, 1872, Sanborn addressed the Secretary of the Treasury the following letter, accompanied by an affidavit:

BOSTON, *July* 15, 1872.

SIR: I beg leave to submit the following statement under the act making appropriations for the year ending June 30, 1873, regarding the discovery and collection of money belonging to the United States withheld by any person or corporation, and to ask to be employed under the provisions of the clause to which reference is made. I desire to set forth fully a written statement, under oath, as follows:

First, claims out of which I propose to recover or assist in recovering money of the United States for evasions of the laws, and frauds upon the laws for the collection of internal-revenue tax upon spirituous and fermented liquors, as well in making false returns of the amounts manufactured as in evading the payment of the tax upon them which is returned; and I append hereto a schedule of the names of the persons and firms which have thus withheld such moneys, and the probable amount thereof.

I also beg leave to state that there are many other firms and owners of distilleries whom I cannot more fully specify because I am in process of investigation, and will file with the honorable Secretary an amended schedule as fast as I find the names of such firms.

I ask to be allowed such amount from the collections, in the form of a percentage, as, in the judgment of the Secretary of the Treasury in the matter, is meet and fit.

I have the honor to be, very respectfully,

JOHN D. SANBORN.

Hon. GEORGE S. BOUTWELL,
Secretary of the Treasury.

DISTRICT OF COLUMBIA, *County of Washington, ss:*
Sworn and subscribed before me this 13th day of August, A. D. 1872.
[SEAL.] A. B. JOHNSON,
Justice of the Peace.

[Indorsement.]

Respectfully referred to the Solicitor of the Treasury.

WILLIAM A. RICHARDSON,
Acting Secretary.

TREASURY DEPARTMENT, *August* 12, 1872.

Appended to this letter was the list of distilleries, rectifiers, and purchasers therein referred to.

On the 13th of August, 1872, Mr. Richardson, then acting Secretary of the Treasury, addressed Sanborn as follows:

TREASURY DEPARTMENT,
Washington, D. C., August 13, 1872.

SIR: Having fully set forth and filed in my office a written statement, under oath, addressed to me, showing the character of a claim out of which you propose to recover, or assist in recovering, moneys for the United States, the laws by the violation of which the same have been withheld from the United States, and the names of persons withholding the same, you are hereby employed, by virtue of the act approved May 8, 1872, entitled "An act making appropriations for the legislative, executive, and judicial expenses of the Government for the year ending June 30, 1873, and for other purposes," to assist the proper officers of the Government in discovering and collecting said moneys, upon the terms and conditions set forth in a written contract made by me with you, of this date.

The compensation agreed to be paid you by the terms of said contract is to come out of the money or property secured by your efforts.

Report of your proceedings is to be made when required by me.

This employment will be terminated when, in my judgment, the interests of the United States require it.

Very respectfully,

WM. A. RICHARDSON,
Acting Secretary of the Treasury.

JOHN D. SANBORN, Esq., *Boston.*

On the same day the following agreement was entered into:

An agreement made this 13th day of August, A. D. 1872, by and between William A. Richardson, Acting Secretary of the Treasury, party of the first part, and John D. Sanborn, of the city of Boston, Massachusetts, party of the second part.

The said party of the second part having been designated by the Secretary of the Treasury as one of three persons to assist the proper officers of the Government in discovering and collecting moneys belonging to the United States, withheld by certain persons, under one of the provisions of the legislative, executive, and judicial appropriation bill, approved May 8, 1872, and the said party of the second part having fully set forth as therein required, in a written statement under oath, addressed to the Secretary of the Treasury and filed in his office, that he proposes to recover or assist in recovering, for the United States from the following persons, to wit.

Here follows the names of the distilleries, rectifiers, and purchasers named in the letter of July 15, 1872.

A large sum of money, to wit, $500,000, which the said party of the second part claims to be due to the United States for internal-revenue taxes upon spirituous and fermented liquors, as well in making false returns of the amounts manufactured as in evading the payment of the tax upon them which is returned, which were legally due under the several acts of Congress levying internal-revenue taxes, and which have been withheld by the said persons:

Now it is agreed by and between the said parties—

First. That the said party of the second part may proceed to collect the said taxes so alleged to be due to the United States by the said persons.

Second. That in case any legal proceedings are required to be had in the premises, the same shall be conducted by the proper United States attorneys; but no such proceedings shall be taken without the written consent of the Secretary of the Treasury first being obtained.

Third. No settlement of such claims shall be made, except under the provisions of section 10 of the act of March 3, 1863.

Fourth. All the costs and expenses which shall be incurred by the party of the second part in investigating and prosecuting the said claims, of every name or nature, shall be paid and borne by said party of the second part, and no part of the same shall be paid out of that portion of whatever shall be realized from said claims under this agreement which is to be retained by the United States.

Fifth. The said party of the second part shall, whenever required by the Secretary of the Treasury, make a full report in writing of all his acts and proceedings under this contract.

Sixth. Whenever any money shall be collected from said persons upon said claims, either by legal proceedings or by settlement as compromise of said claims, such money shall be paid by said persons to the credit of the Secretary of the Treasury, and out of any money so collected and received there shall be paid to said party of the second part in full for his services, and for all the costs and expenses of such collection, a sum equal to 50 per cent. of the gross sum so collected and received, which said 50 per cent. shall be paid to the party of the second part as fast as the money is collected and paid to the credit of the Secretary of the Treasury. The balance of said money to be paid into the Treasury of the United States.

Seventh. This contract may be revoked at any time at the pleasure of the Secretary of the Treasury.

In witness whereof the said parties have hereunto set their hands and seals the day and year above written.

[SEAL.] WILLIAM A. RICHARDSON,
Acting Secretary of the Treasury.

[SEAL.] JOHN D. SANBORN.

Witness to both signatures—
E. C. BANFIELD.

Subsequently, on the 15th of October, Sanborn furnished, under oath, a list of about seven hundred and fifty individuals and firms who he alleged withheld moneys illegally for taxes imposed upon legacies and successions and income, under the act of June 30, 1864, which, on application, were added to his contract.

Again an addition was made to it when on the 19th of March, 1873, the Secretary, on his application under oath, permitted him to add the names of about two hundred foreign firms and individuals doing business through agents in New York, and the names of some sixteen hundred other persons, the residence of about fifty of whom is mentioned.

The last and final addition was made to it on the 7th of July, 1873, when Sanborn filed with the Secretary a list of five hundred and ninety-three railroad companies, taken bodily and without exception from Appleton's or some other guide-book, all and every one of which he swore "were indebted to the Government upon taxes upon dividends and interest paid upon bonds which they have heretofore failed to pay." They were added to his contract, and every railroad in the country without exception, finished and *unfinished*, was turned over to the tender mercies of Sanborn! I say "unfinished," for within my own knowledge one company at least is in the list which has never built a mile of road or issued a bond. I refer to the Southern Pennsylvania. My friend from Kentucky [Mr. BECK] in his speech yesterday pointed out another in the list in the same condition.

Sanborn is careful to state in his testimony that he knew little or nothing about the list, he and his agents having examined not more than one hundred and sixty of them; that he was at the Treasury Department two or three days about it; that he talked with the Secretary and Solicitor; that he wanted the list returned; that if they desired it revised and cut down to just the number he knew about, he would do it; but it was useless, and by the consent and under the advice of the highest Treasury officials, as he swears, he deliberately perjured himself so that his opportunities for plunder might be enlarged. Who will believe they had no interest in giving this advice?

In this manner his drag-net was thrown over and around more than twenty-five hundred individuals and firms and five hundred and ninety-three railroad companies, swearing positively in each case that moneys were illegally withheld from the Government. Heretofore "a custom-house oath" has been the synonym of perjury; what shall hereafter be said of the oaths of a contractor under the Treasury Department for the collection of dues and taxes withheld?

The victims being thus marked, Sanborn was prepared for business. Active operations were not commenced until early in the year 1873. By the terms of the original agreement, he proposed to recover or assist in recovering for the United States moneys withheld from certain persons, in consideration for which he was to receive 50 per cent. of the amount recovered and *to pay all the expenses.*

Armed with his contract he proceeds to Boston, late in December, 1872, or early in January, 1873, to make all needful arrangements with William A. Simmons, then the supervisor of the revenue for the district of New England and now collector of the port at Boston. After presenting his plan, Simmons, who is a prudent individual, declined assistance, unless orders were procured from his superior officer. It chanced that Mr. Richardson, then Assistant Secretary of the Treasury, was most opportunely in Boston. Simmons hastened to interview him on the subject, whereupon Mr. Richardson said "You will render Mr. Sanborn what assistance he requires." Simmons immediately set Mr. Horton, who was his revenue agent, to work up Mr. Sanborn's cases. Growing uneasy about the proceeding, Simmons required of Sanborn a *written* order in the premises, which was forthcoming as soon as desired. It is as follows:

TREASURY DEPARTMENT, *February* 3, 1873.

SIR: You are requested to assist John D. Sanborn, esq., of Boston, in the examination of official records in reference to such cases of alleged violation of the internal-revenue laws as he may ask for your co-operation.

Mr. Sanborn is acting under an appointment from me, and may need some information from the offices of collectors and assessors for the purpose of verifying his claims.

Very respectfully,

GEO. S. BOUTWELL,
Secretary of the Treasury.

TO SUPERVISORS AND COLLECTORS OF INTERNAL REVENUE.

It will be observed that the Secretary limits the assistance to be rendered "to the examination of official records" and the granting of "information from the offices of collectors and assessors."

This would not have fully covered the work being done by Horton for Sanborn; so Mr. Simmons obligingly addresses the following order to his revenue agent, whereby he is directed to continue to render Sanborn "*such assistance as he may require:*"

UNITED STATES INTERNAL REVENUE,
SUPERVISOR'S OFFICE,
District of New England, February 5, 1873.

SIR: I herewith inclose for your information a copy of a letter from the Secretary of the Treasury to John D. Sanborn, esq.

You will continue to render him such assistance as he may require.

Respectfully,

W. A. SIMMONS, *Supervisor.*

C. M. HORTON, Esq., *Revenue Agent.*

Under that Mr. Simmons testifies that "Mr. Horton rendered Mr. Sanborn *whatever* assistance he desired."

Under the order of the Secretary, and the private and verbal instructions of the Assistant Secretary, Mr. Richardson, Simmons and his agent, Horton, collected about $50,000 in New England for Sanborn, without, as it appears, any aid or assistance, and at no expense to him whatever, both drawing their pay as officers of the Government with commendable punctuality! So great was their zeal in his behalf that their labors were not confined to cases included in the contracts of Sanborn, but their devotion to his interests induced them to make raids upon outsiders who were delinquents under "Schedule C," demanding and receiving from a Mr. Williams, of Hartford, Connecticut, the sum of $2,249.16, and from one Gottlieb Scherer $1,000. Mr. Sanborn naïvely denies all knowledge of these cases, and suggests it was done "by his agents and clerks," doubtless thereby meaning Messrs. Simmons and Horton, since it does not appear that he had any other persons employed in the New England district. He pocketed his 50 per cent. of the ill-gotten gains, although he knew the cases were not in his contract. Under other circumstances, and by most men, this would be deemed "theft!"

The industry and vigilance exhibited by Simmons and Horton in "assisting Mr. Sanborn," considering the fact, *as Simmons swears*, that they only received their pay as Government officials, is somewhat remarkable. It is noticeable, however, that Sanborn never paid less than 12 per cent. on the whole amount collected for similar cases to other persons; yet the suspicion must not be entertained that men so virtuous and disinterested as Messrs. Simmons and Horton ever hankered after the "filthy lucre." Had they taken the trouble to examine the records of their courts, and had kept in their office the "records of legacies and successions," provided for and sent to all its offices and officers by the Bureau of Internal Revenue in 1866, every case in which collections were made by them for Sanborn could have been secured by them for the national Treasury. It required the contract of Sanborn and the orders written and verbal of the Secretary of the Treasury in behalf of Sanborn to remind them of their duty. However, it cannot be charged against them that when they thus knew their duty, and it was their interest to perform it, they failed either in vigilance or promptness. They can point with proud satisfaction, and I trust with conscious innocence too, to the sum of $50,000 placed by their exertions in the Treasury, even although Sanborn did receive his slight percentage of $25,000 out of it. It is consolatory to reflect that the revenues of the Government will never be depleted so long as it retains the services of such vigilant officers as Simmons and Horton, backed by Sanborn. One has already received his just reward in his promotion to the collectorship at Boston. What may not Horton expect when his arduous services in this respect are finally rewarded?

So much for the district of New England; now for that of New York. This was a broader and richer field of operations. Here it was necessary to secure the co-operation and services not only of the supervisor, Mr. Lucian Hawley, but that also of his clerks, Messrs. Stowe and Steiner. These were re-enforced by engaging George Bliss, jr., esq., the United States district attorney at New York, and Mr John D. Coughlin, who from 1865 until he was employed by Sanborn in the spring of 1873 had been an assistant assessor of the revenue in New York. All these, save Coughlin, were in the employ of and paid by the Government. Sanborn, however, persists in swearing that Steiner was his clerk and paid by him, but in this he is flatly contradicted by Hawley, who testifies that "Steiner was sub-detailed by him to Sanborn to work up these cases;" that Sanborn certified to his bills, which were paid by the Government. Sanborn resorted to this piece of perjury to cover up the fact that at the very time he made his contract, August, 1872, he was a special agent or detective of the Government, that he so continued until May, 1873, and that during the whole time he drew his pay as such. He testifies that during this period he engaged Steiner and paid him $200 per month, thus attempting to make it appear that although he was a Government officer and drawing pay from August, 1872, to May, 1873, yet having paid for and furnished the Government with the services of Steiner during the same period, he was excusable. The double crime of theft and perjury is apparent.

In February, 1873, Sanborn produced and exhibited to Hawley the general order to supervisors and collectors of internal revenue issued by Secretary BOUTWELL, dated February 3, 1873, which I have before read, but anticipating that Hawley might not consider its instructions broad or explicit enough, the attentive Mr. Simmons, of Boston, was on hand to explain its meaning under the light shed on it by his private and personal interview with Mr. Assistant Secretary Richardson. I will read from Hawley's testimony to explain the particulars of that interview:

LUCIAN HAWLEY sworn and examined.

By Mr. FOSTER:

Question. State your occupation.

Answer. I am supervisor of internal revenue for the State of New York.

Q. When were you appointed supervisor?

A. December, 1872.

Q. What connection with the Internal Revenue Bureau did you have prior to that time?

A. I was internal-revenue agent.

Q. I notice by this printed report that large sums of money have been collected by you, as represented by Mr. Sanborn. I want to know how you came to be in the employment of Mr. Sanborn?

A. I am not aware that I was in the employment of Mr. Sanborn. I was in the receipt of a letter from the Secretary of the Treasury in February, 1873, I think, directing me to assist him. A copy of the letter is published in this book.

Q. That is the letter to collectors and supervisors?

A. Yes.

Q. Did you consider that as authority for your action?

A. That, with the verbal news which I had from the Secretary's office, I considered as instructing me to do as I did.

Q. What was the verbal news?

A. Mr. Simmons was present at the time this letter was presented to me, and I asked him what it meant, and he detailed to me a conversation which he had had with the then Assistant Secretary, Mr. Richardson, of what would be required or what was expected of the officers in connection with this business.

Q. What did Mr. Simmons represent to you as being required?

A. I asked him what the idea was in reference to this new way of doing the work, and he said that Mr. Richardson had told him that the officers would be called upon to assist Mr. Sanborn, and that it was a matter in which the Internal Revenue Bureau had no particular concern. I asked him if reports would be required to the Commissioner of Internal Revenue, and he said they would not; that when examination was made and taxes were found to be due, the manner of transmitting them should be by draft payable to the order of the Secretary of the Treasury.

Q. And on that, and that alone, you felt authorized to collect for Mr. Sanborn any claims he reported to you?

A. I felt authorized to collect taxes and forward them to the Secretary. What Sanborn's interest in them was I was not advised particularly.

This being entirely satisfactory to Hawley, he was willing and ready for himself and for his clerks to do Sanborn's bidding. The services of Mr. Bliss, who received a salary of $6,000 a year from the Government, and in addition a commission of 2 per cent. upon all moneys collected in cases where suit was brought, were invaluable and to be secured. Sanborn thereupon waited on him and stated his wants, whereupon Mr. Bliss wrote two letters to the Solicitor of the Treasury, which I shall read:

OFFICE OF THE DISTRICT ATTORNEY OF THE UNITED STATES
FOR THE SOUTHERN DISTRICT OF NEW YORK,
New York, February 15, 1873.

DEAR SIR: Application is made to me to take some action under the contract existing between the Treasury Department and Mr. J. D. Sanborn. I would be pleased to receive a copy of that contract, and also to be informed whether, in case Mr. Sanborn requests the commencement of suits and I am satisfied that a proper case for a suit exists, I am authorized to commence the same without communicating with your Department or the Commissioner of Internal Revenue, or whether I shall communicate with one or the other of these departments before acting upon Mr. Sanborn's recommendation.

Very respectfully, your obedient servant,

GEO. BLISS, JR.,
United States Attorney.

Hon. E. C. BANFIELD,
Solicitor of the Treasury.

OFFICE OF THE DISTRICT ATTORNEY OF THE UNITED STATES
FOR THE SOUTHERN DISTRICT OF NEW YORK,
New York, February 26, 1873.

SIR: Permit me to call your attention to my letter of the 15th instant, requesting to be furnished with a copy of the contract of Mr. John D. Sanborn. As he is pressing me to take action in connection with it, and as delay on my part may be injurious to him and to the Government, I respectfully request that the copy may be at once furnished me.

I have received from Mr. Sanborn a very long list of persons in this city who are alleged not to have paid the legacy or succession tax, which they as executors or administrators were bound to pay. Mr. Sanborn has requested me to transmit a copy of the list to the supervisor of internal revenue for this district, in order that he may understand that the matters are in my hands for suit and collection. The object of this request is that the supervisor may direct the assessors and collectors not to take any proceedings to collect the money so alleged to be withheld from the Government. I desire to be informed as to the wishes of the Department in this respect. Unless suit is actually commenced by me at the outset in these cases, parties notified by me will naturally apply to the assessor, make their return, and pay their tax in the ordinary course; and Mr. Sanborn seems apprehensive that under these circumstances he will fail to receive that proportion of the amount collected which he represents that he is entitled to under his contract. It is, therefore, important that the Department should give some direction upon the following points:

First. May I commence suit when requested to do so by Mr. Sanborn in cases falling within his contract, if in my opinion good ground therefor exists?

Second. May I enforce the collection of penalties for failure to pay?

Third. Is notice to be given to the internal-revenue officers that such suits have been commenced, in order that they may not thereafter receive the amount due, without reference to the pendency of the suit?

Fourth. If in cases which seem to me proper, instead of commencing a suit I issue a notice, what course shall be pursued with reference to the payment of the amount due?

Very respectfully, your obedient servant,

GEO. BLISS, JR.,
United States Attorney.

Hon. E. C. BANFIELD,
Solicitor of the Treasury.

To which letters in due time the following answer was made:

DEPARTMENT OF JUSTICE,
OFFICE OF THE SOLICITOR OF THE TREASURY,
Washington, D. C., March 27, 1873.

SIR: In reply to your lettter of the 15th and 26th ultimo, making certain inquiries in relation to the contract existing between the Treasury Department and Mr. J. D. Sanborn, I have to say:

First. That you are hereby authorized to institute suit in any case presented to you by Mr. Sanborn arising under his contract, when, in your opinion, the facts presented justify the institution of suit.

Second. I doubt the expediency of enforcing the payment of penalties for failure to pay the tax to which you particularly refer, to wit, legacy and succession taxes.

Third. It is proper that notice should be given to the collectors not to receive payment in cases embraced in Mr. Sanborn's contract, it being understood that his contract relates to claims which are not of record in any of the collectors' offices.

Fourth. The contract provides that payment shall be made of the entire amount collected to the Secretary of the Treasury, who pays out of the same the amount due to Mr. Sanborn. You will, therefore, hand over all sums received by you, whether received on suit, by compromise, or voluntary payment to Mr. Sanborn, who is accountable to the Secretary of the Treasury.

I have verbally requested Mr. Sanborn to cause copies of his contract to be made for your use.

I am, very respectfully,

E. C. BANFIELD,
Solicitor of Treasury.

GEORGE BLISS, JR.,
United States Attorney, New York.

By these orders, verbal instructions, and letters of the Treasury Department, the whole machinery of the Internal Revenue and Law Departments of the Government was placed at the absolute command of Sanborn to effect his purposes. How diligently, effectively, and profitably (for Sanborn) they "plied their vocations" may be judged of by the amounts collected. Mr. Bliss testifies that his commissions of 5 per cent. on those coming from taxes imposed upon legacies, successions, and incomes alone amounted up to January 1, 1874, to $3,300; therefore the gross amount collected from this source must have been $65,000.

Had Hawley examined the books of his office he doubtless would there have found one provided by the Bureau of Internal Revenue in 1866, in which was ordered to be kept, and unquestionably was kept, the name of every estate from which taxes on legacies and succes-

sions were due. That the book was there, and that these records were kept in it, is proved by the intimate knowledge of Coughlin, who had been an assistant assessor in the office at New York up to May, 1873, with the subject generally, and particularly with the estate of the late Mr. John J. Phelps, of that city.

There was no *sufficient* inducement, however, for Mr. Supervisor Hawley or his assistants to collect these taxes until Sanborn appeared in the district with his 50 per cent. contract and the orders of the Secretary. It is true that under them the Government would only receive one-half the amount collected, yet Sanborn would receive the other. He was a liberal employer, as is shown by his paying Coughlin 12½ per cent. on collections made by him, and Bliss 5 per cent., without even bringing a suit in any case, upon the whole amount. It would not have been profitable for Mr. Bliss to have instituted a suit in any case, as then he could have taken but 2 per cent. Sanborn paid him better wages for less work. It is not a violent presumption to assume that he would pay others at the same rate he paid Coughlin for similar services, but this is virtuously and indignantly denied, yet the extreme diligence and activity of Hawley and his subordinates, when one-half of the amount collected was to go to Sanborn, as compared with their inactivity and lack of vigilance when the whole sum collected would have gone into the Treasury is not altogether inexplicable.

How much was collected by these confederates from individuals and firms charged with the evasion of laws and frauds upon the laws for the collection of internal revenue upon spirituous and fermented liquors, &c., I have not time particularly to inquire. They did not, however, confine their rapacity to cases included in Sanborn's original contract and the first amendment to it of October 30, 1872, for on the 28th of April, 1873, there was placed in the Treasury the sum of $2,202.71 taxes collected by them from the Buffalo, New York and Erie Railroad Company, and on the 1st day of July, 1873, the Delaware and Hudson Canal Company sent their check to the Treasury for $9,668. The one-half of both these amounts was paid to Sanborn. Neither of these cases was included in his contracts, yet on them he claimed 50 per cent., alleging they were covered by his amended contract of October 30, 1872; and, as I have said, it was paid by the Treasury. An examination of his amended contract of October 30 will show that not a railroad company is named in it. Either the chief officials of the Treasury Department knew they were not embraced therein and were thus direct participants in these clear and undoubted cases of robbery, or they neglected and failed to make the simple examination required, which would have shown the fact that they were not included, thus convicting themselves of gross negligence and incapacity. Who will hesitate to say it was not something more and worse?

Having thus tasted of railroad blood, Sanborn and his gang determined to further pursue them, and on the 7th day of July, 1873, he filed with the Secretary of the Treasury that list of five hundred and ninety-three railroad companies, to which I have before referred, and had it made part of his original contract. I have already narrated the circumstances under which this was done, and that it included the names of companies which had never built a mile of road or created a dollar of indebtedness, although Sanborn testified they were all indebted to the Government for taxes on dividends and interest paid on bonds, which they withheld and refused to pay. I have now to add that in addition to this wholesale perjury, he was guilty of distinct, willful, and specific perjury in this: that in the list thus filed and sworn to by him on the 7th day of July, 1873, was included the Delaware and Hudson Canal Company; although Sanborn on the very day he made oath to the list, to wit, on the 1st day of July 1873, wrote a letter to the Secretary of the Treasury stating that the company had on that day paid to him the sum of $9,668, being the full amount due the Government as interest or other causes! It is admitted that on that day he had no right to collect or receive it, and that he demanded it, or his agents did for him, without shadow of authority, in order that the Treasury might be defrauded of one-half of it. It was paid, and he knew it when he swore to and filed the general list, considering perjury of little consequence so that it filled his purse.

Time will not permit me to examine their proceedings generally with reference to railroad companies. The case of the Delaware, Lackawanna and Western Railroad Company will serve as an illustration.

That this company was largely indebted to the Government was well known to the revenue officers in New York from the year 1869 to the time of settlement. The reason why this company did not pay was, that owing to the conflicting decisions of the then Commissioner of the Internal Revenue, General Pleasonton, it was impossible to determine the amount. Being thus known and of record in the revenue office, it was excluded from the contract between Sanborn and the Treasury Department. The probable amount due was well and generally known to be about $100,000. The company was willing and ready at all times to pay when the amount due was ascertained and asked for. There was no special incentive for Mr. Supervisor Hawley to cause the collection to be made. He was working at a fixed salary and cared little for extra labor. When it became possible to have this case included in Sanborn's contract all was quickly changed. He became sensitively alive to the vast importance of settling the amount due and collecting it. Suddenly it became vastly more important that the Government should receive $50,000 than it had ever been before the making of the Sanborn contract that it should get $100,000, which Hawley might have received at any time had he attended to his duty.

The first general order of Secretary BOUTWELL to supervisors and collectors, dated the 3d of February, 1873, under which Hawley and his subordinates had heretofore been doing Sanborn's bidding, was scarcely broad enough in its terms to embrace this case. By it they were directed to assist him in the examination of the records; just what Hawley did not desire to do in this particular case, since it was there of record, and hence Sanborn could not lay his hands on it. This was embarrassing; it was to be a clear loss to Sanborn and his confederates if the first order was obeyed. But Sanborn, being from Massachusetts, was equal to the emergency. Were not Messrs. BOUTWELL, Richardson, Sawyer, and Banfield all from the same State, and all his fast friends? Did not and would not Mr. Secretary Richardson sign any and everything "by way of routine" which was ever presented to him; so what more easy or natural than to obtain a new order which would cover this rich prize, not into the national Treasury, but into the capacious pocket of John D.Sanborn! It was had for the asking; and here it is:

TREASURY DEPARTMENT,
Washington, D. C., October 15, 1873.

To Supervisors and Collectors of Internal Revenue:

You are requested to assist John D. Sanborn, of Boston, in the examination of such cases of alleged violations of the internal-revenue laws as he may ask for your co-operation.

Mr. Sanborn is acting under an appointment from the Treasury Department, and may need some aid and information from your district for the purpose of verifying his claims.

Please render him such assistance as he requires.

Very respectfully,

W. A. RICHARDSON,
Secretary of the Treasury.

Mark the great and cunningly devised change. Under the order of Mr. BOUTWELL, of February 3, 1873, supervisors and collectors of internal revenue were to assist Sanborn in the examination of *official records* in cases of alleged violation of the internal-revenue laws. Under this order of Mr. Secretary Richardson they were no longer confined to the official records, but were to assist Sanborn in the examination of *such cases* of alleged violations of the internal-revenue laws as he might ask their co-operation in.

This order covered every imaginable case; and immediately after it was issued Hawley, the supervisor, Stowe, the clerk, and Alden, the detective, proceeded to business, and within fourteen days from its date settled the account with the Delaware, Lackawanna and Western Company, agreeing on $99,685.24 as the amount due the Government.

Mr. Odell, the treasurer of the company, testifies that the settlement was made on the 28th day of October, 1873; "that he never knew or heard of Sanborn in the case; that they settled directly with the officers of the Government; that the final settlement was made with Mr. Hawley, and that it was a pleasant and an amicable settlement." The company contended that the delay in settlement having been caused by the conflicting decisions of the Commissioner of Internal Revenue, General Pleasonton, they were not in fault, and on the next day, October 29, it was agreed that for the convenience of the company the payment should be postponed until the 5th day of January, 1874, on which day Mr. Odell, the treasurer, deposited the whole amount in a New York bank, and on the 6th of January sent his check, No. 23332, payable to the order of Mr. Richardson, Secretary of the Treasury, for $99,685.24, in full settlement.

This check reached the Secretary, by mail, on the 7th of January, and on the very next day, January 8, Sanborn, who was in New York, writes to the Secretary that Mr. Odell, the treasurer of the Delaware, Lackawanna and Western Railroad Company, had paid to him the sum of $99,685.24, and had sent his check, No. 23332, for the amount. As Mr. Odell signed and mailed the check himself, and as no other person in New York knew of his having done so save Mr. Sloan, the then president of the company, he was naturally astounded that Sanborn, who was also in New York, but whom he had never seen or heard of in the transaction, should have known that he had drawn the check, had mailed it to the Secretary of the Treasury, and that it was for $99,685.24, and that its number was "23332," all this knowledge having been gathered within twenty-four hours by the mysterious Mr. Sanborn! There is but one key to the mystery, which is that Sanborn had his confederates in Washington as well as in New York; and if they served him for less wages than 12½ per cent., his usual price for such services, he was neither just nor liberal.

The leading Treasury officials here were both careful and solicitous that by no possibility should Sanborn be deprived of his 50 per cent. of this large sum, notwithstanding the fact that it was a matter of record that the sum was due the Government long before the contract was made with Sanborn; that he did nothing and was never known in its settlement and collection, which were made by the revenue officers in New York, and that, too, in the very office of the Government in that city. So determined were they that there should be no mistake, that on the 10th of January the check for the whole sum was handed to Sanborn, and by him deposited in this city to the credit of the Secretary of the Treasury. To save appearances Mr. Assistant Secretary Sawyer on the same day referred the matter to Mr. Solicitor Banfield for an expression of his views as to the propriety of paying one-half of it to Sanborn. This was a work of supererogation, as

Sanborn testifies and as the evidence shows that no claim of his was ever disallowed whether it was in his contract or not. On the 26th of January, 1874, Mr. Banfield filed one of his stereotyped opinions, and on it Sanborn received a draft for $49,482.62, and thus the infamy was consummated, this enormous sum being paid in a case which was of record, which the revenue officers at New York could have collected at any time by asking for it, and which they, and they alone, did finally settle and collect without the aid or assistance of Sanborn in any way or manner, but they did not do it until they knew that Sanborn would receive, by and through the connivance of the Treasury officials at Washington, nearly $50,000 of the amount and the Government be defrauded of a like sum.

Did my time permit it would be both useful and instructive to track Sanborn in his other operations under the contract in the city of New York. His relations with a lawyer named A. Goodrich Fay are suggestive. This individual seems to have been chiefly useful to Sanborn in extorting money from unfortunates indicted for violating the revenue laws relating to the manufacture and sale of liquors, one of whom he coolly fleeced to the extent of $3,000, paying to the Government one thousand by way of settlement, although the United States district attorney, Judge Davis, testifies that "he thinks it very doubtful whether sufficient can be shown to satisfy a jury as to criminal intent," and keeping two thousand for himself, (and Sanborn?) although it does not appear that he ever rendered any other service than to suggest and have the settlement made. Sanborn was careful to get his "pound of flesh" out of the $1,000 paid to the Government.

This Fay is the same person who, at the sole suggestion and request of Sanborn, was here at Washington created a Treasury agent, or more technically "detective," and as such went to Europe, traveling about in princely style for a short time at a cost of over $3,000 to the Government, getting up evidence in cases embraced in Sanborn's contracts. His monthly accounts with the items of his expenses would be illustrative of the luxurious habits of "Treasury detectives." After reading the evidence touching him and his practices, the suggestion arises that hereafter he should be named "A Culprit," instead of A. Goodrich Fay. It would more fittingly designate him.

John D. Coughlin, too, who so cleverly hoodwinked the executor of the estate of the late Mr. J. J. Phelps and induced him to pay nearly $15,000 for Sanborn's benefit, when he innocently and naturally thought he was paying it into the Treasury, is an instructive study. His adroitness in this case shows him to be the equal of his master, Sanborn, in all the qualities of a detective, and on the score of economy it is to be deplored that the Government refused his offer made in the spring of 1873, to make all collections in cases such as were embraced in Sanborn's contracts for the relatively low price of 15 per cent. It is true he was not from Massachusetts, it is unfortunate he had no personal relations with Messrs. BOUTWELL, Richardson, Sawyer, or Banfield, had it been otherwise his application might have received at least the courtesy of an answer, which it did not; still he had qualifications for the place; he had been in the internal-revenue service for years, knew all about legacies and successions, and his entire success in the Phelps case demonstrates his great capacity. The testimony of the gentleman from New Jersey [Hon. W. W. PHELPS] would seem slightly to indicate that his veracity might possibly be questioned under certain circumstances, but even in mendacity he is not greatly the inferior of Sanborn. Why his services at 15 per cent. for the same purposes were rejected, and those of Sanborn at 50 per cent. were accepted and retained, is one of the many mysteries of this case. Time may solve it; the report of the committee fails to do so.

However loth to do so, I am compelled to quit New York and follow Sanborn to other scenes—to Philadelphia and Washington.

In the former city his efforts were abortive, made so for the reason that there chances to be in that revenue district a supervisor who not only understands his whole duty, but who has the courage and honesty to perform it. Sanborn engaged the services of an agent, and through him was preparing to engage in operations similar to those described in Boston and New York, but the officers of the revenue were met by the stern veto of Mr. Supervisor Tutton, forbidding them to render any assistance to contractors under the enactment of May 8, 1872. In his district taxes of every description were of record in the offices of the supervisor and collector, and by his vigilance and integrity his district was spared the degradation of being ravished and robbed for the benefit of John D. Sanborn. I know Mr. Tutton personally and well; for years he was the revenue assessor of my own district in Pennsylvania, and his whole conduct in this matter is in strict accordance with my high estimate of his character as an officer and a gentleman.

In Washington Sanborn organized his forces and machinery to make his raid on the Western States, and for that purpose engaged the services of one Otis F. Presbrey, who had been in the revenue service from 1862 down to 1872, and of Frank M. Green, who had entered the same service in 1869 as clerk to Presbrey, who was then supervisor at Richmond, Virginia. He came to this city in 1870 and acted as assistant assessor of the District for five months. These gentlemen were law partners when Sanborn engaged their services. In order to gain them credence in their proposed excursion westward each obtained in some mysterious manner, either through some friend of his inside or outside the Treasury, a quasi commission from Secretary Richardson. It is in the following language:

TREASURY DEPARTMENT,
Washington, D. C., June 3, 1873.

SIR: You are requested to assist Frank M. Green, esq., who has been employed to assist in collecting claims in favor of the United States for internal-revenue taxes which have been withheld, in the examination of official records, and by allowing him to make examination of the same in such cases as he may call upon you for assistance.

Very respectfully,

WM. A. RICHARDSON.

To the SUPERVISORS AND COLLECTORS OF INTERNAL REVENUE.

Armed with this missive, which Green candidly testifies he knew conferred no authority whatever, they departed for the scene of their operations, claiming under it everywhere that they were special agents of the Treasury Department, and by virtue of it obtaining permission to examine all books, papers, and documents in every revenue office they entered. Under it in one case, that of the Indianapolis and Saint Louis Railroad Company, Green collected $6,090, representing in addition that the Commissioner of Internal Revenue, Mr. Douglass, had examined the list, ascertained the delinquency, and sent him out to collect the money. This was undoubtedly a case of record, and the money should have been paid to the collector, yet it was grabbed by Green for Sanborn, who on the 3d of February of this year received his one-half of it, to wit, $3,045.

Green testifies that under this "commission" they collected about $132,000, of which Sanborn received 50 per cent., or $66,000, and he and his partner, Presbrey, were paid at the rate of 25 per cent. on their collections, or, say, $33,000. How much more these industrious and well-paid gentlemen would have collected for themselves, Sanborn, and the Government, it is difficult to estimate. They were in the full tide of success when, unfortunately for them and him but fortunately for the Government, this investigation was instituted. Green was at Indianapolis when the news of the proceedings here reached that city. How he was affected by it and what he said and did when confronted by his crime is so graphically narrated under oath by Mr. King, who is deputy collector at Indianapolis, that I will read it:

Mr. Green remained there several days, and while he was there the first knowledge or intimation which was had that he was anything else than what he said (a special agent of the Treasury Department) was in the newspaper dispatches in reference to the Sanborn contract business. He was in the office the day that these dispatches were first published, and I talked to him about the matter at once, as soon as he came in. He denied emphatically that there was any such contract as the dispatch stated, by which Sanborn was to collect delinquent taxes and to get 50 per cent. on the amount. I told him I thought the statement came very straight. The dispatches said that the matter had been reported by Mr. BECK and Mr. FOSTER, a sub-committee of the Committee on Ways and Means, the committee which had charge of the Internal Revenue Department, and they gave his name as one of the parties who were interested. He said that Mr. BECK and Mr. FOSTER never made any such report, and never would make such a report; that there was not any truth in it; that he was not the Mr. Green who was spoken of there at all; and denied it as emphatically as he could; so that I almost felt ashamed of myself for insinuating anything different, and I let the matter drop.

Had his immediate fate been that of Ananias and Sapphira it would have been as fitting and deserved!

From the evidence it is shown that the whole amount collected under the Sanborn contracts is $427,036.49, of which sum he has been paid 50 per cent., or $213,518.24.

I have thus endeavored, Mr. Speaker, very hurriedly I know, and most imperfectly I fear, to track this man John D. Sanborn and his confederates in office and out in the different fields of their operations.

Those who would know of them with greater accuracy and particularity must read the evidence accompanying the report. It is proof positive of such villainy, corruption, and fraud on the part of some, and of such imbecility and incapacity on the part of others, who by their high official positions were made the sworn guardians of the rights and interests of the Government and therefore of the people, as have never before in my judgment disgraced and dishonored any administration.

The relation which the Secretary of the Treasury bears to the whole transaction, as shown by the testimony of others and as admitted by himself, is unfortunate, humiliating, and indeed pitiable. His only excuse for the crimes and wrongs committed under these contracts and his own orders is that of total, absolute, helpless ignorance of everything which has ever been done by him or through him in relation to this matter. Had he been a child unborn he could scarcely have known less. He admits and pleads ignorance. I charge incapacity and imbecility. He doubtless would be shocked by a charge of corruption. I assert that he who permits crime to be committed when he has the power and it is his sworn duty to prevent it is not free from gravest censure.

What, sir, is or rather should be the Secretary of the Treasury? The great husbandman of this land; with brain big enough, will strong enough, and powers so developed and matured as to fit him to garner the vast resources of the Republic, that they may be used for its growth, its comfort, its honor, and its glory.

Who may dare assert that he who now holds that high place has ever exhibited a quality or done an act tending to any one of these ends?

During the great financial storm of last year which swept over the land and shook it to its very center, what words of cheer, of counsel, or advice were heard from that source? And even now when all around us are the evidences of its wrath, he moves on in his imbecility, making no sign whereby the pathway to financial prosperity may be regained.

O, sir, when I think of the great office and of its vast powers and responsibilities, when I remember that of the Great Dead it was first held by Hamilton, of whom Webster has said immortally that "he

smote the rock of the national resources and abundant streams of revenue gushed forth; he touched the dead corpse of the Public Credit and it sprang into life;" and last by Chase, who during the dark night of civil war moved a very pillar of fire, I am forced to exclaim that the place once held by giants now serves as the hiding-place of a pigmy!

For Mr. Sawyer, his assistant, and Mr. Banfield, his solicitor, even the poor excuse of ignorance and imbecility is wanting. That there is crime and guilt and outrage and wrong they both admit; and the chief endeavor of each is, as the testimony clearly and painfully shows, to fasten them on the other. For myself and for all others I doubt not who have read and weighed the testimony, the decision is easily made—they are both alike guilty, there being no appreciable difference in favor of either.

In conclusion, sir, for myself, for those whom I have the honor immediately to represent, and I will venture to say for all honest men everywhere, of every political creed, I have to thank the Committee on Ways and Means, and each and every member of it, for the manner in which they have probed this festering sore to its very quick. Their burning words of censure and condemnation are of blistering force and will brand the guilty for all the years to come. I could have wished they had felt themselves justified in going just one step farther—that is, to have recommended their impeachment. That this House, when the evidence was heard, would have ordered the charges to have been presented to the Senate, and that conviction would have surely followed, I do not doubt. Thus the almost unanimous wish of this House as expressed by the unanimous report of its committee would have been accomplished, and the universal prayer of the people, as it comes up to us through the press and other sources, would have been heard and granted. Being removed from office by impeachment, they would have been rendered forever incapable of again abusing and betraying high trusts and responsibilities.

That the President should so stubbornly resist this united demand of the whole people it is difficult to understand. He is not always so defiant in attitude when a demand for a removal comes from a particular and proper quarter, for within a few hours, without word or warning, when in the witness-box attempting to tell and explain the whole truth, where he needed the sympathy and support of all who desire fair and honest dealing, a member of the board of public works in this District was stricken down by a blow and his head cast into the basket.

Is his fate to be a warning to others who may err in the same direction, or will the President, when called upon by the whole people, decapitate those who are shown to be unfit and unworthy?

Were I his personal or political friend I would urge him so to act that his own good name might not be tarnished and his high place be brought into discredit and dishonor by his seeming willingness not alone to screen, but also to defend and uphold, those who have forfeited the confidence and respect of the whole people.

But, sir, this question is not to be finally decided either here or now. There is another and a more august tribunal, made up of the honest men of every political faith, before which and by which these cases will be tried and decided. I have yet to learn that they will uphold crime or shield its defenders.

Development of the Resources of the Country.

SPEECH OF HON. JAMES S. BIERY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

June 9, 1874,

The House being in Committee of the Whole, and having under consideration the substitute for the bill (H. R. No. 1246) to establish at the seat of Government a Department of Manufacture and Mining, and for other purposes—

Mr. BIERY said:

Mr. CHAIRMAN: On January 19 last I introduced a bill for the establishment of a Department of Manufacture and Mining. Being referred to the Committee on Manufactures, the following substitute has been agreed upon by that committee:

A bill to extend and prescribe the duties of the Chief of the Bureau of Statistics.

Be it enacted, &c., That the officer in charge of the Bureau of Statistics, in the Treasury Department, shall be known as the Chief of the Bureau of Statistics, and shall perform all the duties, exercise all the powers, receive the same salary, and be entitled to all the privileges conferred on the director of said Bureau as provided by the thirteenth section of the act approved July 28, 1866, entitled "An act to protect the revenues, and for other purposes."

SEC. 2. That in addition to the duties of the officer in charge of the Bureau of Statistics, in the Treasury Department, prescribed by the thirteenth section of said act, it shall be the further duty of said chief, under the direction of the Secretary of the Treasury, to prepare and submit annually to Congress a statement of the rates of wages paid to workmen employed in the leading industries of the several States, the wholesale prices of leading articles of merchandise in the principal markets of the country, and the prices of the principal articles of subsistence and domestic use, including house rent, together with similar information in regard to the same industries and articles in other countries so far as practicable; and it shall be the further duty of said officer, annually, to collect, digest, and arrange, for the use of Congress, the statistics of the railroad and canal companies of the United States, showing, respectively, the quantity and kind of freight transported and the number of passengers carried during the year, the casualties occurring to passengers and employés, separately, and all such other information concerning said railroad and canal companies as will present a full exhibit of their condition and operation.

SEC. 3. That in collecting statistics concerning the sources of raw material, as directed in said act of July 28, 1866, the said chief shall embrace all kinds of raw material, whether of a vegetable, mineral, or animal character, distinguishing between foreign and domestic; and the statistics relating to the exchanges with the producing regions of the country as designated in said last-mentioned act shall comprise and include statistics of commodities transported to and from regions producing raw material as aforesaid, embracing both manufactured goods and raw materials entering into the same, and also the cost of transportation.

SEC. 4. That it shall be the further duty of said chief to collect, digest, and arrange, for the use of Congress, so far as may be practicable, the statistics of the trade between the several States and Territories of the United States, exhibiting separately the quantities, value, and kind of freight transported over railroads, canals, lakes, and rivers, and also by sea coastwise. And the expenditures necessarily incurred by the Bureau in obtaining and preparing for Congress the statistics contemplated by this act shall be defrayed, on the order and approval of the Secretary of the Treasury, out of any money in the Treasury not otherwise appropriated, the sum not to exceed, during any year, $10,000 in addition to the allowance now made for the expenses of said Bureau, and all laws and part of laws inconsistent herewith are hereby repealed.

SEC. 5. That the sum of $10,000 is hereby appropriated from the Treasury of the United States for the purposes herein named for the fiscal year ending June 30, 1875.

In addition to the collection and convenient arrangement of valuable statistics touching the mining and manufacturing industries of this country, it seemed to me to be desirable that a Bureau should be organized which should exercise a fostering care over the mining and manufacturing industries of the nation. Upon careful examination and due reflection, however, as to the amount of expense which such a department would entail, and in view of the necessity of the strictest economy in our public expenditures, it appeared to be at present an impracticable though not unimportant proposition. That there should be some means provided calculated to aid in the satisfactory adjustment of the conflicting views and claims of the different sections of this broad land concerning the subjects of tariff, free trade, capital and labor, transportation, and other matters entering into the development of our varied resources as a nation, and exercise a watchful care over our mining and manufacturing industries, there can be no doubt. But for the present, and until such time when we shall be able to bear the expense better than now, it is proposed simply to extend and more clearly define the duties of the officer in charge of the Bureau of Statistics, which would very materially aid us in this direction.

The act of July 28, 1866, which established this Bureau, and in the thirteenth section prescribes the duties of its head, says:

It shall be the further duty of said director—

That being then the name of its chief officer—

to collect, digest, and arrange for the use of Congress, the statistics of the manufactures of the United States, their localities, sources of raw material, markets, exchanges with the producing regions of the country, &c.

By consultation with the present efficient officer at the head of this Bureau, I am informed that in attempting to execute this law it is found to lack perspicuity. "Raw material"—what is meant by this phrase as it it stands in the act? Shall it comprise only the natural ores in the mine, the timber in the forest, the cotton on the tree, the grain in the sack, and the cane in the brake; or shall it include also materials which have undergone processes of manufacture to some extent, but enter into other manufactures as raw material, such as pig-iron, steel, cotton in the shape of yarn, &c.? These may be manufactures in one locality, but really are raw materials in another. If the designation of "raw material" is uncertain, how much more uncertain under these circumstances must be the "sources of raw material?" In addition to these uncertainties, the act of 1866 is entirely silent as to whether any notice shall be taken distinguishing between raw material imported from foreign countries and that produced in our own country. To render this part of the law more explicit, the proposed bill provides in section 3 that all kinds of raw material shall be embraced, whether of a vegetable, mineral, or animal character, and that the foreign shall be distinguished from the domestic.

Raw materials and their sources being clearly defined, the exchanges with the producing regions which are required to be reported by the act of 1866 will become very clear as to its meaning, especially when this bill in the same section provides that—

The statistics relating to the exchanges with the producing regions of the country as designated in said * * * act shall comprise and include statistics of commodities transported to and from regions producing raw materials entering into the same, and also the cost of transportation.

The provision of the present law governing expenses is that "the expenses of the Bureau of Statistics for clerical service, publication of reports, stationery, books, and statistical periodicals and papers required by the Bureau, shall be defrayed," &c., thus limiting and specifying the particular items of expense to be paid. This was all well enough so long as the Government had in office thousands of vigilant revenue assessors all over the land, who had power and authority to pry into the very minutest details of every species of employment and investment of capital, especially during the time when the income tax was in force; but now that such aid is denied the officer at the head of this Bureau, he must either obtain his data by personal solicitation, as much as his time will allow, incurring expense of travel, or leave the facts ungathered and his report incomplete and unreliable; and yet the present law does not allow one cent for necessary expenditures in collecting data. For this defect and to pay the additional expense of printing it is proposed to allow the payment of necessary expenditures not to exceed $10,000 per year, which the Chief of the Bureau says is sufficient.

One more point in respect to the modification which this bill pro-

poses to effect in the existing law, and I shall proceed to discuss matters incident to the development of our resources, to aid which is the purpose of this bill.

The act of 1866 having designated the chief officer in charge of this Bureau "director," and put his salary at $3,500, the act of July 20, 1868, abolished the office of Director of the Bureau of Statistics, and transferred its duties to the special commissioner of the revenue. Since that the officer in charge of this Bureau has been without legal name, though he is popularly known as Chief of the Bureau of Statistics, and his salary has been cut down to $2,500. The director had the important duty to perform of keeping the registry and numbering of American vessels, and no ship could leave port without first obtaining its number from him. Since the abolition of the office of director, the Chief of the Bureau of Statistics has been performing this duty of the office also, although no law exists whereby he could be compelled to do it.

I submit that with the additional duties with which this bill proposes to charge this office his salary should be put as high at least as was that of the director, and this the first section of the bill proposes to do. I wish to say that in my opinion there is no Government employé in the city of Washington who is paid so small a salary for the invaluable service which this officer renders as is he. With the extra labor which he is now performing in order to obtain reliable statistics he ought to have $3,500 per year.

No doubt objection will be made to this bill both on the ground of its provision to appropriate money and on the ground that it seeks to pry into men's private business. Nothing could be more foreign to its purpose than the latter. No power is given the chief to send for persons and papers, nor indeed is any one compelled to divulge his business secrets to him unless he voluntarily chooses to do so, and this is the course suggested by that officer. Under this bill much valuable information will be collected respecting the localities, magnitude, quality, and accessibility of our mineral deposits, and some approximation will be arrived at what it costs us annually for their transportation more than we should pay. So with agricultural products, including timber and lumber. Statistics relating to the importation and place of production of hides, tallow, and horns, peltry and furs, and the cost of their transportation will begathered, showing in what state of preparation for man's use they are shipped. Certainly no one having at heart the highest good for the greatest number can object to a project aiming at such valuable results.

Just at this time authentic figures on this subject are eagerly sought after. The mode of transporting to market at the cheapest possible rates southern and western produce has become a great national question, and calls for wise and judicious legislation. Both those sections of our country have such a predominant production of raw material, which is consumed by other sections of our own nation and by other peoples, and the distance of the transportation of these materials has become so great and the mode of carrying them so expensive, that after paying the public carrier very little of their value remains to remunerate the producer for his toil and capital invested. In speaking of the produce of the Western States, I beg to refer to the statement of Mr. Grosvenor, of Saint Louis, as contained in the report of the sixth annual meeting of the National Board of Trade, held in Chicago in October, 1873, page 111. He says:

> Gentlemen, the topic before us concerns a surplus of agricultural products in the interior States demanded for consumption by the people of the sea-board and of other countries. The interior eleven States—the States of the Mississippi Valley—embracing 1,100,000 square miles and a population already of 18,300,000—well-nigh half of the whole population of the United States—and 44,000,000 acres of farming lands, producing in the aggregate, 1,000,000,000 bushels of cereals each year, the surplus of which exceeds 300,000,000 bushels, and exceeds in tonnage 8,000,000 tons. The movement of that surplus toward the consumer is the problem of the age for this country. It is a problem, the solution of which can no longer be deferred. The events of this very month force upon us the understanding of the fact that the interest of the people of the Northwest must at last be considered.

And further on, on the same page, he says:

> Mr. President and gentlemen, the time has come when every business man and every capitalist, every manufacturer, as well as every producer in this country, must realize that this, if it ever was, is no longer a local question. It is a question which affects directly nearly one-half of the whole people of the United States as producers. It also equally affects the other half, the people of the sea-board States, the manufacturers, and their employés, first as consumers of the products, and next by reason of the fact that prosperous agricultural communities can and will consume the more largely of the products of the manufacturing States. The moment that agriculture in these Western States is depressed, that moment you find the products of the manufacturing States are consumed in a smaller measure; that moment the investment of capital in all manufacturing becomes less profitable; that moment the investment of capital in all the railway enterprises of the country becomes less profitable; that moment distress seizes capital, and all the business interests in the country begin to feel the blow.

If the production of agricultural commodities were the only capability of this great internal region, and the question presented itself nakedly whether it should be transported in a raw state to Eastern and European markets or remain a drug on the hands of the producer, then it would be most inexcusable indeed to defer for one day the most ample provision for the cheapest possible transportation of this produce. And notwithstanding the suggestions which I may make as I proceed in my remarks, there is no doubt but that, in order to bring to market at as cheap a rate as possible the marketable produce of every description of this great inland country, the most practicable and speedy means should be provided.

But as our western domain is blessed not only with fabulous agricultural capabilities, but also with the most famous deposits of minerals, such as the iron and copper mines of Northern Michigan; Pilot Knob and Iron Mountain in Missouri; the lead mines of Galena, Illinois; the block coal of Indiana; the great breadth of other mineral lands all over the Mississippi Valley, less known to fame: and, in addition to these, can proudly boast of dense forests of all the useful kinds of timber, and having a net-work of railroads and navigable streams affording the most ample means of shipment, it seems to me that no land on earth is so well calculated to manufacture its own raw material on the soil from which it is taken as is this locality. If the enterprise of its energetic inhabitants were to be turned in this direction a home market right at the door of the farmer would be assured, and instead of shipping his grain from twelve hundred to fifteen hundred miles eastward on rail, and then three thousand miles across the Atlantic Ocean, for the purpose of feeding the man who makes his hoe, the husbandman would carry his grain on his own axle to the man who would be employed in the workshop, and save the enormous expense of transportation.

Sir, here is one of the greatest blunders which this country can possibly commit—the exportation of her raw material to England, three thousand miles removed from us, there to be manufactured into goods and retransported to us in the shape of goods and wares, compelling our people to bear transportation both ways and paying the manufacturer a handsome profit, while at the same time he is drawing from us largely the breadstuffs necessary to feed his operatives. Why ship our raw material across the sea to be turned into goods and wares for us? Why ship our grain there to feed the operatives? Is it cheaper for us to do this than to bring the operative into our midst and let him consume the same food here and give us the benefit of his labor?

The following table will show the amount of breadstuffs and raw material which were exported from the United States during the month ending January 31, 1873 and 1874, and the seven months ending 1873 and 1874, as shown by the monthly statistical report for January, 1874:

Domestic exports for the seven months ending January 31, 1874.

In addition to this, let us examine some figures relative to the production and consumption of raw material in the South, that section of our country on which rests just now a triple curse—the ravages and destruction of property incident to the late war, the instability of society, and an utter lack of the requisite amount of money to carry on business, except the production of raw material. Referring to the statistics collected by the Eastern and Western Transportation Company, I find that since 1865 the cotton yield and the prices at which it was sold have ranged as follows:

In 1865–'66 the crop of cotton and the old stock that was brought to market and sold by the 1st September, 1866, was 2,193,987 bales; price—July, 25 cents; December, 32 cents.

In 1866–'67, 2,019,774 bales; price—July, 23 cents; December, 14 cents.

In 1867–'68, 2,593,993, bales; price—July, 29 cents; December, 23 cents.

In 1868–'69, 2,439,039 bales; price—July, 32 cents; December, 22½ cents.

In 1869–'70, 3,154,940 bales; price—July, 18¼ cents; December, 14¼ cents.

In 1870–'71, 4,352,317 bales; price—July, 19½ cents; December, 19 cents.

In 1871–'72, 2,974,351 bales; price—July, 21 cents; December, 19 cents.

In 1872–'73, 3,930,508 bales; price—November, 14 cents.

And instead of being manufactured into goods at home as it should have been, the bulk of this great staple was sent to foreign lands to be worked up into fabrics.

The grand total sales in eight years, ending 1st January, 1874, aggregates more than 27,000,000 bales, averaging in the southern markets $90.75 per bale, equal to $2,457,000,000. Besides supplying the home consumption to the amount of 1,200,000 bales per annum, we exported in 1871, at 14.8 cents, 1,459,715,036 pounds, the customs value of which was $216,889,570, equal to 700,000,000 bushels of corn, at 30 cents and upward.

In principle this is unjust, both to the producer of cotton and to the ultimate consumer. The shipment of cotton in a raw state, like all other raw material, leaves much refuse matter, which costs as much per pound to be carried to market as the cotton itself, and consequently enhances the price of every pound of cotton to the consumer. It is also a well-established fact, that while the raw material will bear shipment but a comparatively short distance, the same turned into manufactured goods will bear transportation a much greater distance, leaving a profit still to the producer. For instance, a pound of raw cotton may be transported from Alabama to Massachusetts leaving but a small margin above cost to the producers; but the same cotton, manufactured into fine thread, may be shipped half way around the globe and leave a fair profit to the producer. A pound of pig-iron will bear transportation but for a short distance until its value is consumed, whereas if it be refined and turned into watch-springs it may be carried around the world and still leave a profit to the producer.

I say, then, the shipment of nearly all the raw cotton of the South to far-distant localities is a ruinous error.

An allwise Providence has placed side by side the cotton field and mountain stream; not for the cultivation of the one and neglect to utilize the power of the other; not that the lavish yield of the plantation should be transported thousands of miles at an enormous expense for the purpose of being manipulated into fabrics by power which must itself be created by the artificial process of steam at large expense, while millions of horse-power of motive force, waiting like a faithful servant for the application of mechanical skill, ready to spin and weave your cotton, runs waste with a prodigality that seems almost criminal, but that the one might be the hand which should prepare the fruit of the other for man's use.

Nor is it necessary, in advocating this theory, to say that its adoption would close up the cotton mills of the Eastern States; they would still be the manufacturers of the finest textures and would be enabled to purchase the cotton in an advanced state of preparation for their mills. If the South would do no more in the matter she ought at least to spin her own cotton, or the greater part of it, before sending it to market, thereby diversifying her industries and be enabled to transport her product a greater distance at less cost.

Sir, great as may be the questions of interstate commerce, finance, tariff, relations between capital and labor, and others of equal importance, they are all minor subjects entering into the great national problem of the harmonious development of our resources in the East, West, North, and South.

If we would maintain what we now possess, and go on increasing our manufacturing industries to the full extent only of supplying our own demand, we must move in harmonious columns. So long as one section cries for free trade and the other for tariff; so long as capital will attempt to grind down labor, and labor in return strike for higher wages; so long as rich men will insist to make money scarce in order that the purchasing power of their money may be increased by the depression of prices, and consequently lower the salary of the laboring man and the mechanic, so long will we suffer periodical fluctuations between seasons of great prosperity on the one hand and panic, want, poverty, and suffering on the other hand; and in the mean time foreign nations, whose policy it is to keep the laborer and mechanic poor, will invade our shores with their *cheap* goods and drive our manufacturers out of the markets of their own country. Sir, conflicts that produce such results should be trampled under foot and put out of existence in a great and free country, and it is fondly to be hoped that as American manufacture will spread in localities now producing raw materials only, greater unanimity of sentiment may obtain throughout the land.

When it is remembered how unequally are distributed the several

and distinct industries of this nation, it is not so much to be wondered at that there should be conflict. Without intending blame or censure, but rather commendation for enterprise in our Eastern States, the present aspect of American industry as shown in manufacture reminds me very forcibly of the great image which Nebuchadnezzar saw in a dream:

Thou, O king, sawest, and behold a great image. This great image, whose brightness was excellent, stood before thee; and the form thereof was terrible.
This image's head was of fine gold, his breast and his arms of silver, his belly and his thighs of brass.
His legs of iron, his feet part of iron and part of clay.

The Eastern States at present are in possession of the great workshops; they have the accumulated skill of long years of training and education; they hold stores of hoarded wealth; and in financial strategy they have stolen a march on all the balance of the country, which, to prevent its ruinous effect, has baffled the skill of our ablest financiers.

In order to show a comparison of people employed in manufacturing establishments in the different States and Territories, based on their relative population, I invite attention to the following figures taken from the last census report:

Table showing population, amount of capital, and number of persons employed in mechanical and manufacturing industries in the different States and Territories in 1870.

States and Territories.	Population.	Amount of capital.	Employés.
United States	38,558,371		
Alabama	996,992	$5,714,032	8,248
Arizona	9,658	150,700	84
Arkansas	484,471	1,782,913	3,206
California	560,247	39,728,202	25,392

RECAPITULATION.

	Employes.
Arkansas	3,206
Alabama	8,284
Georgia	17,871
Kentucky	30,636
Louisiana	30,071
Maryland	44,860
Mississippi	5,941
Missouri	65,354
North Carolina	13,622
South Carolina	8,141
Tennessee	19,412
Texas	7,927
Virginia	26,974
West Virginia	11,672
Florida	2,749
Total fifteen States	296,740
California	25,392
Illinois	82,979
Indiana	58,852
Iowa	25,032
Kansas	6,844
Michigan	63,694
Minnesota	11,290
Nebraska	2,665
Nevada	2,859
Ohio	137,202
Oregon	2,884
Wisconsin	43,910
Total twelve States	463,603
Pennsylvania	319,487
Fourteen Southern States	294,001
Pennsylvania's excess	25,486
Twelve Western States	463,603
New York	351,800
Excess of the former	111,803
Massachusetts, New York, and Pennsylvania	950,667
Twenty-six Southern and Western States	760,343
Excess of former	190,324

The above table shows the astonishing facts that the fourteen Southern States, including Missouri, employ in mechanical and manufacturing industries only 296,740 persons, while Massachusetts alone employs 279,380. The twelve Western States employ only 463,603 persons, while New York alone employs 351,800; and the Southern and Western States combined, being twenty-six in number, employ only 760,343 persons, while Massachusetts, New York, and Pennsylvania combined employ 950,667 persons, an excess over the former of 190,324 persons.

In making this comparison, however, I deem it due to my native State to say that she develops only those resources with which nature has so lavishly endowed her.

Pennsylvania furnishes, perhaps, the brightest example of uniform development in this nation. It is true, she is called the great iron-producing State, and rightfully so; but no one who is at all acquainted with her industries has failed to see that she is yielding wealth from a dozen sources. The following table contains a partial summary of her unexampled enterprise and wealth:

Railroads:		
Roads controlled by the Pennsylvania Railroad		$140,837,262
Roads controlled by the Reading Railroad		66,995,110
Independent railroads		64,139,168
Passenger railroads		8,131,807
Telegraph companies		5,659,167
Canal companies		28,151,219
Coal lands by mining companies		80,000,000
		393,913,733
Agriculture:		
Value of implements and machinery		$35,658,196
Farm products		183,946,027
Amounts, in kind not in value, estimated		125,000,000
Farm wages paid		23,181,944
Orchards		4,208,094
Market gardens		1,860,016
Forest products		2,670,340
Household manufactures		1,503,754
Animals for slaughter		28,402,963
Live stock		115,647,075
		522,678,349
Manufactures, all kinds		997,050,521
		1,519,128,870
Coal and oil:		
Anthracite	$85,181,583	
Bituminous	24,913,272	
Oil	19,616,000	
		129,710,855
		1,648,839,725

Of the total product of coal in the United States in 1872, amounting in gross to 42,080,564 tons, Pennsylvania produced the following quantities:

	Tons.
Anthracite shipped in 1872	19,026,125
Consumption in coal regions	3,110,000
Semi-bituminous, in 1871	2,714,790
Towanda, Ry.	1,299,544
Broad Top	319,625
Bituminous, Pittsburgh seam	1,847,609
Mercer County	500,000
	28,817,693

The following shows the value of manufactures of the articles named for the year 1873:

Iron	$177,000,000
Steel, copper, zinc, and nickel	40,000,000
Slate, marble, limestone, &c.	20,000,000
	237,000,000

It will be seen that, rich as she is in mineral wealth, she has not been so reckless as to confine herself to manufacture only and draw her supplies of breadstuffs from other States, except so far as her own agricultural product has fallen short of supplying her demand.

With a soil much less fertile than that of the greater part of the Mississippi Valley, by the judicious diversification of her employment, bringing ready markets to the door of the farmer, her land has been enhanced in value far beyond the most fertile of any lying between

the Alleghany and Rocky Mountains. I venture to say there are no farms in this country superior in improvement, and so far as the soil will admit, in fertility, than those in eastern Pennsylvania; and one of the greatest causes to which this is attributable is that the husbandman can sell for cash all kinds of grain and vegetables of every description, no matter how perishable.

Thus has this great Commonwealth been growing and multiplying her wealth, by the policy of developing her resources, the only true policy on which any State can prosper in this Union; and in the mean time this State has sent her citizens out by the thousand into other States, until there is scarcely one in the whole compact that has not some of her sturdy sons; and yet the census of 1870 shows that in the ten years preceding her population increased at the rate of 21.18 per cent.

I have thus trespassed on the attention of the House to a considerable extent in bringing to its notice the practical result achieved in one notable case at least, (and others might be adduced,) to show that the policy which I advocate is not a mere theory, but springs from actual demonstration.

I know it is claimed that Pennsylvania has grown rich at the expense of her customers, because she has had a protective tariff to shield her. I will say, first, that the soundest political economists have shown conclusively that all tariffs in this country have cheapened the very manufactures on which the duty was imposed; and secondly, that the tariff afforded a protection, not to Pennsylvania alone, but to all those in other States who saw proper to avail themselves of its benefits. This, then, cannot be said to be a peculiar benefit to Pennsylvania, but to all American manufacturers alike.

New York, less fortunate in regard to her manufactures, draws largely on the other States and on foreign countries for raw material; while Massachusetts and all the other Eastern States, possessing a sterile soil and no minerals, produce scarcely any which their factories consume, and being compelled to rely on others for their raw material, it is but natural that their manufacturers should wish to buy as cheap as possible; hence comes the cry of free trade, specie payment, currency of the world, reciprocity with Canada; all of which means a depression of prices and a consequent lowering of the workman's wages by bringing foreign pauper labor in contact with our free labor. Allow me to call attention to a singular fact right here. The Eastern States in their relations of capital and labor are very similar to the Old World.

The man who must depend on his manual labor for support is largely at the mercy of his employer; he has not the alternative of locating a quarter-section of land, and in a few brief years being the owner of a comfortable home and sure of living under his own "vine and fig-tree," like the western laborer has. Unless he has been able to save money enough out of his wages to transport himself and family thousands of miles across the continent, and support himself and his long enough to produce the first crop, he must submit to the mandate of his employer or go without work, without pay, without food and raiment. And, sir, this spirit of aggrandizement does not stop here, but asserts its power whenever and wherever it is possible. Being leagued with foreign sentiment, its aim has been, and is now, to compel the South and West to produce raw material and pay the transportation thereof across thousands of miles at ruinous prices. In order to induce the belief that the West is receiving great favors from the Eastern States, the latter lend the former their surplus of money at the generous rate of from 10 to 12 per cent. interest, when they cannot get more than 6 or 7 per cent. at home. On this point witness an extract from the speech of the gentleman from Connecticut, [Mr. KELLOGG,] delivered in the House of Representatives, January 31, 1874:

Mr. JEWETT. Have you more circulation than you need?

Mr. KELLOGG. We have not in our section, and we cannot keep what we have got. There are from five to ten millions of our circulation to-day from my State out in your Western States. We cannot keep enough for our business purposes at some seasons of the year, because men go to the West with it and get 10 and 12 per cent. interest upon it, when they cannot get more than 6 or 7 per cent. with us.

Mr. JEWETT. Will the gentleman allow me to ask him another question?

Mr. KELLOGG. Certainly.

Mr. JEWETT. If you have in the East no more national-bank currency than you want, why do you object to the West having what they want?

Mr. KELLOGG. We do not object to the West having what they want. We are giving up millions of our currency every day to the West, and helping you out in this very matter. And I will say to the gentleman that if he will go into a bank in Cleveland, or Chicago, or Saint Louis, and obtain a package of bank-notes on a check, he will find that more than one-half of those notes thus paid him were issued by banks in New York and the Eastern States rather than by banks in the West.

In short, the aggrandizing spirit in the northeastern part of the United States is fast becoming so dominant that it will in a short time, unless checked, dictate the price of labor, of raw material, and manufactured goods to the balance of the States. This is the tendency, to say the least.

What this country needs most at the present time is a sound basis of national finance that will afford every section as much currency as it may need for the transaction of its business, and to supply her own demand of all such manufactures as she can produce within her own borders. And if it be found that the tariff on manufactures is too low to compete with foreign imports, restore the 10 per cent. reduction of 1872, or add more as the exigency of the case may demand.

With her inexhaustible resources this country ought to abandon her suicidal course of importation of goods and wares which she can make, and work up into fabrics the raw material which she now exports.

Within the last ten years we made very commendable progress toward supplying our own demand, and great progress was made in internal improvement. Witness, for instance, the manufacture of rails and the building of railroads.

The following table exhibits the production of rails in the United States from 1849 to 1872, inclusive, together with the growth of the railway system of the country during the same period, in tons of 2,000 pounds:

Years.	Made in United States.	Imported.	Consumption, (iron and steel.)	Miles built.
	Tons.	*Tons.*	*Tons.*	
1849	24,318	69,163	93,481	1,369
1850	44,083	159,080	203,163	1,656
1851	50,603	226,350	276,953	1,961
1852	62,478	294,750	357,228	1,926
1853	87,864	358,794	446,658	2,452
1854	108,016	339,439	447,455	1,360
1855	138,674	153,019	291,693	1,654
1856	180,018	186,594	366,612	3,643
1857	161,918	215,166	377,084	2,486
1858	163,712	90,894	254,606	2,465
1859	195,454	83,958	279,412	1,821
1860	205,038	146,610	351,648	1,846
1861	187,818	89,388	277,206	651
1862	213,911	10,186	224,098	864
1863	275,768	20,506	296,274	1,050
1864	335,369	142,457	477,826	738
1865	356,292	63,327	419,619	1,177

1869	593,586	336,500	930,086	5,118
1870	620,000	472,403	1,092,403	5,525
1871	775,733	566,202	1,341,935	7,779
1872	941,992	530,850	1,472,842	6,427

In other manufactures of iron we were fast gaining ground, and felt certain of getting the mastery over our foreign rivals in a comparatively short time, at the time we were overtaken by the panic last fall. Since that time every industry has been suffering of course, and will continue to suffer to final prostration unless the financial difficulty will be settled on a wise and judicious basis.

To show what this country was doing prior to the fall of 1873, I beg leave to insert here valuable tables taken from the authentic figures of the last report of the American Iron and Steel Association, showing the production in the following-named articles in 1872 and 1873, by States:

PIG-IRON.

States.	Whole number of completed stacks.	Completed in 1872.	Completed in 1873.	Building or projected in 1873.	Make in 1872—tons of 2,000 pounds.	Make in first six months, 1873—tons of 2,000 pounds.	Estimated make in 1873—tons of 2,000 pounds.	Estimated annual capacity of completed furnaces—tons of 2,000 pounds.

The foregoing tables are so comprehensive that extended comment is rendered unnecessary. The total number of new furnaces finished and put in blast in 1872 was 41; finished and put in blast in 1873, 42; total number of new furnaces put in blast in the last two years, 83. Many of these are among the largest in the country. By the erection of these 83 furnaces the furnace capacity of the country has been increased fully one-fourth.

We append a table showing in tons of 2,000 pounds the production of the various kinds of pig-iron in this country from 1854 to 1873, inclusive. The figures for 1872 and 1873 have already been given, and their claim to confidence has been stated. The figures for preceding years were prepared in the office of this association, and have heretofore been published with its sanction.

Years.	Anthracite.	Charcoal.	Bituminous coal and coke.	Total.
	Tons.	*Tons.*	*Tons.*	*Tons.*
1854	339,435	342,298	54,485	736,218
1855	381,866	339,922	62,390	784,178

1872	1,369,812	*500,587	†959,671	2,830,070
1873	1,249,673	‡524,127	§921,634	2,695,434

* Includes 224 tons of peat pig-iron.
† Includes 37,246 tons of mixed anthracite and coke pig-iron.
‡ Includes 1,600 tons of mixed peat and charcoal pig-iron, and 1,778 tons of mixed charcoal and bituminous coal pig-iron.
§ Includes 48,000 tons of mixed anthracite and coke pig-iron.

An estimate of the production in 1872 and 1873 of the merchant bar-mills, plate-mills, and other rolling-mills, exclusive of rail-mills, can be made with some approach to accuracy. Observing the classification heretofore in use in this office, we submit the following figures for 1872 and 1873, in tons of 2,000 pounds. William E. S. Baker, esq., secretary of the Eastern Ironmasters' Association, has courteously assisted in making this estimate.

	1872.	1873.
	Tons.	*Tons.*
Merchant bar and rod	500,000	400,000
Sheet and plate	200,000	250,000
Hoop	30,000	30,000
Nails and spikes	175,000	200,000
Axles, &c	95,000	100,000
Total net tons	1,000,000	980,000
Add iron and steel rails	941,992	850,000
Total of rolled iron	1,941,992	1 830,000

The estimated production in 1871 of rolled iron other than rails was given by this office at 710,000 net tons.

The product of the forges and bloomaries of the country, strictly so-called, is estimated at 58,000 net tons in 1872, and 50,000 tons in 1873.

The iron industry of the country has become so extensive and varied during the past few years that it is annually becoming more and more difficult to procure its statistics through private channels. The national census should be taken every five years.

SUMMARY OF IRON AND STEEL PRODUCTIONS.

Below is a summary, in net tons, of the ascertained and estimated production of iron and steel in the United States in 1872 and 1873:

	1872.	1873.
	Tons.	*Tons.*
Iron and steel rails	941,992	850,000
Other rolled and hammered iron	1,000,000	980,000
Forges and bloomaries	58,000	50,000
Cast steel	32,000	28,000
Bessemer steel	110,000	140,000
Siemens-Martin steel	3,000	3,500
Pig-iron	2,830,070	2,695,434

The greater part of these productions was consumed in this country; but, to our credit be it said, we had made a very fair beginning in exporting some iron manufactures. We still send out some machinery and other articles of purely American manufacture and invention, as the following article, taken from a late Philadelphia paper, will show:

More valuable shipments than a couple of hundred mowing and reaping-machines are made by every steamship that sails from Philadelphia. The Pennsylvania, however, took that number of those articles on her last outward passage. The demand for them was created by the Vienna exhibition. They are American man-

ufactures and for European use, shipped by an American line of steamships. We send locomotives to South America, and sugar-mills and evaporators to the West Indies. Some of our machinery is going to China and Japan, and its products are annually going to new markets in a greater quantity. Until very recently no American machinery reached Europe save as it was copied and fabricated in England. This introduction not only gave England the profit but also the reputation. The supply sent out by the Pennsylvania is of more moment, as publishing the capacities, the skill, and intelligence of the country, than for its equivalent in cash. It opens the door to a closer inspection of our methods and to a larger business; opens the way to other demands that may in time enable us to export our manufactures even to Europe. Sewing-machines and some other articles have been sent by previous steamships. We have to wait and work until our machinery and its fabrications help to fill the vessels that are laden with petroleum and grain.

Sir, in view of the rich fruitage bequeathed to us as a nation, this whole country ought to unite in a grand effort to open up her mines of iron, copper, lead, and zinc ores, her coal mines and stone quarries. She ought to turn these into wares for the market—for the consumer. The mechanics and laborers of the Old World, whose labor is not needed there, and but ill-requited when employed, should have every facility for coming to our shores. England's cotton spinners and weavers should be able to find ready employment in the Southern States at all times and at fair wages. What we want and must have to fulfill our destiny among the familiy of nations is more muscle and motive power. This we can have in proportion as we afford employment and pay fair wages. And I desire to say here that this country cannot afford to pay pauper's wages for a man's faithful toil. We must rise and keep higher in our pay for labor than Europe. It costs more to live here than it does there. A man's family will consume more; the education of his children, being a matter of necessity, will cost more; but aside from these considerations it is but just that good wages should be paid in order to bring and keep out of poverty a class of people which is oppressed in all other lands. This is the only country where the laborer and mechanic may cherish the hope of providing a competency for himself and family. Here he may accumulate some property out of his earnings, while at home he lives from hand to mouth and scant at that.

Mr. Chairman, it is often advocated by the apologists of European pauper labor that the corresponding cheapness of the necessary articles of consumption in foreign countries will enable the laborer and mechanic to purchase more for his earnings there than he can for his advanced wages here. An examination of the following tables, compiled from the most authentic official statistics, will dispel any delusion harbored on this point:

Statement showing the comparative average weekly rates of wages in United States money.

INFLUENCE OF HIGH WAGES IN AMERICA.

The excess of wages to the American laborer and mechanic above the wages of those classes in Europe has had the happy effect of raising the wages of the latter. In a foot-note to a very valuable table in the "fifth annual report of the bureau of statistics of labor" of Massachusetts, for 1874, page 99, is contained the following gratifying statement:

By extensive calculations the following statement of increase in wages in the kingdom of Wurtemberg, from 1865 to 1872, has been prepared: Advance in cotton manufactures, 26 per cent.; woolen, 41 per cent.; paper, 37 per cent.; printing, 46 per cent.; chemical works and dyers, 21 per cent.; tanners, 30 per cent.; bricklayers, 22 per cent.; carpenters, 26 per cent.; painters, 18 per cent.; blacksmiths, 45 per cent.; tailors, 50 per cent.; boots and shoes, 41 per cent.; day laborers, 37 per cent.; and factory help, generally, 31 per cent.

It is a well-known fact, also, that heretofore our immigration increased in proportion as our manufactures flourished. In stimulating these, therefore, we add not only to our wealth-producing machinery, but we multiply our industrial population, which, being so much labor, is so much wealth itself; and by importing the foreign mechanic we link his experience, gathered in the workshop of his native land, to the genius of American enterprise, and by giving him ample elbow room, and the facilities for acquiring property and distinction, his own abilities expand and develop.

The mechanic in America is not only better clothed, better fed, and better housed than his brother in Europe, but he is more intelligent, more enterprising, and inventive. It is this that has enabled us to advance so far in some of our manufactures of iron to compete even with England in her own markets. To-day we sell American axes in Australia, to British subjects, cheaper and of a better quality than those manufactured in Sheffield. It is this that discovers the secret processes of some of the iron manufactures of Russia, by which she has sustained a monopoly in the sale of her sheet-iron for years the world over. This famous article is now made by an American firm in the city of Pittsburgh, and notwithstanding the higher wages paid for labor, they are able to sell it in England cheaper than Russia can.

I call attention to an article from the Pittsburgh Commercial on this point:

Until very recently, the manufacture of sheet-iron corresponding in quality and finish to that known throughout the world as "Russian" was preserved, by a secret process, in the mills of Siberia. No other country had been able to make this particular kind of iron; and not even the stimulus of an offer of £50,000 by the English government was sufficient to accomplish the desirable result in England. Pittsburgh skill and enterprise, however, have been equal to the task, and the well-known firm of Messrs. Rogers & Burchfield are now manufacturing sheet-iron every way equal to the Russian brand, and have sent their first consignment of finished Russian sheet to Liverpool, England. Their present capacity in this important specialty is two tons per day, but their facilities can be increased indefinitely, to meet all demands of the trade. They can manufacture this iron and sell it to the English consumer cheaper than it can be imported from Russia to England. The importation of Russian sheet-iron has, as is well known to dealers, been controlled altogether by a single New York house, and all imported sheets were of one size—twenty-eight by fifty-six inches. This did not suit American purchasers, who can now have any sized sheet they wish to order. The capacity of these mills is from sixty to seventy-five tons per week, according to the kind of work being turned out.

From what I have said, the only conclusion that can be drawn is, that the protection and solicitude which American industry has received at the hands of the General Government since the establishment of the tariff in 1862 has resulted in the most wonderful progress as to its rapidity and extent in mechanics, manufactures, mining, stock-raising, agriculture, and horticulture that has ever been witnessed.

A word more and I have done. In less than one hundred years as a nation, we have achieved in greatness and power what no other nation ever achieved. The question now is, shall we go on in the course that has marked our progress hitherto, or shall we allow the lilliputian cords now being twined around this young giant to bind him to the earth and remand him to the servitude of his cruel foreign masters, or shall we loose him and allow him to assert his strength until he shall stand matchless before the world? I trust we will do the latter.

Publishing-house of the Methodist Episcopal Church at Nashville.

SPEECH OF HON. C. W. MILLIKEN,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

June 3, 1874.

The House having under consideration the bill for the relief of the Publishing-house of the Methodist Episcopal Church South at Nashville, Tennessee—

Mr. MILLIKEN said:

Mr. SPEAKER: I hope the House will patiently indulge me for a few moments only, while I, in no spirit of unkindness, complain at the tardiness of the Committee on War Claims in making their reports to the House of the conclusions to which they have arrived on many of the most important claims pending before them.

Among these is the claim of the Publishing-house of the Methodist Episcopal Church South, for the use, occupancy, and total destruction of much of its valuable property situated in the city of Nashville, in the State of Tennessee, during the late civil war.

I claim to be an economist in the expenditure and appropriation of the public money, and have complained, both privately and publicly, at what I regarded a useless extravagance and waste of money belonging to the public. But I have not and will not offer objection when it is used in the liquidation of an honest debt, or applied to any other needful, legitimate purpose. It is always right to oppose that which is wrong, but never wrong to do that which is right. While we are striving in the direction of economy, we should be careful at the same time to strive to do right. With a view, therefore, of enabling myself to do ample justice both to the claimant in this case as well as to the public, I have with some care examined the testimony and exhibits filed in this case, and from them I will most cheerfully cast my vote in favor of a fair and equitable appropriation of money to reimburse the claimant to some extent for the loss it has sustained, unless other and additional testimony is produced to change my present convictions of what I regard as not only right but my duty as a Representative of the people. The delay to which I have referred has in some instances amounted to denial, and I fear such will be the result in this case—at any rate for the present session. This, sir, is not the way for a good and great Government to maintain its high place in the estimation of its citizens and among the nations of the earth. And for one I enter my solemn protest to this sort of evasive legislation. If the claim has no merits to commend its favorable consideration to the members this House, for the want of them let it fall. But if it has them, give the House an opportunity to act in the premises, and at once; for surely ten years is long enough time to wait on a Government that is paying out its hundreds of millions of money in the same time for purposes of much less merit.

Mr. Speaker, I wish now to call the attention of the House to the merits of this claim; and in doing so, to give the reasons which at this time direct the course I expect to pursue, and also to refer to some law and precedents for our guidance in the effort to reach a just conclusion in the premises.

The claimant is an incorporated institution, made so in 1856 by an act of the Legislature of the State of Tennessee. Its aim, end, and object were then, and now is, to extend the means of literary, scientific, and religious knowledge, regardless of sectionalism or sectarianism, to every human being on earth who may come within its reach. To accomplish these ends, and in pursuance of its chartered privileges, it bought real estate in the city of Nashville, in the State of Tennessee, printing press, type, paper, &c., sufficient to meet the demands of the hour. And as the demands grew more and more pressing upon it, more and more money was expended to meet those demands, until in 1863 it had grown in actual money value to quite if not all of $1,000,000.

At this period the testimony shows that it was taken possession of by order of General G. H. Thomas, who was then commanding the Federal Army in that locality, for the use of the Army of the United States, and was by force thus used and held for two years, not as a matter of military necessity, but as a matter of convenience and economy to the Army and the United States. This testimony to this time stands uncontradicted, and until contradicted by a preponderance of evidence there can be in justice none other than an affirmative vote on this question. That the original title to this property was full and complete in the claimant no one has to this time denied, nor do I presume they will. This being admitted, it is the duty of the United States Government, or those who deny the legitimacy of this claim, by all the rules of law known to me, to show, by competent evidence, that it has, by some act or omission, parted with or forfeited that title; otherwise we are in honor bound to pay a just equivalent for the use, occupancy, and destruction of its property.

Mere presumption is not sufficient to warrant the Government in taking the property of any one or more of its citizens, or that of a corporation, and appropriating it to its own use without compensation; nor will it do to turn a deaf ear to the appeal of an institution for a restoration of its property, whose aim, end, and object is to enlighten, cultivate, purify, and christianize the community in which it exists; that community, too, be—, the citizens of the Government to which the appeal is made. Sir, these are, and of right should be, the great primary objects sought to be attained by all governments. In support of this idea I read from Vattel's Law of Nations, on page 55:

That the superiors intrusted with public affairs should constantly endeavor to deserve the approbation of their divine Master, and whatever they do in the name of the state ought to be regulated by this grand view. The care of forming pious dispositions in all the people should be constantly one of the principal objects of their vigilance, and from this the state will derive very great advantage.

Again, on page 76 of the same work, in speaking of the duties of a nation, it is said:

Next to the care of religion, one of the principal duties of a nation relates to justice. They ought to employ their utmost attention in causing it to prevail in the state, and to take proper measures for having it dispensed to every one in the most certain, the most speedy, and least burdensome manner. This obligation flows from the object proposed by uniting in civil society and from the compact itself. We have seen that men have bound themselves by the engagements of society, and consented to divest themselves in its favor of a part of their natural liberties, only with a view of peacefully enjoying what belongs to them and of obtaining justice with certainty. The nation would therefore neglect her duty to herself and deceive the individuals if she did not seriously endeavor to make the strictest justice prevail.

Sir, with these axiomatic truths before us, and so recognized by the civilized world and sanctified by all nations by being recognized and engrafted into the code of national laws, how can we afford to deny the relief sought for in this case upon a mere presumption and in positive conflict with an overwhelming preponderance of testimony in favor of the claimant, and at the same time claim that we have in good faith kept the law inviolate?

But, sir, as a relief to those who propose to oppose this claim, the question is asked if the institution was loyal to the United States Government during the rebellion, and upon the presumption of its disloyalty, simply because it was located in one of the seceded States, against positive testimony to the contrary, it is proposed to disallow the claim. In answer to the gentleman who proposes this question, I ask him to give one instance on record, or an instance of truthful tradition, where an incorporated institution has ever been held to answer a bill of indictment for a crime or misdemeanor? In other words, tell us how it is possible, in the very nature of things, to punish by imprisonment or fine that which has no physical existence, or a thing ideal or spiritual only? How is it to be reached if it has no physical being? Being an incorporated institution, it has no separate, independent self-existence; therefore it cannot act or think of and for itself, and hence cannot be punished for any violation of law done in its name by another or others. These premises being true, as I claim they are, neither the crimes of treason or disloyalty can be maintained, and the opposition is imaginary or the result of prejudice.

If you are determined to try to punish it whether or not, by taking possession of its property as was done by the power and force of an army, and then refuse to make good the damage thus done it, because it happened to be located in a State that had passed secession ordinances, and because some one or more contributors to its existence engaged in the rebellion or gave aid and comfort to those in rebellion, you punish also others who were and are equally interested in it and who were truly loyal to the Government. For it is a remarkable fact, as shown by the testimony, that out of twenty employés engaged in this institution at the commencement of the rebellion, but three of that number went South with the rebel army on the occupancy of the city of Nashville by the Federal troops, the other seventeen remaining inside the Federal lines and strictly loyal, so far as shown by the evidence.

In addition to this fact, it is said by Rev. Mr. Abbey that "in 1863, while the war was still raging around this region, (Nashville,) and the result of the conflict was still uncertain, arrangements were made by distinguished clergymen of the Church, including the officers of this publishing-house, to hold a general convention of the conferences within its jurisdiction, and the convention was held in Louisville, Kentucky, in April, 1864. At that convention the general business of the Church South was transacted, its loyalty asserted, and an address to the President of the United States adopted, declaring that loyalty;" thereby establishing beyond question, so far as testimony can establish a fact, not only the loyalty of many distinguished clergymen of the Methodist Episcopal Church South, but also the loyalty of those in whose care and custody this property had been placed. But this, in my opinion, cannot and ought not to affect the rights of the claimant, unless it can be shown that the general conference authorized the use of the property for disloyal purposes, which has not and cannot be done.

But, sir, if seventeen of its employés out of twenty remained loyal to the Government, or if they remained inside the Federal lines and gave no aid, countenance, or encouragement to those in rebellion, and the institution itself could do no physical or mental act of disloyalty, by what hypothesis of reasoning can it be said that the United States is not responsible for such loss as this body sustained by the acts of the Government through its officers? It is positively stated by Rev. J. B. McFerrin that no part of the building, machinery, types, presses, or other property of the institution was permitted to be used by or for the benefit of the rebel army. Mr. Abbey says it was distinctly agreed and understood between them (himself and McFerrin) that suitable care must be taken by them that the said publishing-house, being a church institution, must be kept, as far as possible, entirely aloof from all connection, entanglement, or alliance with the civil

and military strife and commotion then threatening the country so fearfully. This understanding, he says, was strictly and faithfully carried out as far as was in the power of the agents to do it. He also says that none of the property, machinery, or implements of any kind were at any time used or permitted to be used by the confederate army or soldiers for their government or cause. Both of these witnesses did state, however, that a portion of the machinery, &c., of this publishing-house was used by the confederates or for their benefit in manufacturing warlike iron, publishing Hardee's Military Tactics, &c.; over this, though, they say they had no control. Of this I have no doubt, nor has any candid man who was fully cognizant of all the facts and circumstances surrounding that people in those exciting times.

When the facts are applied to the principles of law already settled, it is simply a legal impossibility to evade making a fair recompense to this party. Let us test it by the rule as laid down by Chief Justice Chase in the case of the United States vs. Klein, (13 Wallace's Reports, page 136.) That eminent lawyer and jurist said:

It may be said in general terms that the property in the insurrectionary States may be divided into four classes.

First. That which belonged to the hostile organizations, or was employed in actual hostilities on land.

Second. That which at sea became lawful subject of capture and prize.

Third. That which became the subject of confiscation.

Fourth. A peculiar description, known only in the recent war, called captured and abandoned property.

These four classes comprise all that class of property of which the owner could be deprived of his title by any act of Congress passed during or since the rebellion. This, whether true or not, comes from the highest judicial authority in the Government. Then a complete solution of the question resolves itself into the inquiry, Does the property of this claimant come within the purview of either of these classes? If it does, the Government should not pay one cent. If it does not, the reverse is the only honorable course to be pursued. Certainly it cannot be classed with the first, because the property is not claimed by any one to have belonged to the Confederate States, or hostile organizations to the United States, nor employed in actual hostilities on land. Nor can it be said to belong to the second class, because that class refers to property at sea used for hostile purposes. The third class is that which became the subject of confiscation. It is clear to my mind that this is the only one of the four classes that in any way could possibly be construed to reach this property, and it is equally clear that it cannot do it, because, as I have before stated, it being without physical existence, having only an ideal or spiritual existence, could neither do nor think disloyally. Nor could any act of any one or more of those employed in its service make it disloyal, or subject its property to seizure or confiscation, because it was not theirs nor any part of it, or its property. They were simply agents managing and controlling it for the public good.

The legal principle that an agent cannot bind his principal beyond the limitations of authority given him by his principal in carrying out the designs of the principal are too well and frequently settled for me to stop here to give or cite authorities. And on this point I have but this to say, that those agents having the management and control of this institution were placed there by the general conference of the Methodist Episcopal Church South to publish books, papers, magazines, &c., for the promotion of science, literature, morals, and religion, that thereby the whole country might be benefited. Not alone for the whites or slave-owners of the South, but for the whole people north, south, east, and west, rich and poor, black and white. Unless the general conference passed some law, rule, or ordinance authorizing or directing its agent or agents to aid or abet, countenance, or assist those in rebellion in someway, it matters not if every employé in that institution actually took up arms against the Government, it cannot be held responsible. In other words, we cannot refuse a just compensation for the use and destruction of its property by the United States, unless the general conference sanctioned or approved their disloyal acts after they were committed, which is not only not true, but the contrary is true, as proven by the affidavit of Mr. Abbey.

But, sir, for the sake of argument, I will admit that the general conference as a body, having full control of the whole affair, did countenance the rebellion, still you cannot by any legal possibility avoid responsibility. In the same decission I have just referred to, on page 137, referring to the several confiscation acts, it is said:

But it is to be observed that tribunals and proceedings were provided, by which alone such property could be condemned, and without which it remained unaffected in the possession of the proprietors.

Now, sir, there were no steps of confiscation taken in this case, no tribunal was appealed to or had cognizance of it anywhere, at any time; therefore the property remained unaffected in the possession of the proprietors. But it may be said that this is not a question of title to property, but compensation for property taken and used, and therefore the rule does not apply. I do not see, if both the legal and equitable title remain undisturbed in the claimant in property in its possession, how it is, without the removal of the rights, the remedy is lost to recover a just equivalent for the same property, the possession of which has by force been taken away. Hence I conclude that so long as the title to property is undisturbed, the remedy exists to enforce its recovery, or its equivalent in money. Sir, this general conference represented the interests of men and women, black and white, then and now of every political faith known in our country. And to refuse this claim is to refuse to restore to loyal as well as disloyal citizens, black and white, a facility for obtaining cheap literary, moral, and religious reading almost indispensable.

I grant the amount of the claim is of some magnitude. But that is not the question. The only question is, is it right, and ought it in equity and good conscience to be paid? On this question it will be remembered that within a fraction of $21,000,000 have been covered into the Treasury from a sale of captured and abandoned property during the war, while there has been paid out to claimants for lost property not quite $15,500,000, leaving about $5,000,000 undisposed of; besides the untold millions in the way of commissary and quartermaster stores taken from corporations and loyal citizens that have not and never will be restored, nor their equivalent. The Government cannot be loser in this matter, from these figures, when we further remember that only about one of every five claims presented is paid.

In argument against the allowance of these claims, I have heard it asserted on this floor that claims have been presented for payment, sworn to, in which both the claimants and the witnesses had perjured themselves. This may or may not be true in some few instances. But if true it ill becomes a Representative to make the charge, to prejudice the rights of claimants generally. It would place the judge of a court in a very unenviable attitude to question the right of litigants to recover judgment in his court simply because one had sworn falsely in some previous cause pending before him. Yet the reasoning is equally as good in one case as the other.

Certainly it cannot come under the fourth class, which refers to captured or abandoned property; because, this being the property of no particular individual, but that of the whole country everywhere, and in the custody at the time it was taken of agents of the public, who were and had always been civilians, was in no sense of the term the subject of capture.

This, sir, is by no means establishing a precedent case. The books are quite full of such and similar cases from the Revolution down to the present time. I will give but few instances, at the same time referring members specially to volumes 6, 16, and 17 of the United States Statutes at Large, and to Sabine's American Loyalist; also to the fifth article of the treaty of peace between the United States and Great Britain upon the settlement of our revolutionary struggle. The States at this time, being each a sovereign, had passed confiscation laws, over which the Congress had no power. But in the fifth article I have just referred to we find this language:

It is agreed, that the Congress shall earnestly recommend it to the Legislature of the respective States to provide for the restitutions of all estates, rights, and properties which have been confiscated belonging to real British subjects; and also of the estates, rights, and properties of those persons residents in districts in possession of His Majesty's army, and who have not borne arms against the said United States.

Here we see that the Congress sitting at the time of the treaty of peace, after a hard struggle of seven years of war, recommended a restoration by the States of all property of British subjects, notwithstanding they had been in actual active hostility to them, and in some instances it was done. South Carolina did it. And yet we find members of this Congress who are unwilling to restore property to a claimant that was not only a non-combatant, but an institution for the promotion of science, morals, and religion. In addition to that restored by the States, the British government contributed about fifteen and a half million dollars together with annuities, half-pay to officers, large land grants, &c.

In volume 6 of the United States Statutes at Large, on pages 164 and 165, will be found an act passed April 26, 1816, by Congress directing compensation to be made for the destruction of the court-house in Clinton County, in the State of New York, by order of General Alexander Macomb.

In the same volume on page 309 will be found an act to pay to Jonas Duncan sixty dollars as compensation for the use and occupancy of his house by United States officers during the war of 1812, though this act was not passed until May 19, 1824. With that Congress justice, not time, was the criterion.

In the same volume on page 478, chapter 37, an allowance is made for the destruction of a house of Samuel Wagstaff.

Same page, chapter 38, is an allowance of $450 to Samuel Tupper for a barn occupied by the United States troops and destroyed by the enemy.

Same page, chapter 39, is an allowance of $650 for injury done house while occupied by the United States troops in the years 1818 and 1819. Though this relief was not given until March 7, 1832, certainly delay will not be made an objection to the claim now pending.

In volume 16 of the United States Statutes at Large, page 678, will be found an act which was passed January 17, 1871, directing the Treasurer to pay to the Kentucky University at Lexington the sum of $25,000 for the occupation of their building as a hospital and for damages and injury caused to the building and grounds adjacent, and to the museum and personal property belonging to that institution. This is almost an identical case with the one before us, except it is not so strong a case.

Hundreds of other cases could be cited, but I will not weary the patience of the House in this direction further than to notice the fact that in the late Franco-Prussian war, almost immediately upon its termination, the French government passed an act appropriating more than 100,000,000 francs for the relief of her loyal citizens, not-

withstanding her overwhelming defeat in war and the heavy exactions forced upon her by her conquerors, which she knew she was compelled to meet promptly.

In this case there is no job to be put up or jobbers to be rewarded. Not one dollar of dividends is or will be declared to any one. It is not a stock company for profits or dividends. Not a dollar is paid out by this institution other than for the necessary labor, machinery, and materials used in promoting the greatest good to the greatest number possible. It does occur to me that if there ever was a case having everything to recommend it favorably to Congress it is this one.

In the confident hope that an effort to do justice will be the chief motive power of every member on this subject, I decline to speak further.

Mercy to him that shows it is the rule
And righteous limitation of its act,
By which Heaven moves in pardoning guilty man;
And he that shows none, being ripe in years
And conscious of the outrage he commits,
Shall seek it, and not find it, in his turn.

The Iron-Molders' Union.

SPEECH OF HON. H. B. BANNING,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

June 9, 1874.

The House having under consideration the bill (H. R. No. 3521) to incorporate the National Iron-molders' Union.

Mr. BANNING said:

Mr. SPEAKER: I wish to say a few words in explanation of this bill, which I introduced at the request of the Molders' Union of the United States. The Molders' Union has been long and favorably known to the people of this country whose business and interest have brought them in contact with it. It is composed mainly of mechanics who have organized among themselves for the purposes set forth in this bill. It is meant for their protection, instruction, and general benefit. I may say without exaggeration that the molders as a class are known to be worthy, honorable citizens; they are sober, industrious, and seek honestly and in good faith only what this bill sets forth. It was thought better to have this act of incorporation from the General Government than from a single State or several States, as such act would give them a more perfect union and greater strength through the dignity that accompanies such incorporation. I am well aware this is not usual, and yet I cannot see wherein it is unconstitutional or improper.

I am among those who believe that a true knowledge of capital and labor finds harmony in both; the organization that antagonizes the one against the other does so to the injury of both. We are bound to remember, Mr. Speaker, that in this free land of ours the laborer of to-day is the capitalist of to-morrow, while the capitalist in turn may become the laborer. But all organization looking to a cultivation of kindly feelings, that seeks to inaugurate benevolent designs, and strives to extend the benefits of education as in this case, should be encouraged, and therefore I trust this bill will pass to a law.

Mr. Saffin, of Cincinnati, Ohio, the president of the Iron-molders' Union of the United States, has sent me an argument in support of this bill, giving a history of the Iron-Molders' Union, showing the wants of the iron-molders, and giving their reasons why this bill should become a law, which I now submit for the consideration of members of this House.

Mr. Saffin says:

The Iron-molders' International Union was organized in Philadelphia, Pennsylvania, on July 5, 1859. The causes that led to its organization may be briefly summed up as follows: The panic of 1857 had caused the wages of molders everywhere to be so largely reduced, that although known as skilled mechanics, they were not receiving wages above those paid the day laborer; odious rules were being enforced; the molders were obliged to make contracts to work a given time provided the work was furnished them to do, but if the work was not given them they must remain idle, as by the contract they were not allowed to seek elsewhere for work. The contract was enforced by the employers retaining until the end of each year a large portion of the wages earned, which would be forfeited if the molder should dare to go elsewhere. The molder was compelled to learn a large number of boys the trade under penalty, thus compelling him to spin the rope that would strangle the life out of him.

As an able writer has said:

"Labor has no protection; the weak are devoured by the strong. All wealth and all power centers in the hands of the few, and the many are their victims and their bondsmen."

So great had become the oppression, and so helpless the moulders, that it became absolutely necessary, if they would maintain even the semblance of freedom, that they must organize for defense.

Previous to 1859 there were several local organizations, and delegates from these several local organizations met in 1859 and organized what was then called the National Union of Iron-Molders, under which name the organization gained numbers and power until 1863, when the name was changed to the "Iron-molders' International Union," because of the many molders in Canada who desired to be connected with it. For nearly fifteen years our organization has been maintained intact, and while we have had conflicts with our employers, yet have we ever maintained the reputation of peaceable, law-abiding citizens.

One thing in connection with our business is important in the light of modern events; that is, our business is one entirely domestic, our employers have no foreign competition to contend against; they are not brought in contract with the cheap labor of foreign countries. Previous to the organization of the molders under an international union the wages paid to molders were governed entirely by the will of the employer. He who could secure his labor for the lowest sum was enabled to undersell his competitors in the market, forcing them to either reduce wages or quit the business. The close competition was sure to force wages to a common level, no matter whether that level meant semi-starvation to the wage laborer, or whether it meant a comfortable living to himself and family. We claim the molders' union, while it has placed the molder on a footing second to no mechanics in the country, yet has in no manner worked injury to employers; instead of injury they have been largely benefited, as through our union we have established a standard of wages throughout the whole country, thus giving every employer an equal chance in the common market, preventing them from underselling each other, except at the expense of their own pockets, which they are not very likely to do.

The most marked effect of our organization is, however, upon the molders themselves. As mechanics they have rapidly advanced; from being mere machines they have become reasoning, thinking beings; their labor has become to them a pleasure; the study of the various materials that enter into their daily labor has become a necessity; a spirit of emulation, a desire to excel, has taken the place of that stolid indifference that was part of their character when ground down by oppression. All this naturally is in favor of the employer as well as the molder.

As citizens, the molders have through the teachings of the organization, through the necessity of education that is sure to follow organization, become second to none in the country.

It has been charged against us that we are communists, internationalists, that we are in league with foreign organizations that avow their objects to be the overthrow of the entire social as well as political system of the world. These charges we emphatically deny; we have upon every occasion repudiated the organization known as the commune or internationale. At our last convention, held in July, 1872, the following resolutions were adopted, that should give the lie to every assertion of that character. Our history as an organization should save us from such charges; but to err is human.

"Whereas the great makers of public opinion, the 'press and the pulpit,' have, during the past year, condemned trades-unions and their members as being controlled by the 'internationale' of Europe; and whereas such assertions, although both unjust and untrue, are calculated to draw from trades-unions the sympathy of the general public, and otherwise work injury to the various trades-unions: Therefore,

"*Be it resolved*, That the Iron-molders' International Union, composed of the molders of the United States and Canada only, denounce any and all assertions that they owe any allegiance or are in any manner connected with the 'internationale' of Europe as willfully and maliciously false.

"*Resolved*, That the Iron-molders' International Union is purely an American institution, having for its object the elevation, mentally, morally, and financially, of the molders of America.

"*Resolved*, That while we will extend a welcome to our foreign craftsmen, we shall expect of them to throw off all allegiance to foreign trades-unions, believing, as we do, that the molders and other mechanics in America are fully competent, through their own organizations, to protect and elevate their respective trades.

"*Resolved*, That the 'press' generally be requested to give as great publicity to these resolutions as they have given statements at variance herewith."

Adopted.

The following resolution was also adopted:

"*Resolved*, That no union of this organization shall participate in any demonstration of the association known as the internationale, or commune, either by association or contribution."

The majority of our local unions have become beneficial associations, securing to their members weekly assistance in case of sickness or accident, and decent burial in case of death. We also have connected with our international organization a system of mutual insurance, securing the heirs of members a moderate sum of money (four or five hundred dollars) to relieve immediate necessities. We publish a monthly journal of thirty-two double-column pages, devoted to the trade and the elevation of our members. Through our beneficial association and our local payments for sickness we expend yearly a sum approximating $10,000. Our yearly printing bills will aggregate $7,000. For relief of needy members we expend, in proportion as trade is prosperous or dull, from three to ten thousand dollars per year. These amounts are collected from an aggregate membership of seventy-five hundred men.

Our object in asking for a charter from the Congress of the United States may be summed up in four words—"protection for our funds." This demand on our part is not without a precedent. The trades-unions of England have their funds protected by law by an act known as the "friendly societies' act," adopted in 1852, amended in 1854, and again amended in 1862, in which are the following provisions:

The property of the society is vested in the name of the society; fraud committed with respect to the property of the society is punishable by justices' or county courts; disputes settled by arbitrators.

John Kidd Pratt is registrar of friendly societies in England.

We have after years of experience determined that all future differences between our members and their employers shall be settled by arbitration, provided our employers will agree thereto. For nearly two years we have strictly enforced this law upon our members, with the happiest results.

Our employers have organized a national association similar to ours. The cohesive power of capital has enabled them thus far to maintain their organization without asking for favorable legislation. As an evidence of our feeling toward our employers' organization we submit the following resolutions adopted at Troy:

"*Resolved*, That we congratulate the stove and hollow-ware manufacturers of the country upon their success in organizing a society having for its object the securing to its members of a just and equitable price for their wares sufficient to fully compensate them for the capital invested and the labor incident to making their business a success.

"*Resolved*, That their efforts in that direction have our hearty sympathy, and, if necessary, will receive our hearty assistance.

"*Resolved*, That while we fully recognize the rights of capital as represented by our employers, and believe their society well calculated to secure them those rights, yet we are unalterably fixed in our determination to resist by all lawful means any and every effort made to deprive the molder of his right to demand and receive a fair equivalent for his labor, or to abridge his right to fix a price for that labor."

For years past our organization has devoted considerable time and means toward establishing co-operation. We have to-day more co-operative associations (successful) than of all other callings combined. We recognize in co-operation one of the surest means to elevate labor, but are prevented from going into it to the extent we would desire because as an association we are unknown to the law. We have no right to issue stock, we can give no guarantee to stockholders; our efforts must be local in their character, because we have no national legal existence. If we were chartered by Congress, co-operation would receive a new impetus, strife between employers and employés in the foundery business would cease, and that identity of interests so much talked about between capital and labor would be realized by and through co-operation.

A refusal to grant the charter asked for will not destroy or impair the power of our organization. We have lived fifteen years without legal recognition; we can live fifteen more. A charter would make our organization responsible for its acts; without a charter individuals only are responsible. Give us a charter, and laws can be enacted and enforced that would certainly prevent the realization of the terrors of those who believe, or at least say they believe, we are communists.

Societies for the prevention of cruelty to animals can be chartered; but societies

for the prevention of cruelty to human beings have never yet received the sanction of law. Are we less than the brutes? Societies having for their object the aiding of their members in times of sickness the laws hasten to recognize, giving them all the legal recognition and assistance they may desire; but a trades-union, organized for the sole object of aiding their members, when in health, to secure living wages, has never received such recognition, but are met by laws on all sides to destroy their power. Despite all the drawbacks trades-unions have flourished, are every year increasing in power and influence; they are organizations unknown to the law, yet are they law abiding, and now they simply ask that they may become, as all other societies, recognized by and amenable to the law.

Improvement of the Mouth of the Mississippi River.

SPEECH OF HON. THOMAS J. CASON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

June 3, 1874.

The House having under consideration the bill (H. R. No. 3342) for the improvement of the mouth of the Mississippi River—

Mr. CASON said:

Mr. SPEAKER: The question that comes nearest to the people of the valley of the Mississippi, and the one that is fraught with the greatest benefit, is cheap transportation. The farmer and mechanic, the merchant and professional man, are one and all deeply and directly interested in the question that lies at the foundation of the future prosperity and development of the largest, the most fertile valley of the world.

A few years ago its rich plains were a wild wilderness and its beautiful savannas were the camping-grounds of the Indian warrior. One half-century has not passed since the wild savage with his tomahawk and scalping-knife held possession and sway over the greater portion of that country. What wonderful transformation! The wilderness has given way to the cultivated fields; where the savage roamed over limitless prairies, now miles and miles, leagues upon leagues of maize, wheat, and other cereals spring from the warm bosom of the fertile valley as if by enchantment, and millions of bushels of golden grain reward the honest husbandman, the hardy tiller of the soil. The school-house and church stand in place of the wigwam. As the sound of the war-whoop of the Indian died away, songs and hymns of praise arose in thanksgiving to Him who has made "her wilderness like Eden." Along the path of the original nomad is now and has for years past been heard the shrill whistle of the flying locomotive; echo answering echo from prairie to woodland, resounds through hill and valley. Great cities have arisen as if by magic, and the towns and hamlets cover the country from the Alleghany to the Rocky Mountains; from the Gulf of Mexico on the south to the British possessions on the north. Having been born in the valley, lived there all my life from early youth to manhood, toiled as a tiller of the soil and struggled for a livelihood, familiar with the habits and associations of her people, identified with her interests, their ways my ways, their homes my home, I enter into the discussion with the profoundest feelings of the importance of the question to my people and the most earnest regard for the success of the principles I shall advocate. In what I may say I shall aim at arguments rather than rhetoric; shall collate facts showing the wonderful resources of the country, and shall endeavor to portray the extent, the grandeur of this center and heart of nature's great store-house.

The key to the progress and development of this valley is the improvement of the Mississippi River and its navigable tributaries. But little over a half-century has elapsed since any except a small portion of the eastern part of this country was settled by civilized man. The States that compose the principal part of this valley are named as follows, together with the date of their admission into the Union:

Indiana, admitted in 1816; Illinois, in 1818; Ohio, in 1803; Kentucky, in 1792; Tennessee, in 1796; Texas, in 1845, Mississippi, in 1817; Kansas, organized in 1854, admitted in 1861; Iowa, organized in 1836, admitted in 1846; Wisconsin, organized in 1836, admitted in 1848; Minnesota, organized in 1849, admitted in 1857; Louisiana, admitted in 1812; Arkansas, a French colony acquired by the Louisiana purchase, organized in 1813, admitted in 1836; Missouri, a French colony, organized in 1805, admitted in 1820; Nebraska, organized in 1854, admitted in 1866.

In addition to the States named, I shall include in my statement West Virginia and Western Pennsylvania (estimated at one-third of the whole State) as legitimately belonging to the Mississippi Valley and directly interested in the improvement of its rivers.

For the purpose of showing the extent, the magnitude, and population of this valley, demonstrating that we have an empire in area and unlimited internal resources, much of which have been, yet far more are to be developed, I have prepared a series of statistical tables to which I beg leave to call the attention of the House. By the following table we find that in the States I have heretofore mentioned there is a total area in square miles of 1,081,015; that by the census of 1870 the population was 18,835,287, making an average population to the square mile of 44,733; that the whole number of farms of all sizes were 1,566,180; that there were a total of 5,670,626 persons, engaged in all kinds of occupations; of which number there were engaged in agriculture 5,670,626; in manufactures, mechanical, and mining industries, 897,067; in transportation and trade, 469,286; in professional and personal services, 1,079,314:

States.	Area in square miles.	Population.	Population to square mile.	Farms of all sizes.	Engaged in all kinds of occupations.	Engaged in agriculture.	Engaged in manufactures, mechanical and mining industries.	Engaged in trade and transportation.	Engaged in professional and personal services.
Arkansas	52,198	484,471	9.30	49,424	135,949	109,310	6,271	5,491	.....
Illinois	55,410	2,539,891	45.84	202,803	742,015	376,441	133,221	80,422	151,931
Indiana	33,809	1,680,637	49.71	161,289	459,369	266,772	76,057	36,517	80,018
Iowa	55,045	1,194,020	21.69	116,292	344,276	210,261	47,319	28,210	58,484
Kansas	81,318	364,399	4.48	38,202	123,852	73,228	18,126	11,762	20,736
Kentucky	37,680	1,321,011	35.33	118,422	413,593	261,080	44,197	25,292	84,024

That the House may have a clearer idea of the relative portions of this valley that have already been improved and that are yet to be improved, together with the number of domestic animals and total productions of the leading cereals, the following figures have been drawn from the census report of the year 1870: Total number of acres of improved land, 105,715,405; number of acres of unimproved woodlands, 91,966,296; total number of acres of other unimproved lands, 36,129,579; cash value of farm lands, $5,143,702,858; cash value of all farming implements and machinery, $188,628,038; total amount of wages paid during the year previous to taking the census, $140,435,160; total amount of estimated value of all farm productions, including betterments and additions to stock, $1,370,839,464; cash value of all live stock, $893,873,496; cash value of all slaughtered animals, $264,827,174; total number of horses, mules, and asses, 6,139,644; total number of neat cattle, 17,311,686; total number of sheep, 11,791,270; total number of swine, 18,312,578; total value of all real and personal estate, less West Virginia, for that year, is shown by Table No. 2.

RETURNS FROM THE STATISTICAL BUREAU FOR 1869.

The annual earnings or values created by the leading industries of the country are shown to be substantially as follows:

Agriculture	$3,282,950,000
Cotton manufactures	71,500,000
Woolen manufactures	66,000,000
Iron productions—pig and bar	119,950,000
Leather manufactures	220,600,000
Rail service	360,000,000
Fisheries	100,000,000
Other industries	2,602,000,000

Here it is shown that our annual earnings, not by labor alone but by the aid of its handmaid, capital, amount to the enormous sum of $6,823,000,000, or three times the entire amount of the national debt.

In connection with these tables I call attention to the following table, which exhibits some of the leading articles produced in States bordering upon the navigable rivers of the Mississippi Valley, as shown by the census of 1870:

State.	Wheat.	Corn.	Oats.	Rye and Barley	Wool.
	Bushels.	*Bushels.*	*Bushels.*	*Bushels.*	*Pounds.*
Illinois	30,128,405	129,921,395	42,780,851	4,936,978	5,739,249
Indiana	27,747,222	51,094,538	8,590,409	813,730	5,029,023
Iowa	29,435,692	68,935,065	21,005,142	2,556,586	2,967,043
Kansas	3,391,198	17,025,525	4,097,925	183,612	335,005
Minnesota	18,866,073	4,743,117	10,678,261	1,110,112	401,185
Missouri	14,315,926	66,034,075	16,578,313	823,781	3,649,390
Ohio	27,882,159	67,501,144	25,347,549	2,562,111	20,539,643
Wisconsin	25,606,444	15,033,998	20,180,016	2,970,313	4,090,670
Arkansas	741,736	13,328,145	528,777	29,566	214,784
Louisiana	9,906	7,596,628	17,782	2,210	140,428
Mississippi	274,479	15,637,316	414,586	18,825	288,285
Kentucky	5,728,704	50,091,006	6,620,103	1,347,419	2,234,450
Tennessee	6,188,916	41,343,614	4,513,315	298,403	1,389,762
Nebraska	2,125,086	4,736,710	1,477,562	230,013	74,655
Texas	415,112	20,554,538	762,663	72,872	1,251,328
Total	192,857,058	573,576,484	163,543,324	17,946,531	48,324,900

The total amount of buckwheat in the above States was 1,504,505 bushels.

I would also ask the attention of the House to the following statement of the production of cereals:

Statement showing the production of cereals in the United States, the quantity consumed, and the quantity exported, 1840 to 1872, inclusive.

Year.	Production.	Consumed in the United States.	Consumed per capita.	Exported.	Percentage exported.
	Bushels.	*Bushels.*	*Per cent.*	*Bushels.*	*Per cent.*
1840	615,525,302	602,326,253	35.21	13,199,049	2
1850	867,453,967	851,502,312	36.8	15,951,655	1.8

As showing the rapid increase in the cereal productions of the interior States north of the Ohio River and as a comparison with the like productions of the entire country, I beg leave to direct the attention of the House to the following tables:

The cereal products of the interior States north of the Ohio River, embracing the present States of Ohio, Indiana, Michigan, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Kansas, and Nebraska, were—

In the year 1840	bushels..	166,204,201
In the year 1850	do....	311,581,066
In the year 1860	do....	577,255,715
In the year 1870	do....	812,055,564

Estimating these cereals at 60 pounds avoirdupois per bushel for wheat, 56 for Indian corn, and 32 for oats, with the customary rates for the minor grains, (rye, buckwheat, and barley,) the total weight of the 812,055,364 bushels was 42,302,282,904 pounds, or, in round numbers, 21,000,000 tons of 2,000 pounds, slightly exceeding 40 bushels to the ton. If 11,000,000 tons were reserved (which is an extravagant allowance) to feed the population and animals of the interior States, there would remain for other purposes 10,000,000 tons, nearly all of which, with adequate facilities for cheap and rapid transportation, would be exported to other States or sent down to the sea-board for export to foreign countries, to feed their constantly increasing populations and animals.

The 10,000,000 tons, if ground into flour or meal, and placed in barrels holding 5 bushels each, would require 80,000,000 barrels, and would fill 40,000 Erie Canal boats, each carrying 250 tons, or 1,000,000 railway freight cars, each carrying ten tons.

In addition to this, a considerable portion of the 11,000,000 tons reserved to feed the population and animals of the interior would reappear, diminished in weight, but much increased in relative value, in beef, pork, dairy products, and other animal food greatly needed on both sides of the Atlantic, and serving to swell the rich centrifugal streams of our inland commerce.

The total products of cereals (consisting of wheat, Indian corn, oats, rye, buckwheat, and barley) in all the States and Territories of the United States amounted in the year—

1840 to	bushels..	615,535,077
1850 to	do....	867,454,033
1860 to	do....	1,238,138,947
1870 to	do....	1,357,230,096

The aggregate cereal product of all the nations of Europe in 1868, with a total population of 296,128,293, was reported to the international statistical congress at the Hague in 1869 to be 4,754,516,604 bushels, being sixteen bushels to the head. The product in the United States in 1870, of 1,357,230,096 bushels, with a population of 38,558,371, was thirty-five bushels to the head.

I will endeavor to impress the House more perfectly by bringing to your notice the amount and value of a few of those products that may be termed staples, for time would fail me to go into detail. The farmers of this country produced, as per census of 1870, 287,745,626 bushels of wheat, 760,944,540 bushels of Indian corn, 3,011,996 bales of cotton, 100,102,387 pounds of wool, 514,092,683 pounds of butter, 53,492,153 pounds of cheese, orchard products valued at $47,335,189, market-garden products $20,719,229.

As I shall hereafter be able to show, the tables from the census returns of 1870 only enable us to approximate the actual agricultural resources of the Mississippi Valley for the year 1873. The increase since 1870 has been very large.

COAL LANDS.

The discovery of the coal area in the Northwest Central States in the last few years has been very extensive, and that there is block-coal in all or nearly all of these States almost equal to charcoal for smelting iron, and the manufacture thereof has greatly added to the wealth and resources of this country. There are in Indiana, Kentucky, and Illinois over 61,700 square miles of coal lands, with from one to thirteen layers or strata of coal, and an aggregate thickness of thirty to thirty-five feet. Ohio has 10,000 square miles, with an aggregate thickness of nearly fifty feet, and in places as many as ten beds. The Missouri basin, from Iowa to Texas, has over 105,000 square miles of coal-beds, with a thickness of sixteen inches to five feet, and of a total thickness of thirty feet. Tennessee has 5,100 square miles, and some of its beds are as thick as fourteen feet.

From the census report of 1870 we learn that there were that year 1,723 men and boys engaged in mining in Indiana, and the capital invested was $610,692; paid for wages, $754,964; value of materials employed, $73,992; value of the total mining productions, $1,137,172. In the State of Illinois there were 7,504 men and boys engaged in this employment; capital invested, $4,814,123; wages paid, $3,606,913; materials employed, $448,338; total productions, $6,968,201. In the State of Ohio there were engaged in the business 11,241 men and boys; capital invested, $9,017,197; wages paid, 4,682,571; materials employed, 437,714; total productions, $7,751,544. In the State of Missouri there were engaged, men and boys, 3,423; capital invested, $3,489,250; wages paid, $1,938,792; materials employed, $670,781; total productions, $3,472,513. In the State of Iowa there were employed, men and boys, 1,528; capital invested $756,224; wages paid, 676,714; materials employed, $88,262; total productions, $1,063,484. In the State of Wisconsin there were employed, men and boys, 701; capital invested, $737,728; wages paid, $233,981; materials, $38,582; total productions, $510,982. In the State of Tennessee, men and boys employed, 1,239; capital invested, $941,829; wages paid, $378,913; total productions, $776,292. In Kentucky, men and boys employed, 925; capital, $761,450; wages paid, $312,486; materials furnished, $31,083; total productions, $509,245. Making a total for these eight States, of men and boys employed, 28,384; capital invested, $20,608,553; wages paid in all, $12,583,453; materials employed, $1,720,177, and total productions, $22,189,433.

It is not necessary for me to say to those acquainted with this branch of industry that it has increased largely since the census report of 1870; in many of the States perhaps doubled.

TAXES, NATIONAL AND LOCAL—PUBLIC DEBT, NATIONAL AND LOCAL.

As an evidence of the recuperative ability and internal resources of our people, and demonstrating the patience with which they bear the burdens of taxation while others reap the larger share of the profits of their toil and productions, I append the following table for ten of the States in the Mississippi Valley. From this table we find that there was a total indebtedness for the year 1870 (not national) of $255,591,120; that the State and local taxes (national) for the same year amounted to $51,706,229.03; that the taxes other than national were $102,296,755; that the total taxes paid by these States were $149,493,124.03; that the common-school revenues of these States amounted to $28,557,056.41; the permanent school fund of said States was $37,632,676.41; total revenue and permanent school fund, $66,079,231.82. The following table gives the amounts for each of said States:

States.	Public debt not national, 1870.	Taxation not national, 1870.	Amount of taxation paid by each State to national Government, 1870.	Total for each State of taxes, 1870.	Years for school fund.	School revenue for each State.	Amount of permanent school fund.	Total revenues and permanent school fund.

NAVIGABLE RIVERS FOR STEAMBOATS.

The estimated extent of steam navigation on the rivers of the Mississippi Valley by a Government topographical engineer is as follows: On the Mississippi River and its branches, a total of 7,097 miles; on the Ohio and branches, 3,292 miles; on the Missouri and branches, 2,655 miles; Red River and branches, (bayous, &c.,) a total of 3,630 miles, making in all of steamboat navigation a total of 16,674 miles. Besides there are several hundreds of miles of navigable rivers in addition for flat-boats, keels, and barges.

NUMBER OF MILES OF RAILROADS, ETC.

There are in the United States over 67,000 miles of railroads. These roads exceed in mileage the railroads of all Europe combined. The tonnage of the railroads of the United States amounts to about 225,000,000 of tons per year. The capacity of the railroads to move to the sea-board, to all the different points, is estimated at about 30,000 tons per day. The capacity of the water-routes, by canal, the Saint Lawrence and Mississippi River, and other water communications to the sea-board is equal to about 75,000 tons per day; so that if the business was equalized it makes a capacity to move, if it was equally distributed over the time, equal to 105,000 tons per day. Take that for a year, and you have a tonnage equal to 7½ tons for every man, woman, and child of the whole United States west of Buffalo. There are in operation in Ohio, Michigan, and Western States and Territories north of the Ohio River and east of the Rocky Mountains, Missouri, Kansas, and Colorado, and north of them, 28,778 miles of railroads, owned and controlled by about two hundred different sets of men as stockholders, represented through their boards of directors. These roads, with their equipments, have cost an average of $50,550 per mile. The total earnings, less actual working expense, give an average of 2.83 per cent. on all the capital; but nearly one-half of the entire cost is represented by bonds bearing from 7 to 10 per cent. interest, which of course should be added to the earnings of the roads. Many of the roads, however, pay no dividends, and some of them do not even pay the interest on their bonds. The grand total cost of these roads in the West alone, at the rate I have given it above, would be $1,454,677,900.

STATE PRODUCTIONS.

I shall not have time to go into detail in relation to the individual State productions. The able and energetic auditor of the State of Indiana, Mr. Wildman, has been lately collating from official sources statistics of the resources of several different States. A short abstract of a part of these statistics has been published, and Mr. Wildman has kindly furnished me with the published statement, and I take pleasure in incorporating the following, showing the taxable property *per capita* of several States, to which is appended a short statement of the taxables of some of the States.

We learn that in twenty States the proportion of taxable property per head is as follows:

Alabama	$100
Arkansas	150
Connecticut	650
Georgia	220
Illinois	330
Indiana	560
Iowa	306
Kentucky	354
Louisiana	314
Maine	358
Massachusetts	1 163
Minnesota	255
Mississippi	179
New York	408
North Carolina	116
Ohio	588
Oregon	437
Wisconsin	325

By the above statement it will be seen that Connecticut is running down rapidly, if we may trust the comparison between Mr. Wildman's table and the census. The former gives her only $348,855,457 of

.axables, while the latter three years ago made her worth $425,433,237, a loss of about $76,000,000. Massachusetts shows an increase in three years from $1,591,983,112 to $1,696,599,969, over $100,000,000. New York gains in the same way and same time from $1,967,001,185 to $2,129,626,386, about $162,000,000. Ohio advances from $1,167,731,697 to $1,567,274,639. Illinois, however, makes the most astonishing jump upward ever recorded in the duplicate of any country since that which Ducalion populated by picking up pebbles and throwing them behind to become men and women. She was assessed, says the census, in 1870, at $482,892,575, nearly $200,000,000 less than Indiana. In 1873 she sends Mr. Wildman an assessed total of $1,341,543,046, a gain of nearly 200 per cent. The poorest State is Alabama, and the next North Carolina. New York, singularly enough, considering her increase of wealth, is worth less per head than Indiana. Massachusetts, as would have been guessed in advance by everybody of any business knowledge, is the richest State in the Union, having $1,163 of taxable property for every man, woman, and child of her population. Connecticut, in spite of her unaccountable decline, is next, and then Ohio, Indiana, and Illinois are next, at very nearly the same rate *per capita*, Ohio leading all a little, and Indiana leading Illinois. New York and Pennsylvania are behind Oregon. They are cursed with the dregs of Europe, while the West gets the cream of immigration from the North Sea to the Mediterranean.

MISSISSIPPI RIVER.

The Mississippi River and its tributaries float annually upon their bosoms more than $2,000,000,000 of commerce, which is an excess of more than $1,000,000 over our foreign commerce, and nearly $2,000,000,000 in excess of our carrying trade, coastwise and foreign. We have no means of estimating accurately the magnitude of our internal trade; but its colossal proportions may be inferred from two or three known facts. The value of commodities moved by the railroads in 1872 is estimated at over $10,000,000,000, and their gross receipts reached the enormous sum of $473,241,055. The commerce of the cities of the Ohio River alone has been carefully estimated at over $1,600,000,000 per annum. Some conception of the immense trade carried on upon the northern lakes may be formed from the fact that during the entire season of navigation in 1872 an average of one vessel every nine minutes, day and night, passed Fort Gratiot light-house, near Port Huron. It is probably safe to say that the value of our internal commerce is ten times greater than our trade with all foreign nations, and that the amount annually paid for transportation is more than double the entire revenues of the Government.

INDIANA RESOURCES.

I shall not attempt the discussion in detail of each individual State of the Mississippi Valley, and shall confine myself to a few of these States, for what illustrates the progress of one demonstrates that of the others. The total value of personal and real estate in the State of Indiana in 1860 was $528,860,282, and increased to $1,268,180,543 in the year 1870; the total value in manufacturing industries alone was in 1860 $42,803,469, and in 1870 had increased to $108,617,274; the number of improved acres of land was in 1860 3,242,183, in 1870 the amount was 10,104,279; the cash value of farms in 1860 was $356,712,175, and in 1870 $634,804,189. In 1873 there was assessed in the State 22,390,865.99 acres of land, the assessed value of these lands were $412,760,682; the value of improvements was $78,261,010, the value of land and improvements $491,921,692; the value of town lots was $90,209,823, value of improvements $72,377,501, value of personal property $247,146,331; making a total value of all taxable property, real and personal, $900,765,347. There are in this State miles of railroads, as follows: Main track 3,653.84, of side tracks 424.76; the total value of the main tracks are $27,652,621; the value of side tracks are $2,479,229; the value of the right of way, $54,846; value of rolling-stock, $9,093,056; total valuation, $39,279,752. The total value of the Western Union and Pacific and Atlantic Telegraph Companies, $807,875; total value of other corporations, $9,614,880; making a grand total valuation of all taxable property of $950,467,854.

The following statistics as to the productions of the State of Indiana for the year 1873 are taken from the report of the State auditor:

Amount of stock.—Horses, 314,438; mules, 54,307; cattle, 1,201,246; sheep, 1,235,874; hogs, 2,999,139.

Number of acres.—In wheat, 1,902,599; in corn, 2,627,980; in oats, 624,795; in meadow, 985,529; in pasture and wood land, 4,511,775; number of acres in cultivation, 6,162,157.

Number bushels of grain, seeds, &c.—Wheat 22,149,527; corn, 81,185,485; rye, 333,153; oats, 11,434,628; barley, 322,943; grass and clover seeds, 137,774; flaxseed, 389,179; fruit, 3,473,161; potatoes, 3,412,159.

Manufactures.—Piano-fortes, 5,114; melodeons and organs, 4,834; sewing and knitting machines, 63,115.

Miscellaneous.—Lime, 1,167,661 bushels; hay, 825,477 tons; hemp, 18,794; coal mined, 570,382; beef, 3,320,067 pounds; bacon, 40,716,539; bulk pork, 30,913,745; lard, 11,391,432; wool, 2,228,437; tobacco, 12,377,792; hops, 29,729; maple sugar, 302,041; beef, 6,133 barrels; pork, 85,065 barrels; cider, 1,097,019 gallons; vinegar, 385,835; wine 827,486; sorghum molasses, 501,363; maple molasses, 57,675; value of nursery stock, $39,487; of slaughtered animals, $3,938,754; of home-made manufactures, $20,247,216.

Insurance companies.—Gross receipts by insurance companies doing business in this State, $1,169,413.26; losses paid by same, $608,950.71; receipts less losses, $583,300.09. Taxes paid by said companies, $17,498.45.

Liabilities, receipts, and expenditures.—Foreign debt, October 31, 1873, $994,030.12; domestic debt, October 31, 1873, being non-negotiable bonds due school fund, $3,904,783.22. Total amount of receipts into the treasury from all sources, including balance in treasury, November 1, 1872, of $755,021.87, $4,300,653.02; paid out during fiscal year, $4,115,457.55; leaving balance in treasury, November 1, 1873, $185,175.47.

The common-school revenue for the year was $1,372,993.30; total permanent school fund belonging to the State, $8,437,593.47.

PRODUCTIONS OF ILLINOIS.

The value of the real and personal estate in Illinois was in 1860 the sum of $871,860,282, which increased to $2,121,680,579 in the year 1870; manufactured productions were valued in 1860 at the sum $57,580,886, and in 1870 were valued at $205,620,679; the number of improved acres of land in 1860 was 13,096,374, and in 1870 19,329,952. The cash value of farms was in 1860 $408,944,033, and in the year 1870 $920,506,346. In 1830 the population of Illinois was 1¼ per cent. of the whole population of the United States; in 1840 it was 2⅝ per cent.; in 1850, 3⅝ per cent.; in 1860 it was 5⅛ per cent.; and in 1870 it was nearly 7 per cent. of the whole. In 1830 it contained one-eighteenth of our population; in 1870, one-fifteenth. In 1850 Illinois was valued at $156,000,000; in 1860, $871,000,000; and in 1870 her valuation had increased to the enormous sum of $2,121,000,000. The marvelous growth of this State may well excite the pride of its citizens and cause them to challenge the world for its parallel.

RESOURCES OF MISSOURI.

The value of real and personal estate in Missouri was in 1860 $501,214,398; increased in 1870 to $1,284,922,897; manufacturing industries were in 1860 $41,782,731, and in 1870, $206,213,422; the number of acres improved land in 1860 was 6,246,871, and in 1870, 9,130,615; the cash value of the farms was in 1860 $230,632,126, and in 1870 $392,908,047. She has an area of 43,123,200 acres, of which in 1870, as shown by the census, there were planted in corn 3,025,159 acres; in wheat, 519,230 acres; in rye, 19,166 acres; in oats, 220,000 acres; in barley, 10,795 acres; in buckwheat, 3,559 acres; in potatoes, 21,359 acres; in tobacco, 26,146 acres; and in growing hay, 414,403 acres; making the total amount in cultivation 4,258,817. The productions from these lands were, in corn, 94,990,000 bushels; wheat, 6,750,000 bushels; rye, 299,000 bushels; oats, 5,525,000 bushels; barley 285,000 bushels; buckwheat, 84,000 bushels; potatoes, 2,200,000 bushels; hay, 412,403 tons; tobacco, 19,600,000 pounds. The aggregate value of the foreign productions in 1870, as shown by the census, was $60,357,320. It is shown that less than one-tenth of the soil of Missouri in 1870 was in actual cultivation, and I am sure that no one who is familiar with the topography of the State doubts but what at least three-fourths of the entire surface is susceptible of cultivation. Assuming this to be true, instead of having only 4,258,817 acres in cultivation, they ought to have 32,343,200, or seven and one-half times as much as they had in 1870. An estimate has been made by one of her leading statesmen that Missouri has 13,000,000 of hemp lands, 5,000,000 of grape lands, 15,000,000 for ordinary farming, 2,000,000 for mining; that there could be mined 100,000,000 bushels of coal annually for thirteen hundred years; that there are 230,000,000 tons of iron above ground, with lead at five hundred points; copper in fifteen counties, gold, zinc, tin, nickel, cobalt, emery, granite, marble, limestone, pipe-clay, and metallic paints, within one hundred miles of Saint Louis, exciting the wonder and cupidity of the adventurous and enterprising of the other States.

PARTIAL RESOURCES OF OTHER STATES.

In Kentucky it has been discovered that Rockcastle County has black coal that will smelt ores equal to any of Pennsylvania or Indiana, and a bed of two hundred and fifty acres has just been developed. Limestone abounds; iron ore exists in several counties, and a two-stacked furnace is to be constructed immediately, with large rolling-mills connected. I have not time to allude to what has been done and proposed in Alabama, Georgia, Tennessee, and other States in various directions—manufacturing cotton and wool and lumber, and attempting other industries. It is only necessary to allude to them.

The production of cotton in this country and other portions of the world in 1860 and in 1870 was as follows:

	1860.	1870.
	Pounds.	*Pounds.*
United States	1,115,290,698	625,609,080
Other countries	275,048,133	763,237,392

In the first period this country produced an excess of 840,842,565 pounds in a total product of 1,390,338,831; in the second the American product was 158,628,312 deficient in 1,408,846,472 grown. The gross increase of production was 7,907,641, but the American decline was 999,470,877, showing beyond all cavil and beyond all rhetoric that if cotton is king his throne is no longer in this country. It is true that we still produce more cotton than any other single country, but in 1860 we produced almost four times as much as all others combined.

BUTTER AND CHEESE IN WISCONSIN AND OTHER STATES.

The Fort Atkinson Union says:

As the season advances renewed activity in dairy matters begins to take place. If the past is any indication of the future, we are of the opinion that but few years will elapse before the Northwest will constitute the chief producing portion of the United States. The amount of cheese alone produced in Wisconsin, Illinois, Minnesota, and Iowa during 1873 was nearly, if not quite, 30,000,000 pounds. It is safe, we think, to put the production of these four States for 1874 at 35,000,000 pounds. Of this at least 15,000,000 pounds will seek an export market either West, East, or South. The advance in the manufacture of butter is almost as great. Within the last two years a very marked improvement has taken place in the quantity of western butter, so that it is now eagerly sought for eastern and foreign consumption.

OHIO RESOURCES.

The following is a statistical statement of the resources, values taxables, &c., as prepared from the auditor's report for 1873:

The total number of acres of land in State	25,446,107
The total value of lands	$698,815,731 00
The value of real estate in cities, towns, and villages	342,948,200 00
Total value of chattel property	525,510,708 00
Grand total value	1,567,274,639 00
Increase over 1872 of	$42,951,521 00
Total value of all taxables in 1800	19,240 67
Making an average increase for seventy-three years of	21,469,252 03
Taxes levied:	
Taxes for State debt sinking fund, .8 of a mill	$1,251,695 34
Taxes for general revenue fund, .6 of a mill	938,773 16
Taxes for asylum fund, 1.1 of a mill	1,721,082 45
Taxes for State common-school fund, 1 mill	1,566,388 30
Making a grand total State taxes, 3.5 mills	5,477,839 25
Total taxes other than State	20,653,493 98
	26,131,353 23
Indebtedness:	
Total State indebtedness, including funded debt	$8,211,062 10
Total indebtedness of counties, townships, &c.	20,033,123 32
Increase of the last-named taxes since 1872	2,442,575 35
Value of taxable property:	
724,602 horses	$47,212,499 00
1,765,331 cattle	29,449,948 00
23,738 mules, &c.	1,702,929 00
4,596,864 sheep	11,710,407 00
2,088,313 hogs	6,726,597 00
358,301 carriages	16,617,928 00
107,362 watches	2,655,585 00
27,278 pianos	3,824,515 00
Merchants' stock	53,769,487
Manufacturers' stock	19,830,963
Value of moneys	37,114,941
Value of credits, book accounts, &c	110,258,264
Bank and other corporations, returned to county auditors	95,254,959
Bonds or stocks of any State or of any company or corporation not required to list its property for taxation in Ohio	6,848,214
Monthly average value of moneys, credits, or other personal property converted into non-taxable bonds	2,335,883
All other personal property subject to taxation and not included in the enumerated articles, excluding bank capital and corporation property	40,953,291
Number of dogs, 118,694; taxation	364,678
Total	487,254,308
Amount of stock of railroads:	
Amount of stock taken in railroads by the county previous to the 1st day of September, 1851	$4,128,000 00
Amount of stock taken in railroads by cities, towns, and townships within the county previous to the 1st day of September, 1851	1,507,500 00
Aggregate amount of interest paid upon bonds issued for the stock by the county	3,963,165 86
Aggregate amount of interest paid upon bonds issued for the stock by the cities, towns, and townships within the county	1,342,993 94
Dividends paid cities, towns, and townships within the county upon such stock	181,470 78
Dividends paid cities, towns, and townships within the county upon such stock	1,762 50
Stock that has been sold—amount realized from the sale to the cities, towns, and townships of the county	738,300 33
Stock that has been sold—amount realized from the sale to the cities, towns, and townships of the county	228,240 67

The following table shows the amount of taxes for all purposes paid by railroads in the State of Ohio in the several counties for each year, 1846 to 1872 inclusive:

1846	$4 26
1847	98 72
1848	92 72
1849	250 08
1850	483 93
1851	13,538 38
1852	67,198 73
1853	132,216 93
1854	183,196 51
1855	187,196 08
1856	188,175 36
1857	193,336 36
1858	184,594 03
1859	184,769 82
1860	192,542 08
1861	192,072 64
1862	227,744 71
1863	217,006 09
1864	644,926 58
1865	781,790 84
1866	662,432 10
1867	793,533 47
1868	817,611 22
1869	842,941 98
1870	1,048,802 16
1871	902,029 82
1872	931,094 56
Total paid as above	9,591,606 36
Amount of revenue-fund appropriations for 1873	$815,993 72
Asylum-fund appropriations for 1873	1,631,845 36
Sinking-fund appropriations	1,056,815 02
Receipts of school fund in 1871	7,365,992 20

Increase over value of 1870	1,170,058 00

CONSUMPTION AND SURPLUS PRODUCTIONS OF CEREALS.

Consumption of cereals is usually estimated by population alone, and results obtained by that method, when applied to all cereals together, approximate to the actual consumption, and still more closely to the quantities required for consumption in the different States. The census taken July 1, 1870, shows a production of cereals during the year preceding of 1,467,299,183 bushels. Treasury returns for the year ending June 30, 1870, show that the equivalent of 56,707,843 bushels was exported, flour being reduced to wheat. Deducting exports, there remain for consumption 1,310,501,340 bushels, or 33.98 bushels *per capita*. At 34 bushels *per capita*, the six New England States, New York, New Jersey, Pennsylvania, Maryland, and Delaware, with the District of Columbia, would consume 437,317,165 bushels; but the production was only 237,317,165 bushels, or 216,117,331 bushels less than the quantity required for their consumption according to the general average of all the States. The thirteen States south of the Potomac and Ohio Rivers and the southern border of Missouri would consume 382,513,974 bushels; but they produced only 299,616,877, and their apparent deficiency is 82,897,097 bushels. These enormous deficiencies, and over 56,000,000 more for export, were supplied by the surplus products of the remaining States and Territories, namely, those west of the Alleghanies and north of the Ohio line, including the Pacific States.

CONSUMPTION OF WHEAT.

The consumption of wheat may properly be estimated upon the basis of population. In 1850 the average was 3.93 bushels *per capita;* 1860, it was 4.95 bushels *per capita;* and the average consumption each year 4.44 bushels.

For a general estimate of the surplus or deficiency, the ratio of four bushels to the person in 1850, and five bushels to the person in 1860 and 1870 will yield general results sufficiently accurate. At that ratio, the deficiency in the eleven Eastern States and the District of Columbia was 24,866,168 bushels, Delaware and Pennsylvania only growing a surplus. In the thirteen Southern States the deficiency was 26,185,298 bushels, Virginia and West Virginia only producing a small surplus. The following table, giving for each State the actual production and the consumption upon these ratios, with the surplus or deficit in each case, though by no means corresponding accurately with the facts, serves to show in what direction the surplus wheat and cereals of the Northwest must be moved, and to afford some idea of the vast quantity of grain thus demanding transportation:

Table showing the actual production and consumption upon the ratios mentioned, with the surplus or deficit in each case, of wheat and cereals, in each State.

This estimate supposes a consumption of wheat somewhat too low in the Eastern and too high in the Southern States, so that of the actual deficiencies that in the Eastern States is the larger. It will also appear that the apparent surplus of cereals in the Northwestern and Pacific States, enormous as it seems, is not as great as the actual surplus in years of full crops, for in the year 1870 the crop of corn was short about 200,000,000 bushels, although the consumption also greatly diminished.

Looking first to the production of wheat in the Northwestern States, and estimating the consumption at the ratios already given, we find an apparent surplus available for shipment to other States in 1850 of 22,000,000 bushels, in 1860 of 49,000,000 bushels, and in 1870 of 130,000,000 bushels upon the basis of the census returns as to production.

The following table indicates in what States the surplus was produced:

States.	1850.		1860.		1870.		Surplus in millions and tenths.			
	Crop.	Consumption at 4 bushels.	Crop.	Consumption at 5 bushels.	Crop.	Consumption at 5 bushels.	1850.	1860.	1870.	1872.

It is more difficult to make a satisfactory estimate of the consumption of corn than of wheat. Used in part for the food of human beings, in part for the ordinary nutriment of cattle in winter, in part for distilling, and largely in the fattening of hogs and cattle for market, the consumption varies widely in different years, and depends in different localities upon conditions widely varying. It is evident that no estimate based upon population alone will answer. In 1850 the consumption of corn averaged twenty-five bushels to each inhabitant, and in 1860 twenty-six bushels, but in 1870 not more than twenty bushels; showing that no reliance can be placed upon estimates on this basis. The use of corn in distilling is an item to be considered in arriving at the true amount of consumption, yet it does not exceed one-thirtieth of a full crop in the Northwest. The bushel of grain produces fourteen quarts or three and a half proof gallons of spirits, and the total production of spirits in the United States from all materials other than fruit during the fiscal year ending June 30, 1873, was 68,236,567 gallons, so that the consumption of corn for distilling was less than 20,000,000 bushels in all the States.

Of the spirits produced by distilling in this country more than one-fourth is the product of Illinois, and nearly one-half is the product of Illinois and Ohio, and the quantity of corn thus consumed in the two States is nearly 10,000,000 bushels. In the ten Nortwestern States there are about 17,000,000 hogs, which consume not far from twenty bushels of corn each; much more than half the entire crop. A large quantity of corn is also consumed in the feeding of cattle for market. Nearly 5,000,000 head of cattle are slaughtered every year. The proportion of all corn consumed in the country to the number of hogs and cattle was nineteen and two-thirds bushels to each animal in 1870, although the crop of corn in the census year was only 761,000,000 bushels, about 200,000,000 bushels below the average of recent years. The crop of 1871 was 991,898,000 bushels, but the number of "other cattle" increased at the same time from 13,566,000 to 15,069,000, and the number of hogs from 25,134,000 to 31,800,000 in February, 1872, and the quantity exported from the crop of 1871 being 30,000,000 bushels, the quantity remaining for consumption was twenty and one-half bushels to each animal.

The crop of oats produced in the Northwestern States, according to the census report, was 159,000,000 bushels in 1869, and according to the Agricultural Report was 147,000,000 bushels in 1871. The production of barley in said States by the census of 1870, was 10,608,389 bushels.

For the purpose of showing more connectedly the consumption of corn by hogs and cattle in the following States for the years 1870 and 1872 and the crops of corn for 1869 and 1871 and the surplus productions of this article over that consumed, I have prepared the following tables:

Approximate consumption of corn.

States.	Hogs and cattle Feb. 1, 1870.	Consumption at 20 bushels.	Crop of 1869.	Surplus.
Ohio	2,481,000	40,620,000	67,501,000	17,981,000
Indiana	2,657,000	54,140,006	51,094,000	none.
Illinois	3,080,020	16,600,000	129,921,000	68,321,005
Missouri	3,055,000	61,100,000	66,035,000	4,934,000
Kansas	766,000	15,320,008	17,025,000	1,705,000
Nebraska	176,000	3,520,000	4,736,000	1,216,000
Iowa	3,136,000	62,720,000	68,935,000	6,215,000
Minnesota	319,000	6,380,000	4,743,000	none.
Wisconsin	812,000	16,240,000	15,033,000	none.
Michigan	758,000	15,160,000	14,086,000	none.
				100,372,000

Approximate consumption of corn—Continued.

States.	Hogs and cattle, Feb. 1, 1872.	Crop of 1871.	Consumption at 20 bushels.	Surplus.
Ohio	3,023,000	89,506,000	60,460,000	29,046,000
Indiana	3,239,000	79,905,000	64,780,000	14,425,000
Illinois	4,834,000	203,391,000	96,680,000	106,711,000
Missouri	3,297,000	87,390,000	65,940,000	21,450,000
Kansas	778,000	24,693,000	15,560,000	9,133,000
Nebraska	167,000	7,228,000	3,340,000	3,888,000
Iowa	4,468,000	99,019,000	80,360,000	9,659,000
Minnesota	454,000	8,152,000	8,080,000	72,000
Wisconsin	1,070,000	21,394,000	21,400,000	none.
Michigan	982,000	16,179,000	19,640,000	none.
Total				194,384,000

The receipts of grain at the sea-ports amounted to 3,971,088 tons in 1871; the actual tonnage of vegetable food moved by five routes, 5,589,112 tons; and the estimated tonnage eastward, other routes included, 6,100,000 tons of flour and grain. Of barley and rye the quantities received are quite as large as the available surplus at the West; of oats the quantity moved cannot exceed the quantity received more than 10,000,000 bushels, or 160,000 tons. A remainder of 1,970,000 tons of grain must have been either of wheat or corn, and mainly of corn. The estimated corn crop of the preceding fall was 1,094,000,000 bushels. The shipments eastward, other than to sea-ports, must have been in that year at least 60,000,000 bushels, or 1,680,000 tons of corn, and nearly 10,000,000 bushels, or 300,000 tons of wheat. Thus the movement eastward, the estimated surplus, and the remainder for shipment to the southward or for superfluous consumption, may be thus stated:

	Eastward.	Surplus.	South or unsold.
Wheat	96,500,000	116,000,000	19,500,000
Corn	106,000,000	190,000,000	84,000,000
Other grain	36,000,000	40,000,000	4,000,000
Total	238,500,000	346,000,000	107,500,000
In tons	6,100,000	9,300,000	3,200,000

For a year of smaller crops some reduction must be made. The quantity of grain moved eastward was probably abou 5,700,000 tons in 1872, and the entire surplus about 8,600,000, of which 2,900,000 tons were either shipped southward or consumed in excess of the estimated average. As nearly 20,000,000 bushels are known to have gone southward, nearly all from one point, it is not improbable that 50,000,000 bushels in all found a market in that quarter, while nearly as much more appears to have found no market. Absolute accuracy will not be claimed for estimates necessarily based in part upon conjecture. But these serve to show both the magnitude of the exchanges now effected and the urgency of the demand for increased facilities for transportation.

Thus far only the movement of grain has been considered. But for an appreciation of the deficiencies of the present routes for transportation it is necessary to observe that from the same prolific valley enormous quantities of animal food are sent forward to eastern consumers. In the year 1872 about 472,000 tons of hogs and cattle were shipped from Chicago alone, about 120,000 tons from Saint Louis, and about 60,000 tons from Cincinnati; 652,000 from three cities only. The average age of beef cattle when sent to market does not exceed three years, and if one-third of the number in the country are consumed each year, the average is 117 to each thousand persons. At that average the number of cattle sent to market each year from the Northwestern States and Texas, in excess of the consumption of those States, is 1,057,742; and as 510,025 head were shipped from Chicago alone in 1872, the number is doubtless much greater than 1,000,000. Of hogs about 2,000,000 were shipped from Chicago alone, and of sheep 145,000. As only about one-fourth of the hogs packed at the West were packed at that city, so probably not more than one-fourth of the live hogs shipped eastward passed through it. These data warrant an estimate of at least 1,500,000 tons as the weight of animals moved eastward; and the statements of only four railroads show a movement of 1,558,405 tons, namely, on the New York Central, 785,879; on the Pennsylvania, 395,296; on the Erie, 305,599; and on the Baltimore and Ohio, 72,631 tons.

The quantity of meat packed at the West is closely estimated. In 1872 the hog product at the different packing points in the Mississippi Valley was over 1,100,000,000 pounds, or 550,000 tons. Of about 60,000,000 pounds of wool produced in the same region, the greater portion goes forward to eastern mills, and a large, though not ascertainable, portion of 170,000,000 pounds of tobacco produced, besides at least 60,000 tons of spirits, (30,000 tons were shipped eastward through a single port,) 10,000 tons of flax, 42,000 tons of flaxseed, 10,000 tons of hemp, a surplus of perhaps 22,000 tons of butter, and quantities of cheese, potatoes, fruit, and minor farm products, of which no accurate estimate can be formed. Besides grain, the products of agriculture of which estimate is possible, and of which the greater portion passes over the routes from the Mississippi Valley eastward, already amount to 2,304,000 tons, and there are yet to be added 565,000 bales of cotton which moved northward across the Ohio or Mississippi, and thence eastward by rail, equivalent to 130,600 tons. Of 108,000 hogsheads of sugar grown at the South, probably no portion goes by the interior route. Thus, of agricultural products other than grain, some estimate of which can be formed, 2,434,000 tons seek a market mainly at the East, and it is believed that the proportion of tobacco, wool, flax, and flaxseed and hemp, which is reserved for use at the West, is not in quantity greater than the shipments of potatoes and other vegetables, apples and other fruit, cheese, seeds, pease, and beans, and other products of which no estimate is made. But, upon this supposition, not less than 8,134,000 tons of agricultural products are moved eastward, (besides cotton, sugar, and some grain and other products southward,) taking 5,700,000 tons as the yearly shipment of grain in that direction. At the same time the remainder of 2,733,000 bales of cotton produced in the valley, or about 2,168,468 bales and 500,916 tons, finds a route to market by way of the Gulf, with a small portion of the grain shipped southward.

To fully measure the task imposed upon existing routes eastward, it must also be remembered that a large quantity of forest products from the lakes and Western States goes eastward. Over the New York canals in 1872 there were moved 1,671,721 tons, and over the three chief railroads 1,061,341 tons. At the same time an immense quantity of iron ore and pig-iron coming eastward to Pittsburgh and other points in the Eastern States crowd the railroads, employs over two hundred vessels on the lakes, and a large fleet on the Ohio River. The quantity of iron shipped from Lake Superior district in 1871 was 1,250,000 tons, from Saint Louis about 315,000 tons, and the annual product of petroleum for the same year was about 1,200,000. The coal, lumber, and petroleum moved by railroads amount to 11,186,564 tons, and including pig-iron and ore amount to nearly or quite 12,000,000 by railroad alone. To this must be added the 1,671,721 tons of lumber and 107,000 tons of articles enumerated as "other articles" arriving at tide-water from Western States, making a total by canal and four leading railroads running east and west of about 13,765,285.

LOCATION OF SURPLUS PRODUCTS.

We find by examining statistical tables that the center of the surplus wheat crop has in the few last years made a remarkable western movement. In 1850 Ohio, Michigan, and Indiana produced over 12,000,000 bushels of the surplus, and all other States only 10,000,000 bushels, and the line of equal division was near the middle of Indiana. In 1860 these States produced 17,000,000 bushels of the surplus, while the States west of the Mississippi River produced 6,500,000, and Illinois and Wisconsin 27,000,000, so that fully one-half was produced west of a line passing through the eastern half of Illinois. In 1870 States east of Illinois and Wisconsin produced 44,000,000 bushels of the surplus, and States west of the Mississippi River 67,000,000, and the line of equal division of the surplus passed through the western portion of Illinois and Wisconsin. Of the surplus of 1872, 20,000,000 were produced by the three Eastern States, and over 35,000,000 by the States west of the Mississippi, so that the dividing line cuts that river at the bend near Fulton, Iowa. In 1850 the States west of the Mississippi produced only 4,000,000 bushels, with a surplus less than 1,000,000. In 1870 they produced 82,000,000, with a surplus allowing a consumption of only four bushels *per capita* in Missouri of about 50,000,000 bushels.

The foregoing estimates have been based upon populations so far as they relate to wheat, and for the purpose of making an estimate deducting seed-wheat from that already made upon population, we find the following surplus for each of the ten Northwestern States, as follows:

Localities from which the surplus of wheat is moved.

West of river:	*Surplus.*
Minnesota	24,358,746
Iowa	16,515,310
Missouri	3,820,163
Nebraska	2,264,748
Kansas	827,771
Total	47,786,738
East of river:	
Wisconsin	19,214,327
Illinois	10,198,056
Indiana	6,714,897
Ohio	4,919,183
Michigan	4,062,656
Total	45,109,119

The record receipts at the chief eastern cities and at New Orleans prove beyond question that these estimates are too low, for the quantity of wheat (flour included) received from August 23, 1872, to August 23, 1873, was over 80,000,000 bushels, and statistics show that about one-third of the quantity transported eastward does not reach the eastern sea-ports, so that the surplus from the crop of 1872 must have exceeded 100,000,000 bushels, and the actual surplus from the crop of 1873 must be nearly 120,000,000.

EXPORTS OF AGRICULTURAL PRODUCTS.

The export of agricultural products for the year ending June 30, 1873, are as follows: 39,204,235 bushels wheat, value $51,452,204;

2,562,086 barrels wheat flour, value $19,381,664; 38,541,930 bushels Indian corn, value $23,794,694; corn meal, value $1,474,827; 482,410 bushels barley, value $323,187; rye and rye flour, value $515,676; oats, 714,072 bushels, valued at $290,575; 2,609,254 bales of cotton, valued at $227,243,069, to which should be added a considerable amount of manufactured cotton.

COMPARISON OF FREIGHT RATES OVER RAILROADS AND WATER LINES.

Nothing demonstrates the necessity of water lines more forcibly than the difference in cost of freights and carriage in favor of water transportation over railroads. I shall not enter into an elaborate argument in favor of this proposition, and shall rely mainly upon statistics prepared from official sources to sustain the position. The actual average charge on all cereals moved by the trunk lines of railway between Chicago and New York in 1872 was less than 12 mills per ton per mile. The evidence taken by the Senate Committee on Transportation shows that the average cost of movement, exclusive of interest and dividends, was from 8 to 9 mills per ton per mile. I am indebted to the valuabe report of the Senate Committee on Transportation for the following summary of the comparative cost of freights by railway, canal, and river.

The river rates, per bushel, of freight on corn from Saint Paul to Saint Louis during each month of the season of navigation from 1870 to 1873, inclusive, were as follows: April and May, 14½ cents; June, 16 cents; July, 17½ cents; August, 19 cents; September, 20⅝ cents; October and November, 23½ cents.

The river rates, per bushel, of freight on wheat from Saint Paul to Saint Louis during each month of the season of navigation, from 1870 to 1873, inclusive, were as follows: April and May, 15 cents; June, 16½ cents; July, 18 cents; August, 19½ cents; September, 21 cents; October and November, 24 cents.

Average rate of freight on wheat and corn by rail from Saint Paul to Milwaukee each month during the years 1872 and 1873.

MOVEMENTS OF FREIGHTS.

The following is a comparative statement of the movements of freight on the two railways connecting New York with Lake Erie and the State canals during the last seventeen years, showing the tons carried each year, the total movement or number of tons moved one mile, and the freight and tolls received therefrom. It shows the tons of total movement on the lines named for seventeen years, the freight paid to the roads, and the tolls paid to the State, and carriers' charge on the canals, with the tolls:

The charges for delivering wheat from Chicago to New York for a series of years are noted as follows:

Year.	Per bushel by lake.	Per bushel by canal and river.	Total.
	Cents.	*Cents.*	*Cents.*
1865	9. 78	16. 84	26. 62
1866	13. 04	16. 96	30. 00
1867	6. 67	15. 69	22. 39
1868	7. 14	15. 05	22. 10
1869	6. 81	14. 07	20. 88
1870	5. 88	11. 02	16. 9
1871	7. 62	12. 62	20. 2
1872	11. 15	13. 00	24. 1

During the season of navigation the Erie Canal exercises a strongly marked and unquestioned controllment of carriers' charges upon all routes competing for western trade, and to a considerable extent upon property moving westward. Upon the opening of the Erie Canal the great railroad lines invariably reduce their rates, and as invariably

increase them when through shipments from Chicago can no longer be made by water.

The annexed tables fully establish this fact:

Statement of charges on all rail, per bushel, of wheat from Chicago to points named.

Date.	New York.	Boston and Portland.	Baltimore and Philadelphia.

The increase in the winter months over the summer and late fall averaging $2.07 a ton on wheat.

On the through line from the Ohio River to Boston, composed of the Baltimore and Ohio Railroad and the Boston Steamship Company, the earnings were divided as 4 to 1 in favor of water, counting the actual distances operated by each. On the line between Baltimore and New York, consisting of railway, canal, and open water, and involving payment of tolls on the canals, the earnings were prorated by allowing the vessels 125 miles for an actual distance of 230 miles, making nearly two to one in favor of water. The Erie Railway Company and the steamers from New York to Boston have a prorating arrangement equivalent to three to one in favor of water. From Parkersburgh and Cincinnati the arrangement between the railway and the river steamers allows the latter for 250 miles by water as the equivalent of 125 miles by rail, being two to one in favor of the river. The arrangements between the Erie Railway Company and the lake steamers is that the railway shall furnish terminal facilities at Milwaukee and Chicago, and the actual distance of 1,000 miles is prorated at 212 miles, making nearly five to one in favor of the lake. The Central Vermont Railway and the Northern Transportation Company steamer line constitute a through line from Chicago to Boston and other places in New England. The distance by water is 1,365 miles, and the distances by rail average about 500 miles. The earnings are divided equally, being nearly three to one in favor of water.

This comparison is the more valuable because the officers of the railway company own a controlling interest in the stock of the steamship company, and hence may be supposed to divide according to actual cost of service. Mr. Diefendorf, agent of the steamboat company, testified before the Senate Committee on Transportation that this division of earnings is predicated upon the cost of transportation. The Chesapeake and Ohio Railway prorates with vessels on the Ohio River upon the basis of two to one in favor of the river. The gross earning on the through line from Chicago to New Orleans via the Illinois Central Railway to Cairo, 365 miles, and thence by the Mississippi River to New Orleans, 1,050 miles, are divided three-fifths to the railroad and two-fifths to the river, making on the charge of $7 per ton from New Orleans to Chicago 2.7 mills per ton per mile for the river, and 11.5 mills per ton per mile by the railroad, or over five to one in favor of the Mississippi River against the current.

From the Kanawha coal mines to Huntington, West Virginia, the distance by rail is 67 miles, and the minimum charge for transporting coal 75 cents per ton; from the same coal mines to Cincinnati, by the Ohio River, the distance is 275 miles, and the charge per ton for coal transportation is 50 cents; being at the rate of nearly 2 mills per ton per mile by river, and 11.2 mills per ton per mile by rail; nearly six to one in favor of the river. The river rates include the return of the boats to the coal mines.

From Pittsburgh to New Orleans, via the Ohio and Mississippi Rivers, 2,400 miles, coal is transported during high water for $1.60 per ton, or at the rate of two-thirds of a mill per ton per mile. This is done in barges, and in very large quantities.

The New Orleans Chamber of Commerce furnished to the Senate Committee on Transportation a detailed statement of the actual expenses of a tow-boat with five barges (each barge of 1,500 tons' capacity) from Saint Louis to New Orleans, 1,250 miles; from which it appears that the expense was .7 of 1 mill per ton per mile, or at the rate of 5¼ mills per bushel of wheat for the entire distance. Also a statement of the actual expenses of the steamer John F. Tolle, 1,650 tons' capacity, valne $65,000; showing a cost per ton per mile of 3.47 mills, or at the rate of 1½ cents per bushel of wheat for the whole distance. Neither of the last two cases include any profit to the carrier nor interest on the cost of vessels.

The average cost of freight from Cincinnati to New Orleans by water is stated by a joint committee of the board of trade and chamber of commerce of the former city to be 3½ mills per ton per mile. The same average charge exists from Louisville to New Orleans. Even on the Tennessee River, which is hardly navigable for want of proper improvements, the charge between Knoxville and Chattanooga is only about 6 mills per ton per mile.

The following comparison between the Erie Canal and competing railways summarizes a portion of the benefits conferred upon the country by the former: From 1854 to 1864 the total number of tons moved one mile by the New York Central Railroad was 2,132,073,612, and by the Erie Railroad 2,587,274,914 tons; by the New York canals 8,175,803,065 tons. And the average charges of the Central Railway were 2.6 cents, Erie Railway 2.22 cents, and the canals .91 cent per ton per mile. Had the freights which were carried by canal for the ten years been carried by rail, the additional freight charges would have amounted to $122,637,045.97.

To show the cost of carriage by the various modes the following comparisons have been instituted: By rail, 13 mills per ton per mile; by canal, 7 mills per ton per mile; by sea, 1½ mills per ton per mile; by lake, 5½ mills per ton per mile; by river, 3½ mills per ton per mile. The freight charges for the transportation of grain from Saint Louis to New York, a distance of 1,000 miles, are 65 cents per 100 pounds—equivalent to 36 cents per bushel, or 13 mills per ton per mile; while the freight charges for the transportation of grain from Saint Louis to New Orleans, a distance of 1,200 miles, are 17 cents per 100 pounds—equivalent to 10 cents per bushel, or 3 mills per ton per mile. Here, then, is the startling disclosure that a bushel of grain is transported from Saint Louis to New Orleans, a distance of 1,200 miles, 26 cents cheaper than to New York by rail—a distance of only 1,000 miles.

The charges per ton per mile on fourth class goods on the leading railways in each country and under each system, for the distance stated, are as follows:

Great Britain.—On the London and Southwestern and London and Northwestern Railways, for 192 miles, per ton per mile, $3.16; on the Great Northern Railway, for 155 miles, per ton per mile, $4.04; on the Great Northern, London, Chatham and Dover Railways, for 198 miles, per ton per mile, $4.05; on the Great Northern, Northeastern, North British, and Highland Railways, for 594 miles, per ton per mile, $1.98.

France.—On the line between Paris and Orleans, for all distances over 186 miles, per ton per mile, $1.74.

Belgium.—On the Belgium state railways, for all distances over 155 miles, per ton per mile, 74 cents.

Average freight earnings of the most important eastern railroads, including those which are reputed to enjoy as efficient and economical management as any in the country, and which are in such close competition with each other and with other roads whose statistics are not known or with water-routes as to be forced to reduce as far possible their operating expense, and which possess a larger freight business than any other roads in the country, and should therefore be able to do that business at a lower rate per ton per mile, show that railroads cannot carry freights as cheap as water lines and pay reasonable dividends. These rates are for through freight and are far below the average.

The following table illustrates this fact, and includes all whose statistics are published and whose business is large enough to justify low rates. Under the heading "At one cent" is entered for each road the amount of net earnings which would have been realized had the whole freight business been done at one cent per ton per mile and had the other business of the road been what it actually was. Under "Cost of road" is entered the actual sum stated to have been invested in excess of bonded indebtedness, when that is known. Only nine roads would at the *supposed* rate be able to pay 6 per cent. interest on their bonds; only one would pay 6 per cent. on its entire cost. In the second table similar estimates are given at a *supposed* rate of 2 per cent. per ton per mile for some of the western and southern roads doing a freight business of less than one hundred million tons one mile.

These data do not, as I have said, fix the cost of transportation by rail, but they serve to show that even on the most prosperous roads there could be no competition in freight charges as against water lines. These facts become important when we consider that a very small proportion of the products to be moved is grown directly upon the line of the great trunk roads, and that it is upon the smaller roads, those having a business insufficient to make rates lower than two cents remunerative, that by far the greater part of the grain must be moved either to the lakes or rivers or to the main trunk railroads.

Table showing net earnings of railroads carrying freight at one cent per ton per mile.

Railroads.	Rate charg'd.	Tons one mile.	Net earnings.	At one cent. per ton per mile.	Bonds.	Cost of road less bonds.	Interest on bonds.	Earnings on stock.

NEW ORLEANS.

While the Mississippi River and its tributaries give sixty-six hundred and seventy-four miles of steamboat navigation, without question the greatest inland water communication of the world, passing through a country the richest in natural resources, it is nevertheless a great inland sea without an outlet. Passing through the alluvial regions of the North, it carries in its bosom a continent of the richest alluvial deposits known to any country. These deposits from countless ages have been forming a delta of hundreds of square miles in area. Through this delta the river drags its way to the Gulf of Mexico, shorn of its mighty strength, divided into seventeen different channels or outlets. Each of these channels widens out so that their united width amounts to many miles in extent, and each sweeps along its bottom immense rifts of alluvial deposit which settle along the channels as resistance is made to its further progress by coming in contact with the tides and water of the Gulf, the bottoms or banks of the outlets, or some other obstruction in the beds of the channels The deposits fill up the different mouths of the river and for many feet out into the Gulf, so as to leave upon these bars but a few feet in depth of water and not sufficient in the channels to float vessels of a size to make the carrying business profitable in competition with other portions of the country having access to the ocean through deep channels.

New Orleans and Galveston ought to be among the greatest commercial ports in the world, and with such improvements as will give free admission to their ports for large-sized vessels, in less than one half-century their commerce will have more than doubled that of New York at this time. Notwithstanding the innumerable drawbacks to trade and commerce at these ports, there is no inconsiderable business that forces itself over all obstacles. To sustain this position I herewith submit the following prepared tables, showing the local consumption and exports of flour from the year 1851 to 1873, omitting the years 1861 and 1862, &c.:

Exports of barrels of flour from the port of New Orleans from September 1, 1851, to August 31, 1873, omitting the years 1861 and 1862, and showing to what places exported.

The New Orleans Republican estimates the total value of the annual production of Louisiana as follows:

Sugar, 48,817 hogsheads, including molasses	$5,000,000
Cotton, 132,070 bales	10,000,000
Rice, 14,000,000 pounds	2,500,000
Total	17,500,000

As an evidence of one of the industries of this State I ask attention to the following articles clipped from a newspaper under the title "The real southern question:"

Louisiana is mining salt. The work began on Avery's Island since the war, where 99.62 per cent. of chloride of sodium is proved by repeated analysis. The quantity is illimitable. The first attempt failed. The second sank a shaft fifty feet through solid salt and ran galleries one hundred and twenty feet one way and one hundred and fifty feet another through pure crystal the whole distance. Machinery for crushing and grinding to three grades—Turk's Island, Liverpool coarse, and fine table—was introduced, and 35,000 sacks were sold in 1870-'71. The capacity of the present works is 100 tons daily, or 300,000 sacks per annum, while 1,000,000 sacks were imported at New Orleans, Galveston, and smaller ports. The cost of mining and crushing is $1.75 per ton; transportation from New Iberia to New Orleans $2 per ton, and incidental costs 50 cents more—$4 in all, against $4.25 for Turk's Island. With these general facts, a company has been formed to buy and work the mines extensively, build a railroad from the mines to New Iberia, and so bring the trade direct to New Orleans.

Prior to the war New Orleans enjoyed nearly all of the export trade in tobacco. The receipts of tobacco at New Orleans for ten years preceding the war was 668,749 hogsheads, the export value of which was $82,482,815. Since 1865, or close of the war, nine years, the receipts here have been 179,368 hogsheads; value of same, $33,136,482. The growth of this trade at the port of New Orleans since the war is very marked and encouraging, rising from 2,410 hogsheads the year succeeding the war, to 30,841 hogsheads this year, valued at, for the past year, $4,724,500. This whole trade properly belongs to New Orleans and would nearly all go there had the city sufficient capital and ocean freights were not relatively higher from this than other seaports, mainly owing to lack of water on the bars. The average freights from the west by steamboats is $4 per hogshead, or 27 cents per hundred pounds. Tobacco has been brought there this season by steamboat at 15 cents per hundred pounds or $2.50 per hogshead.

The territory bordering on the Lower Ohio, Cumberland, and Tennessee Rivers, and the State of Missouri, for which New Orleans is the outlet and natural market, produces annually 150,000 to 170,000 hogsheads of tobacco.

The average product of Southern Kentucky, Tennessee, Indiana, Illinois, and Missouri for the past five years, is set down at 160,200 hogsheads per annum, as follows:

Kentucky	80,200
Tennessee	21,400
Indiana	27,600
Illinois	12,200
Missouri	18,800
Total average crop	160,200

GALVESTON.

I desire now for a few moments to speak of the importance to the whole western country of the improvement of the harbor of Galveston. This is a question that has received but little attention in the North and West. It needs only investigation to earnestly enlist the entire producing and commercial class. There is territory enough for five such States as Ohio, whose people are mainly dependent on Galveston for their imports and exports and coast-wise trade. The country is marvelous for its natural resources and adaptability for the production of everything for the support of both the necessaries and luxuries of life. From Springfield, Missouri, to Houston, Texas, by the Atlantic and Pacific Railroad, the Missouri, Kansas, and Texas Railroad, and the Houston and Texas Central Railroad, you pass over an extended plain hundreds of miles in extent, gracefully undulating, exceeding fertility of soil, and almost every acre susceptible of the highest state of cultivation. Pleasant streams of water meander through the lower lands, bordered by beautiful groves of timber on either side and gently sloping back from the water-courses form between the streams; broad, rich, and comparatively level plateaus, over which thousands of herds of cattle range, feed, and supported to maturity, and are fattened for market on the grass that spontaneously grows over the entire plains, producing pasture almost equal to the celebrated blue-grass of Kentucky. What strikes a northern and eastern man as exceptionable in agriculture is the fact that in Texas everything grown and cultivated in the temperate zone either North or South may there be produced in the same field. Nothing is more common than to see within some inclosures, growing side by side wheat, corn, oats, rye, cotton, sugar-cane, tobacco, potatoes, (Irish and sweet,) &c., each with such healthful thriftiness as to assure the farmer an abundant crop of all.

I cannot dwell on the wonderful resources of the Lone Star State. It is the harbor at Galveston that the Upper Mississippi Valley people are most deeply interested in. A short canal connecting one of the many outlets of the Mississippi River with the Gulf will enable boats from any point of that river or tributaries to pass from the river directly to the harbor at Galveston in a very few hours more of time than it will take to land at New Orleans; and with some improvement of the channels over the bars at the harbor the largest vessels could load from the river-boats for any port in Europe. I find the following concise statement showing the increase in population of the city of Galveston, the imports and exports for the last five years, &c., in a speech delivered by Hon. ASA H. WILLIE, in the House, March 17, 1874. As I am unable to find a clearer or more valuable exhibit of the importance of the port of Galveston, I have taken the liberty to quote the following extract and table from Mr. WILLIE'S speech:

In 1865, at the close of the war, Galveston was a city of 5,000 inhabitants; in 1870, when the Federal census was taken, it contained 14,000; and by an accurate census just completed it is shown to number over 34,000. It is five times as large as nine years ago and two and a-half times as large as four year ago.

The following table shows the value of its exports and imports for the past five years, the fiscal year ending 30th June:

Year.	Imports.	Exports.
1869	$266,517	$9,641,112
1870	509,231	14,873,732
1871	1,255,003	13,789,250
1872	1,741,000	12,211,933
1873	2,426,626	17,716,509

These comprehend only products exported to and imported from foreign countries. To these should be added the value of imports and exports in the coastwise trade. I am not able to give them for the preceding years, but for the year ending August 31, 1873, these imports amounted in value to $27,357,221, and the exports to about $20,000,000. So the entire imports of this port for the past fiscal year amounted to about $30,000,000, and her exports to about $37,000,000. These figures show that our foreign exports for that year were twice as great in value as they were five years before, and that our imports had increased tenfold.

The following is a statement of the duties collected for the four years, beginning with the year ending June 30, 1869, and ending with that which closed June 30, 1872:

1869	$184,177
1870	268,477
1871	611,333
1872	682,934

Showing that the revenues derived by the United States from that port have nearly quadrupled in the last four years.

Let us look at some of the articles exported and which go to make up these values. The principal export from Texas has been its staple production, cotton. Of this there were sent from Galveston to foreign ports during the year ending June 30, 1871, 133,736 bales, and about 160,000 bales to ports of the United States. I cannot state the exact amount shipped to all ports for that year, but for the year ending September 1, 1872, which is the commercial year, the total number of bales of cotton shipped from Galveston was 294,718. During the year ending September 1, 1873, we shipped 333,802 bales of cotton, an increase of about 60,000 bales, or one-fifth. Statistics show that since the date last mentioned we have received at Galveston for shipment down to the 11th of this month, a period of little over six months, 316,267 bales. This is an increase of 40,000 bales in the receipts during the same time of the preceding fiscal year. A corresponding increase to the 1st of September, 1874, will make the receipts by that time amount in round numbers to 400,000 bales. Besides this we are exporting other articles which were but little known to our trade in former years, such as wool, hides, cattle, tallow, pecans, bones, beeswax, peltries, horn, hair, &c. The value of these exports during the last commercial year amounted to $5,000,000, and the trade in them is rapidly increasing.

Without going at length into statistics, I will take the apparently accurate computation made by the Kansas Board of Trade as to the aggregate productions in 1870 of a portion of the country, excluding Arkansas and Texas. By careful computation they show that for the year ending June, 1870, there were produced in this region 26,452,116 bushels of wheat; 631,353 bushels of rye; 89,236,854 bushels of corn; 24,367,214 bushels of oats; 1,429,946 bushels of barley; 1,856,138 tons of hay; 6,235,366 pounds of tobacco. In live stock it produced of hogs, 2,596,185; cattle, 2,595,176; mules, 116,585; sheep, 2,233,326; horses, 835,833.

These figures are far behind what the statistics of 1873 would show the products of this great country to be, so rapidly is it increasing and its resources developing. Add to this the grain, the cotton, and the cattle of Texas and Arkansas, and you may form some idea of the wealth of production within easy reach of the port of Galveston; and the surplus of which, with this one improvement of the bar so easily accomplished, will find there its surest immediate outlet to the markets of the world. Thus stands Galveston as compared with her former self in size, commerce, transportation facilities, and connection with the great wealth-producing West, and in all these she has exhibited progress that is excelled by but few other cities of the Union.

Let us now for a few moments glance at her rank as compared with the other seaports of the United States.

The report of the Bureau of Statistics for the year ending August 31, 1873, shows that the United States has eighty-one points of export and import, and that of these Galveston is the eighth in importance, being excelled in this respect by New York,

New Orleans, Savannah, San Francisco, Boston, Philadelphia, and Baltimore, in the order of their enumeration. The following is a summary of the exports of each of these ports for the year indicated:

New York	$334,101,644
New Orleans	107,556,203
Savannah	32,626,586
San Francisco	34,326,965
Boston and Charlestown	30,408,323
Philadelphia	26,167,832
Baltimore	19,769,737
Galveston	18,508,904

These figures show the comparative grade of Galveston as an exporting point to foreign countries only. We must add, as I have already stated, the value of products which she sends to other parts of the Union, which will further swell her importance. Moreover, these figures are for the fiscal year ending in 1873. The present fiscal year will show at its close a vast increase in her exports over those of any preceding year, making cotton alone reach, as I have stated, to about four hundred thousand bales, worth at least $25,000,000.

I regret to have detained the House so long. The investigation and facts connected with the subject I have been discussing is almost boundless. I have merely skimmed over the details of the question; and in the limited time allotted for making a speech I have been unable to use but a very small part of the data I have collected. In fact, I should be regarded as utopian in my statements should I attempt to unfold and portray the internal wealth, the undeveloped resources of the Mississippi Valley. The timbered part of the country is covered with magnificent forests of the finest timber in the world, and which is a source of wealth to that country of millions yearly. Where the land has not been timbered in its natural state the great prairies invite the farmer to turn over its fertile, virgin soil, plant and seed the ground, and with no other labor than plowing and fencing, reap therefrom a bountiful harvest. Almost the entire valley is an alluvial deposit of the richest character; even upon the rich coal lands there is the best of soil, the best of timber, or the best of prairie lands overlying the rich beds of block and bituminous coal.

The farmer often leases the underground to the miner of coal and cultivates the soil over their heads, producing as fine crops of cereals as can be found in the world; or he fells the mighty trees, rives up the oaks and saws up the poplar, walnut, and ash for the lumber market of the East. What other country can boast of such resources? Yet when we come to estimate the extent of our mineral resources, whether it be the thousands of square miles of coal, the mountains of iron ore of Missouri and Lake Superior, the acres of lead and zinc, the beds of fire-clay and mineral paints, and add to these the almost unlimited agricultural and manufacturing resources, the wonderful water-power in hundreds of places yet undeveloped and sufficient if utilized to turn the machinery of the entire world, we begin to see but an outline and get only a faint glimpse of the true and actual, natural, and internal wealth, the unlimited resources of this great valley. Notwithstanding these great natural internal resources, the entire West and South are to-day laboring under commercial and financial depression.

The question that comes home to the western statesman at this time is, what will this Congress do for the relief of western interests? One of the important demands is that the great natural arteries of commerce be deepened and improved so that the productions of that great heart of agricultural resources can cheaply and freely flow to the border and coast markets of this country. The condition of the West is one of dependence upon the capitalist and monopolist of the East, and these interests are reaping the larger portion of the profits of our industries. We might, and perhaps should, ask who is to blame for this condition of things, and why that portion of our land that produces more than twofold of the entire wealth of the country should be bound hand and foot to the brokers and money-changers of Wall and Beacon streets? The country that produces the crude materials that make millionaires of the eastern manufacturer, merchant, and capitalist is at this hour an humble suppliant, an imploring petitioner for the pittance that falls from the bloated money-bags of the bank oligarchy of the East. My convictions are that both East and West are to blame for this state of affairs.

The East, as we call things, is an old country, comparatively well developed. Its business has from its necessities become systematized and its material strength well combined; it acts as a unit on all questions. No one is allowed to question the justness of its measures or doubt the immaculate superiority of its inspirations. Its early adversity and its long experience have taught it many things that the West will have to learn in the same manner before it will be able to command complete equality. I have not time to go over the entire ground of the selfish and somewhat arrogant demands of the East, and will only speak of a few points most prominently complained of by the West. The difficulty I shall mention grows out of the excessive concentration of capital in the Eastern States. How often since the present session of Congress commenced have we been reminded by sneers from speeches on this subject, in private conversation, and and through the public press that the South and West have no capital to take up any more currency if Congress were to authorize a further issue; and at the time refer in triumphant hauteur to their *per capita* wealth, their banks, manufactures, and millionaires. It might be well if these self-constituted eulogists should stop their laudations long enough to inquire into the manner by which the East has become enriched, and at whose expense much of it has been accumulated. As an illustration of this question it would be well enough to refer to the following tables which I have prepared from the census report of 1870:

Manufactures in eight Eastern States.

States.	Number in 1870.	Number in 1860.	Number in 1850.	Decrease from 1850 to 1860.	Increase from 1850 to 1860.	Increase from 1860 to 1870.
Connecticut	5,128	3,019	3,737	718	.....	2,109
Delaware	800	615	531	.....	84	185
Maine	5,550	3,810	3,974	164	.....	1,740
Massachusetts	13,212	8,176	8,852	676	.....	5,036
New Hampshire	3,342	2,592	3,211	619	.....	750
New Jersey	6,636	4,173	4,207	34	.....	2,463
New York	36,206	22,634	23,553	919	.....	13,582
Rhode Island	1,850	1,191	864	.....	327	659
Total	72,724	46,200	48,929	4,140	411	26,524
	1,897					1,897
Total mining, quarrying, and fishing in 1870 brought up	74,621					28,421

To the above should be added for 1870 mining, quarrying, and fishing industries, which have been included in the above for 1860 and 1850:

Total for all the States, mining and quarrying, in 1870	670
Total for all the States, fisheries, for 1870	1,227
Total	1,897

Hands employed in manufactures in eight Eastern States.

States.	In 1870.	In 1860.	In 1850.	Increase in 1860 from 1850.	Increase in 1870 from 1860.
Connecticut	89,523	64,469	50,731	13,738	25,054
Delaware	9,710	6,421	3,888	2,533	3,289
Maine	43,180	34,619	28,020	6,599	14,561
Massachusetts	279,380	217,421	177,461	39,960	61,959
New Hampshire	40,783	32,340	27,092	4,248	8,443
New Jersey	75,552	56,027	37,830	18,197	17,525
New York	351,809	230,112	199,349	30,763	121,683
Rhode Island	49,417	32,490	20,967	11,523	16,927
Total	945,345	673,899	545,338	127,561	264,441

Capital employed in manufactures in eight Eastern States.

States.	In 1870.	In 1860.	In 1850.	Increase in 1860 from 1850.	Increase in 1870 from 1860.
Connecticut	$95,281,278	$45,599,430	$25,876,648	$19,713,782	$49,690,848
Delaware	10,839,090	5,452,887	2,978,945	2,474,942	5,386,106
Maine	39,793,190	22,044,020	14,699,152	7,344,868	17,749,170
Massachusetts	231,677,862	132,792,327	88,940,292	43,852,035	98,985,535
New Hampshire	36,025,743	23,274,094	18,242,114	5,031,980	12,748,649
New Jersey	79,606,719	40,521,048	22,293,258	18,237,790	39,085,671
New York	366,994,320	172,895,652	99,904,405	72,991,247	194,198,668
Rhode Island	66,557,322	24,278,295	12,935,676	11,342,619	42,279,027
Total	926,775,524	476,848,753	85,870,490	180,989,663	460,023,674

Productions of manufactures.

State.	1870.	1860.	1850.	Increase in 1860 over 1850.	Increase in 1870 over 1860.
Connecticut	$161,065,474	$81,924,555	$47,114,585	$34,809,970	$89,140,919
Delaware	16,791,382	9,892,902	4,649,296	5,243,606	6,898,480
Maine	79,497,521	38,193,254	24,651,057	13,332,197	41,304,267

New Hampshire	71,038,249	38,586,453	23,164,503	15,421,950	32,451,796
New Jersey	169,237,732	76,306,104	39,857,256	36,448,849	93,931,528
New York	785,194,651	378,870,936	237,597,249	141,273,690	407,323,712
Rhode Island	111,418,354	40,711,296	22,117,288	17,593,908	70,707,059
Total	1,948,155,931	920,031,425	556,996,228	362,126,098	1,040,114,407

These tables illustrate only partially the rapid increase of wealth in the Eastern States. Importations, bank capital, corporations, and railroad investments show an increase equally astonishing. And peculiarly astonishing when we remember that the population of these States have increased in comparatively a small ratio with the wealth; and that immigration, which has added largely to the wealth of the Western States, has given but a small amount to the grand total of the Eastern States.

The practical question, and one in which the whole country feels a deep interest, is how has this great increase in the old States been brought about? It certainly cannot be said that the fertility of the soil, the natural resources of the country, or the peculiar energy and industry of the people over the western citizen has consummated with-

out other agencies this great increase of wealth. It is clear there are other causes than those named above, and let us consider some of these causes. When the late war broke out, it is shown by the tables I have given that manufactories were in a languishing condition. The necessities of the war forced upon the nation the adoption of a high protective tariff. The demands of the nation called for immense supplies. The capitalists of the East readily recognized the favorable opportunity and eagerly appropriated the golden harvest. Manufactories in existence enlarged their capacity, and new ones sprang into being as by magic; the wealth of these States redoubled, and millionaires rose up all over this part of the Union. The true valuation of the real and personal property, as shown by the census of 1870 is as follows:

State.	1850.	1860.	1870.
Connecticut	$155,707,980	$444,274,114	$774,631,524
Delaware	21,002,556	46,242,181	97,189,833
Maine	122,777,571	190,211,600	348,155,671
Massachusetts	573,342,286	815,237,433	2,132,148,741
New Hampshire	103,652,835	156,310,860	252,624,112
New Jersey	200,000,000	467,918,324	940,976,064
New York	1,060,309,216	1,843,348,517	6,500,841,264
Rhode Island	80,508,794	135,337,588	296,965,246
Total	2,337,361,238	4,098,880,617	11,343,523,455

Increase from 1850 to 1860, $1,761,519,379; from 1860 to 1870, $7,244,642,838.

Is not this increase fabulous when we consider that outside of the State of New York, in the seven other States named, the population cannot be considered as having increased as a whole in the last decade? It is true that the wealth of the Western States have increased largely in the last decade, but this increase is on very different basis from that of the East. The increased value of real estate, the improvements on real estate, the increase of stock, had been very large, all adding to the material wealth of these States; but the increase of cash capital has been far below that of the Eastern States. It is evident that the East has monopolized the money capital of the country and is now demanding tribute for the use of the same; this drains the West of its surplus earnings, and yearly adds to the enormous wealth of the East, and the increased productions of the West adds to this overgrown wealth the larger portion of its profits.

Notwithstanding this immense wealth, the East is still demanding a further increase, as the experience of all demonstrate when an individual becomes wealthy his demands become more exorbitant. So it is with classes of individuals, countries, and parts of countries. And these demands are never disinterested, but always selfish; so it is now with the East. A few years ago and the East was clamorous for a high protective tariff on all manufactures. Through its energy, skill, capital, and machinery it has monopolized particular classes of manufactures, and now, forgetful of the weakness of their poor brethren of the West, demand a reduction of the tariff on the materials that enter into the manufacture of this class of articles, and in some instances do not stop at this, but ask that a lower grade of material used by the manufacturer of the West shall pay the same tariff as the finer material used by the East.

It is exceedingly refreshing to see with what blissful innocence these disinterested benefactors talk of the rights of the poor consumer of the West and South. These same disinterested capitalists are now preaching to the western agriculturist about the wonderful prosperity that would be infused into the West by a reciprocity treaty with Canada, so that the western cereals could enter into competition in the eastern market with the Canadian productions. Competition, you know, is the life of business.

The selfish illiberality of the East is shown in its action on the currency question, and its inconsistency in this respect is equal to that on the tariff. The West and South are in some respects to blame for the condition of things I have mentioned. These sections of the country have a majority in both Houses of Congress, and particularly so in the House. If the West would only become more tolerant of small faults that are immaterial to the living, vital issues, dispassionately study the interest and welfare of the whole country and all its people, combine its strength for the right, then select men to carry out its will and the right, my word for it the West, bountifully rich in nature's gifts, would bound from depression to prosperity in a wonderfully short space of time.

What America needs is American ideas and American legislation. It is time our people should rise above British ideas, British trade, and British gold. Place your workshops alongside of the farm, establish your machine-shops and manufactories over your coal-fields; let the tiller of the soil feed the mechanic, and the one exchange his commodities for the other's. And as there is strength in unity, let each combine, and through the battle-cry of cheap transportation, lay under tribute the markets of the world; through the abundance of nature's rich supplies and the energy and indomitable will of the American freemen, advance to prosperity and wealth. As being apropos to this point and an excellent hint to the American people, I ask the consideration of the following extract from a late article by one of England's best writers on political economy. It seems to me that while he draws the matter rather mildly, according to American ideas, yet he gives a hint which, if we are wise, we will profit by and follow:

COTTON MANUFACTURES.

Beyond these we have to remember that America is at the present time entering fairly into the race. It was lately announced that in one State alone, that of Tennessee, twenty-three mills had been erected, and it will be seen from the returns that the amount of cotton reserved for America's own manufacturers is continuously on the increase. Beyond this the whole condition of American society would appear to point to a great growth of their cotton trade. The influence of her import duties will necessarily stimulate her home trade, and the natural advantages of climate, soil, and position all point the same way. If we add to these the development of her railway system, the infusion of northern blood into the Southern States, the immigration of the Chinese coolies who are at once steady, patient, and tractable, we have combined a series of causes that may at any time produce a formidable and permanent rivalry. It is difficult to see why America should not eventually lead in the cotton trade. Cotton is not only naturalized to her soil, but that which is produced is unquestionably the best in the world. She has machines equal or superior to our own, and the skill that has made our manufactures famous are leaving our shores by multitudes to find a new home there. If, then, she has material, skill, and machinery, what are the reasons that should prevent her outrivaling ourselves?

Again, instead of our people seeking after European ideas on finances and other measures, we should base our legislation upon the actual conditions and necessities of the country, thus giving a currency based on our actual wealth, and representing a measure of value in exchange as we represent the measure of value in other cases.

It is by building up our country on an American basis and on American ideas that we invite immigrants from foreign countries, who leave their homes because of the peculiar character of our institutions and the unusual advantages our country extends to all classes of persons.

There is one point further I desire to call the attention of the House to before I close, that is, the importance to the Central Northwest of the free and open navigation of the Mississippi River. The late war to the people of these States meant something more than the question of preserving in theory a government. Failure meant isolation, and would practically have been the construction of a Chinese wall across the Mississippi Valley, cutting off the Western States north of the line of division from any free outlet to the outside world. It would have compelled the payment of tribute for every bushel of grain moved to the coast, for every head of stock shipped. History will record the deeds of valor of the gallant soldier, the living and the dead; the grand struggle will be attempted to be portrayed, but the great sacrifices of the people cannot be written, cannot be portrayed; they can only be felt.

As an evidence of the great struggle I call attention to the efforts in part of my own State. Less than one half-century since its admission into the Union it furnished 208,367 soldiers for duty in the front, of whom there were 24,416 officers and men who died in battle or of disease while in the service. And while the larger portion of these men were in the front, the State organized 65,000 men in forty-eight hours, ready to march and repel the invasion of her soil. Our soldiers were engaged in three hundred and eight battles, all of which were out of the State except one. During the war there were paid out for bounties by the several counties of the State $15,492,876.04; for relief to soldiers' families, $4,566,898.06; for miscellaneous contributions, $198,866.58; making a total paid out by counties of $20,258,640.68. To which should be added, as paid out by the State, the $2,000,000 loan by act of the Legislature May 13, 1861; for relief of soldiers' families $1,748,017.99; for sanitary supplies, $622,620.29; for her portion of the direct tax levied by Congress under act August 5, 1861, $904,875.33; soldiers' home, $50,000; making a grand total of $25,584,154.29.

This is but a very imperfect statement of the actual expense of the war, as there were millions expended of which no regular account was kept, and could now only be approximated by an estimate. There should also be added to this enormous sum the internal-revenue taxes paid to the General Government, which amounted in all to the sum of $14,561,704.16 during the war, making a total paid by the people of the State of $40,145,858.45. The State, besides paying these heavy war expenses, carried on the ordinary expenses of government, both in the counties and State, building railroads and expending large sums in public improvements and private enterprises. The State, from October, 1862, to October, 1866, paid in carrying on its government the sum of $12,377,468.01, and paid the sum of $6,587,950.94 of its bonded indebtedness from the decade of 1860 to 1870. What my State did the other central Northwestern States were in no respect behind.

May I ask, is it not natural that the people of the Upper Mississippi Valley, after such sacrifices, should feel a deep interest in anything that would bind the two sections of the West more closely together, and that would promote the welfare of both sections of the country. The cities of New York and Boston, especially New York, have monopolized the import and export trade of the entire country. Great money centers have grown up in these places. The result is that in New York City money has become merchandise, and has its periodical flow and ebb, flowing out over the country through the loan of banks to speculators, who fleece the agriculturists of the West and South, and in its ebb passes through the hands of the merchant princes who have fleeced their western and southern purchasers of millions in the sales of their merchandise.

This condition of things has produced a redundancy of money and culminated in stock-gambling, robbery, fraud, combinations, conspira-

cies, and corruption unparalleled in the history of any country, and national disgrace and dishonor.

The question of a remedy for this state of things assumes a national importance. I have no doubt but the distribution of trade and commerce would do much to overcome the evil. Improve the mouth of the Mississippi River and the harbor of Galveston and you create two markets far more advantageous to the West and South than New York and Boston, and thus establish competition at the two extremes of the country, and produce an equilibrium in the markets, imports, and exports.

It is wonderful to see what nature has done for our country in providing on every side places for great ports and commercial emporiums: New York and her sister cities on the Atlantic coast, Chicago and her sister cities on the lakes, New Orleans and hers on the Gulf coast, San Francisco, California, and Portland, Oregon, on the Pacific coast. It is the duty of patriot statesmen to build up and foster by every means these great ports, and give to each as near as possible an equal advantage. Again, among the many reasons for the improvement of the Mississippi River and its tributaries, are the direct relations of the people of the entire valley in a commercial, moral, social, and kindred view. A very large proportion of the population of the Southern States north of the Ohio River are southern emigrants, or descendants of such emigrants, and there is that home geniality in the association and commingling of the elements of the two sections of the country that binds the people together in a common sympathy and as one people.

I appeal to Congress to consider the commercial necessities of our people and to afford us the help we so much need. With unlimited natural resources, yet we are bound hand and foot by the monopolist. It cost us of the northwest central States two bushels of grain to get one to market. With corn at twenty cents per bushel in the State of Iowa and $1.50 in the State of Georgia, the one suffers for the want of grain and the other burns it for fuel for the want of cheap transportation. Our great agricultural productions rot in our granaries for the want of a cheap way to put them into the hands of the consumer. No wonder the people of the West and South arise in their might and demand their rights, and I here second the demand and insist upon its justness. Give them cheap transportation, take them from the grip of the money-changer of the East. Elevate labor by educating our children, not only mentally, but to each child in our land, however poor, give at the common expense a trade or business. Harmonize capital and labor by meting out to each its just share in their joint productions. Listen to the just demands of the producing class. Capital can and will to a great extent take care of itself, but the laborer needs the strong arm of the Government to give him the needful protection.

I have not given nor will I hereafter knowingly give, one vote for any law that gives capital an advantage over labor or that does not fully protect the producing class. The perpetuation and the prosperity of this Government, if nothing more serious, depends upon the issue of this question. Let Congress do justice and stand by the right. Let the hard-pan stickler for a gold basis remember that there are other creditors of the nation than the bondholder—those who have periled their lives to save the Union, who are to-day demanding not gold redemption, but that jewel which is above all price, the redemption of right and justice, the protection of labor and industry, the equality of the laws for all, rich and poor alike.

Fort Saint Philip Canal.

SPEECH OF HON. J. HALE SYPHER,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

June 4, 1874.

The House having under consideration the bill (H. R. No. 3342) for the improvement of the mouth of the Mississippi River—

Mr. SYPHER said:

Mr. SPEAKER: The Mississippi River is the highway to the markets of the world for half the inhabitants of this Republic. Its tonnage is destined to exceed the international tonnage of the civilized world It drains an empire nearly a million miles in extent. The same percentage of land being under cultivation as in France would produce food sufficient to subsist half the human family. The improvement of this great commercial channel, from its source to the sea, is a national work the performance of which is a high, national duty. The people's representatives must be alive to the paramount benefits resulting therefrom to the whole country. No sectional interests are involved in this question. The people inhabiting the Mississippi Valley by their industry supply the necessaries of life and raw material to the East in exchange for their manufactured products. Nothing is detracted from the power and importance of the great manufacturing and trading centers of the States on the Atlantic slope, in claiming that the commercial as well as the political supremacy of this nation is centered in the Mississippi Valley. France's greatest soldier and most sagacious statesman, when he relinquished his hold upon the Louisiana territory at the conclusion of the treaty, remarked prophetically:

This accession of territory strengthens forever the power of the United States; and I have just given England a maritime rival that will sooner or later humble her pride.

Again, that great ruler remarked that—

The day may come when the cession of Louisiana to the United States shall render the Americans too powerful for the continent of Europe.

Under the wise policy of internal improvements adopted by this Government, and by the intelligence and industry of our people, in less than three-quarters of a century are these prophecies realized, though jealously and reluctantly acknowledged by the nations of the earth. The yeomanry of this empire, located between the two great mountain ranges of this continent, asserted their rights in unmistakable terms when the insolent Spanish intendant, in 1802, attempted to obstruct their outlet to the sea. They addressed their Government in this posititve language:

The Mississippi is ours by the law of nature; it belong to us by our numbers and by the labor which we have bestowed on those spots which before our arrival were desert and barren. Our innumerable rivers swell it and flow with it into the Gulf of Mexico. Its mouth is the only issue which nature has given to our waters, and we wish to use it for our vessels. No power in the world shall deprive us of this right.

Again, when Pakenham marshaled the flower of the British army on the banks of the Lower Mississippi and penetrated the river with a hostile fleet, the stalwart men inhabiting the valley—the American, the Frenchman, the Spaniard, and the colored man—rallied in solid column under the American banner and repulsed the proud battalions of the British invader which in many former conflicts had covered themselves with glory. In the recent unhappy struggle between citizens of our own country millions of treasure and thousands of lives were sacrificed for the possession of this natural outlet to the sea. Thus having secured free and unobstructed navigation of the Mississippi River to American citizens first by purchase, secondly by the valor and daring of our people, and thirdly by the great sacrifice of blood and treasure, will you now permit this great commercial artery to be closed by mud and sand?

In advocating the Mississippi route to the sea as the one of greatest reliance for the surplus products of the West, and as the great regulator of all other routes, I do not antagonize any of the other great lines of transportation either by the lakes and canals of the North or the railroads across the country. All are necessary both for the producer in the West and the consumer in the East. Increased production will continue to employ all the available routes more abundantly than capital and labor, including the appropriations from the national Treasury, can multiply the facilities for transportation. There can be no antagonism between the different routes; and the constituents I represent have no such interests in conflict with other sections of the country. Before entering upon the different methods of improving the mouth of this river as presented in the bills now pending, I desire to invite your attention to the obstructions to be overcome.

In 1699 Bienville found upon the bar only eleven feet of water, and reported that the depth and location of the channel were constantly changing. In 1726 Ponger reported—

The bar at Southwest Pass is about eight hundred yards more in the interior than Balize Island. I recommend to the Indies Company to make an inclosure of piles, *joined together*, to point the current to grow deeper and deeper, to be made of cypress, which would last a long time.

From this it would appear that jetties were recommended for the improvement of the mouth of the Mississippi one hundred and forty-eight years ago. Can it be possible that the celebrated gun-boat and bridge-builder is that much behind the times?

In the year 1745, Devegues, a distinguished French engineer, presented to his government a memorial on the mouths of the Mississippi, in which he said:

The bars which are to be found at the mouths of the river are so many serious obstructions. The pass which is the deepest, and which has been the only practicable one since 1722, when it was examined and became thoroughly known, is that of the Balize, where ships drawing from thirteen to fifteen feet of water have been able to run through with more or less facility in proportion to the depth of water on the bar; and it has ever since been observed that it has varied from eleven feet to fourteen feet and a half, so that it was but seldom that vessels drawing from thirteen to fifteen feet water could pass without stranding and without making use of the warp, even after having been lightened of half their cargoes. This pass measures in width from thirty to forty fathoms, and the current is very rapid.

The captain of the port and chief pilot, Livaudais, wrote to the chief minister of his government in 1750 that—

When the king's man-of-war, the Rhinoceros, arrived in July, the location of the pass was south-southeast and north-northwest, and now it is east and west. The changes have been so frequent in the twenty-five years I have been coming here, that I have seldom come in and gone out by the same outlet.

The experience of this pilot is continually verified by the pilots of the present time.

From the following it is shown that the discovery that the bars are continually advancing seaward is not of recent date:

In September, 1751, Governor De Kerlerec, together with the intendant commissary of the colony, wrote to the minister of the home government that the lands at the entrance of the river had so little consistency that it was not possible to build any fortifications, and that those built by the Indies Company had been destroyed, in spite of the repairs made on them in 1731 and 1742.

The island of Balize, which was twenty years ago half a league outside is now one league and a half inside (of the bar.)

The bars have gone seaward at the rate of one-third of a mile per annum for centuries; and as nature is not likely to change her course, that rate will continue.

The first methods for the improvement of rivers forming bars at their mouths by the deposit of sediment was by dredging. That process was first applied at the outlet of the Mississippi River by Captain Talcott, of the Engineer Corps, in 1839, for which an appropriation was made. This was the first effort of the General Government to remove the obstructions to commerce at the mouth of that river. This method was continued with varied success until 1856. Then the Secretary of War entered into a contract with Messrs. Craig & Rightor, who attempted to produce a depth of eighteen feet of water by means of a breakwater or jetties. Failure and bankruptcy soon terminated this process. Then the Government constructed and operated powerful dredge-boats, which are still in use, and these have been able to maintain about eighteen feet of water. The Government has expended in these different methods about $2,000,000, and the channel, since the work began under Government supervision, thirty-five years ago, has been scarcely more practicable than by the ordinary process of nature. Increased commerce and a large class of vessels demand a greater depth of water than had been produced by these processes. A ship-canal has been advocated for many years as the most certain and practicable mode of relief from the obstructions to the commerce of the valley.

A survey was made about 1830 by Major Buisson, at one time a distinguished engineer in the French army under Napoleon. Upon the results of this survey the Legislature of Louisiana addressed a memorial to Congress, and a survey was ordered by authority of the General Government. In 1837 Major Chase, an able engineer in the service of the United States, made an exhaustive examination and survey, the report of which will be found in Executive Documents of the second session of the Twenty-fourth Congress. From that report I quote as follows:

> The advantages of the plan of a ship-canal are so decided, that they require no further comments from me.

In concluding his report he says:

> I have thus endeavored in the short time allowed me and with the information in my possession to throw some light on the improvement best adapted to the amelioration of the navigation of the Mississippi. It is of great importance not only to the commerce of New Orleans and the vast trade tributary to that great emporium, but to every section of the Union; and believing that the true policy is at once to grapple with the subject and adopt a plan for the improvement that shall exhibit permanent benefits, and believing also that any sum, however large, expended for that object, would not be more than commensurate with its importance, I do not hesitate to adopt and recommend the construction of a ship-canal without further delay, in preference to resorting to those expedients which are doubtful in their results, and at the most temporary in their character.

Captain Bowman, one of Major Chase's assistants, remarks as follows. I quote from the same report:

> I am of the opinion that the only practicable plan for securing a permanent ship-channel for vessels of the first class to New Orleans is to cut a canal from such point on the Mississippi above its mouth as shall combine the greatest advantages for the purpose to some one of the arms of the Gulf of Mexico which approaches nearest to the river.

Another officer, Lieutenant Poole, of the Third Artillery, reports:

> It is my opinion that it (the canal) offers a fairer prospect of certain results than any other plan that has been spoken of of opening the Mississippi to ships of the largest class.

These are the opinions of able officers of the United States Army detailed to examine this work. It was done thoroughly and impartially. The distinguished gun-boat builder and the utopian scheme of jetties were unknown to them, and there was then no prejudice and conflict of opinion between the military and civil engineers to warp the judgment of either, as is now charged in certain quarters. But there are *other* valuable authorities in favor of a canal. In 1858 Mr. Montaign, an eminent civil engineer, made a survey, with estimates of cost, for the State of Louisiana. His report is submitted in the document before you, to which I invite your attention.

In 1871 I had the honor to secure the passage of the following resolution, authorizing the survey of the great work which is now presented for your consideration and action:

> *Resolved*, That the Secretary of War be, and is hereby, requested to cause an examination and survey, with plans and estimates of cost, to be made by an officer of engineers, for a ship-canal to connect the Mississippi River with the Gulf of Mexico, or the navigable waters thereof, of suitable location and dimensions for military, naval, and commercial purposes, and that he report upon the feasibility of the same to the House of Representatives.

Under this resolution Major Howell, an able and competent officer of the Engineer Corps, was detailed to make a new survey of the canal project. His report is before you in Document 220, and with it is a report of a revisory board, composed of seven of the ablest engineers in this country, who examined and revised Major Howell's work, and this is the result of their deliberations. I quote from page 96, Executive Document 220:

> 1. From the facts and data presented in official reports and otherwise, from the experience gained on works of the same character, and the many improvements made in the practice of hydraulic engineering within the last twenty-five years, but more particularly and pertinently from the character of the borings made by Captain Howell upon the Fort Saint Philip peninsula, across which the proposed canal is to run, the board is of the opinion that no extraordinary engineering difficulties in the construction and maintenance of the canal need be apprehended.

In his letter transmitting that report, the Chief of Engineers, General A. A. Humphreys, than whom there is not an abler officer in the service, says:

> Respecting the practicability of constructing a ship-canal from the river near Fort Saint Philip to the deep water of Isle au Breton Pass, all the members of the board agree that there is no doubt as to its entire practicability.

Mr. Speaker, in the presence of such overwhelming testimony from the best engineering talent in the country as to the *entire practicability* of the Fort Saint Philip Canal, who will longer hesitate in making this great national work. In the presence of your own precedent, established for forty years, of following the recommendations of your Engineer Corps for all works of internal improvements for which you have appropriated money from the national Treasury, I ask, will you now depart from this established rule, when not a single work recommended by that corps of competent, faithful officers has proven otherwise than eminently successful?

I am no engineer. I do not know of any member of this House who belongs to that honorable profession, unless, perchance, it may be the honorable members who sign the majority report. They must be engineers, or they certainly would not set up their judgment against the entire Engineer Corps of the Army and against the opinion of all civil engineers in the country whose knowledge of the subject entitles their opinions to credit, all of whom report in favor of the *entire practicability* of the canal.

The bill reported by the majority of the committee provides for the improvement of the mouth of the Mississippi by a system of jetties. This system is described as follows:

> The jetty system as applied to improvement at the mouths of rivers depends on the lateral contraction of the water-way, by which the water surface above the jetties is raised and increased velocity of discharge given. This increased velocity gives increased scouring effect to the current, and this is the effect depended upon or deepen the river-bed between the jetties.

From this definition to insure success two fundamental conditions are necessary:

First. Solidity of foundation, upon which a superstructure can be erected capable of resisting the currents of the river and the storm-wave of the sea.

Second. A littoral current crossing the mouth of the jetties at right angles, with sufficient velocity to carry away the matter held in suspension by the river, tending to form a new bar at the outer extremity of the jetties. Are these conditions present at the mouth of the Mississippi River? On the first of these conditions much light will be thrown by the early efforts to erect fortifications for the defense of the Colonies. In 1746 the Marquis of Vaudreuil, who succeeded Bienville as governor of Louisiana, wrote to his government that—

> On being apprised of the declaration of war I visited the mouths of the Mississippi. From the mobility of the passes and from the want of solidity in the land bordering on those passes it is nearly impossible to think of erecting fortifications.

Governor Vaudreuil and his engineers selected as the site for erecting forts the first solid ground found in ascending the river, which was about forty miles from the Gulf, where Forts Jackson and Saint Philip are now situated. History affords further information in the efforts to erect a light-house at Southwest Pass in 1837. An enterprising individual like some of the present day, distinguished for their zeal in inventing theories rather than for practical knowledge of hydraulic engineering, entered into a contract with the Government to construct a light-house of brick upon a foundation of piling. The work of construction begun, no difficulty was encountered in setting the first pile at a depth of forty feet; the second one by its own weight went down sixty feet, and the third one went out of sight.

No further efforts were made to secure a pile foundation on the delta, and the contract was abandoned. Any one familiar with the formation at the mouth of the Mississippi knows that the light alluvium forming the banks, which are only a few inches higher than the sea level, cannot hold piling for a foundation and is not capable of resisting a current of sufficient scouring capacity to deepen the channel. The second fundamental condition is the existence and presence of a littoral current. The indispensable necessity of this current is more evident from the fact that the advocates of the jetty system persist in asserting that it does exist at the mouth of the Mississippi. I invite your attention to the most reliable and creditable authorities on this disputed question.

In the very able report of Humphreys and Abbot on the Physics and Hydraulics of the Mississippi River, from which I quote, will be found this language from Lieutenant (afterward Major-General) George G. Meade. He says:

> At the southwest bar many observations were made to determine the existence of a littoral current.
>
> * * * * * * *
>
> The velocity is increased when the tide is falling and diminished when it is rising. If there is any wind, the current will obey the impulse given to it by its direction. If from the east, the set of the current will be to the west, more or less inclined to the axis of the pass as the force of the wind is greater or less. So if the wind is from the west the same circumstances will be perceptible with regard to the set of the current to the east. The bottom velocity is slightly less than that of the surface and is affected in the same way, though not to so great a degree, and is much sooner neutralized by the resistance of the sea. The prevailing winds being from the east and the axis of the pass southwest, the general set of the current is to the west; hence may have arisen the idea of a "*westerly littoral current.*"
>
> Care was taken to make the observations under all circumstances of wind and tide, and no trace of the existence of such a current is shown within *seven* miles of the land—the extreme point to which the observations were carried.

Captain Patterson, a distinguished officer of the Coast Survey, and for many years assigned to duty on the Gulf coast, says:

No littoral currents have been found, only such temporary currents as the wind for the time being creates.

On this question the Chief of Engineers says:

If there was a littoral current of force sufficient to carry off any large quantity of this earthy matter it would not have been deposited where it is now and always has been found. What has been said respecting the recent soundings of Captain Howell exhibits this fact clearly.

Further, upon examining the horizontal curves of equal depth on Captain Howell's recently prepared map, going out as far as a depth of three hundred and fifty feet, we find that from the crest of the bar to one hundred feet depth the greatest amount of deposit is made east of the axis or mid-line of the pass prolonged; between one hundred and two hundred feet depth the greatest amount of deposit is made west of that line; and between two hundred and three hundred and fifty feet the greatest amount of deposit is made east of that line. Further, the investigations into the currents made under Captain Talcott's direction in 1838, for the very purpose of ascertaining whether there was a littoral current, failed to detect its existence off any of the passes, the investigations in the case of the Southwest Pass extending seven miles seaward of the bar.

* * * * * * *

The very shape of the delta is indicative of the absence of such current. Its increase in the direction of the mouths of the passes, and the existence of such areas of water as Blind Bay, Garden Island Bay, and East and West Bays, which would have been gradually filled in the course of the delta formation by deposit if such current had existed, all point to its absence.

These statements, made by officers eminent in their professions, based upon careful examinations, stand uncontradicted by any scientific authority worthy of credit. A reverend enthusiast, recently imported to the national capital to instruct "heathen" Congressmen and obdurate engineers, is set up as the sole advocate of the existence of a littoral current. If the orthodoxy of this reverend engineer is as unsound as his scientific tenets, I fear that his followers will never be found among the "elect." In reference to the assumptions of the reverend professor, Engineer Fontaine, Major Howell says:

Very careful observations have been made at all the passes, out to a distance of seven miles from land, to ascertain if an appreciable "littoral current" is to be ound off the mouths of the Mississippi; none has been found. It does not appear necessary to repeat the observation every time Tom, Dick, and Harry chooses to question the result.

I submit one fact, and close my request. Last December a careful survey showed at a distance of nine miles from the present bar, at Southwest Pass, but a depth of 300 feet. In 1838, at a distance of about nine miles from the then crest of the bar, there was 900 feet. Since 1838 the bar has moved out about two miles; for the past two years the bar has moved out at an average rate of about 400 feet per year.

This does not indicate that the bar is moving into deeper water, nor that its annual rate of advance is decreasing.

With no littoral current, and the bar advancing more rapidly, and into shoaler water, each year, there is reason to doubt the value of an application of the jetty system, if we leave out of consideration all other essential requirements for its success.

Very respectfully,

C. W. HOWELL.

Then, from the best sources of information, it is found that the two essential conditions necessary to a successful application of the jetty system at the mouth of the Mississippi River do not exist.

Where has this system of improving sedimentary rivers been applied? The Danube is cited as an example of its application and success, and it is claimed that the conditions are the same at the mouth of the Mississippi. Upon that point I quote from the able report of General John Newton, of the Engineer Corps:

The prominent physical features of the Danube are quite different from those of the Mississippi, and it is proper, in concluding this paper, to briefly glance at them. This river separates into two branches at Ismail Chatal, namely, the Kilia and the Toulcha; and the latter, after eleven miles, into two others, the Saint George and Soolina branches.

The distances to the sea from Ismail by the Kilia is ninety-six miles; by the Soolina, seventy-eight miles; and by the Saint George branch, ninety miles. The triangle thus formed, having Ismail as its apex, has a base of forty miles along the sea-coast, and a perpendicular of fifty-eight miles.

The first difference between the Danube and Mississippi is, that the former has divided into three long branches, each of which is an active stream, whereas the Mississippi has no branches, but pushes its trunk undivided to the Gulf.

At Isatkcha, fifteen miles above the division, the Danube is 50 feet deep and 1,700 feet wide. At Fort Saint Philip, twenty miles above the head of the passes, the depth of the Mississippi is 151 and its width 2,360 feet. Its great depth constitutes another point of difference, which the Mississippi also maintains in its passes.

The average specific gravity of the matter held in suspension in the Danube is 2.5; that of the banks, 2.7; and for the Mississippi the latter element is 1.96. The specific gravity of materials on Southwest Bar, after it has been sifted from finer materials by the action of currents and waves, was 2.6, or about the same as that of the suspended matter in the Danube.

The proportion of silica in the material brought down by the latter river is very large—about 67 per cent.

It is not surprising, if we read, that at the Soolina mouth large warehouses have been erected on the banks alone as a foundation; that a crib 30 by 15 feet sunk off Soolina mouth, and loaded with 130 tons of stone, remained for nearly one week supported on only ten square yards of foundation without the least settlement, and that the driving of a single pile 13 inches square in the line of piers to a depth of 16 feet was a day's work for one driver.

Dunes of sand, thirty to forty feet, are encountered at the Kilia mouths, and of smaller dimensions at those of the Saint George.

What a contrast the above offers to the mud shoals and banks of the mouths of the Mississippi, in which it is said that the weight of a man will send a pole down to a depth of nine feet. Upon the surface of the bar, where the waves and currents sift out the finer materials, there is of course a deposit of more or less sand. From this brief analysis of *physical differences* between the two rivers some important deductions may be made. The strength and resistance of its banks is the cause, probably, why having once separated into three branches, the Danube has been unable to reform its main trunk, or that the cross-section of either branch has not become so great as to convert the others into mere drains for overflow.

In the Mississippi, owing to the nature of its sedimentary deposits, the main trunk cannot be divided, because it has the power always to excavate its bed to the depth and width required to carry off its waters. No crevasse or artificial outlet has ever yet formed a branch to this river.

The same reasoning applies to the passes, which, perforated through the most yielding alluvions, will always suffice to discharge the river, and should one by some obstruction be impeded in its discharge, the others enlarge their cross-sections to supply the emergency.

The experiment of the jetty improvement at the Soulina pass of the Danube has no value in its application at the outlet of either of the passes of the Mississippi. It emits only two-twenty-sevenths the quantity of water of the Southwest Pass. It is too insignificant to make any practicable comparison. But as this is the example of jetty improvement invariably quoted by the advocates of the system, I will offer further authorities. I quote from General Humphreys, (Executive document, 220:)

Further, the sea-shore line at the mouth of the Soolina is also stationary, and we do not find any recent delta formation at its mouth. The characteristic of a delta-forming river is the constant annual extension of the shores at its mouth, the constant advance of the crest of its bar and of the whole bar, and the constant annual advance of the deep channel inside of and behind the bar. None of these characteristics are found at the moath of the So lina, which has long since ceased to be a delta-forming river.

On the improvement at this river I now quote from a distinguished French engineer, Elissée Reclus:

The operations undertaken at Soolina, one of the mouths of the Danube, appear to have met with great success, *but through an entirely special cause.* Mr. Charles Hartley, the skillful constructor of the Soolina jetties, has taken care to push them out more than a hundred yards into the sea, as far as a point where a current generally passes along the shore tending from north to south. This current catches hold of all the alluvium which glides down over the bottom of the bed of the river and thus hinders the formation of a fresh bar.

If Captain Eads will "push" his jetties out "where a current will catch hold of all the alluvium which glides down over the bottom of the bed of the river and thus hinder the formation of a fresh bar," I will then concede that his experiment may be successful. He will not claim that he can accomplish this. At the Danube that current is reached in one hundred yards. At the Mississippi it is nine miles out.

Notwithstanding the "special cause" to which Charles Hartley's success in improving the Soulina Pass is attributable, Reclus says:

It is certainly a fact that the gradual encroachments of the whole delta of the Danube will have the effect of pushing the current itself further out to sea, and sooner or later a second mound of sand will obstruct the mouth of the Soulina.

This high authority here declares that "sooner or later" "a mound of sand will obstruct the mouth" of this channel, then the only example of the jetty system in the improvement of sediment-bearing rivers in the civilized world will have resulted in ignominious failure. The same author describes the failure of the operations at the mouth of the Rhone, as follows:

Among the undertakings of this kind (jetty improvements) which have been the most costly and the most useless, we may mention those which have been carried out in the delta of the Rhone. It was hoped that by compressing the mass of water in a narrower channel and compelling it to run into the sea through a single outlet a current would be produced which would be strong enough to clear out the passage to a considerable depth, and thus to allow ships of a deep draught of water to enter the river.

In 1852, Surell, the engineer, closed up the various *graus* through which the water of the Rhone found lateral outlet and lengthened the two banks of the principal mouth by means of dikes converging one upon another, thus doubling the force of the current.

The water of the river did, in fact, accomplish the work of erosion and cleared out the channel; but fresh alluvium being incessantly brought down by the flow of the Rhone and thrown up by the waves of the sea, a new bar formed across the mouth outside. Before the operations of embanking were begun, the average depth of the channel was five feet ten inches; at the present time it is the same, after having varied from thirteen feet to six feet and one half, and three feet eight inches, according to the quantity of water sent down by the current.

In the absence of a single example of the successful and permanent improvement of the mouth of a sedimentary river by means of jetties, I ask this House to pause before it accepts the pending bill. It involves an experiment which this nation cannot afford to make. The interests at stake are too great and the results held out too uncertain.

Again, I invite you to the words of Reclus, which are wise, disinterested, and therefore safe to follow. He says:

Among all the immense works which have been carried out at the mouths of rivers many have become useless or even absolutely injurious to navigation. Millions and millions of money have been thus cast into the ocean and purely wasted.

I will now notice some of the objections offered to the canal project, as presented by its opponents and advocates of the jetty system.

My friend from Missouri, [Mr. WELLS,] who addressed the House last night when I was not present, but whose remarks I find in the RECORD, said:

But, sir, a canal running from the Gulf, with locks to check its entrance to the bed of the river, and requiring each vessel laden at New Orleans to pass out these locks, will never suffice to convey the surplus produce of the Mississippi Valley to the ocean. If its cost could be calculated and its success insured, it will never answer the purposes of relieving the people of these producing States from the embarrassment they now suffer in relation to transportation of their productions to the markets of the world.

This kind of reckless statement is just what the friends of the canal project have frequently encountered. They have been made and repeated by the lobbyists of the jetty scheme about this Capitol all winter.

Now what are the facts. It is admitted that twenty-four vessels can pass the canal daily with ease. Vessels of light draught would, according to the theory of the jettyites prefer "the open river,

mouth." The annual tonnage of New Orleans for the last five years has been 885,000 tons, and the number of vessels engaged in this commerce about seven hundred, averaging 1,260 tons burden. That is less than two vessels a day. And with increased depth of channel vessels of larger size and greater tonnage will enter that trade. Let me assure the gentleman that if the canal is constructed the surplus products of the Mississippi Valley will never be delayed at New Orleans in consequence of insufficient tonnage.

The second objection to the canal is raised by the reverend engineer employed by the celebrated gun-boat builder to advocate the *jetty humbug*. In his imagination the *terrible* "cyclone" will ingulf this canal as soon as it is completed. Who ever heard of a canal being hurt by filling it with water? And if cyclones will destroy a canal forty miles in the interior, what will they do to jetties three miles out in the Gulf?

Is not the cyclone "an absurd bugaboo?"

The advocates of the jetties allege that the surveys of the Fort Saint Philip Canal project are indefinite and insufficient. I answer that four exhaustive surveys have been made, extending through a period of forty years. They are as complete, thorough, and specific in all their details as preliminary surveys usually are of similar works. But if the surveys of the canal are too incomplete and insufficient to justify Congress in appropriating $8,000,000 for its construction, upon what survey, upon what examination, upon what authority do the advocates of the jetty system ask Congress to appropriate $11,000,000? You answer, "*No cure, no pay.*" Do you believe that this great Government can afford to allow one of its citizens to expend millions of private capital on an enterprise for the public good, which it indorses by a special contract, and then not indemnify him in case of loss? If you do, cite me a case in your entire history, and I will cite millions involved in the relief bills which fill your statute-books and your committee-rooms. That argument is an attempted fraud. It is the quack-doctor's argument; and I am inclined to believe that the quacks are not confined entirely to the medical profession.

Another very plausible and seductive argument is employed by the advocates of the jetty system. It harmonizes beautifully with the greatness of the "Father of Waters" and the magnitude of the trade and commerce of the empire through which it flows unobstructed to the sea. It is the "open river mouth" theory. There never has been and there never can be an open river mouth in the sense in which this phrase is applied. An "open river mouth" must be a harbor enterable by vessels of all classes day and night and in all kinds of weather. An "open river mouth" must be of certain permanent, unchanging depth, of channel requiring neither pilots nor tow-boats. These conditions are not found at the mouths of any rivers obstructed by bars. At the entrance of the canal there is a secure harbor of sufficient capacity to accommodate five hundred ships. Hence the canal is enterable in all kinds of weather without a pilot. That harbor can be defended against the approach of a hostile fleet. The mouth of the river is entirely indefensible. The canal will be a permanent, reliable channel of uniform depth, which will give confidence to vessels of the greatest tonnage traversing the seas of the world. No other improvement will secure these advantages. The canal is a certainty; the jetty system is an untried theory. One well-attested experiment is worth ten thousand untried theories.

The Representatives on this floor of the Upper Mississippi Valley have spoken boldly and ably in behalf of their constituents on this great question. I stand here to plead in the interests of the people of the Crescent City. New Orleans is the metropolis of the South, the entrepot of the Mississippi Valley, and the second city in the value of her exports and imports of this Republic. She demands harbor facilities commensurate with her geographical position and commercial importance. The harbors of the great commercial ports of a nation should be as nearly of uniform depth as practicable to admit the world's commerce in ships of the greatest tonnage. You enact laws requiring railroads to be constructed of a uniform gauge; the same argument applies with equal force in the depth of the harbors of your sea-port towns. And this rule already applies in the case of the harbors of all your great cities except New Orleans. New York has 29 feet of water; Philadelphia, 26; Baltimore, 27; and San Francisco, 34. New Orleans has only 18, and sometimes only 16 feet.

Compare the following statement of imports and exports for the year 1872 with the depth of water in the principal harbors, and then answer whether the Crescent City has not a pre-eminent right to demand prompt and favorable action from this great Government:

Cities.	Imports, value.	Exports, value.	Depth of water.
			Feet.
New York	$418,515,829	$270,413,674	29
Philadelphia	20,383,853	20,982,876	26
Baltimore	28,836,305	18,325,321	27
San Francisco	33,339,501	25,243,061	34
New Orleans	18,542,188	89,501,149	18

It will be perceived from this statement that New Orleans has a balance of trade amounting to $71,000,000 in her favor, while all the other cities named except Philadelphia have large balances against them. Notwithstanding this liberal contribution toward paying the debts of sister cities, the people of the Crescent City do not complain; they only invoke the same governmental aid and fostering care extended to other cities in the improvement of harbors which will expand their commerce and enable them to meet larger drafts to supply the deficiency of less favored sections.

Construct this canal and you will have furnished a permanent, reliable, and adequate outlet for the commerce of the great West and inspired the commerce of the world with renewed confidence. You will have dealt a death-blow to monopolies, extinguished the fuel fires of the prairie farmer, and quelled the bread riots of the East by appeasing the voracious appetites with cheap and abundant food. Industry will revive in all sections of our common country, production will increase and be more remunerative, and the vast commerce of the Mississippi Valley will float one very sea and bless the inhabitants of every land.

Improvement of the Mouth of the Mississppi.

SPEECH OF HON. BARBOUR LEWIS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

June 4, 1874.

The House having under consideration the bill (H. R. No. 3342) for the improvement of the mouth of the Mississippi River—

Mr. LEWIS said:

Mr. SPEAKER: The opening of the Mississippi to the commerce of the world adequately and capaciously is a measure of immense national importance. It overshadows and dwarfs by its tremendous and far-reaching consequences all other questions of American statesmanship. The vast valley of the Mississippi, the magnificently endowed, fairest, and by kind nature's lavish gifts the richest and noblest portion of our nation, is robbed of one-half or more of all its wonderful natural advantages by the want of a proper outlet to the sea. It is miserably crippled in its resources, isolated, confined, and shut out from the world by the ever-troublesome and dangerous obstruction of the huge bar at the mouth of its great river. Every glorious gift of soil and climate, of mines and forests of untold wealth, of vastness of territory, of the richest cereal and semi-tropical productions, with the grandest net-work of navigable rivers in the world, is all neutralized by this monstrous hinderance to its free and unrestricted commerce. The transportation of all its great staples is burdened and weighed down by the terrible difficulties which confront its entrance to the open sea. The products of the farmer and the planter yield him little or no profit because of the heavy and grievous expense of sending them to the great markets of the world where they are so badly needed. Nations in Europe may be almost starving for our meat and grain and flour, their mills and workmen may be idle for want of our cotton, but while the mouth of the Mississippi remains closed the cost of transportation will be ruinous to the producer, and he will be doomed to remain poor, oppressed, and unfortunate. In vain will generous nature give him bounteous harvests; costly transportation will continue to eat the life out of all his labor and his toil.

TRANSPORTATION.

To remedy these evils in part I acted with my fellow-members of the Committee on Railways and Canals in framing a valuable and most judicious bill to protect the planter and the producer against exorbitant charges by railroads. The House passed the bill very promptly, but as yet it has not I believe been acted on by the Senate. The principles of that bill will one day pass into law, however, and the beneficial effect will be felt by all who own the land or till the soil of our country. Great Britain demands each year from one hundred and fifty to two hundred million bushels of our wheat; Western Europe, five hundred million bushels. Europe requires five million bales of our cotton, and we can furnish it, but the wretched bar at the mouth of the Mississippi burdens commerce so heavily, that transportation sometimes costs more than production. The great Northwest doubles its produce every ten years. Its cereal crop has grown to one thousand million bushels per year. The South when prosperous wants one hundred millions of this immense crop, and Europe needs five hundred millions; but the mouth of the Mississippi is locked up, bolted, and made almost impassable to ships by its dreadful bar. While that continues to fence in the great valley there is little inducement to free the mighty river and its tributaries from snags, from dangerous sand-bars, and a hundred other deadly perils to navigation, and the whole remains comparatively neglected and unimproved. Commerce on our great western and southern rivers remains subject to a thousand dangers, and transportation is costly, insecure, and difficult. The South and Southwest could easily raise every pound of cotton the whole world requires; but of what use to raise it while transportation remains so exorbitant as to be ruinous to the planter!

MEMPHIS A SEAPORT.

Give us cheap transportation and our farmers and planters can feed and clothe the world, and make themselves immensely rich. Now they are ground down and impoverished by the fearful cost of transporting their products to the great markets of consumption, where men are perishing for want of them! While the mouth of the Mississippi remains closed by its mountains of mud, commerce languishes, agriculture loses all heart and courage, the plow rusts in its furrow, the ship rots at its wharf, enterprise is paralyzed, hope is forgotten, and desolation broods over the land. Neither the States nor the nation have even vigor and courage and manhood enough to protect the lower valley of the Mississippi from the floods that devastate and ruin its choicest lands. All this will go on until the business men, the planters, the river men, and the workingmen of the whole Mississippi Valley resolve that they will endure it no longer, that they will tamely submit no more, but will unitedly demand that the Mississippi shall be open to the sea, that every obstruction at its mouth shall be forever removed, that the whole river and its great tributaries shall be rendered navigable for the largest steamers, and that the vast delta region from Cairo down to the Gulf shall be safely and securely protected from floods. These great measures will naturally go together. They are practically almost inseparable. Make the Mississippi River an open highway to the great ocean routes of commerce, and then you will inevitably feel compelled to clean out its channel and scour out its sand bars and deepen its bed in the few places that are shallow at low water, until from Memphis down at least it becomes navigable for the largest ocean steamers. Doing all this it will be a matter of course to protect its banks everywhere from floods and overflow. Memphis will become a great sea-port, as she ought, with her half million of inhabitants, and the great Mississippi Valley will go on increasing in wealth and population and power until it becomes the most prosperous and the most flourishing region on the face of the globe. The population of that valley, now some twenty millions, under such a stimulus and with such magnificent opportunities, will grow up in time to hundreds of millions of the most intelligent, the most cultivated, the wealthiest, and the most gifted people in the world.

A CANAL? OR AN OPEN RIVER?

How shall the Mississippi be opened wide and free to the commerce of the world? Some gentlemen, who seem to think it a small affair, say by a mere canal. They propose that the fleets and navies of the world shall never enter the portals of that noble and majestic river unless they are dragged through a mere ditch! Nature has given us a glorious river, thousands of miles long and a mile wide. Yet they say nature made a mistake, and a mere miserable little Dutch canal, fit for a flock of geese to swim upon only in single file, is the nice and proper thing! And this is their conception of American statesmanship. The mighty "Father of Waters," with his twenty thousand miles of navigable tributaries, with the Missouri, the Arkansas, the Ohio, and hundreds of lesser branches, that would all be deemed giants and monarchs among rivers in Europe; the grandest and most wonderful river on the globe, draining half a continent and pouring in some years almost thirty trillion cubic feet of water into the sea, it is gravely proposed shall have no navigable outlet to the Gulf of Mexico and the ocean, save a petty, insignificant canal.

The other proposition is to open the river to the sea by jetties in the Southwest Pass that shall give a grand highway to the Gulf twelve hundred feet wide. It is an open river to the sea so wide and deep that the navies of the world could sail in, ten or twenty ships abreast, and still have plenty of sea-room. The great fleets of the world with their thousands of vessels could all sail into the deep waters of the great river in a single hour! In that time, with good luck, a single vessel could possibly hope to get through the canal! By the time that a half-dozen ships could creep and crawl like mud-turtles through the wretched ditch of a canal, all the navies of Christendom could have sailed up the great Southwest Pass, and on up the river, and come to anchor at New Orleans.

ARMY ENGINEERS NOT INFALLIBLE.

The gentleman from Illinois, [Mr. HAWLEY,] who has just spoken, has enlarged much upon the fact that a large portion of the Corps of Army Engineers are supposed to be opposed to jetties as a means of improving the mouth of the Mississippi. I hope he does not think that is conclusive; for there never was a great engineering work in the world which an official board of Army engineers did not pronounce to be an impossibility. Take any one of the great engineering enterprises of any age, and you will find that an official board of engineers denounced it until it was proved to be possible by being done, and then crowed over it boastingly and triumphantly when it had become a grand success. Why, sir, when Stephenson gave the world the railroad and the locomotive, all the official boards of engineers of his day deemed him a crazy enthusiast, a visionary, and a humbug, and when he proposed to make railroad trains move as they do to-day, they demonstrated, with their learning, their science, and all their self-complacent infallibility of knowledge and wisdom, that no locomotive could ever move faster than seven miles an hour, and that if it did it would tear everything to pieces, itself included. But Stephenson, a live engineer and a genius—not one of these easy-going men in soft positions in an army engineer corps, with nothing to do but sit in a rocking-chair and sleep when they want to—Stephenson, a self-taught engineer, almost ignorant of books, triumphed over all their learned demonstrations, and lived to see the day when a railroad locomotive moved at the rate of seventy miles an hour, not seven. So it has been in all cases. Whatever progress has been made by the world, these sleepy-headed, old fogy fossil officials of the army and navy, all the world over, have told you that it was impossible and an absurdity.

ARMY AND NAVAL ENGINEERS VS. BREACH-LOADERS AND IRON-CLADS.

Why, less than twenty years ago G. W. Morse, an eminent civil engineer of Louisiana, but born and educated in New England, came to this city with his invention for breech-loading arms perfected by him. A board of Army officers told him that it was worthless, that no guns but muzzle-loaders could ever be good for anything, and the Secretary of War, who had himself been a graduate of West Point, and somewhat noted as an engineer of that easy-going school which knows everything and does nothing, said that the invention was useless. But when the great civil war came with its tremendous and deadly conflicts, and the life of the nation depended upon the issue of that mighty struggle, the sleepy-headed board, just such as my friend has been quoting from, got its eyes rubbed open at last and learned, after three or four years of awful war had been waged, that there was such a thing as a breech-loader; that it was a most powerful and effective weapon, and an immense improvement upon the old muzzle-loader. They waked up at last, and the armies of our country and of the world use breech-loaders to-day. Just such boards as the gentleman talked of, the boards of naval engineers of every country, demonstrated a hundred times that iron-clads were an impossibility, and that to construct monitors would be worse than folly, and yet Captain Cole, in England, and Ericsson and Eads, in this country, proved that monitors and iron-clads were what the nations of the world needed, and to-day the navy of every nation is supplied with them and relies upon them in war.

THEIR RECORD AS TO STEAMERS AND TELEGRAPHS.

The great discoveries in art and science that lift the world upward and impel it onward in the grand pathway of progress do not come from official boards. When Galileo made his sublime discoveries in astronomy the official boards of the age all denounced him as a madman. For twenty or thirty years the official boards of engineers demonstrated that vessels propelled by steam could never cross the Atlantic, could not even carry their own coal for such a voyage; but they did cross it nevertheless, and now steam-vessels traverse every ocean and carry the chief commerce of the world. No official board of engineers invented or applied the telegraph. The youthful Morse in the civil walks of private life, unaided and derided, gave to mankind what governmental engineers, with all their scientific standing, for thousands of years had utterly failed to accomplish.

COMMONPLACE MEN, AND GENERAL BARNARD.

I do not believe that these men in their easy positions, where they do not depend on their labor, their thought, their genius, their talent, or their study for advancement in life, but are almost sure of it, whether they labor hard and faithfully or not, whether they study and think laboriously or not—I do not think that their pronunciamientos on such a subject ought to be conclusive, especially when the engineer, who in public estimation stands head and shoulders above the rest of this board, a man of great intellect and genius as well as talent, General Barnard, was warmly, strongly, and decidedly in favor of jetties. The judgment of one man like him of genius and profound talent is of more value than that of a score of common minds.

OPEN RIVER VS. CANALS—OUR INLAND SEA.

The open mouth of the Mississippi to the ocean is worth all the canals in the world. The question of expense and difficulty should not be thought of when such a great national undertaking is brought before the country. I advocate the open mouth to the river because it is infinitely better for the country than any canal system possible. Give us this open river highway to the sea from that "great inland sea," as Mr. Calhoun well called the Mississippi River thirty years ago; give us an open highway to the sea that all the navies of the world can ride on. How infinitely superior that is to some miserable Dutch canal presided over by a few sleepy-headed, fossil Army engineers. Why, there is no comparison between the two systems, and every gentleman here and every child in the nation has understanding and intelligence enough to know that. The open river is worth a thousand canals; it is as much superior to them as a battery of artillery would be to one of pop-guns.

A FEW ILLUSTRATIONS.

The advocates of a canal might as well tell us that a wheelbarrow was as good a means of transporting the goods and productions of a great country as a grand railroad train. They might as well prefer a canoe or an old flat-boat to an ocean steamer. You might as well say that a vast army of a quarter or half a million of men, in a great and important campaign, instead of having before it for its marches and evolutions and encampments a grand open plain, should be made to march and maneuver and struggle toilsomely and painfully and wearily on for years in a narrow lane twenty or thirty feet wide.

HOW WOULD NEW YORK LIKE SUCH A BOTTLING UP.

We have only to think for a moment of what New York would say if we asked her to close up her magnificent highways to the ocean and to be content to depend upon one miserable little canal. And if

one little, trifling canal is not enough for New York and the commerce of this country that pours eastward across the Atlantic to Europe and the world beyond, it is not enough for the commerce of the grand, magnificent valley of the Mississippi, with its twenty-one States, and its seven Territories soon to become States, and its twelve hundred and fifty-six thousand square miles of the richest soil on the globe, with its capabilities of production greater, vaster, and grander than those of all Europe.

THE RIGHTS OF THE GREAT VALLEY.

The valley of the Mississippi is entitled to some consideration in Congress, and it will have it. Not that I suppose any gentleman desires to do injustice at all to that immense valley. Every American, be he from the East or the West, from the North or the South, knows that that great valley is the heart and lungs and vitals and backbone of the nation. The East and the West, the Atlantic slope and the Pacific coast, grand and noble as they are, grand in their past history, and glorious in their future hopes, when compared with the Mississippi Valley, are but as the mere fringes upon the garments of this nation. Future hundreds of millions of population will be in that valley when but tens of millions will be on the Atlantic slopes and on the glorious far Pacific shores. Surely no one dreams of fettering the limbs of this young giant of the West and the South that holds the future destinies of this nation in his hand, and was marked by fate to wield for untold ages the scepter of empire for our continent.

If New York, and Philadelphia, and Boston, and Baltimore, those grand cities of the East, and San Francisco, with her Golden Gate and harbor in the far, far West, are entitled to their magnificent openings to the ocean unrestricted and unconfined, without locks or gates or bars, so is the great, glorious valley of the Mississippi. One might infinitely better say that London, with its grand commerce, its immense fleets, its magnificent navies that come up to its docks from all quarters of the globe, could get along without the Thames, that wide, open stream debouching into the sea, and could make shift with a miserable canal! That could much better be said than to say that the valley of the Mississippi shall be confined to such a miserable resource.

NATIONAL DIGNITY, AND GOOD OR BAD BARGAINS.

The gentleman from Iowa, [Mr. McCRARY,] who spoke yesterday ably, indeed, on the other side of this question, said that it was unworthy the dignity of a great nation to make a good bargain with Eads to secure by jetties an opening to the sea on so favorable terms, so low and so cheap. This is because Colonel Eads, one of the greatest of living civil engineers, with a world-wide reputation, has proposed to the Government to open the Mississippi to the sea for the largest vessels that float, *at his own expense*, by jetties; to charge nothing at all unless he shall fully succeed; that when he shall have given twenty-two feet of water continuously and permanently for one year, he shall be paid $1,000,000, and so on afterward for each additional two feet until he shall have reached a depth of twenty-eight feet. Unless he succeeds he is to be paid nothing. He takes all the risks, the nation none. He guarantees and insures the thorough and complete accomplishment of all he undertakes. The gentleman sees that this is a good bargain for the nation. It risks nothing and will gain everything. Eads, the great and gifted engineer, risks his all, his great reputation, his time, his labor, his own money and the money of his friends, who have such confidence in him and his skill, his judgment, and his genius, that they are willing to invest their millions under his guidance even in the sea. The gentleman sees clearly that the Government is making a splendid contract, and as he cannot possibly deny it, he cries out that it is unworthy the dignity of this nation to make a good bargain! Its dignity I suppose he thinks can only be maintained by making bad bargains!

WHICH COURSE IS BEST WORTHY THE DIGNITY AND HONOR OF THE NATION.

Sir, it is never unworthy the dignity of this nation to apply business principles to the conduct of its great public affairs. It is never unworthy this nation, or any other, to secure a good and honest bargain. I will use his language in another way: I will say it is unworthy the dignity of this great nation to turn the mouth of the Mississippi River, that grandest of all the rivers of the world, with its tens of thousands of steamboats navigating its main stream and its tributaries—it is unworthy the dignity of this great nation to shut up the mouth of that mighty river and turn it into a mere wretched mud-hole, compelling the fleets, the navies, and the commerce of the world, that come up that great valley, to creep and squirm and crawl in through a mere canal, instead of sailing or steaming up the great river direct from the sea, with their sails spread to the breezes of heaven, and their flags proudly flying as they ought.

NO TIME WILL BE LOST.

General Barnard tells us that it will take ten years to construct the Fort Saint Philip Canal; that not a ship will go through it in any event until 1884, ten years from now. Before that time has half elapsed, before more than one-quarter of it has elapsed, the largest sea-going steamers that ever plowed the ocean will go up the open river, if Eads succeeds. But should his plan fail, the exploration of the canal will be going on and not one moment's time will be lost, and the nation will lose nothing. Colonel Eads takes all the risks. If he does open the Mississippi to the Gulf and gives us another great river with the world's commerce on its bosom, then he is to be paid; but if he does not do it the nation does not pay a cent, and loses nothing, not even time; for all possible explorations, borings, soundings, investigations, studies of quicksands, and seeking for a fit site for a canal with some possible harbor, can go on all the time. The nation will have lost not a cent, not an hour, not a moment. Indeed it will have gained; for it is worth millions of dollars to the Government even to demonstrate that the opening of the mouths of the Mississippi cannot be accomplished.

JETTIES CANNOT FAIL. THE DANUBE.

But this work cannot fail. It has been tried and tested elsewhere. The army engineers of the world pronounced that the Danube could not be opened to the commerce of Europe and the world by jetties; but Hartley, that great and gifted engineer of Europe—not an army engineer, thank Heaven, but a civil engineer—a man of talent and genius, demonstrated that it could be; and when it was done the boards of army engineers had little to say. Now they try to show that the circumstances there were peculiar. Yes; and when the Mississippi shall be opened they will discover that there is something very peculiar at its mouth! Every time they prove to be false prophets they will say that circumstances caused their failure!

IMMENSE COST OF THE CANAL, AND ITS SUCCESS UNCERTAIN.

The estimates in regard to this canal project are worthy of a careful examination. Captain Howell, a young man who has been dredging and harrowing the mouth of the Mississippi among the mosquitoes for some years, states that thoroughly occupied as he has been with other things, hard pressed with work, he has not been able to give the proper time and examination to the subject, but that the work will cost $7,373,000. The board of Army engineers revise his estimates and find that he has forgotten all about fortifications to protect the canal; he has forgotten all about a harbor; he has forgotten two-thirds of everything; and yet they tell him that on his plan the cost will be $10,270,000. We are to bear in mind also the fact that such estimates by official engineers always have to be doubled before the work is done; you never knew an instance to the contrary, and you never will. Recollect also that the fortifications of that canal may cost ten or twenty million dollars, and that the harbor that is to be dredged and dug out may cost ten or twenty million dollars more; and it is cheap enough at that, if you have a great, noble, and secure harbor; for this nation can afford to pay anything that may be necessary to facilitate the navigation of the Mississippi. But it will be seen by going into these calculations that $50,000,000 may be sunk in this work, and then you do not know whether the canal will be at all a success; you know, indeed, that it will not be in any great degree, for it will be unworthy the magnitude of the interests involved and insufficient for the purposes for which it is designed; it inevitably must be.

A canal for sea-going vessels is but a wretched make-shift after all. That it is better than nothing is about the best you can say for it. It is not worthy to be named in the same century with an ever open river highway to the sea.

MUD-LUMPS.

The gentleman from Iowa, [Mr. McCRARY,] told us yesterday of the "mud-lumps"—those fearful "mud-lumps" that rise before his imagination and the imagination of other gentlemen like gloomy specters. He is afraid that "mud-lumps" will rise where the jetties are placed. I hope they will; I wish to Heaven that each side a "mud-lump" would rise five miles long, and I do not care if it be half a mile high; all the better. Then no jetties will be needed. If "mud-lumps" rise in the right place they are just the thing of all others that we need. The channel will flow beside and between them. The "mud-lumps" will be the best of jetties.

But what will be the effect if a "mud-lump" six hundred or one thousand feet long and ten or twenty feet high gets under your canal and heaves it up? Where will your commerce then be for a year to come? After the mouth of the Mississippi River has been allowed to become a mere mud-hole, so that no ship of any pretensions to size can get through it, and after your canal is built, if one of those "mud-lumps" which my friend from Iowa fears so terribly should rise and lift up his canal, where will he be? What will become of his canal? What will become of the commerce of the Mississippi locked up for a year or two until he can dig another canal?

Mr. McCRARY. Will my friend allow me to ask him whether he has any knowledge of any "mud-lumps" rising so far up the river as where the canal is proposed to be constructed? Do they not occur on the immediate coast?

Mr. LEWIS. The gentleman's imagination is convenient. He thinks "mud-lumps" will only rise where he wants them, or rather where the jetties are to be placed. Why, sir, if we were to place the jetties up by Fort Saint Philip the gentleman might still get scared about "mud-lumps." Those Army engineers, who have enlightened him in such a peculiar manner, would tell him "Beware of the mud-lumps; they are coming!" The gentleman asks me whether "mud-lumps" are to be found anywhere except at the mouth of the Mississippi. Why, sir, "mud-lumps" existed hundreds of centuries ago, just as the bar did, above New Orleans, and even far above Baton Rouge. There is no reason to suppose that "mud-lumps" will be found only along the coasts. Fort Saint Philip itself is only twenty miles above

the passes, where the river forks to run into the sea; and through those passes, above the passes, below the passes, you may find them.

LOCATION OF THE CANAL AND EVERYTHING CONNECTED WITH IT DOUBTFUL.

The gentleman does not know where his canal will be put; for General Barnard says in his report that he does not know where it will be placed. You do not know whether you will have a straight canal, as Captain Howell suggests, or whether it shall be made with curves, a winding, crooked, sinuous ditch, dragging its slow length along. You do not know whether its termini will be where Captain Howell suggests, or miles and miles away. The fact is, nobody knows much more about it than the alligators that live down there. General Barnard and other able engineers tell us that the whole thing must be examined; that examinations must be made for years; that there are quicksands in hundreds of places beneath the soil; and that the most elaborate and extensive investigations have to be made. No man living can at present know anything about where the canal should be placed, or what it will cost, or whether it can be made a success or not.

OBEY NATURE'S LAWS.

The jetty system, Mr. Speaker, is only carrying out the system of nature; it is only following the laws of the great Mississippi River as exhibited by itself. The river all the way from the mouth of the Ohio to the Gulf grows narrower and deeper on the average with every mile. Gentlemen would think that as it moves onward toward the sea it would grow broader, but it does not. On the contrary, between Cairo and the last one hundred and seventy miles of its course as a single stream it loses nearly half a mile of its width. From the mouth of the Ohio, one thousand and eighty miles above the Gulf, to the mouth of the Arkansas, about six hundred and seventy miles above the passes, the average width of the river at high water is 4,470 feet and its depth 87 feet. From the mouth of the Arkansas to the mouth of the Red River, three hundred miles above the passes, it has a width of 4,080 feet only, but a depth of 96 feet. From the mouth of the Red River to Bayou La Fourche, one hundred and seventy miles above the passes, the width has become reduced to 3,000 feet only, while the depth is 113 feet. From Bayou La Fourche to the passes, the last one hundred and seventy miles the river runs through a single channel, it has a breadth of only 2,470 feet and a depth of 129 feet. The river in its course of one thousand miles has lost 2,000 feet in breadth while it has increased in depth some 50 feet.

It pursues that course even in the passes. They hollow out their way to the sea and build up banks on each side, leaving a narrow opening to the sea. In the case of the Southwest Pass, the greatest of them all, it is only 1,200 feet wide and 60 feet deep. In the Southwest Pass nature has established the condition and proclaimed her laws. Nature in thousands and thousands of years has formed it into a channel 1,200 feet in width and 60 feet in depth. I propose jetties shall be placed there where the pass, as it meets the Gulf, spreads out like a fan. There establish your jetties 1,200 feet apart. The bill says 600, but Colonel Eads is willing to make them 1,200. I will at the proper time suggest that as an amendment to the bill. It will prevent collision between vessels going in and coming out. They can sail up and down, passing each other by scores and squadrons and hundreds, without fear of danger in any way. Place those jetties 1,200 feet apart, plant them strong, and solid, and firm enough, and nature will do the rest, and will give you 60 feet depth of water just as she has done above the bar. You will be carrying out the designs of nature, you will be carrying out the laws of the Almighty when you extend the jetty system, and carry it out to the width nature herself has ordained. There is certainty of success when you obey the dynamics and the natural laws of the river; the river always knows what it is about. The man who tries to make water run up hill will prove himself a fool, but the great engineer who acts in harmony with nature and in obedience to her laws will succeed.

CIVIL AND ARMY ENGINEERS.

The gentleman last on the floor, [Mr. HAWLEY, of Illinois,] told us Army engineers had succeeded thus far in the little undertakings they have had control of. He never knew of their making a failure. No, he never knew of their doing anything more than building ditches or fortification walls. What great work of the nation can you name that Army engineers have done? Take that magnificent suspension bridge at Niagara, did Army engineers build it? No. Did Army engineers place the Victoria bridge over the Saint Lawrence River at Montreal? No. Or a similar one over the Menai Straits in England? No. They did not believe in those things; but Stephenson, who built the one, and Ellet, who built the other, did. When a great bridge was to be flung across the East River at New York, one of the mightiest of undertakings, it was Roebling, a civil engineer, whose genius was called into action, and not any of our Army engineers.

I do not mean to underrate our Army engineers. I respect their many merits, their learning and science and fidelity to their duties. We all respect their esteemed chief; we all honor him, and the nation admires the great acquirements and distinguished abilities of Barnard and some few others. But when indiscreet friends speak of the opinions of a majority of a board of Army engineers as infallible, we resent the assumption.

THE RIVER WILL BE OPENED TO THE COMMERCE OF THE WORLD.

Such engineers pronounced the great bridge over the Mississippi at Saint Louis, with its great span of five hundred and twenty-five feet, impossible. But Eads built it, and there it stands, the pride and admiration of his countrymen. Now they are ready, some of them, to pronounce his magnificent scheme of opening the mouth of the Mississippi another impossibility. But it will be done, and the great river will be, like the Danube, opened by the genius of a master intellect to the ships and commerce of the world. The planters and farmers, the producing and creating classes, the merchants and business men of the Southwest and the West, should all demand that it be done speedily. They have waited and toiled and suffered long enough.

SPLENDID RESULTS TO FOLLOW.

An open river, with the other great improvements to its navigation that must follow, means wealth, prosperity, and happiness to the people of the whole of the great valley. It will attract immigration, will greatly cheapen transportation, will increase the value of every product, will double the profits of the planter and farmer, will make their lands valuable, will quicken trade and commerce, will give new hope and life to our mechanics and our manufactures, and will build up our cities.

OUR DEMANDS ARE JUST.

Surely we are reasonable in asking that the Mississippi shall be made thoroughly navigable at all seasons and always for vessels of all classes, not only at its mouth, but as far up as Memphis, at least, if not higher. To accomplish this may require the labors and struggles and combinations of many years, or of a life-time; but there must be no cessation and no surrender until it is done. The right is on our side; and, sooner or later, the right will ever triumph.

Improvement of the Mouth of the Mississippi River.

SPEECH OF HON. STEPHEN A. COBB,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

June 4, 1874.

The House having under consideration the bill (H. R. No. 3342) for the improvement of the mouth of the Mississippi River—

Mr. COBB, of Kansas, said:

Mr. SPEAKER: With the incoming of the Forty-third Congress a new and important factor was added to the forces of this Government. The increase of fifty members in this House over that of its predecessor, the crop of the census of 1870 so to speak, has already been felt in the legislation of the nation. That increase is for the most part from the West. Its tendency is, and its effect surely will be, if I may coin a word for the expression of the idea, to *westernize* the legislation of the country.

I grant you, sir, that no relative increase is found in the Senate by reason of that census. I recognize and respect the fact in our civil compact which gives to Rhode Island an equal voice in the Senate with the great Commonwealth of New York. I recognize and respect the order of the fathers which accords for all time to the few thousand people inhabiting the sterile soil of the twenty-one hundred and twenty square miles called the State of Delaware equal privileges in the Senate with the millions who in the near future will dwell in the fertile vales and uplands of the eighty-one thousand square miles of Kansas or the two hundred and seventy-four thousand square miles of the imperial domain of Texas.

But, sir, the idea, correct as it may be, which gives equality to the States represented in the other end of this Capitol is not so grand as that upon which this House is based. The one is the idea of States and of equality between the States; the other is of the essence of the idea of men and of the equality of individuals. The one partakes of the nature of that government which subordinates the rights of the citizen to the claims of the State; the other makes the chief object of government protection of personal rights. Protection of personal rights is the granite out of which is built the massive and enduring column of the Republic; equality of States is only the gilded trappings, the flutes and cornices, the ornaments and appendages which lend symmetry and beauty to the structure. Without the one the nation—less fair, it is true—would endure; without the other there would be no republic. When the gentleman from Massachusetts [Mr. BUTLER] a few days since, in reply to a question, in a jocular way styled this House "the higher and more numerous body," in my opinion he builded not better than he knew, but better than he thought. He spoke a literal truth. Sir, shall the time ever come when the House and Senate will be arrayed against one another in a determined conflict, the issue here will be but a repetition of England's history in this respect. The Senate, like the House of Lords, would emerge from the struggle shorn of many ancient rights and curtailed in power and influence in the nation.

To this fact, Mr. Speaker, the Senate is not blind. It has been taught wholesome lessons upon the subject even in our day. You, sir, and the country are familiar with the attempt of the Senate to originate and pass general appropriation bills during the administra-

tion of Mr. Banks as Speaker of the House. Notwithstanding it was in the midst of the wildest party excitement the country ever witnessed, those bills when they reached this House were sent to the table at once, and the House by universal consent adhering to the traditions and immemorial usage of the Government that all money bills must originate in this House, proceeded to originate and pass its own appropriation measures, which the Senate approved. Another case. Two years ago a bill was sent from this House to the Senate proposing some little modification in the revenue laws. The Senate took that bill and amended it by revising the whole revenue code. The House, justly jealous of this specious attempt to subvert its ancient rights, at once rebuked the assumption of the Senate and settled forever, it is hoped, the extent to which the Senate may go in the way of an amendment to a revenue bill.

Sir, let it be clearly demonstrated that the House asks certain legislation in no uncertain voice, and that legislation will sooner or later be assented to by the Senate. Hence I say a new and important factor was added to the forces of the Government with the opening of the Forty-third Congress, one which is sure to be speedily felt in public affairs—as they affect what is styled western interests.

Upon two great measures of vital importance to my section the House has already passed. The West demanded action of some sort in relation to the regulation of fares and freights upon railroads. The McCrary bill is the product of that demand so far as this House is concerned. What may be the fate of that bill in the Senate I cannot predict. But this I can predict with safety: Sooner or later the McCrary bill, or some other bill which will probably be more stringent in terms than the McCrary bill, will be enacted into a law to regulate the interstate commerce of railroads. The House of Representatives of the United States, backed by an overwhelming public sentiment, has decided that Congress has the constitutional power to regulate commerce between the States by rail, and that it is *expedient* to exercise the power. This assures the law.

The second measure is that of the finances. A majority of more than two to one in this body has determined the policy of the country upon this question. The united constituencies of the western members upon this floor almost to a man, taught by experience instead of bookish theories, believe that the money made by the nation in the midst of civil war has been of great benefit to them in peace; that it is only just that debts contracted with greenbacks as legal-tenders should be paid by the money in use at the date of the contract and solely had in view when the contract was made; that the great and unprecedented wants of the country, superinduced by new and marvelous industries and by an activity in business affairs never equaled or approached in any former time by any people, demand an increase in the medium of exchange of the products and labor of the country, have through their representatives decided that there shall be no contraction of the circulating medium at this time. While they would guard with care and tenderness the honor and plighted faith of the country and compel every citizen to deal justly with his neighbor, they will not permit exactions of the people beyond the terms of the obligation; they will not require that the dollar agreed to be paid in time of prosperity and hope should now in the days of depressed industries, financial ruin, and despair be paid in a different and more costly material than that in use and had in view when the debtor agreed to pay it. Mr. Speaker, in the passage of these two measures the House has spoken the people's will, demanded with force and purpose, and foreshadowed what will surely be the law of the land.

One other measure of great moment to the West remains to be passed upon by the House; one without which a vast portion of the industries of our great valley will remain depressed and stagnant. The Mississippi River must be opened to ingress and egress of ocean tonnage. To the people whom I in part have the honor to represent upon this floor no question can be sprung in this Congress so vital to their interests as this. I came here instructed over and over again to urge this great measure in season and out of season. I have kept the faith. At the very outset of this Congress, in an informal meeting of western members called to consider western interests, I introduced a resolution in terms as follows, which I am sure ought to be made the policy of the Government without delay:

Resolved, That the Government of the United States ought, as its first great work of internal improvement, to permanently improve the outlet of the Mississippi River, either by the construction of the Fort Saint Philip Canal or otherwise, as competent engineers may decide most feasible, so as to admit the heaviest draught seagoing vessels into its channel at New Orleans, at the earliest practicable moment.

Mr. Speaker, the bill under consideration is one proposing to accomplish the end sought for in this resolution, and as such I welcome it as a friend. I am for formal action in the matter, and in any question of leadership do not partake. What interests the jetty project fosters, and what the canal plan supports, I do not care. I follow any leader who will guide me to success, with an abiding confidence that success means to build up the industrial interests of Kansas and the West, whatever it may do toward making or marring the interests of small localities or men. My wish is, now that the measure is before the House, to select the best method of accomplishing the great work. To these two views of this measure, then, I beg the attention of the House for the brief time allotted to me in this debate, namely: First, its importance to the agricultural and productive interests of the valley of the Mississippi and its western tributaries; and secondly, the feasibility of the project in some form.

In presenting the question of the importance of the measure to the House I know I shall be pardoned in taking my outlook from among the new and happy homes, the fertile farms, the busy workshops and factories of the people who sent me here.

And first, Mr. Speaker, a correction of terms as to localities. Although so called, I am not a western Representative, nor is the legislation sought, and that which I have spoken of and approved, in reality western legislation. Bisect the United States, not including Alaska, longitudinally and you will bisect the State of Kansas, throwing more than seven-eighths of its population into the eastern section. Bisect it latitudinally and you still bisect the State of Kansas. So that although I to-day represent in common parlance a frontier western State in this House, in reality and literally I belong to no section, but am of the central State of the Union. In fact, I reside in the eastern half of the United States. So vast and extensive is the territory of my country that one must almost think twice in order to comprehend its volume. One must think oftener than this and keep well on his guard not to be misled by a term in common use, for even I am not from the West—I have not reached that yet.

Mr. Speaker, a glance at the map of the country shows the Mississippi Valley as an inverted pyramid with its apex resting on the Gulf of Mexico and its lateral lines stretching outward at irregular distances from the Atlantic to the sources of the Ohio and its tributaries on the right, and to the left along the Red, the Arkansas, and Missouri Rivers to their sources in the Rocky Mountains, its base extending away from Lake Erie on the east along the line of the British possessions to Leech Lake, the upper springs of the Missouri, and the great Yellowstone Park in Montana. The region of country thus described in quantity, variety, and quality of resources has no equal on the globe. In minerals of the useful sort for man the supply is without limit. It contains a greater breadth of arable land in one body than is to be found elsewhere on the earth. Of the forty million souls in the United States, eighteen millions dwell in the Mississippi Valley. Near the apex of the pyramid and stretching northward toward its base are the only cotton lands of the world. That is to say no region of country now known produces this great staple of the quality, texture, and usefulness of that produced in this belt of country known as the cotton belt of the United States. North of this cotton belt are the great farming States of Ohio, Indiana, Illinois, Wisconsin, and Minnesota, lying mostly to the eastward of the great river, with their graineries which yearly groan beneath the weight of cereals and products of agriculture of all kinds; States possessed of a soil so wealthy in producing powers as to be capable under proper tillage of supplying food for all the starving millions of the earth. To the west are the newer States of Arkansas, Missouri, Iowa, Kansas, and Nebraska, and the Territories of Colorado, Wyoming, Montana, and Dakota, supplemented by that model of countries the Indian Territory, which together with Northern Texas and Western Kansas yearly send out in increasing numbers from their great pastoral regions the beeves which supply the continent.

Mr. Speaker, a word descriptive of this pastoral region of the Southwest. It extends from the Gulf of Mexico northward through ten degrees of latitude, and possesses a climate of such mildness as to require no shelter for domestic animals throughout the year. Along the margin of its streams and rivers, which are numerous and always filled with clear running water, are found wide bottom lands covered with the only timber in the country. The rest is unbroken prairie of plains and undulating surfaces of valleys and hills, carpeted always in its wild state with the herbage of the plains, buffalo-grass, a short, fringy grass possessed of wonderfully nutritious elements upon which the buffalo subsists in all seasons of the year, winter as well as summer. This plant seems to have been fashioned by nature solely for the support of these wild cattle of the plains; for it is a fact which all experience proves, that as the buffalo are driven westward by the advancing column of civilization the eastern line of the buffalo-grass region recedes with them. But the region is a region of grasses of spontaneous growth, and upon all which spring up, whether buffalo or prairie grasses, or those planted by the hand of man, the vast herds of cattle and horses of the Southwest thrive.

These pastoral lands of America in my opinion will forever remain the herding-grounds of the continent, out of which will annually be poured an immense supply of animal life for the subsistence of man. This animal life must seek the markets of the world not like our cereals and other productions of the soil through the nearest sea-port, but northward in a climate of sufficent rigor to admit of slaughtering and packing. Experience has shown that about 39° north latitude is as far south as beef and pork can be profitably packed on a large Cincinnati, Saint Louis, and Kansas. I quote from a recent memorial scale. Hence the immense business of this sort done in the cities of of the Kansas City Board of Trade a paragraph descriptive of this country. Says the memorial:

It is the only natural pastoral region in North America, where, from time beyond the knowledge of this continent, have been subsisted the countless herds of aboriginal cattle, exceeding in number the domestic herds of the globe. These are now being supplanted by the cattle of civilization. The present season has brought together for market, at the several points in Kansas, on the feeding-grounds of the Kansas City stock market, over $7,000,000 worth of grass-fed cattle alone.

And the soil of this country, together with that of all the States and Territories west of the Mississippi, in fertility and variety of production, in wealth and power of natural resources, does not yield to any of the States east of the river.

The State of Missouri it is conceded is the richest in minerals of any State in the Union. Its mountains of iron, its broad scope of coal lands, and its lead mines are without rivals upon the map. The region of the Mississippi Valley so described embraces an area of about one million square miles, or about one-fourth of the entire area of the United States and Territories. Of this area two-thirds lie westward of Saint Louis. I do not overestimate the facts when I say the increase of the population of this great valley will for the next twenty years be one million souls annually.

Mr. Speaker, is it not a striking fact, worthy the rapt attention of statesmen, that a region so vast as this great valley with its millions of busy men, its resources so great, its wants so numerous and exacting, its intelligence so varied, diversified, and extensive, its success so marked in all matters of business, has no open highway to the sea? Yet such is the fact. The tea and coffee, the spices and exotics which supply the people of my section reach them through the port of New York.

Leavenworth, the chief city of Kansas, is separated from the Atlantic on the east by eighteen degrees of longitude and from the Gulf of Mexico on the south by nine degrees of latitude. It is barred from the eastern coast by broad rivers, extensive forests, and high mountains, impassible except by long, devious, difficult defiles, steep ascents, and costly tunnels; while between it and the southern coast no obstacles of any kind intervene. Notwithstanding all this, however, this state of fact exists. The coffee used on the breakfast-tables of that city this morning, the silks worn by her ladies to-day, and all the imports which minister to the wants, the taste, or the luxury of her citizens came by way of our great eastern port, through tunnels, over mountains, across prairies, lakes, and rivers. And why? Simply because the Mississippi Valley has no sea-port.

Another view. The beef and pork product at the great packing-houses of Kansas, the wheat and corn raised by her farmers, all the articles of exportation, for the most part raised from the soil or manufactured in her factories, or from whatever source, go out to the sea through the artificial gateways of the East, instead of by the natural outlet of the Gulf of Mexico. The result is most of the crops raised on our fertile lands will not bear exportation; and those which are exported are consumed in freight by the time they reach the market of destination, while the price set upon our imports is far in excess of what it ought to be. The consequence which follows is plain. Living on the most fertile spot of the globe, where it is literally true that the farmer has only to "tickle the ground with his hoe and the soil will laugh with abundant harvests," our people do not thrive as they ought, and their whole attention is correctly directed to find and apply the remedy for the evil. Hence the farmers' movement of the West—cheaper transportation. Can any one glance at the picture here drawn and suppose for a moment that this movement is a temporary call of unrest? If he does, let me assure you, Mr. Speaker, he is indeed mistaken. What is to-day only a slight ripple of the waters of discontent will next year have swelled into a gale, increasing in fury with the increased force of a million helpers annually added to the motive-power behind the storm-cloud.

The people who reside west of the Mississippi cannot afford to cross that stream to find a market for their products, or to obtain the luxuries and necessaries which their country does not afford. And I have shown that two-thirds of the valley is to the westward of the river. When you take into view the fact that the States and Territories west are the ones in which the increase of population will be mostly found, is it not manifest that the cry for cheap transportation cannot be stifled? Is it not plain that no legislation relative to railroads, however wise and wholesome, can answer the call which will go up for cheap transportation—for a home port.

Mr. Speaker, when I contemplate the magnitude of the interests involved, I am amazed that the cry for cheaper transportation, for a home port, had not long since been raised and become a universal demand throughout the West.

Only the fact that the nation for the last fifteen years has been in the throes of civil war and the disorders which follow such convulsions; only the fact that the people of the great valley are possessed of a patriotism so exalted that they subordinate interest to love of country, and that they fully understood the perplexities in which it would involve the country in those troublous times to have made the demand in this behalf which they now make, can account for the patience and forbearance which they have exercised all these years. History tells you they were not unadvised of the importance of the question when the war broke out in 1861. Sir, when it became a demonstrated truth that a great peril menaced the integrity of the Government and threatened to transfer the outlet of our great river to a foreign power, the hardy sons of the whole West swarmed from their farms and their work-shops, their counting-rooms, their offices, and their pulpits to the defense of their country with the slogan and war cry "that the waters of the Mississippi should go unvexed to the sea;" and, sir, by their valor and devotion, displayed on so many historic and memorable fields unvexed to the sea those waters go.

Mr. Speaker, I should do wrong to pause here. Although of western origin, this war-cry was confined to no section, but East as well as West all felt that the chain that for months barred our steamboats from southern waters at Columbus, Kentucky, in the early days of the war and by which puny men expected to reverse the laws of nature, would be an insupportable burden upon the neck of every citizen of the Republic should such a fact be made perpetual. The closing of that national highway by armed enemies of the country was as offensive to you of the East as to us of the West.

And here let me be simply just. I do not intend to array the sections. That the East has prospered and the interests of the West have been neglected; that the Government in its Executive Departments is scarcely represented anywhere westward of Ohio; that executive marks are in fact obliterated beyond the Mississippi; that infinitely the greatest majority of representatives in all these Departments is eastward of the Alleghanies is the fault of no section, no party. For the last quarter of a century the whole statesmanship of the country has been employed in solving the problem of human rights and not attending to the material interests of sections.

In that high duty the West has borne its full share, and claims an equal division of the glory which arises from great success. Only this I say, now that the great question which divided the country into a North and a South is removed by the abrogation of the evil; now that the Union is restored and rehabilitated; now that Ku-Klux disorders on the one side and misrule on the other have to a great extent ceased and the bitter sorrows of the war been assuaged by time, which ever brings "healing on its wings," some section, some party, will be responsible if this state of things shall continue and relief is longer denied to us. We come to arraign no one for the past. We come, sir, in a spirit of respect and fraternity, and ask that our present demands be met in like good-will, confident that we do not ask in vain.

And here, Mr. Speaker, pardon me the diversion while I express my profoundest regrets at the tone of the speech made by the gentleman from Pennsylvania [Mr. CLYMER] a few days since on this floor. I do this, not because I desire "to obtrude my head into that conflict," in the language of the other gentleman from Pennsylvania, [Mr. KELLEY,] but because I am deeply impressed that such partisan harangues are detrimental to the material interests of the country. Sir, the great heart of this nation throbs in symphony with the Union, and the party which he arraigned in such bitter invective holds that great heart because of its devotion to the Union. The material prosperity of the nation can be advanced only by forgetting the sad sacrifices of a fratricidal war, and it is impossible to remind the country of "innocent men" who languished in prisons and fortresses in those days when "laws were silent," by order of the President and Secretaries, except you recall not the brave foe in front but the dastard traitor and spy in the rear, abhorred alike by North and South, by God and man. And when you speak of a woman hung, you thrust before the mind the form of one not beautiful in personal grace, but whose name to-day stands in equal rank with the Father of his Country, as its saviour, for whose murder the woman died. All these reminders only serve for purposes of evil. Material growth can only come by a union of all parties, and so long as you thrust forward the gaunt ghost of that political organization whose funeral has so often been celebrated by the American people, you only stimulate the bad men in the dominant party to seek to retain their hold of power by old party cries, instead of making it necessary for the party to keep abreast the demands of the people to preserve its power. Hence, I deeply regret that speech of the gentleman from Pennsylvania. On the narrow platform of partisan success it is welcome; on the broader stage of public welfare, such a speech from so high a source is a public calamity.

Mr. Speaker, I have no right to speak for my party or my section. I do not pretend to claim such a distinction. But let me say to the gentlemen on the other side of this House, many of whom were upon the other side in the recent conflict of arms between the sections, we want peace and fraternity, we want a united country in substance as well as form. Speaking for myself alone, having fully considered the import of my every word, I am ready to-day to vote for any measure of general amnesty which you of the South deem necessary to the public welfare without condition. I want every citizen beneath the flag of my country equal before the law, without regard to past political offenses or past condition of life. Equals to equals will always award justice. Hence the civil-rights bill with me does not hinge upon general amnesty, or general amnesty depend upon civil rights. I am ready to do right at any time.

Mr. Speaker, turning from that which is general to that which is special, let me ask the attention of the House and the country to the material victories which await the Commonwealth whose Representative I am by a proper improvement of the Mississippi River and the permanent establishment of a reliable and adequate port for vessels of all tonnage on or adjacent to the Gulf of Mexico. The State of Kansas, as I have shown, is pre-eminently an agricultural and pastoral State, and the great majority of her citizens will always be engaged in one or the other of these pursuits. She cannot embark in the carriage of the products of other people because she is an inland State. She does not expect to rival many of her elder sisters in the business of factories, workers of metals, or of wood. Her wealth is in her soil. Her people, part and parcel of the American family, with tastes as refined and wants as numerous and diversified, will always demand what their State will not produce. She must exchange her productions for her imports. Hence the matter of transportation of her products to the sea, the world's market, will ever be a question of great moment to her active and prosperous citizens, and the study of how to lessen the costs of transportation will always enlist the active and best thought of her statesmen and lawgivers. Her wishes will be

answered in this respect when ocean-going vessels shall be put the nearest possible to her during all seasons of the year. This is clearly by way of the Gulf of Mexico and the Mississippi River. Improve the outlet of the river as contemplated in the resolution which I have recited and you have taken the first great step in the right direction. Next improve the channel of the river so that a ship drawing twenty feet of water may moor at the wharf of Memphis and you will have accomplished for Kansas and the West a work whose value to the nation is illimitable. Do this and you have doubled the value of the vast acres of Kansas. Do this and no prosperity of the past which has visited my State will approach that which is in store for her. Do it speedily and one million souls will not comprise all the inhabitants of that rising Commonwealth when the marshal of 1880 shall number her hosts in their happy homes on the census-roll of that decade. Sir, were this done, every acre of the district in which I live would be practically placed within four hundred miles of tide-water. I quote the following from the memorial of the Kansas City Board of Trade, which I have referred to in support of my views. Discussing this subject, the able writer says:

Then with the obstructions at the mouth of the Mississippi removed, or avoided, ocean steamers could land at Memphis just as freely as at New Orleans, and grain be loaded direct from the elevators and shipped to either New York, Philadelphia, Boston, or to Europe; and the flour made from our winter wheat, equal to any in the Union, be shipped by the shortest route to the West India and South American markets.

It would practically place our grain port within four hundred miles of the mouth of the Kansas, and give us both for export and import the lowest rates, and uniform at all seasons.

Taking the same rates of charges on freight by river and rail, as we have used above, we could by this proposed route place grain in Memphis at 15 cents, in New Orleans at 29 cents, New York at 30 cents, and Liverpool at 35 cents per bushel; or even by rehandling at New Orleans in addition to Memphis, it would only make the cost of our grain at New York and Liverpool 35 and 40 respectively, or a saving over present rates to Europe of 36½ cents for every bushel of the grain of Western Iowa, Western Missouri, Kansas, and Nebraska.

What is herein asserted about grains is true of course in like manner of all freights; and what is true of Kansas in this respect is true of all her neighbors—

From one, learn all.

Sir, to dwell longer on this subject to impress its importance to my State and section upon your mind and that of the country is to offend against the good sense and patience of this House. I pass to consider how the end we seek may best be accomplished.

Mr. Speaker, this bill and the substitute reported by the gentleman from Iowa in behalf of a minority of the Committee on Railways and Canals embody two projects which have long been discussed for the improvement of the outlet of the Mississippi—the one known as the jetty scheme and the other as the Fort Saint Philip Canal. Both of these plans have able and honest advocates among scientific men who have studied the subject. The former—the jetty plan—is the one proposed in this bill. It comes to us with the high sanction of the great engineer whose monument for all time is the Saint Louis bridge. It has the approval and ardent support of the exchange and press of that city as well as many warm friends among all classes deeply interested in the question. Ay, more than this. So confident are the gentlemen who urge this scheme upon Congress of its entire and absolute success that they propose to put the large moneys it will cost into the work with the distinct understanding that nothing shall be paid them in case the scheme is a failure. Upon its face the proposition of Mr. Eads and his associates to the nation is to the last degree favorable, and were it a matter about which the country could afford to experiment and drive sharp bargains I should not hesitate to give it my support at once. But, sir, the opening of the Mississippi River to ocean commerce, and that speedily, is so vital to the interests of my State, as I have attempted to show, that I dare not for one moment enter upon the unknown field of empiricism if there be any sure cure for the ills which beset us. The question of the expenditure of a few million dollars more or less in the prosecution of the work is to my mind but a feather in the scale, so vast and overtopping are the interests at stake.

Mr. Speaker, we must have these in the order named: First, *certainty of success;* and second, *speed in its accomplishment.* To attain these in the order named no considerations of personal respect for men, no niggardly fears of lavish disbursements of public moneys when another and cheaper way of doing may be possible, shall swerve me. What I want and will have, if I can, is to put my State practically within four hundred miles of tide-water, or as near this figure as can be done, and that as soon as science, money, and men can do it.

And first the question of certainty. The proposition contained in this bill more than suggests a doubt of its feasibility. A body of worthy and respectable gentlemen come to this House and offer to undertake a work of great national moment not for so much money to be paid absolutely, but contingently in the event of success. This, I say, is experiment, so treated by the proposers, and so expected to be treated by Congress. If the proposal is accepted and is a success, I do these gentlemen no wrong in saying that they expect to reap mammoth profits from the contract, the same as the attorney who works for a contingent fee.

And why, Mr. Speaker, do they approach Congress in this way? A slight review of the history of engineering at the mouth of the Mississippi answers this question. I do not think I overstate the facts when I say that all disinterested engineers who have studied the phenomena of the mouths of the Mississippi are opposed to the project so far as certainty of success is concerned. For myself I see no way for any one who has studied this document which is upon the tables of all the members (Executive Document No. 220, in relation to a canal connecting the Mississippi River with the Gulf of Mexico) to approve of the plan proposed in this bill. From this report it is very clear that the eminent engineer in charge of the work at the mouth of the Mississippi River, Captain C. W. Howell, can see no relief for himself from his sisyphean task of dredging the channel except through a ship-canal. In this view he is supported, with one exception, by the eminent board of engineers of the Army, appointed in compliance with a resolution of this House of March 14, 1871. This view is clearly supported by Messrs. Humphreys and Abbott in their Physics and Hydraulics of the Mississippi, when they recommend as the more feasible plan the tedious process of dredging now in vogue. Say they, after a full discussion of the jetty plan:

The plan of stirring up the bottom by dredging harrows or scrapers over the bar is no doubt the most economical and the least objectionable.—*Physics and Hydraulics of the Mississippi*, page 456.

Add to this the fact that more than twelve years after that publication of these views by Captain Humphreys, the principal author, he, as the eminent Chief of the Engineer Bureau of the Army, reaffirms them in his approval of the plan of the ship-canal submitted by Captain Howell. Hear what he says:

Respecting the application of the jetty system to the improvement of the channel at the mouth of the river, the board, Colonel Barnard dissenting, reports adversely both as to the difficulties attending the constructions and the cost of the system.

After a careful investigation of the question of applying this method of improvement to the mouth of the Mississippi River, I am of opinion that it does not present, either in its constructions or cost, superior advantages to the canal plan. One of the chief objections to the jetty system is the unavoidable necessity of constantly extending the piers in the open sea, exposed to the full force of storms.

And here I beg the House to recall what is said by General Humphreys upon this subject of the extension of the jetties annually. This is what he says:

The depth of twenty-one feet thus obtained must be maintained by the annual extension of the jetties seven hundred feet into the Gulf, and the reduction of the mud-lumps by suitable machinery whenever they begin to appear. This rapid extension of the mouth of the pass into the Gulf would tend to increase the volume of the shorter passes at the expense of its own, and it would eventually be necessary to resort to another pass for the continuation of the plan.—*Physics and Hydraulics of the Mississippi*, page 456.

Again, in Executive Document No. 220, General Humphreys says:

The conclusion is inevitable; the jetties must be extended annually at the same rate that the bar is advancing if we intend to maintain permanently the same depth upon the bar.

If the depth to be maintained is twenty-seven feet at low water or twenty-eight feet at high water, it will be found by a similar process that the annual advance will not be less than twelve hundred feet.

But, Mr. Speaker, I have neither time nor scientific knowledge to intelligently discuss the objections to this bill in detail, to show why jetties are a success at the mouth of the Danube and a failure at the mouth of the Rhone and what forces operate at the mouth of the Mississippi to make them either a success or a failure. This which the board of engineers says is sufficient for me. I quote from Executive Document No. 113, page 75:

The difficulties at the mouth of the Mississippi, so far as concerns the improvement by jetties, resolve themselves into three sources.

1. The absence of a littoral current.
2. The yielding nature of the banks and shoals.
3. The abundance of deposits.

The first and third combine in the yearly and rapid extension of the bar, and compel the works of improvement to continue at a heavy annual cost until their entire abandonment.

The second makes their construction difficult and their maintenance improbable, unless deeply founded at a very heavy expense.

I only add this: From all I have read upon the subject, from a careful study of scientific reports, from personal knowledge to some extent of the country about the mouth of the Mississippi, from the effect it seems to me that must arise to these jetties from the mud lumps so well described by Humphreys and Abbot, on page 452 of their Physics and Hydraulics of the Mississippi, I conclude that I shall be recreant to my constituents if I sanction by my vote a measure fraught with such interest to them whose chances of success is so problematical, provided a surer method can be had.

I adhere to the plan of the Saint Philip Canal. That this project involves a large outlay of money none deny; that it can be made a success none deny. Even Colonel Barnard, who dissents from the majority of the engineering board on the jetties, says: "I do not doubt the entire practicability of the canal construction." He thinks the majority report, that no "extraordinary engineering difficulties need be apprehended," underrates the real difficulties to be anticipated; which is undoubtedly true. Colonel Barnard's objections, in a word, to the canal project is as to details of execution and not to its feasibility.

I adhere to this plan of improvement because, first, it is a sure plan, and second, it is just as speedy in execution.

It is sure, say these authorities. First, Benjamin Buison, State engineer of Louisiana, as early as 1832; second, L. Poole, of the United States engineers, and Captain W. H. Chase, who elaborated the matter and furnished specifications for the canal as early as 1837; and, third, R. Montaign, a civil engineer, revived the subject and gave it careful study; and, lastly, Captain C. W. Howell, whose plan receives the sanction of the most eminent board of engineers this country ever produced, in the report submitted to this House in the document

I have referred to, to all of which there is no dissent. And, Mr. Speaker, why should there be a supposition that an earnest effort in this direction will fail? After the triumphs of engineering which our age has witnessed, can it be possible that the art will find a Waterloo in the Saint Philip Canal? This will be the story, will it not? At Suez and Port Said engineering skill hollowed out harbors, and then, taking fresh water from the river Nile and salt water from the Red and Mediterranean Seas, it led these waters through separate paths, over trackless deserts, through morasses and lakes, into hills where the excavation in some places was eighty feet in depth, in all a hundred miles from sea, making a highway for the heaviest ships, and married in indissoluble bonds the continents of the old world, but failed at the insignificant ditch of Saint Philip? Sir, it is simply ridiculous. What Lesseps accomplished, Howell and his able associate can accomplish if it shall become necessary. They can build the Saint Philip canal, and the country could well afford to pay for it what the Suez canal cost if it were not to be had at a cheaper rate. In importance of results Saint Philip is little behind Suez. The one links continents; the other will link the commerce of the Mississippi Valley with the sea in its natural way.

Mr. Speaker, the relief afforded to us will be just as speedy by the canal as by the jetties, if successful. In proof listen to this from the text of the bill:

> Unless the said Eads and his associates shall secure twenty feet of water, as hereinafter provided, within thirty months of the date of the approval of this act, Congress may revoke the privileges herein granted, and cancel the obligations herein assumed by the United States. And Congress may revoke the privileges herein granted, and cancel the obligations herein assumed by the United States unless said Eads and his associates shall after securing twenty feet of water, secure an additional depth of two feet during each succeeding year thereafter, until twenty-six feet shall have been secured, and two feet additional, or twenty-eight feet, within twenty-four months after having secured twenty-six feet.

Think of it. The mouth of our great river transferred to the corporation created by this bill and thirty months' time given to obtain twenty feet of water on the bar—the same depth which Captain Howell claims he can obtain by his dredge-boats—and eight years and eight months to obtain the requisite depth of twenty-eight feet. Mr. Speaker, the canal can undoubtedly be built in less time than this, and I protest in the name of eighteen millions of my countrymen, so vitally interested in an early outlet for their products to the sea, against embarking in an experiment which may lose them so many years of valuable time. Another view, and I have done. The method of this bill is wrong. If the jetty system can be made successful for creating an open river mouth, then let the work be done by and in the name of the Government. Do not, I beseech you, so lower the dignity of this mighty people as to farm out a work of this kind upon a contingent fee and make the Government a party to an act which would constitute the crime of champerty if done by one of its citizens.

To conclude, Mr. Speaker, let Congress give us the Saint Philip Canal and improve the Mississippi River, that ocean-going vessels may visit if they choose the mouth of the Ohio. Make it possible, and they will soon become hourly visitors at the wharves of some great city below freezing point on the Mississippi, in the vicinity of Memphis. This done, no panorama of the future of my State which I can picture to your imagination will equal the reality. Endowed with nature's resources to a degree that is marvelous; peopled by men and women in whose veins courses the heroic blood of the Puritan and the Cavalier, its valleys and plains dotted with nestling villages and towns, no one of which is without its church and its schoolhouse, possessed of a civilization when its waters cease to be troubled rare in its refinement, wholly Yankee in its activity and enterprise, who can predict the future of such a Commonwealth? And who among you of this House can refuse to us the grand possibilities which open to the West when our great river fulfills the intention of Providence and becomes an ocean highway? I await the response in your votes.

Civil Rights.

SPEECH OF HON. E K. WILSON,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

June 4, 1874.

The House having under consideration the bill to protect all citizens in their civil and legal rights—

Mr. WILSON, of Maryland, said:

Mr. SPEAKER: I do not desire to enter upon the high plane of constitutional law involved in this measure. It is rather my purpose to mingle with the skirmishers who contest the outlying regions of expediency. Indeed, it now seems futile to do more than protest against the excesses of the party in power. Flushed with past success in revolutionizing our fundamental law, inspired with the hope of consolidating their party strength by the still more slavish subjection of their new adherents, and invested with a powerful momentum by the natural recoil from the one extreme of secession, the republican party is rushing with the speed of a torrent into the opposite extreme of imperialism. Thus again has one extreme begotten another, each in its own way having the negro as its chief corner-stone. To talk to them of States-rights and limitations of Federal power is to provoke a smile of ridicule or a sneer of contempt. To enunciate the sentiments of the once revered founders of our Government, even in their own language, is to elicit the approbrious epithet of "pestilential heresy." The tenth amendment of the Constitution, which is only the doctrine of State-rights formulated, is with them abrogated by the fourteenth. The power of Congress being limited only by necessity, as even our reconstructed Supreme Court has solemnly adjudged, and we being necessarily the judges of that necessity, all restraints practically vanish, and Congress becomes at once an imperial, omnipotent parliament, with the power to name a dictator, or, as phrased by the gentleman from Massachusetts the other day,) "to take the shirt from your back," if it choose.

Archimedes only wanted a foot-hold to move a world. Give to our modern political engineers a general phrase in the Constitution, and the magic art of construction is at once made to topple over the once admired fabric of Government, built by our fathers upon the safe foundation of local self-government in the States. But more startling than the conception of the Syracusan philosopher is the skill of our modern architects. He required at least a substantial fulcrum for his mighty lever; they only want the shadowy basis of a negation, upon which to build a vast pile of civil and criminal law. A denial to the State of the power to abridge certain fundamental rights of the citizen is made the basis of the power of Congress to invade the States, and to regulate by laws with heavy penalties almost every conceivable right and relation of person and property. For if this law is based upon sound reasoning and construction, Congress has, by parity of reasoning, the same right to legislate upon all the innumerable interests of "life, liberty, and property," also guaranteed in the fourteenth amendment as against the States, and to enforce such legislation by appropriate penalties. Then, indeed, is the high road to a consolidated despotism laid open. Then do States exist only by sufferance; their governors can at pleasure be made no more than petty proconsuls, and their Legislatures reduced to insignificant municipal councils. Such a *reductio ad absurdum* will not stagger our republican friends at all, for it is only that *reductio ad imperium* for which they seem to long.

But, Mr. Speaker, whatever may be the true view of the constitutionality of this measure, a vast proportion of our people regard it as plainly violative of the very spirit of our fundamental law, and as most destructive, not only in its consequences upon our institutions, but in its immediate effects upon that section where it will chiefly operate. It is more than probable that if it could be submitted to a vote of the whole people of the United States, such would be the verdict of a decided majority. If the Supreme Court has not squarely decided in a case properly presented against this law, as I believe they have, they have surely taught us by the whole tenor of their reasoning that such is their opinion. Such is the conviction of many of the best legal minds in the country, of both parties and non-partisan. Surely such a vast body of earnest dissentients, in the absence of any pressing movement of any considerable portion of our people in its favor, should cause the friends of this measure to pause, and to desist from thrusting so doubtful and odious a law upon a protesting people, unless some momentous public necessity demands it, or some overshadowing public advantages are to be its plain result.

And now, sir, I want the friends of this measure to come and reason with us in a plain and practical way. We have now come to a view of the question where common sense, and not the entanglements of legal construction, is to furnish us with our premises and shape our conclusions. Here layman as well as lawyer can reason and judge. In view of the violent opposition to this law, both on account of its alleged unconstitutionality and its tendency to open up fresh fountains of bitterness in the land, what great compensatory benefits do its advocates expect to result from its passage. As reasonable and honest legislators, you must expect to promote the interests of somebody. Even if you care nothing for the white man, it is surely to be presumed that you desire the benefit of the negro. Well, now, if it can be shown upon the well known and unchanging principles of human nature and the teachings of all human experience that the passage of this law will inflict incalculable evils upon both races, upon your own white brethren whose welfare you seem not for a moment to consider, as well as upon the colored people who are the especial objects of your solicitude, then as wise statesmen, as lovers of your country, yea as men of honor, we shall ask you to let this bitter cup pass from us.

Although every feature of this act is open to the gravest objections, I shall confine myself almost entirely to that respecting the public schools. If the majority of this House really have the welfare of our colored friends at heart, it must be their desire and aim to extend to them greater facilities for education, and thereby to raise them in the scale of humanity. This is a great and noble purpose, which southern men have vastly more reason to desire than you have. It is the only way we can free them from the slavish thralldom of your party yoke. It is the only way we can fit them not only for the duties of national citizenship, but for the vastly more vital and far-reaching duties of State citizenship. It is an object which the southern people have been prosecuting according to the measure of their

very poor ability, while you northern gentlemen have been contenting yourselves with holding out to them the lure of ampler school privileges, not by the contribution of some of your superfluous wealth, which with true Yankee thrift you managed that the devastating hand of war should double, but by the passage of a law of doubtful validity, which will compel these war-striken and impoverished southern whites to wring still more from their necessities to bestow upon those whom you are educating to be their enemies. This may be in your view a genuine humanity; to us it seems but a very cheap, second-hand charity.

Sir, the six hundred thousand white people of Maryland not only appropriate every cent the colored man is taxed for educational purposes to the support of his schools, but they tax themselves $100,000 a year besides for his benefit. And they do this notwithstanding they lost $50,000,000 by his emancipation, and as many millions more by the depreciation in the value of their lands by the consequent demoralization of their labor. The agricultural lands in large portions of our State will not now yield 3 per cent. on this reduced valuation. And yet you northern gentlemen, in the exuberance of your cheap humanitarianism, tell us it is not enough, and that we must pile up more taxes to educate more rapidly these wards of the nation whose guardianship you so generously throw upon others. Mr. Speaker, Maryland is not able to bear any heavier burdens; the other Southern States have still less ability; and it is ungenerous in northern men to make the demand. If you would only let the colored people alone and not keep them excited by continually flaunting this civil-rights bill in their faces, they would be gratefully content with what we have done for them. They now prefer separate schools, such as they have, where your emissaries have not aroused them by expatiating on their fancied wrongs. In our State they have actually petitioned the Legislature for separate schools.

But, sir, concede our ability to bear any pecuniary burden you choose to impose on our wearied shoulders. What then? Do you for a moment suppose that the scheme is practicable in the South? With one voice, except here and there a hungry expectant of office or some one who represents or expects to represent a large negro constituency, you are told by the people of the South that mixed schools are an impossibility; that such are the feelings, views, and prejudices, if you will, of the southern people, that they would not, if they could, endure taxation to support such a system. You shut your eyes to this general testimony, often of that of your best party men; and you choose to consider the declaration as a threat, and not as the spontaneous outgrowth of the principles of human nature. And when you fail to see in it a threat, you contemptuously speak of the declaration as the ebullition of an idle, childish prejudice, unworthy of a moment's consideration, and which a few words in a penal statute will explode.

Sir, if anything I have ever heard in this Capitol has astonished me, it has been to hear wise men assume as a postulate that the deep, hoary, pervading prejudices of nine millions of people are not an element to be taken into consideration for a moment in the enactment of a law vitally affecting their interests. Thus to act, permit me to say, is to ignore all the teachings of history, to disregard the very constitution of man's nature, and to indulge the strange delusion that human nature can be molded over again in a day by an act of Congress.

Why, sir, what is the power that most moves humanity in all the complicated relations of life? If the different forces which energize human action could be summed up, I much doubt if the aggregate of those springing from prejudice would not preponderate over those of interest and reason combined. Human prejudice has been one of the mightiest levers that has moved the world. How many of the millions of voters in this land take their sides from cool reason, and how many, think you, from the results of prejudice acquired in early life or from locality of birth? How many of the millions of religionists in this and other lands have adopted their creeds from conviction, and how many from the prejudices instilled in childhood's days? It rankled in the hearts and gave expression to the tongues of those who cried out "Crucify him, crucify him!" and thus became the ministering spirit that crowned the tragedy out of which arose the salvation of man. For long, long centuries that noble people, whose is the heritage of genius as well as wealth, have been the foot-ball of human prejudice; hedged in by disabilities, now stripped for torture like some Isaac of York by a robber baron, and now plundered under the forms of law by some needy and licentious Prince John. From prejudice arose that cruel expulsion of the Jews from the Spanish Peninsula, which robbed the country of the flower of its people, but scattered over other lands the great teachers of industry, commerce, and science. Prejudice has made a large portion of human laws, and has caused many of them to remain a dead letter on the statute-book. It has arrayed one-half of the world against the other, walling in millions, as could no walls of stone, from all contact with their fellow-men. To the Christian it has made the Mussulman an infidel dog; to the Mahomedan it has turned the Christian into a filthy Nazarene. It has perpetuated for hoary centuries distinctions of caste higher and more enduring than any middle walls of partition. It drove from the inhospitable shores of Europe the Roundhead and the Cavalier, and laid the foundations of an empire in the West. It now lives in all its energy, and will ever flourish as long as human nature remains unchanged. It is even now the potent engine through which our northern friends array the freedmen against their former masters. And I fear the bitter prejudices of the North against the beaten, dispirited, and impoverished white people of the South will never be fully satiated till they have done their best to level down men of their own race, not only to a political but to a social equality with their former slaves.

And still filled as northern men seem to be with an unsparing prejudice against men of their own race, you denounce as idle and unworthy of notice a prejudice of theirs against men of another race, not original with them, but coeval even with the dawn of history. If you would only consider the constitution of the southern social system, which is not the plastic product of a day, but the slow, crystalline formation of ages, you could not fail to arrive at a better understanding of the case. Everybody knows that of all human prejudices that of race has been the most universal, ineradicable, and virulent. In the South they have had side by side millions of each of two distinct races, as wide asunder as the poles in all physical, mental, and moral characteristics. In addition to this powerfully segregating influence, one of these has been the master and the other the servile race. No institution has ever been devised that has engendered a more insuperable prejudice than that of master and slave. Wherever it has existed among men of the same race it has required generations to efface its remembrance. No amount of learning, culture, or talent, not even the exquisite genius of a Horace, could obliterate the ancestral stain. Consider that for two centuries in the South these distinctions of race, color, and servitude have been accumulating in force. On the one hand the dominant class was taught to believe that they sprang from a race whose destiny it was to lead, if not to rule, among the nations of the earth; on the other hand they were reared in the notion that the negro was an inferior type of humanity, destined to be a servant of servants to other people. Recollect, now, I am only sketching facts with regard to the constitution of southern society. I am not called upon, nor does my argument require me, to discuss the question of the inferiority or superiority of the negro. The intrepid general from Massachusetts, [Mr. BUTLER,] who, like a second Leonidas with his Spartan band of dusky braves, won such imperishable renown at Newmarket Heights, and who like Cæsar has found such a graphic chronicler of his own glory, seems to have assumed the championship in behalf of the black; while the gallant gentleman from North Carolina, [Mr. ROBBINS,] who is too sturdy to permit a defeat on the tented field to change his views on a great ethnological question, manfully stands up for his kith and kin. To them I leave the solution of this knotty question.

All we mean to say is, that to the prejudices of race, color and servitude, as a matter of fact and reality, must be added that most powerful one arising from the conviction of the natural inferiority of the African. To all these causes must be added another of no insignificant weight—the comparative ignorance and debasement of the colored race. Much has been said and written by northern men about the brutalizing influences of African slavery; much, on the other hand, has been done to illustrate its ennobling and educational power. But while we can scarcely believe its transforming and formative energies to have been adequate to the education of hundreds of thousands of voters up to the average standard of American citizenship, yet we do know this accursed institution, this sum of all villainies, this hot-bed of all crime and vice, has dragged out of the most bestial barbarism, and educated to a higher degree of civilization than ever before fell to the lot of any portion of that people, some five millions of the African race.

But slavery, it must be acknowledged, is a slow school-master, especially when encompassed as that institution was in the Southern States by hostile and aggressive elements, to bring minds benumbed by the hereditary torpor of ages up to even a moderate degree of enlightenment. The African race in this country, I am sorry to say, and nobody can deny, is comparatively ignorant and depraved. Strange, indeed, would it be if two centuries of such advantages as even they have had not produced some notable exceptions, some of whom have done honor to themselves and their people on this floor. But we cannot disguise the fact, not mentioned as a matter of reproach but only in the way of argument, that, as the natural consequence of their springing from the lowest scale of civilization and their subsequent long servile state, mental ignorance and moral debasement must and do characterize their race. All these causes have produced and tend powerfully to keep up a broad distinction between the races, which no laws or penalties can efface. A deeply seated feeling of personal and race supremacy has thus inevitably been developed, which by resting and actively operating in the minds of the southern people for ages have become to them almost a second nature.

Profound as was this feeling, it was powerfully nurtured by events transpiring in other States. They looked abroad and beheld the surging waves of anti-slavery agitation. They believed their property in their slaves to be as sacredly guaranteed to them as any other right. They honestly believed slavery to be justified by law and gospel. And just in proportion as the hatred of the rest of mankind toward their institution became the more intense, did the progress of commercial events interweave their own pecuniary interests the more intimately with it, and did their minds become the more enamored of it. And when the war which the South most unfortunately waged in defense of their cherished property made freedmen of their slaves and voters of the freedmen, and in many places turned the

servile into the ruling race, and everywhere in that vast region invested with equal political rights those who were but the day before menials and dependents, making them (as you shrewdly calculated) for the time being the natural political foes of their old masters, ever incited and ever seeking as a distinct race to rule where they were used to obey; I ask you as men of common sense, who know something of human nature, do you imagine that all this has tended to allay the force of prejudice, or to beget the spirit of fraternity and equality?

Sir, a noble and generous nature is never easily scourged into anything; but to expect a sensitive and spirited people, filled for ages with the prejudices arising from the relations of master and slave, of race and color, of superior and inferior, and of educated and ignorant, patiently and thankfully to receive at the hands of a conqueror their former slaves and domestics upon terms of perfect equality, is to ask more than poor human nature ever did or was deemed capable of doing. Carry yourselves back from your blinding party stand-point to the history of other days and people. How think you the Spartans would have felt if Athens had stripped them of power, and made their helots rulers in their State? Or imagine the deep agonies of Roman senators and people, if some Spartacus and his fellow-slaves, aided by some foreign power, had gained the rule of their former masters! You must see, howeve, you believe such results consistent with natural right, that such forced equality would have turned into the bitterness of hate what was before mere prejudice of caste. Such has been, to some extent, the natural and inevitable result of your reconstruction process; but I am glad it has not brought forth still more bitter fruits of hatred and alienation. If Congress would but let us alone, good and generous feelings would gradually arise. The white man would not be required to forget his pride of race; but would, as he became able, take the colored man by the hand and lead him along in the pathway of knowledge.

But just here, Mr. Speaker, your party comes forward with a measure fraught with disaster to all classes. We are now striving, as it is plainly our interest to do, to advance the negro in knowledge and virtue. We have provided, and are providing, separate schools for his children, just such as they can attend without annoyance from the prejudice of race and color. And right here you interpose your baleful influence and power. You tell the negro that he is a fool to be satisfied with anything else than mixed schools; and you tell the white man that if he dare interpose his pride of race, which has grown not only with his growth as a man, but with the very life of his race, his person shall pine in a dungeon and his estate shall be eaten up with penalties. No wonder the colored man listens to the flattering tale of further equality thus almost forced upon him, and in which he thinks he will be backed by the power of the nation. And no wonder the white man will not voluntarily impose taxation to support institutions which must either offend against his profoundest feelings and prejudices, or make himself the victim of a tyrannical law.

Mr. Speaker, in the section where you live, the colored people are too few to affect the social status. But in a land where the blacks often predominate and are always numerous, and where all the feelings I have tried to portray are powerfully operative, you leave the white man no alternative but no schools at all, or the association of his children upon terms of perfect equality with the children of his former slaves. Unless he is composed of different materials from other men, unless his philosophy is superhuman and his freedom from prejudice almost divine, you cannot doubt what his choice will be. And it is no argument against the force of this prejudice, as we have often heard in this debate, that associations of the different colors in the South have always occurred; that white and colored children have always played together, or that mistresses have taken their maids with them in their dressing-rooms or in first-class cars. So they have; but it must be remembered that the relations of superior and inferior, of mistress and servant, were always sedulously observed. There lies the explanation of the whole matter.

And this destruction of the public-school system of the South would not be the result of spite or revenge or retaliation. The prejudice of the southern man is as much a part of his nature as his reason, and as is often the case, more potent as a motive-power. Whether he is right or not, he would consider that he was degrading his children by such an admixture of races in the schools. No penalty can make him do it; and when it is only necessary to repeal the school tax in order to escape the attempted coercion, right speedily will he do it. No one will respond with a heartier amen than the poor white man. He well knows that the rich can escape from the operation of such a law, while his offspring must either submit to what he considers a degradation, or grope their way through life in mental darkness. He would infinitely prefer to see all public schools abolished, and trust to his own voluntary subscriptions and those of his neighbors for future educational advantages. To both races, then, your law will be an unmitigated curse. To the blacks it will be mental starvation.

Do you seek for any other reason why the southern white man would thus act? Because he knows and feels the tendency of such a law would be to produce social equality. You say such is not your intention, and seem to deny such would be the result. Pray, do not mock us, gentlemen. As well might the physician deny that his emetic will tend to produce nausea. You leave us no room even to believe that such is not your intention. Equal rights do not require identity in time and place of enjoyment; equal privileges do not demand the thrusting of one race upon the other in almost every possible social relation outside of the family circle. Home life is by no means all of social life. But when the one race leaves its hearthstone in search of social enjoyment, whether it will or not you force upon it the presence and contact of the other. Why are you not content with equality in all these things? Why do you force by heavy penalties the actual contact of the races? It must be because you seek to level down *all* distinctions.

But while in every institution sought to be controlled by your law the contact is casual, and not so potential in beating down all barriers between the races, the least reflection must convince every man that their admixture in the schools would powerfully tend to obliterate all social distinctions. Who does not see that if the white and black children can be brought together in the same school-room, and there be made to pass the long years from early childhood through youth to early manhood upon terms of perfect equality such as you propose, sitting upon the same bench, joined in the same class, studying out of the same book, reciting the same lessons—possibly to a negro school-master—engaged in the same sports, enjoying the same amusements, in all the fullness of sympathy and freedom from restraint characterizing their tender years, and this system should go on from generation to generation, then social equality would not be a horrid eventuality to be feared, but a dread actuality realized? The child would be fully educated to it, and the man and woman could not be expected to repudiate the teachings of childhood. From all this the white man shrinks with the whole energy of his nature, and to avoid this he will endure any sacrifice. No laws or penalties can enforce it. Force can strike the manacles from a slave; force can invest him with all external political rights; but force cannot make the white man tax himself to educate his children down to the level of social equality with the negro. Yea, you may enlarge your laxity of constitutional construction, and claim the right to make education national, with hundreds of thousands more of office-holders looking to Washington as their political Mecca. It is not improbable you may do so; for your method of construction is a perennial well from which you can make perpetual draughts and still never draw it dry. You may even go a step further and vote to compel the whites to send their children to your seminaries of social equality. You will then see of what strength is the pride of race, color, and mastership. The world has never seen such unflinching endurance, such heroic resolution, such sublime self-sacrifice as will then mark the white men and women of the South in their attempt to escape what they believe to be the degradation of their children and the ultimate contamination of their race.

Mr. Speaker, southern men with supreme wonder see your party seeking to force upon them this most odious law. It is utterly unreasonable in the light of your own teachings. In his African home, as you know, the negro cares little for the institution of matrimony. With the most holy horror and impassioned invectives have your press, pulpit, and rostrum cried out against his state of slavery as the enemy of virtue, the nursery of concubinage, and the hot-bed of every vice and crime. Although a fervid party zeal has drawn a picture more hideous than the reality, and although slavery has slowly but surely raised its bondsmen above the brutal level of their origin, yet it must be acknowledged that emancipation found a great majority of them oppressed with mental and moral darkness, indifferent to the rights of property, careless as to the obligations of truth, and forgetful of the laws of chastity. Although many exceptions to this rule may be found in every community, yet all who are conversant with southern society must own the general correctness of the statement. Often have I heard the better class among the blacks deplore these sad truths. And our northern friends must accept the truthfulness of the picture or own all they have said or written on the subject to be a libel or a slander.

Sir, southern parents see the repulsive companionship into which you seek to thrust their children. They see that the association of the races during the impressionable years of childhood as perfect equals in the same school-room would inevitably produce an amalgam of their moral natures greatly below the present standard of the white, if above that of the negro. Do you wonder then that they shrink with an iron resolve from such an intimate association? Sir, if Charles Sumner were now a living citizen of a Southern State, and were blessed with a tender daughter, over whose budding life he was watching with all the solicitude of a refined and elegant nature, even he would refuse to intrust the idol of his heart to the influences of such companionship. And as sure as there are true fathers' hearts beating in your bosoms, so would you all. And still you seek to force to the lips of others a cup you would be the first to put from you.

Sir, the southern people earnestly desire the elevation of the African; but they do protest with all the energy of their nature against any leveling down of the whites in order to reach that end. They admire and accept your unmeasured philanthropy in emancipating the slave at their expense without a cent of cost to yourselves; they admire and submit to your disinterested humanity, as evidenced by your unselfish efforts to educate the poor black man at the expense of other people; but when you demand of them to aid in the moral and social elevation of the nation's ward at the expense of the moral and social natures of their own offspring, as by the irreversible law of "evil communications" must needs be the case, then they look

upon your superserviceable zeal in behalf of the negro as unmitigated tyranny, which not only deals with the persons and property of other people by laws which scarcely at all affect you, but which enters into the very souls of people of your own race, and inflicts upon them present moral degradation and educates them slowly and surely down to the level of amalgamation.

Again, sir, it is a matter of supreme astonishment that you do not foresee another effect of your proposed law, that it will inevitably enkindle prejudice to an unwonted degree, instead of allaying it as you imagine. It will do more. It will infuse into that prejudice an element which has thus far but slightly marked it. Before the war the feeling of the southern whites toward the negro was not embittered either with hate or antipathy. They believed themselves the superior race by the fiat of the Almighty, the force of law, and the usages of society. But they knew the negro well, and were accustomed to his presence and habits. They had none of that personal dislike and hostility to him which so often exhibited itself in the North, either in the lawless form of mob violence or in the shape of laws excluding him from your States. It would be useless to deny, because it is unreasonable to suppose, that the compulsory acceptance by the whites of his political equality, with the concomitant results in many cases of negro domination and ruination, has not implanted into this prejudice somewhat of bitterness. Different from all other people who ever lived would have been the southern people if such had not been the result.

But, sir, this enforced political equality, though it has for the time to some extent envenomed the prejudice of the white, still moves in an outer circle; and if the races were not further antagonized by the restless influences of political charlatanism, harmony would be gradually restored. But this, it seems, is not desired. This bill seeks to drive the races into perpetual personal contact, outside the sacred precincts of home, in almost every place where men have been wont to meet and must meet as social equals or only meet to exchange the scowl of disgust for the angry glance of hatred and defiance. And just to the extent that your law operates, under the coercive power of pains and penalties, by a law of human nature, will it tend to arouse fierce antagonism, personal collisions, and God only knows what kinds or degrees of social upheavals. For you are not now dealing with extraneous rights of property or suffrage, but with the personal rights of man, with his habits, his feelings, and his prejudices, a province into which it has been always dangerous for the legislator to enter. And if this law is passed, you might as well establish at once throughout the land a huge system of criminal courts with an army of judges to execute your will.

Thus, when the unhappy people of the South had flattered themselves their troubles were about to end, it seems their persecutions have but commenced. A new field of spoliation and annoyance, wide and interminable, is thus opened up. With unpitying eye and unsparing hand you let loose every negro in the South upon every white man, demanding $500 or social recognition. Out of the cupidity of the one and the cringing fear of the other you expect to evolve the mild and gentle quality of social fraternity. You furnish fresh aliment to the unscrupulous demagogues and new incentives to every hungry pettifogger in that accursed section. You evoke every element of disturbance, discord, and hatred; thus turning the land into a pandemonium, and all in the name of justice, equality, and fraternity. Such a ruinous measure could never become a law in any country where the unfeeling tyranny and partisan hate of a party majority did not inspire its legislation. No prince or potentate, whose interest it would be to propitiate all his subjects, would thus trample upon the dearest rights and feelings of millions of his people. It is reserved for a triumphant majority in the great American Republic, with its power and responsibility so widely dispersed that but little falls to the share of any one man, to inflict upon millions of his own race an outrage and wrong which no emperor or king would ever be merciless enough to execute.

Again, sir, the course of your party on this subject is utterly illogical. In one breath you justify the feeling and the conduct of the southern whites in the premises, and in the next utterance you denounce it as an idle prejudice which must be exterminated. Take the language of one of your extremists. In reply to a question pointedly put to him in a recent debate, one of the most advanced guard in this war upon the southern people, of course a son of Massachusetts, replied "that he did expect by the education of the different races and colors in the same school that this prejudice," but would be removed, and the idea of universal human equality substituted in the place of this unnatural and unreasonable prejudice" but at the same time he emphatically stated "that he did not intend to be understood as saying that *all distinctions* of race and color were to be wiped out." And the position and the language of this most ingenious and logical gentleman is substantially taken by all the advocates of this bill. But in the name of common sense and the simplest reason, if all the prejudice of the white man against the negro is unnatural and unreasonable, why should any distinctions of race and color remain? If, by the co-education of the races all prejudice is wiped out, what remains to cause any distinction? The law does not make any; reason does not suggest any; and no feelings of prejudice are to be allowed to arouse any. Can any reasonable mortal tell us how or why any can exist? And still these consistent gentlemen insist that a distinction which it is never intended shall be overcome shall forever remain, and which, if it exist at all, they must concede to be natural and reasonable. And thus the loudest shricker for unbounded fraternity and the fiercest apostle of universal equality is forced to acknowledge a broad distinction between the races, which is not a prejudice, but an instinct planted by nature, insurmountable by force of mere artificial law, and which he, soaring as he does high above all common human weaknesses, is not only constrained to recognize in theory, but all the days of his life has illustrated in practice. *He* shrinks from social equality and race intermixture as much as the most prejudiced southerner of them all.

But human nature is well known to be of a facile and plastic character. Man can be taught to loathe that to which he is naturally prone, and to accept that to which he is by nature averse. The white man is instinctively averse to social equality, because it naturally tends to the mingling of races. And he protests against this law, because he sees in it nothing but a schoolmaster to educate his race down to social equality, with the necessary result of amalgamation. He sees, with the clearness of light, that if your law were cordially accepted by him, whereby he would be perpetually placed on the same plane with the negro, constantly in contact with him as an equal from the cradle to the grave, this life-long education would break down the barrier of nature which even our stern evangelist of human fraternity has been forced to recognize. To avoid this he will rather strengthen this barrier; he will give it a broader base and greater height; and in himself and in his children he will strengthen by accumulating around it every feeling, prejudice, and argument he can impress into service. And thus your law will defeat its own end, and become a nursery of prejudice and hate, instead of a school of liberality.

Mr. Speaker, the millions of white people who inhabit that vast southern land are this day amazed that you, men of the same lineage with themselves, sharing in the same glories of art, literature, and science, the same trophies in a deadly struggle against arbitrary power; whose forefathers, linked with theirs as a band of brothers, furnished a common fund of genius and patriotism toward founding the greatest republic of the world, and have through all the vicissitudes of peace and war established for it a glory which, if as a nation we were now to die, would forever live—that you should be so pitiless in your dealings with men of your own blood, and that you should subordinate their interests and their feelings in all things, even in the most vital points, to those of a race which, however deserving at your hands, you are forced socially to recognize as strangers and aliens. They do not wonder that you should have made the destruction of slavery one of the results of the war, although it was far removed from your original intention; for you thus got rid of a perpetual cause of irritation and disturbance. The bestowal of the right of suffrage upon the freedmen was intelligible as an act of yours, for you may have thought it the best way to secure their newly acquired liberty. But it is utterly incomprehensible to southern people, how wise statesmen of their own immediate race, men of culture and refinement, can deliberately plan a scheme of legislation which will not only dry up the springs of education over half a continent, and throughout that vast region arouse a storm of race animosities which never before existed, but which is calculated, if not intended, to people the land with a piebald race, characterized by lowered moral instincts, and tending toward a degenerate civilization like that of the mixed Spanish republics which lie spread out beneath us as a perpetual warning. More as a horrid dream than a reality do they regard the story that is borne to them, that men of their own blood are deliberately concocting a complicated scheme of law, to be enforced by cruel penalties, which they believe in their inmost souls will tend to break down barriers between the races which these remorseless brethren own to have been the handiwork of the Almighty, and which, if it were enforced in the spirit seeming to prompt its enactment, would constitute the monster crime of the age.

They look abroad and try to account for your course. Some conjecture it to be the expression of your bitter sectional prejudice, not yet satiated, but ever fanned by you into a hotter flame. You speak of your treatment of the vanquished South as gentle and merciful. They think it would tax human ingenuity to devise a more cruel and unrelenting scheme. You boast of your clemency in not consigning to death some scores or hundreds of traitors. Among the hecatombs of their slain, of the brightest and best, what would the slaughter of a few more of their fellows have mattered, except to consecrate the lost cause by the blood of a band of martyrs? But they feel that history may be searched in vain for a more complete vengeance than that you have been and are proposing to take upon them. The confiscation of property is usually regarded as a weighty penalty. The emancipation of their slaves, the depreciation of their lands, and the vast volume of taxation have made them the poorest of the poor. But poverty is but the little finger of the iron hand laid upon them. To deprive a high-minded, intelligent man of his birthright as a freeman, and to make him a stranger and an alien in his own land; to brand a man who is conscious of no dishonorable act or impulse with the mark of a felon, by stripping him of his right to vote and hold office, while the sword, using blind men as its instruments, is dealing with all the interests he holds most dear, is to punish with a terrible severity. To place a man of education and refinement, who has been used to deal intelligently with affairs of state

under the rule of ignorance and rudeness, helpless and hopeless, is a racking turn in the torturing screw. But to subject the man who has been reared in the midst of the institution of slavery, with all the feelings and habits of the master, to the rule of those, or to a constant struggle for the mastery with those who were but just now legally his slaves and domestics, is a refinement of punishment such as no age or nation ever before developed. It surely ought to gratify the hatred of the most revengeful. But it seems that the cup is not yet full. There is a certain political Moloch, called a party, without conscience, without responsibility, capable of immeasurable hate, dead to every impulse of generosity, cold, unfeeling, unsparing, whose act is that of an undefined entity, and, however flagitious, is the crime of nobody; upon whose altar even Christian statesmen can blow into a flame the dying embers of sectional hate, and offer up the sweet incense of sectional revenge. Such a party, it seems, cannot now fill up the measure of its dire vengeance unless it introduces into this once happy land, beneath the very blaze of our boasted civilization, a worse than mediæval system of torture, to be applied, not once for all to the body of a shrinking, palpitating victim, but to the writhing souls of men of their own blood, by the hourly, daily, yearly, process of race degradation. All this would seem impossible, if the most gigantic crimes of history had not been committed in the name of liberty, equality, and fraternity.

Others again believe that in thus trampling upon the dearest rights and interests of men of your own race you are aiming at a contemptible party triumph. I do not want to be forced to such a conviction. There would be some extenuation for the conduct of men, however cruel, if prompted by passion or prejudice. We may still think them sincere, if unfeeling. But if our northern brethern, for the votes of the blacks, can coolly and unrelentingly make merchandise of the social rights and privileges of a people of their own blood, as proud, refined, and elevated as they are, no mind can conceive, surely no tongue can express, the baseness of the act. If this charge can be true, and the majority of the northern people can fix the seal of their approval upon so horrible a trade, then has the malignant selfishness of party reached a climax never before deemed possible. Then, indeed, will you have done your best to stifle all feelings of patriotism and political fellowship in the breasts of southern men. On several late occasions the grateful theme of brotherly union and concord was treated on this floor by men from both sections. A gentleman from the far South, with an elegance of language and a chasteness of sentiment rarely equaled, urged you to discard all animosities and to incline your hearts to love and forbearance, to which course he with just confidence pledged his southren brethren. Gentlemen from the North, with power and eloquence, have urged men from the South to meet them in a great national reunion at Philadelphia, there to drown all the asperities of civil war in the memories of our glorious struggle for independence. But if you, from such a motive, can pass such a law, then, I pray you, what room remains for sentiments of a common brotherhood? They are only fit, in a hollow fashion, to point a eulogy or adorn a centennial oration.

But, sir, if the aim of your party is to strengthen itself by bartering the social rights of white men with your African auxiliaries, then has your natural shrewdness overleaped itself. To insure democratic success, I could wish no better card than that you seem bent on dealing to us. You already have the negro vote, and will mainly keep it while present party divisions endure. You can gain nothing, but lose much by this miserable persecution of your white brethren. You gained but little by enfranchising the freedmen except in localities where they are in the majority. In Maryland you added some thirty-five thousand votes to your ranks, and at the very next election you were beaten as badly as ever. I can tell you the main cause of this singular result. It was the fear that if your party, consisting of a majority of negro votes, got the power, mixed schools would follow. And just as sure as you pass this law, the places which now know many republican members here will soon know them no more. But southern democrats are unwilling to purchase party success at any such price. No party triumph, bought at the expense of such fearful results as this bill would entail upon them, is deemed worthy of a moment's consideration.

Mr. Speaker, your party on this floor contains many able statesmen. You must all see that the colored race is now enjoying at the hands of the southern people great educational advantages, which all testimony and all reason admonish you the passage of this law will destroy. At the same time you know that you have given them freedom and suffrage, and have led them to a mount of civil and political privileges such as no other people that ever lived under God's sun ever enjoyed, who are no more advanced than they in the scale of civilization. They have all the advantages of American citizenship, which it took you and your forefathers a thousand years of painful toil and suffering to acquire. All these, in all their rich redundancy, in the twinkling of an eye have been conferred upon a slave, without probation or training of any kind. He has every right but that of forcing himself into a society where he is not wanted; a morbid desire to enter which only shows a want of self-respect and a total unfitness for its enjoyment. To him is open every avenue of political preferment, from town bailiff to the Presidency of this great Republic. In the language of the gentleman from Massachusetts, he emphatically has "the right to be the equal of every other man, if he can." Surely, if he rendered you aid in the late civil war, never did services so slight receive such a stupendous reward.

As a measure of statesmanship, wise men as you are must see that it is best for his true interests to leave some ground for his own brain and heart to conquer. You surely know that all coercive measures must really retard instead of advancing his social progress. That must needs be his own achievement. If his race is susceptible of great improvement, as all must hope, all you have to do is to let time and his vast opportunities do their work. If the negro has in him the real elements of mental and moral greatness, he now has the most illimitable field for their development, and such elements of character, in whomsoever and wheresoever displayed, will always command respect and admiration. A half-dozen men of color on this floor, educated, talented, and gentlemanly, have done more, and will do more, toward elevating the African race than all the civil-rights bills you can pass. Let others of their race emulate them as they emulate the whites. Let them have something to hope for, to work for, to strive for. Do not treat them like a spoiled pet child, who is upon all occasions thrust forward by the hand of authority, whether he deserves it or not. Thus to treat them is to dwarf their energies and to make them petulant, wayward, and irritable. It will not answer for a race any more than for a man always to travel a royal high road in the march of improvement. Cease, then, a policy which will inflict upon him incalculable present loss and can work for him no prospective gain.

And above all things, Mr. Speaker, leave the poor unfortunate white people of the South a country to love, to pray for, and in the true spirit of patriotism, if need be, to die for. A man's country is not the land in which he is merely permitted to live, and in which the ruling powers regard him as an object of hatred, to be made the sport of tyrannical and oppressive laws; but the land in which the heart takes root, and sends forth strong and enduring tendrils of filial love and affection. That is what the southern people desire. Secession is dead; it died with the conditions which gave it life. Hereafter there is more danger of its resurrection down East than down South. Although the heel of the conqueror has been planted with no gentle tread upon southern soil, and although their recent experience has been harsh, and their present condition in many places truly pitiable, yet in their very hearts they long for a cessation of strife, for a restoration of true peace, and for a genuine political brotherhood. They are willing for the dead past to bury its dead, and to start with you emulously in repairing the waste places of our common country. Surely it should be the prayer of every lover of his country that the glorious consummation may be reached, and may not be stifled by any ill-advised sectional legislation, unprofitable to you and most disastrous to them.

Louisiana Contested Election.

SPEECH OF HON. H. B. SMITH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

June 8, 1874.

The House having under consideration the report of the Committee on Elections in the contested-election case of Sheridan *vs.* Pinchback, from the State of Louisiana—

Mr. SMITH, of New York, said:

Mr. SPEAKER: The fifteenth amendment of the Constitution was the occasion but not the cause of the political disorders in Louisiana. In the transition of four million people from a condition of servitude to the full rights of American citizenship it was to be expected that a suffering nation would—

> Wait beneath the furnace blast
> The pangs of transformation.

Nevertheless, sir, the republican party avows and defends the enfranchisement of the freedmen, and, in the words of Abraham Lincoln, "upon this act we invoke the considerate judgment of mankind and the gracious favor of Almighty God." And now the promise being made will be kept. That same lofty fortitude which in 1864 nerved the people, bleeding and faint, after death had flung its shadow in at every door, to vote for Abraham Lincoln and a continuance of the war, which held firmly to the helm while we were in tempests of fire and blood, and in seas whitened with upturned faces of the dead, will hold the helm with steady nerve until the old ship is brought through its present dangers into a calm sea and under a blue sky.

Mr. Speaker, in kindness let me admonish our friends upon the opposite side of this House that it rests with them to hasten or to procrastinate the day when peace will come to our distracted country. Peace will never come until the colored vote is divided. When the colored vote will be divided, I call as a witness Mr. Eustis, a member of the democratic State central committee of Louisiana, who testified before an investigating committee of this House in 1872.

The Clerk read as follows:

Question. The colored people, as a rule, have strong attachments, have they not?
Answer. I believe they have.
Q. They have a good deal more attachment for their old masters than they have for new-comers?

A. I think they have now.

Q. They have had all the while?

A. When you use the word "attachment," I think they have; but they have suspected that their old masters, if given political power, might deprive them of their political rights.

Q. That suspicion is now passing away from the minds of the colored people?

A. I think so.

Q. When confidence is once established, the intelligence and brains of your State will control your politics as in other States?

A. Yes, sir; if the will of the people is not defeated by the agency of the election and registration laws.

Q. And the only requisite to the most intelligent men of your State having the suffrages of the negroes is the one condition that they shall play fair with them?

A. Or remove the suspicion that they will not.

Mr. SMITH, of New York. I now ask our friends on the opposite side of the House will it do for them, in the light of this testimony, to charge that the republican party has separated the two races at the South? The last declaration of democratic principles upon this subject which has been made to the country was the minority report of the Ku-Klux Committee. During the campaign of 1872, our democratic friends, adopting for the occasion the Cincinnati platform, slept in silence like the souls of the martyrs under the throne. But only a few weeks before the Cincinnati convention the minority of the Ku-Klux Committee had made a report to the House, in which they made a declaration of principles which I ask the Clerk to read.

The Clerk read as follows:

Such a state of things may last so long as the party shall last which had the power and audacity to inaugurate them, and no longer. And when that party shall go down, as go down it will at some time not long in the future, that will be the end of the political power of the negro among white men on this continent.

* * * * * * *

O, that a man might know
The end of this day's business when it come!
But it sufficeth that the day will end,
And then the end is known.

Mr. SMITH, of New York. Mr. Speaker, will it do for our democratic friends to declare war openly against the emancipated race, and then to charge upon the republican party, the responsibility for the separation of the two races in the South? I call upon my distinguished colleague from Mississippi, [Mr. LAMAR,] I invoke the broad statesmanship, the noble magnanimity, the great power, and the peerless eloquence, for which, as displayed in his words over the dead Sumner, a grateful nation wears him to-day in her heart of hearts, to repudiate, in behalf of southern democrats, this atrocious sentiment.

Mr. Speaker, as a lover of my country, more than of my party, I pray God to hasten the day, when the democratic party shall have the vote because it has the confidence of the negroes of the South. Will our friends upon the opposite side see their opportunity, or will they continue to go on in that direction in which the conscience of this country, and the very stars in their courses fight against them, and keep that party with its glorious memories still grinding in the mills of the gods? The negro uses for his protection but he does not love, the carpet-bagger. With unexampled forgiveness, with a divine patience he kisses the hand that has smitten him, and looks to his old master as his natural protector. I press home the question upon the opposite side of the House, if this state of things must continue, at whose door will lie the responsibility? Let a just people judge.

Mr. Speaker, as a partisan and for myself I declare my purpose to take no more load upon deck, to bear no more infamy for the rascalities of political friends anywhere.

This case as presented is entirely anomalous. No testimony has been taken by either side. Mr. Sheridan has presented to our committee this volume of testimony taken before the Senate Committee on Privileges and Elections upon the contest between Ray and McMillen for a seat in the Senate. Mr. Pinchback has presented to our committee the testimony taken and the reports made by the chief supervisor of elections of the State of Louisiana under the enforcement act, and the affidavit of Mr. Blanchard. Mr. Sheridan contends that this volume of testimony which he has placed before us proves his election. The report of the Senate committee finds the evidence of fraud and villainy so strong that they report there was no election. Sheridan's claim is predicated upon the returns of what is called the Foreman board which are contained in this volume.

Mr. Pinchback insists that the courts of the State of Louisiana have decided that the Lynch board was the legal board and these decisions are of binding force upon the House; that the testimony in the reports made under the enforcement act of Congress show that Mr. Sheridan was not elected; that the Lynch board having returned him elected, he should first be entitled to his seat.

Now, first as to the claim of Mr. Pinchback that he should be admitted to his seat under the returns of the Lynch board.

Waiving for a moment the discussion of the question whether the Lynch board was the legal returning board or not, I remind the House that it is in proof and known to the country that all the members of this Lynch board were appointed to office by Governor Pinchback—worth from six to twenty-five thousand dollars per year within thirty days from the time that the return of that board was made. With an apparent insensibility to shame, every member of that board received his hire.

But assuming that this board was the legal board and that it was an honest board, the committee have come to the conclusion unanimously that it is a fact which has become a part of the political history of this country of which the House ought to take legislative notice that the Lynch board had no legal returns before it to canvass, and therefore the returns of this board do not show Mr. Pinchback's election.

It is necessary to call the attention of the House to the fact that this election was held under the election law passed in 1870. In the spring of 1872 the Legislature of Louisiana passed a new election law. That law Governor Warmoth pocketed. After the election of 1872, and after the difficulty had arisen with reference to the different election boards claiming the right to canvass the votes, Governor Warmoth, on the 20th of November, "to escape the clutch of Judge Durell," approved the new election law. Under this new election law, which was not approved until sixteen days after the election was held, the McEnery senate, on the 11th of December, elected a board of returning officers, known as the Foreman board, and that board has returned Mr. Sheridan as Congressman at large from Louisiana.

Now, sir, the minority report assumes without a word of argument that the Foreman board was the legal returning board. On pages 35 and 36 of the report they say:

This last named statute (meaning the act approved by Governor Warmoth on the 20th of November) abolished the existing board, and therefore makes it unnecessary here to discuss which of the two was the legal board.

With great deference to my colleagues on the committee, I must protest against what seems to be the clear begging of the question which underlies this controversy. The supreme court of Louisiana is a respectable court, to say the least. It has been a conservative court, and heretofore has had the confidence of the people of that State and especially of the democratic party, as was proven before the Senate committee. This court has decided that the "existing board," *i. e.*, the Lynch board, was not "abolished," but continued to be the legal returning board for the election of 1872, after the approval of the new law, in fifteen decisions, it is said. Nevertheless, the minority without a word of argument say this is a question which it is "unnecessary to discuss."

By the election law of 1870, under which the election was held, the ballot-boxes were taken to the county seat, and the votes counted and the returns made by the parish supervisor of registration, (section 53.) By section 54, the returning board shall canvass the returns of 'the supervisors of registration." By section 43 of the new law, the 'votes are to be counted in the precincts by the "commissioners of elections;" and the returning board, by section 2, page 63, is to canvass "the statements of votes made by the commissioners of election."

No power is in terms given by the new law to the returning board to canvass the returns made by the supervisors of registration; yet that they had such power, despite the statute and the supreme court, in the judgment of the minority "it is unnecessary to discuss."

By the old law the returning board was to meet, organize, and take the prescribed oath (section 54) "within ten days after the closing of the election," and "continue in session until such returns are completed."

By the new law (section 2) they were to meet, organize, and take the prescribed oath within the same time after the election. But the new law was not approved till November 20, sixteen days after the election.

On the "law day" the old board met, elected a chairman and secretary, took the official oath, and entered upon their duties. Yet that after jurisdiction had attached they were supplanted in their jurisdiction by a board appointed sixteen days after the election, is in the judgment of the minority, so clear, that it is "unnecessary to be discussed."

That the Legislature never intended that the election should be held under one law, and the votes counted under another, is confessed. Suppose the new law had been approved on the evening of the day of election, after the votes were partly counted by the supervisors of registration, what then? Who should count the votes and make the returns?

By both laws the Governor is required to "open the returns in presence of the returning board." This provision is not directory. But long before the 20th of November, when the new law was approved, the returns had been opened. For the purposes of this argument we may assume that they had been opened in the presence of the Lynch board, that the Lynch board had had ocular proof that they had not been tampered with, which proof another board could never have. Nevertheless it is so clear, in the judgment of the minority, that the new board would supplant the old board, though they could not have this ocular proof which the law required, that it need not be discussed.

Mr. Speaker, this House, so far as my knowledge goes, has always followed the precedent of the Supreme Court, in accepting as conclusive, the construction given by State courts to local statutes. Ought not a precedent so beneficent and wise as this, to have, like the English constitution, the effect of written law?

And upon a slight pretext or for a strong reason such as is presented here (if it be called strong) is it a safe and prudent thing, for this House to ride rough-shod over the decisions of the Supreme Court, and all the precedents in this House, and say that we will construe the State statute at our will, in the teeth of fifteen decisions of the supreme court of the State of Louisiana? And if there is danger in recognizing the decisions of Judge Durell, or the State courts, is it not a more dangerous thing, to violate this precedent which has been established from the foundation of this Government,

that we will recognize the decisions of a State court in the interpretations of the constitution and statutes of a State?

Again, sir, I submit, with great deference to my learned colleagues, that this minority report, in assuming that the Foreman board was the legal board, begs another vital question in this controversy, to-wit, that the McEnery senate which elected the Foreman board was the lawful senate of Louisiana. Why do not my colleagues of the minority, take a shorter cut to the result aimed at, and instead of attempting to prove that the McEnery senate was elected, simply prove to the House that Mr. Sheridan was elected, and save for themselves a vast amount of labor? If it be said that the DeFeriet board returned the McEnery senate, I answer that this DeFeriet board was appointed under the new law approved sixteen days after this election was held; and that this assumption again flies in the teeth of, first, fifteen decisions of the State court; second, the action of this House in admitting the Louisiana members upon the *prima facie* case, which recognized the Lynch board; third, the action of the Administration in refusing to recognize the McEnery legislature; and fourth, the report of the Senate committee against the legality of the McEnery legislature.

The majority of the committee, for the sake of the argument, have assumed, and in their printed report, have argued this question upon the hypothesis, that the Foreman board was the legal board. If my colleagues of the minority were alike liberal, would they not either assume that the Lynch board was the legal board or else prove that it was not?

But let us pass this question. I give away all these points to my colleagues of the minority; and I propose now to argue this case upon the hypothesis that the Foreman board was the legal returning board. In the first place, Mr. Speaker, I say there is sworn proof before the Committee on Elections and before this House that no quorum of the Foreman board has ever returned Mr. Sheridan elected.

You will find in the appendix to the minority report, on page 27, the affidavit of Mr. Oscar F. Hunsaker and Samuel M. Todd. Mr. Hunsaker was the president of the Foreman board, Mr. Todd was a member of it, and they both swear that their names to those Foreman returns are forgeries; and they both testify that Mr. Thomas, who was also a member of the Foreman board, departed from the city of New Orleans before these returns were made. Mr. Foreman, himself a member of that board, states (on page 79) that Mr. Thomas only took part in the canvass of the votes for State officers. So, then, it is proved here, and my colleagues cannot successfully controvert it, that no quorum of that Foreman board has ever canvassed the congressional vote.

But suppose they had. I desire to call attention again to the report of the minority of the Ku-Klux Committee, page 307; and I call the attention of the House to the fact that they are here speaking not of reconstruction generally, but of the election law in the State of Louisiana, under which this election was held. They say:

When we come to speak of the registration and election laws passed by these carpet-bag rulers—

Let me stop right here. I have said nothing about carpet-baggers but I stumble now upon this oft-repeated fling. We have heard this tune until we know all its cadences, where the trills and the deep bas come in. Why, Mr. Speaker, you could whistle it yourself. Now, because the boot happens to be on the other leg, and it is our friends over the way who are advocating the admission of a "carpet-bagger" against a native Southerner, they do not peep about the carpet-baggers. They are as mum as the grave.

I believe in a fair fight. There is one thing I complain of; our democratic friends have stolen our thunder—they have gobbled our carpet-baggers. Some wicked joker said that a distinguished general in the war reduced the Chickahominy swamp by taking the bilious fever out of it. Just so they have reduced the republican party of Louisiana by taking the bilious fever out of that.

Without any reflection on my friend General Sheridan personally, I hope they act upon the maxim, "When you get a good thing, keep it."

But I was reading from the minority Ku-Klux report. They say: "When we come to speak of the registration and election laws"—that is of Louisiana—"passed by these carpet-bag rulers, the charge that their whole system of elections was and is a farce and fraud, will scarcely be denied." Who denies it now? Is it the majority or minority of your committee?

This minority of the Ku-Klux Committee say another thing. It is altogether beyond my powers of elocution, and I will ask the Clerk to read it if he will do his best. It is a very nervous passage, and I want it well read.

The Clerk read as follows:

The ballot-box—the sanctuary of freedom; the ballot-box, the only abiding place and secure retreat of liberty; the ballot-box, the arsenal where freemen's weapons were wont to terrify tyrants—is made the charnel-house in which the assassinated liberties of a defenseless people are buried; is made the dice-box in which are staked and played for by the minions of a despot the revenues of a plundered Commonwealth.

Mr. SMITH, of New York. The Clerk did not do as well as I have sometimes heard him. Now I have no doubt the excellent gentleman who said it felt badly for the time, but it is surprising what a difference it makes with them if the dice happen to turn up sixes for the democratic ticket.

Strange such a difference there should be
'Twixt tweedledum and tweedledee.

I offer now an address of the State central committee of the democratic party of Louisiana. Bear in mind that about this time war was flagrant in Louisiana. The democratic State committee was in alliance with the "custom-house faction." The *casus belli* was "the infamous registration and election laws," and this address was issued but a few months before the election in question:

ROOMS DEMOCRATIC CENTRAL COMMITTEE,
New Orleans, February 23, 1872.

To the democratic and reform voters of the State of Louisiana:

The primary object in calling a convention at a date earlier than would have been done under ordinary circumstances is to secure and perfect a thorough organization of the democratic party throughout the State. The accomplishment of this result as an element of success is too important to admit of delay, and the necessity for its immediate attainment is rendered the more urgent by the present condition and probable operation of the registration and election laws.

We have labored strenuously for a modification of these and cognate laws, with the single object of restoring to the people their rights of self-government. The extraordinary powers with which the executive had been armed, the corrupt dispensation of his vast patronage, the boldness and frequency of his usurpation of power to strike down those in his own party who refused to become his personal adherents, his repeated acts of political treachery to the colored race whose votes had elevated him to office, combined to create in the minds of the republican opponents of the governer the most serious apprehension.

* * * * * * *

The democratic members of the General Assembly were numerically too weak to cope, unaided by republican votes with the party of the executive in the General Assembly. Governor Warmoth had had the article in the constitution rendering him ineligible for a second term abrogated, and in view of his political isolation, by the defection of the colored voters, it became manifest that his surrender of any of his political power or patronage would practically result in his abdication. Easily or willingly deceived were those who thought that he could personally or politically afford to modify a single law in the interest of the people. The view first entertained by your committee, that the maintenance of all these infamous and oppressive laws was the political life-blood of the governor, has been verified by the fact that, although the Legislature has been with full houses legislating for two weeks, with a majority obediently submissive to executive dictation, the executive, as he intended has succeeded in falsifying his professions for reform by defeating every effort to, that end that has been made in the Legislature. *The alternative was presented to engage in a flagrant conspiracy with the governor to fraudulently defeat the popular will and imposing upon ourselves the debasing humiliation of electing him governor or to endeavor by honorable means to obtain the desired relief to our people.*

O, no, Mr. Speaker; the "*debasing humiliation*" which the governor demanded of the proud democracy of Louisiana was his *election* to the *Senate*, not his re-election as governor.

The address further says:

It is needless to recapitulate the revolutionary proceedings to which the governor resorted, such as taking armed possession of a co-ordinate department of the government, calling an extra session when the General Assembly was in regular session, and only notifying his personal adherents; making repeated requisitions upon a local commander of United States troops; expelling by armed violence the legal speaker of the house and many members. We refer to these unprecedented acts to remind the people that the governor did not and will not hesitate to initiate revolution in our midst whenever he discovers that by legal and constitutional means an attack against his autocratic prerogative is meditated. If to-day the people have not a controlling voice in legislation, if their burdens have not been lightened, if their political rights have not been restored, and they have the prospect of a turbulent election in November, the responsibility rests upon those who have put their trust in Governor Warmoth, who has had the time, the opportunity, and the power, but not the intention, to accede to the demands of the people. We record the sad fact that the proximate cause of our failure to attain those great beneficent results was the defection of those senators and representatives who, representing democratic constituencies, allied themselves to the political fortunes of the enemy of their people.

And to my colleagues of the minority, who denounce the Lynch board for resorting to secondary evidence, and making up their returns upon the reports of the United States election officers, and such sources of information as were at hand, after Governor Warmoth had got possession of the returns and refused upon demand to produce them, and had in flagrant violation of law given a certificate to General Sheridan without a canvass of the returns by any board, I commend reflection upon the following paragraph in this address. The *italics* are not mine:

Any section of the election law which leaves to the discretion of a board of individuals the power to change that result is *revolutionary in its design, its operations, and its purpose, and must be treated by the people as not upon the statute-book.* If the Legislature were to pass a law that there should be no registration, no election, and that a board of five persons was appointed to select your governor, representatives, and other officers, the people would hold an election and install their officers if need be by force, and their action would be clearly legal. The same duty devolves upon them now, and they will perform it.

* * * * * * *

H. D. OGDEN,
President Democratic State Central Committee.

THOMAS STEEL, *Secretary.*

This is signed by H. D. Ogden, president of the democratic State central committee, who, I suppose without any "flagrant conspiracy with the governor to defeat the popular will," claims to have been elected attorney-general on the McEnery ticket and has since been hotly defending the purity of this election.

Now, Mr. Speaker, my learned colleague from Pennsylvania, [Mr. SPEER,] I regret to learn, is not to speak upon this issue. It is not necessary that he should. He spoke upon it two years ago. In the report which was made to this House from the minority of the investigating committee which went to Louisiana, drawn by his facile pen, he used these words:

But many of the persons who became arrayed against the governor were controlled by different and better motives. A series of infamous laws had been passed, placing imperial power in the governor's hands, which he had used with a reckless disregard of the interests of the people, and with the double purpose of enriching himself and his friends and of perpetuating his control of the State. Himself but a recent resident of Louisiana, he had gathered around him a swarm of adventurers from all sections, destitute alike of either personal or political integrity, and was

fattening himself and them upon the plunder wrung from the property and toil of the people. *Under the law elections were a farce.* The governor appointed the registrars, and through them returned his friends to the Legislature and defeated his enemies. In several cases persons held seats in the house from parishes in which they had never resided and in which they were absolutely unknown. In one case a friend of the governor was *elected in a private room in a New Orleans hotel*, at midnight, to represent a parish hundreds of miles away.

Now, I have not placed my friend, General Sheridan, the most eloquent man in Louisiana, in that category. My colleague, who now says this was a fair election and asks the House to seat him, did that business himself. My colleague need not speak for his friend on this occasion. He preserved him in sugar in that report. All the world knows that Governor Warmoth and General Sheridan have been bosom friends from the first, and are the Siamese twins in Louisiana politics.

Mr. SPEER. Will the gentleman allow me an inquiry?

Mr. SMITH, of New York. Anything my colleague pleases.

Mr. SPEER. Did the gentleman not refuse to sign that report and to indorse those sentiments as a member of the committee?

Mr. SMITH, of New York. Yes, sir; because it did not go as far as my report went in denouncing the carpet-baggers and the villains in both parties in Louisiana. But my friend does not now go back upon his report. He adopts that. And when my friend, Sheridan, shall call him to account, I suppose he will say to him as Jack Falstaff said to the Prince: "I dispraise thee before the wicked, that the wicked might not fall in love with thee."

Alluding to the midnight election of a member of the Legislature in a private room in a New Orleans hotel, my colleague from Pennsylvania put a blue patch on that election of 1870. Why did he not refer to page 909 of this report of the Senate committee, where a Warmoth supervisor named Cahoon is proved to have made the return from Madison parish, tally-sheets and all, in a private room in New Orleans, and to have elected a fusion man to the Legislature, and put the same beautifully blue patch on the election of 1872? Is it because, as he and I used to write in our copy-books at school, "Circumstances alter cases?"

Now, Mr. Speaker, the House will not have forgotten that during the political canvass of 1872 there was a race without parallel in the history of the world. Governor Warmoth and Lieutenant-Governor Pinchback were both at the North. Here was this new election law which had been passed by the Legislature to repeal this old "infamous election law," under which my colleague from Pennsylvania [Mr. SPEER] and the minority of the Ku-Klux committee and the State democratic committee of Louisiana justly say that "elections were a farce.' It was lying unsigned in the pigeon-holes of the governor's office. Pinchback, learning that Warmoth was at the North, started by the lightning train for Louisiana to sign that bill and relieve the distress of the Ku-Klux committee and my colleague from Pennsylvania and the State democratic committee of Louisiana, and have for once a fair election. Governor Warmoth got wind of it and gave chase. There was a railroad race of two thousand miles. The national excitement ran high. Bets were offered of two to one on Pinchback without takers. But the race was not to the swift. With half the strategy necessary to fix a Louisiana ballot-box, Pinchback was inveigled into a telegraph office, while the train was waiting at a station near the Louisiana line, when the key was turned on him, and the train sped away, and the white horse came to the score just a neck ahead. Then it was that hats flew up, and white handkerchiefs waved, and their perfumes floated on the air; and the fusion newspapers, and I doubt not the Louisiana State democratic committee and the minority of the Ku-Klux committee, made the skies echo with their huzzas, because Warmoth had defeated "an infamous fraud" attempted to be perpetrated upon the people of Louisiana!

Now, sir, to demonstrate that times change and men change with them, let me quote the following from Governor Warmoth's speech at the ratification of the fusion ticket in the city of New Orleans:

A great deal has been said of me because of my course in relation to certain legislation in this State. It is known to all of you that I recommended in no uncertain language to the Legislature the repeal of a certain law. The Legislature did after a fashion modify these laws. Those bills have passed the Legislature, and are before me for signature. Now I propose to tell the people of this city, and through the press represented here the people of the State, the simple, plain reason that I do not sign these laws. In the first place, they make no material modification of the old election and registration laws. In the second place, it was intended, when the repeal of these laws was forced through the Legislature, that instead of them General Grant should use his election law upon the people of this State; and then, besides that, *the great mass of the people, who have so long demanded the modification or repeal of these laws, have changed their minds.*

That Governor Warmoth spoke truly the sentiments of the just and true men of the democratic party I deny, and I call as a witness J. Q. A. Fellows, who gave the following testimony before the Senate committee:

Question. In your conversation with leading democrats in New Orleans during the last canvass or two—at the time the fusion was made by Governor Warmoth—state what their calculation was that his accession to the party would be worth to them?

Answer. I will premise by saying that for several years I have held myself somewhat neutral in politics, waiting for an opportunity to arise when I could unite with one party or another for the best interests of the State; and last spring and summer when the canvass was approaching and being carried on, there was an effort made by some moderate democrats and reformers, and a large number of other people in Louisiana, especially in New Orleans, that stood in the same position with myself, to make a union with the best portion of the republican party, and secure the government of the State in all proper things. A fusion was continually thought of by the democrats with the governor. I was solicited time and again, probably by thirty, I think, to join in the movement to make the fusion. During that time, say for two or three months, the whole matter was canvassed over and again. They said that, with the assistance of the governor or fusion with the governor, they could certainly carry the State against the republican party or the custom-house party or the negro party, as they called it. I thought it could not be done; that he had not votes enough at his command to do it. I understood that he had not over a thousand voters that were his followers. They admitted that there were no more than two thousand; but they said this, that his power, with the assistance of the registration and election laws, was good for twenty thousand votes by his appointing his men, or men who would work in his interest, as registrars, and the manipulation of the registration and the appointment of commissioners of election and in placing the election polls, and they thought his influence was good for twenty thousand votes. This was the repeated calculation of every one I talked with that finally went into the fusion party. Others refused to go in who were called "last-ditch" democrats, or "straight-out" democrats. Many of them refused to go in the fusion, and many of them voted for Grant and Kellogg who were within my acquaintance. They made the same calculation; there was the calculation of one, two, or three thousand followers, enough to make fifteen or twenty thousand altogether, by what was frequently called in the newspapers and the people of the State "by the manipulation of these figures." When printed, it was put in quotation marks—"these figures;" this was the common talk of the politicians in Louisiana and in New Orleans, and I agreed with them.

Q. Do you now know that, previously to the fusion being created between Governor Warmoth's party and the democratic party, the very men who were on the ticket for the State offices for the fusion party—that is, Messrs. McEnery and Ogden, were the men who had denounced Governor Warmoth in the most bitter terms?

A. Until the fusion took place in August, every leading politician, every speaker and every newspaper denounced him, and any alliance with him, most bitterly. They denounced him in the most bitter language. Some of it was not respectful—not fit to be used. The canvass had already commenced, and Mr. Jonas was the candidate for lieutenant-governor; Mr. Ogden the candidate for attorney-general; Mr. Ellis, a lawyer, who was expecting to secure some office—I believe had commenced. There were three at least, I remember, who had commenced to canvass the State; and commenced by going up the river, and then passing around through the northern parishes, and coming down by Shreveport, and then around by the southern parishes, making a tour of the State. They had reached about the center of the parishes on the Arkansas line, at Mindon, making speeches all the way, when they were met with a telegram at Mindon, and immediately returned, announcing that a fusion had been accomplished. I met them on the street on the day of their return, or it may have been the day after; it was the day when the ratification of this fusion was advertised to be held in La Fayette Square. I then met Messrs. Ogden and Ellis on the corner of the street, and asked them if they were going to support it. Mr. Ogden was called to one side for a moment. Mr. Ellis said, "I am willing to eat my peck of dirt, or perhaps a bushel, but damned if I can swallow this." He had been asked to speak, but had refused. After this he consented to go in the second canvass which had been arranged by the fusionists—to go around by the southern parishes and come up by the way of the western, and back by the northern and river parishes. I met him—as we go down town frequently to business—and asked him the result. He said he had no doubt, from what he had seen on both trips, first and last, that the union or fusion, as he termed it, had lost the democratic party from ten to twenty thousand votes, actual voters; that all through the northern parishes when he was on his first trip the leading men came out and assured them they could carry the parish by four or five or six hundred, or even a thousand majority; but on their return, coming around the other way, they were obliged to go out and hunt up the leading politicians in the parishes, and they spoke in this way: "Probably we can carry this parish; this one we may lose by a hundred; in this one we probably will not be beaten—may have two or three hundred or four hundred majority at the most," and so on. So that in his calculation they lost fifteen thousand votes. As a further loss for the fusion, he said that the leading democrats would not support any such fusion or go into it. I saw a letter from ex-Governor Moore, of Alexandria, that he would not even be at the meeting. He is an influential democrat, as I know, in Rapides Parish. He stated he would not be in the meeting or be introduced to Governor Warmoth, whom he had heard would be there, and whom he had denounced, as he believed, justly. His partner, Mr. Jonas, who was at the time a candidate for governor——

Mr. RAY. Lieutenant-governor?

The WITNESS. Yes, sir, and was displaced, and Mr. Penn put on the ticket. Mr. Hymans read me a letter—it was from General Moore—denouncing Governor Warmoth. Hymans said his partner, Mr. Jonas, was placed in a delicate position, where he could not say anything; but as for going into this, he would not do it himself, and to my knowledge he did not make a speech in the whole canvass. A number of leading democrats in New Orleans—some of the executive committee—after the fusion refused to go in the fusion movement at all, and to my knowledge voted for Grant and Kellogg. As soon as the fusion was made I came out, and went into the canvass myself for the republican party.

In this statement the manipulation of "these figures" was considered worth twenty thousand votes to the fusion ticket by all the democratic fusionists. The democratic vote in 1870 was 41,000; in 1872 it was 65,000. There were some bets on this election, and the governor surprised his friends and went 4,000 better than their highest anticipations. I will not waste breath by asking which party in Louisiana is ashamed of this election. There are honorable exceptions, Mr Speaker, but the average Louisiana politician is not ashamed of anything. But if I stood here to defend all the actions of the Kellogg party, as I do not, I would dare to ask and challenge an answer, Who ought to be ashamed of it?

I call attention to the testimony of Mr. Fellows, that leading and influential democrats all over the State refused to support this coalition. The condition of it was that Governor Warmoth was to grace the Senate of the United States. And this sworn testimony shows that not only leading influential democrats all over the State, but members of the democratic State central committee in the city of New Orleans, voted for Grant and Kellogg. It is to their credit, and I congratulate our friends upon the opposite side of the House that they have a few honest democrats left in Louisiana for seed.

Now, does any man who knows the fidelity of the negro to the party which gave him his liberty; who knows that a negro with a ballot in his hand is prouder than a negro on horseback; who has examined this testimony and seen that negroes all over the State traveled thirty miles to vote, thousands of them traveling all night, some of them traveling even eighty miles; who knows that in the State of Louisiana the democrats were under just one more wet blanket than the democrats in New York or anywhere else; does any such man believe that in an "orderly, fair, and legal election" the fusion vote rose from 41,000 in 1870 to 65,000 in 1872, and the republican vote fell

from 65,000 votes in 1870 to 54,000 in 1872; a change of 35,000 votes? But it is answered the colored men voted the fusion ticket. Mr. Speaker, the fusion competitor for the seat in the Senate, Mr. McMillen, testified before the Senate committee that in his belief there were no more colored men who voted the fusion ticket than there were white men who voted the republican ticket. And Mr. Packard swears that though he traveled nearly over the State in this canvass, he did not know a single colored man, not one, who voted the fusion ticket.

General Sheridan testified that he saw colored clubs carrying the Greeley badge. As history repeats itself I ask the Clerk to read from the testimony of Mr. Sinnott before the Louisiana committee two years ago.

The Clerk read as follows:

Question. You are not much of a radical yourself?
Answer. Not by a long ways. Never was and never will be.
Q. You are a democrat, sound to the core?
A. Yes, in the time of it, while it existed, I was an active democrat.
* * * * * * * *
Q. You organized a large number of colored democratic clubs in this city, did you not?
A. Yes, sir; I helped to organize one.
Q. Tell me if they played out.
A. They were the biggest set of rascals I ever saw. We got them together, and fed them, and clothed them, and shod them.
Q. Tell me how much they cost you.
A. It is incalculable; I cannot tell.
Q. How many clubs were there?
A. I do not know; we had one, and that was enough for me.
Q. How many members did you have in it?
A. We must have had a hundred almost.
Q. Did you clothe them?
A. Yes; clothed them, and fed them, and shod them; gave them spirits once or twice a week.
Q. Then they went and voted the republican ticket?
A. I expect every one did. * * * * *
Q. From that time the democracy in this city has dropped the nigger?
A. Yes; you may be sure of that.

Mr. SMITH, of New York. Mr. Speaker, if our democratic friends in Louisiana had the statesmanship of Lord Dundreary they would have understood in advance that how these colored clubs would vote "no fellah could tell." By the census tables there were in 1870 in Louisiana 15,180 more colored than white voters. As I have said, no evidence has been taken in this case. The Senate committee, upon this same proof, find there was no election. What the majority of your committee say is, that for the House to seat Mr. Sheridan upon this proof without investigation would be a public indecency. We say that the proof which is before us establishes abundant probable cause for this House to put these parties upon their proof before either one is admitted to the seat. Now, sir, a part of the proof before us is the report of the supervisors of election in Louisiana under the enforcement act. There it is—[holding it up]—nearly one thousand pages in manuscript, every word of it pertinent, showing that though Governor Warmoth and his allies had abandoned the policy of violence and riot, they had adopted a more efficient method and resorted to the most desperate craft and strategy to carry that election. Here, sir, is more of it, eleven hundred pages of printed testimony, from which the Senate committee came to the conclusion that no valid election was held.

Now, what is the duty of the House upon this evidence? What is there upon which to seat either one of these parties? I call attention to the affidavit of Mr. Blanchard, who was the State registrar under Governor Warmoth, which is found in the report at page 12. This man Blanchard is by his own showing thoroughly steeped in infamy Probably, too, he was captured by the Kellogg party by foul means But he discloses a state of facts in that affidavit which is absolutely appalling. And yet, sir, within the rules of the common law which obtain in a criminal court of justice, the testimony is abundantly sufficient to convict the accomplices in his crimes. He is corroborated by so much evidence, at so many points, that no lawyer can read the testimony and examine the corroborative evidence, and escape the conviction that he tells the truth. It is a fact proved beyond a rational doubt that the grave-yards in New Orleans voted the fusion ticket. He gives, from documents, the exact number of dead men voting in every ward, and explains minutely how it was done. He adds, in speaking of the supervisors of elections, that the persons sent from New Orleans to the parishes in which they were to act, and men well known for their personal recklessness and unscrupulous character, and familiar with all the machinery used in manipulating elections and the powers conferred upon supervisors of registration by the laws; that said supervisors were instructed, verbally or otherwise, to impede in every possible manner the registration of colored voters, in such ways as closing their offices when large numbers of negroes were waiting for registration, alleging that they were out of blanks when in truth they were amply supplied; removing their offices to remote points; notifying only white men of their location, and giving no notice to the negroes; giving notice of the location of the office at one point and establishing it at another without notice; establishing polling places without due notice, and so as to facilitate the casting of a large fusion vote, and obstructing the voting of republicans, especially of colored men; that to further carry out the before-recited determination to carry the election at any risk, deponent, without authority of law, directed that a new and complete registration should be made in the parishes of East Baton Rouge, West Baton Rouge, Saint James, and Tangipahoa, each of which parishes was known to contain a large republican majority, and a large excess of colored over white population, on the pretext that the books of previous registration could not be found, said books having been previously purposely made way with.

Against this affidavit of Mr. Blanchard, General Sheridan presented to us a number of affidavits from these supervisors and commissioners of registration who are implicated, denying the allegation of their rascality. I will merely call the attention of the House to one of them. General Sheridan asked our committee to believe that this factotum of Warmoth in these election villainies cheated in this election, because Emile Holburn swears that Blanchard brought him a stuffed ballot-box the night before election, and he would not use it.

[Here the hammer fell.]

The SPEAKER *pro tempore*, (Mr. CROCKER in the chair.) The gentleman's time has expired.

Mr. SMITH, of New York. I understand that the gentleman from Louisiana [Mr. SYPHER] is to follow me, and I will ask him to yield me ten minutes and I will try and give him the same time in the closing hour.

The SPEAKER *pro tempore*. The gentleman from Louisiana [Mr. SYPHER] has the floor.

Mr. SYPHER. I yield to the gentleman from New York ten minutes, and I may ask the same courtesy at the close of my remarks.

Mr. SMITH, of New York. It was proved that Governor Warmoth's allies stuffed ballot-boxes in precincts where there was a strong republican majority with republican ballots, and when the returns came before the returning board they were rejected for the alleged fraud of republicans and large republican majorities were lost in this neat way. Mr. Blanchard testifies and gives details that the total vote which was given to the fusion party by fraud in the city of New Orleans was 6,737 votes. He further testifies, and he gives itemized details, that in the city of New Orleans alone the republican party lost in votes that were illegally excluded 3,010 votes, making frauds in New Orleans alone to the extent of 9,747 votes. Mr. Blanchard itemizes frauds in country parishes amounting to 9,314 votes. I cannot enlarge upon this point, but here is proof showing frauds to the amount of about 19,000 votes, according to the sworn testimony of the manager of this election. Most if not all his statements are sustained by almost irrisistible corroboration.

Now, sir, it is claimed that the majority for General Sheridan was about 10,000. There were four parishes returns from which were proved by the Senate committee to be forgeries and six parishes from which there were no returns. They gave Mr. Kellogg, according to the Lynch board, 7,275 majority. Now, take that from General Sheridan's majority and you have left but 2,611. Without taking time to read what I have before me in reference to the parishes of Caddo and Rapides, there were beyond question in these parishes alone fraudulent votes more than enough to have defeated the election of Sheridan.

Mr. Blanchard issued the following circular:

[Confidential.]

Mr. ——, *Supervisor of Registration, Parish of* ——:

In addition to the instructions contained in Circular No. 8 from this office, you are instructed—

1. In counting the ballots after the election, *count first the votes cast for presidential electors and members of Congress*, keeping separate tally-lists on the form (No. 1) provided for that purpose, and making up and completing the statement of voters for each poll upon form No. 1; then close the box, reseal it, and proceed in a similar manner until all the national vote has been counted. Then proceed with the counting of the State and parish votes, bearing in mind the fact that the United States supervisors of election and deputy marshals *have no right whatever to scrutinize, inspect, or be present at the counting of the State and parish vote.*

2. As soon as the count in each case is completed, telegraph the result to this office at once. Should there be no telegraph office at the court-house, dispatch a messenger by the quickest route to the nearest telegraph station.

3. The stationery, &c., furnished for each parish is to be equally distributed among all the polling places, and at least *one* copy of the election laws must be furnished to each poll.

Respectfully,

B. P. BLANCHARD,
State Registrar of Voters.

He sent Mr. Packard the following letter:

STATE OF LOUISIANA,
OFFICE OF STATE REGISTRATION OF VOTERS,
New Orleans, November 2, 1872.

SIR: In reply to your communication of date, I must respectfully decline compliance with your request to appoint one commissioner of election at each polling place, from the republican party, at the general election to be held November 4, 1872.

In regard to your second request, I have the honor to inform you that the list of polling places in this parish will be published in the official journal and other papers to-morrow, 3d instant.

Very respectfully,

B. P. BLANCHARD,
State Registrar of Voters and Supervisor of Registration, Parish of Orleans.

Hon. S. B. PACKARD,
President State Republican Committee.

If these papers be read in connection with the supervisor's exhibits, on file with the Clerk of this House, and the affidavit of Mr. Blanchard, the fraudulent purpose which they suggest is demonstrated, so far as it can be by *ex parte* testimony.

Again, take the eleven parishes of Assumption, Avoyelles, Catahoula, Jefferson, Point Coupee, Plaquemines, Saint Mary, Union, Orleans, Madison, and East Baton Rouge. By the returns of the Foreman board

Mr. Sheridan received in those parishes 34,624 votes against 17,000 democratic votes in 1870, an increase of 100 per cent. in eleven parishes. By the returns of the same board Pinchback received 24,160 votes in those parishes against a republican vote in 1870 in the same parishes of 35,533, a democratic gain in two years in eleven parishes of 26,649 votes.

I repeat that what the committee assert is, that this evidence shows probable cause, to warn the House against seating Mr. Sheridan until the allegations which are contained in this affidavit of Mr. Blanchard and these one thousand pages, more or less, of the report of the supervisors of registration in Louisiana are rigorously and mercilessly investigated.

Mr. Speaker, there is something at stake in this case besides the individual interests of these claimants. We cannot afford to encourage and invite these election frauds by lending ourselves to cover them. Even now they are undermining the foundations of our Government. If we would maintain our institutions, we must defend the elective franchise. I denounce indignantly the indecent conduct of the Kellogg party. It is said, and I believe, that this old election law has been re-enacted by the Kellogg legislature and is now in the governor's pocket. I believe that men are holding office to-day under Governor Kellogg who are infamous. But, sir, let the truth be told. They are more sinned against than sinning. The coal of their blackest deeds would make a white mark upon the character of Warmoth and his allies, as disclosed by the stupendous crimes in this election. The returns of the Lynch board, there is strong reason to believe, are nearer right than the returns of the Foreman board. I will never help by my vote to screen the villains upon either side. Let us hew to the line of rigorous justice. It it better that the people of Louisiana should be unrepresented in this House than that any man, however genial, eloquent, and popular, should be seated by the perjury and fraud of election officers.

Louisiana Contested Election.

SPEECH OF HON. L. Q. C. LAMAR,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

June 8, 1874.

The House having under consideration the report of the Committee on Elections in regard to the Louisiana contested election—

Mr. LAMAR said:

Mr. SPEAKER: I began the investigation of this case with a decided leaning toward the action recommended by the majority of the committee, as it would have obviated a discussion which I would gladly avoid. But a careful examination of the evidence leaves me no escape from the conclusion that Mr. Sheridan is actually, fairly, and legally elected by a large majority. One single fact attracted my attention immediately upon looking at the record. According to the Lynch returns, on which alone his right can be contested, he outruns his own party by 4,600 votes, while his competitor, Mr. Pinchback, runs nearly 4,000 votes behind Kellogg's; thus making a difference of 8,000 votes in favor of Mr. Sheridan as between the two contesting political parties.

Now, sir, if these Lynch returns were worth any attention at all, and I admit that they are not, they show that Mr. Sheridan's right to his seat does not necessarily stand on the same footing with the other contests in Louisiana.

The committee are unanimously of the opinion, that the evidence in this case does not authorize them to report to this House that the election in Louisiana was void by reason of any alleged frauds committed therein. There was an election, legal and valid. At that election there were but two candidates for this seat. There was not a tie vote. Either Mr. Pinchback or Mr. Sheridan was elected, and one or the other of them is entitled to his seat. The committee are of the unanimous opinion that Mr. Pinchback is not entitled to the seat according to the evidence before them. Three of the committee, constituting the minority, are of the opinion that the evidence clearly demonstrates Mr. Sheridan's election. The majority report does not deny the fact of his election. It goes no further than to say that "the correctness of the legal returns which declare him elected is challenged by evidence abundantly sufficient to put the House upon inquiry before accepting them as conclusive."

Mr. Sheridan holds also the certificate of his election, regular and fair on its face, signed by the governor of the State, the undisputed governor, Warmoth. That document has a certain legal effect apart from the moral credence which may or may not attach to it as a statement of fact. He also placed before the committee Senate Report No. 457, third session Forty-second Congress. The admissibility of that report as evidence is abundantly sustained by all the writers on public law and on evidence, references to some of which will be found in the report I have submitted to the House. The witnesses examined by that committee and the records contained in this document were before the committee during the larger part of the time to which Mr. Sheridan was limited by law for taking his testimony, and were therefore inaccessible to him. That fact, together with the other fact that his contestant here never accepted the issue and never contested with him and has not till this day, except by an attorney arguing against the right of Mr. Sheridan, makes the introduction of this testimony not only admissible but evidently proper to guide us in our conclusions upon this subject.

From this volume of evidence, it is established that the original official returns of the election were brought before the Senate committee and that the result which the two boards arrived at were substantially correct. These returns show Sheridan to be elected by a majority of 10,614 votes. Their genuineness was unimpeached except by one witness, John Ray, who said that the names of the commissioners to four of them were forgeries. If this be true, and no explanation of it given, they should be stricken out. If that is done, the effect will be to increase Sheridan's majority.

It is true that a majority of the committee have attempted to throw some discredit upon the correctness of those returns by statements such as that, first, they were opened privately by Warmoth, which is not true; they were opened in the presence of the board, examined in their presence and under their direction, and canvassed in the same way; secondly, that these returns were certified to the same evening that the Forman board was elected by the Louisiana senate; which is another mistake, growing out of the date of the returns. It is true that when the work came to their hands the Forman board spent the whole night and until ten o'clock the next morning in comparing the tabulation with the returns themselves. Every test to which they have been applied has left them unimpeached and unimpeachable, so far as the correctness of the tabulation goes. They show 10,614 majority for the gentleman now applying for this seat.

Notwithstanding these small points made against these returns, it is nevertheless true that the committee have admitted in words that "the registration, the elections, and the returns," as reported by the Forman board, "were correct in perhaps a majority of cases." They go further and accept thirty-seven parishes, embracing more than two-thirds of the votes of the State, without question.

Now, sir, it is very important to observe that all these charges of fraud and irregularity are confined to thirteen parishes. With the exception of difficulties in registering and inconveniences to voters in two or three parishes, the charge of fraud is unsupported by the direct testimony of a single witness before the committee of the Senate or our own committee. The evidence, if it can be called such, consists in the reports of United States supervisors, (whose gross exaggerations and perversions of truth repel belief,) the *opinions* of disappointed partisans and defeated candidates and *ex parte* affidavits, many of them proved to be forged and nearly all of them printed beforehand. I repeat, all these charges of fraud are confined to a few parishes, just thirteen. The committee expressly accepts the Forman returns for thirty-seven parishes without challenge, and declares that perhaps in a majority of parishes the registration, elections, and returns were fair and honest. Now let us examine the process by which the committee gets rid of the evidence of Sheridan's election.

There are nineteen parishes challenged. One is Orleans, which is challenged on Blanchard's *ex parte* affidavit, and which is not worth wasting the time of this body to notice. Among the others are six parishes that were rejected by the Forman board, and rejected upon evidence which, in my opinion, ought to have controlled any board. There is not one particle of testimony to show that they were not properly rejected. Yet, sir, the gentlemen of the majority of the committee, on page 9 of the report, adopt the figures reported by the Lynch returns, and on the authority of these returns propose to deduct 3,172 votes from Mr. Sheridan's majority. Next they rejected on Blanchard's affidavit 1,623 votes from Orleans. The next is the parish of Saint Charles. What is the ground on which the committee bases its rejection of that return and strikes out 808 more votes? I will read the language of the majority, because I cannot do it justice otherwise:

The Forman board gave Pinchback in Saint Charles Parish 382 votes, and a majority of 272. But this same board (page 81) gives Kellogg 1,231; Antoine, for lieutenant-governor, 1,224; Deslondes, for secretary of state, 1,226; and Field, for attorney-general, 1,225. The Lynch board (page 203) gives Pinchback 1,225, just the vote which the rest of the republican State ticket received there, according to the returns of the Forman board, making his majority 1,060. Moreover, it is proved on page 148 that the Lynch board had full returns from Saint Charles Parish. This contest should be remanded, then, for further proof, or Mr. Pinchback should be credited with the difference in his favor between the returns of the Forman and Lynch boards.

That is the ground; because the Forman board show upon their return that Pinchback runs behind in Saint Charles Parish just as the Lynch board says he runs behind in all the State, they actually strike out the official return and put in the return of the Lynch board! In the Red River Parish, from which 650 more votes are stricken out, the case is precisely the same. Simply because Pinchback is shown to run behind his ticket, they discard the official return and put in the Lynch returns. Then, in De Soto, they strike out his vote and count in 1,190 votes for Pinchback, simply because in 1870 there was a majority for the republican candidate; and for that reason they count against Sheridan the vote of 1870. Such a method of correcting legal returns would reverse all the elections held this year in Ohio, Connecticut, New Hampshire, and Oregon.

But there are nine other parishes. For these they do not take the Lynch returns, but the vote of 1870. Why do they change the basis? Sheridan receives a majority in these parishes by the official returns, but inasmuch as "the correctness of these returns is challenged by evidence that demands investigation," the committee count against him the votes *cast in the elections held two years before.*

Why is not the basis uniform? Why do the majority count in nine counties the Lynch returns against Sheridan and in nine others the vote of 1870?

Mr. SMITH, of New York. Will my colleague on the committee [Mr. LAMAR] yield to me for a moment?

Mr. LAMAR. Yes, sir; but as the gentleman will have the right to the concluding speech, I hope he will be brief.

Mr. SMITH, of New York. I wish to say to the gentleman that the returns of the Lynch board are not referred to by us at all. We refer to the report of the chief supervisor of elections.

Mr. LAMAR. Do you not adopt the returns of the Lynch board for the six rejected counties?

Mr. SMITH, of New York. We do not.

Mr. LAMAR. Do you not adopt the Lynch returns for the county of Saint Charles and for Red River Parish? Your report certainly takes the figures of the Lynch returns for the six rejected parishes.

Mr. SMITH, of New York. Governor Warmoth swore that from three of those six counties there were no returns whatever.

Mr. LAMAR. I am not impeaching your action in refusing to accept the action of the Forman board, but I ask, why interpolate into the official returns those Lynch returns when estimating Sheridan's vote, after acknowledging their illegality in estimating Pinchback's vote? Saturated with fraud, begrimed with infamy, fabricated by men who each (save one) received a lucrative office, from Pinchback himself, as a reward for their abhorrent perfidy, when it is proposed to receive those Lynch returns as the evidence of Pinchback's right to a seat on this floor, the committee unanimously hurled contempt upon the miserable contrivance. The majority of the committee emphatically declares that the fact they are not returns is a notorious one and part of the history of the country. And yet the majority insists upon counting these cheating, fraudulent fabrications in order to defeat Sheridan's claim. They seem to have in the estimation of the majority but one office—to destroy, like eastern serpents which die in the act of biting, and breathe out their life in the wound made by their fangs.

I repeat, why not adopt a uniform basis in the parishes where you have rejected the official returns? I will tell you. Neither basis, taken by itself, will defeat Sheridan. Take the entire Lynch returns of the disputed parishes and eliminate the votes clearly illegal—the affidavits counted as votes—and Sheridan is elected. Or, on the other hand, substitute for the original returns the vote of 1870 in the disputed counties and deduct the vote which Pinchback falls behind his party, then, according to that estimate, Sheridan is elected.

I shall not follow the elaborate argument of the gentleman on the legality of the Lynch board. It is a secondary question, in view of the fact that they had no official returns to count. The question is, who received the majority of votes cast? The canvassing was mere machinery.

Mr. Speaker, I realize fully that the arguments I have been advancing and the arguments which I have been replying to are not the considerations which will control the action of this House. The remarks of my friend from New York, [Mr. SMITH,] and "the argument which followed in the same course after him about the wicked slaveholders' rebellion" and "the conspiracy in Louisiana to trample down the colored people of that State," show that connected with this simple contested-election case there is another question of a higher importance upon which the members of this House are fixing their thoughts and with reference to which their votes will be cast. It is a well-known fact that at the time when these gentlemen claim each to have been chosen as a member of Congress there was a general election in Louisiana; that at this election John McEnery and his associates were, by an actual count of the official returns of a legal returning board and as proclaimed by the legal governor according to law, declared to be actually and legally elected; that these persons, so elected, were invested with their respective offices and would be to-day in the peaceful exercise of the sovereign power of the State, but for their ejection by the military power of the United States Government.

It is also a notorious fact that a body of five men, claiming to be a board of returning officers, declared W. P. Kellogg and certain other men associated with him to be elected to the offices of the State government for which they were the respective candidates; that this declaration was based upon no actual count of official returns; that they had not a single official return before them; that the result at which they arrived was manufactured upon *ex parte* affidavits, most of them forged, oral statements, one-sided reports made contrary to law, and a conjectural "estimate of what the vote ought to have been" by a comparison with the votes at a preceding election, which election was admitted by them to be carried by frauds of the grossest character.

It is also a well-known fact that to fix them in power, which they could not otherwise have held for a moment among that people, a Federal judge, upon a bill to perpetuate testimony, issued an order enjoining the legal government of the people from exercising its legal functions, and decreeing the defeated candidates into the armed possession of the sovereign power of the State; in pursuance of which order Federal soldiers seized the capitol of the State, and inaugurated Kellogg and his legislature by force of arms and in defiance of law. Indignant as the members of this House must unquestionably feel at the wrongs perpetrated upon the citizens of Louisiana; aghast as they must be at the general overturn of all the safeguards of government, social stability and security, which the present condition of that State reveals, for some reason they recoil from casting a vote which may indirectly involve the repudiation of Kellogg's government or the recognition of McEnery's claim. There seems to be an apprehension that in the success of the latter there will be the reascendency of a system hostile to the interests of the republican party; that the McEnery government represents that class in the South which was engaged in the attempt to overturn the Government, and among which yet lingers the spirit of disunion and slavery; that its accession to power means the supremacy of the white race and the oppression, or at least the subordination and subjection in some form, of the black race.

I desire to remove these impediments to a decision of this case upon its merits.

I do not believe that the interests of the republican party are identified with the maintenance of that so-called government now fixed upon the people of Louisiana, or of the governments of a kindred nature in the Southern States. No party supported by the moral sentiment of the American people can long bear the responsibility of the infamy and disgrace which these grotesque caricatures of governments have brought upon the very name of republicanism.

Nor, on the other hand, is there anything in the character of the people of that State who elected McEnery, nor of the people of the Southern States, or anything in their history before the war, or since, which can justify on the part of Congress any suspicion of their designs in once more getting accession to power in their own States—nothing, sir, which should cause Congress to regard their restoration to the management of their own affairs as a menace against any of the results established by the war, against the safety of the black people of the South, or against the security of the so-called loyal men in that section. As this subject has been introduced into the discussion by the gentleman from New York, permit me, in order to disclose the real position and purposes of the original citizens of the South in their true light, to review the events of the last few years.

I am aware, sir, of the fact that the bare mention of these events is calculated to excite apprehension that something may be said to revive resentments and to inflame passion. I presume, I need not assure this House that such is not my purpose. I fear that the two sections can never obtain a genuine and permanently good understanding unless we speak to each other upon these subjects in a spirit of open-hearted frankness. Reticence and reserve persisted in will, it is to be feared, be productive of additional misunderstandings.

Mr. Speaker, in 1869 the presidential election, for the first time in the history of this country, placed the Federal Government in the control of a party whose organization, candidates, and voters were all confined to one section of the Union and animated by a common sentiment of hostility to the slavery institutions of the other section, whose leading policy was not only to exclude those institutions from the Territories, but also to use the powers of the Federal Government to the extent of its constitutional authority, to effect their extinction in the States throughout the Union. There is no proposition better settled than that the overthrow of the civil and domestic institutions of a people against their will, by a power external and paramount to their own, is, in effect, the subjugation and conquest of that people. To the southern people, therefore, was presented one of two alternatives: either to submit to the overthrow of their civil and political institutions or to change their political relations.

Early in 1861 seven of those States, by the action of the people thereof, withdrew from the Federal Union, and by the same authority established a common government, styled the Confederate States of America.

With this controversy between the two sections about the relations of race and labor other questions arose, among which was the one relating to the reserved powers of the several States and their relation to the Federal authority. One school asserted the doctrine of State sovereignty, and, as an incident, its right to secede from the Union. The other theory is that the nation, the United States, is the sole indivisible sovereign, and that the Federal Government is charged with the duty of using all its powers to maintain the national unity and integrity of the national domain. This last question antedated the foundation of our Government and remained unsettled till 1865, when it was adjudicated by a tribunal from which there is no appeal.

Such were the issues staked on the result of the war. Sir, can it be said that in such a conflict (in which questions as old as the Government had passed from theory into fact) between two great sectional organizations, whose armies, larger than those of the first Napoleon, stretching their line of battle across the continent and maintaining a war of four long years of alternate victory and defeat, the crime of treason could attach to either belligerent? I do not mean the technical treason that the fortunes of war give you the power to record against the southern people, but the moral guilt that lies in treasonable intent? They certainly did not conspire or attempt to subvert your form of government or to destroy your Constitution or to depose your rulers. When their secession was con-

summated they left the United States, the United States still, a great and powerful nation, with its extended sea-coast, its teeming population, its vast extent of territory, its mechanic arts, its commerce, its Constitution safe, its laws unobstructed, its administration unembarrassed, its magistracy, Federal, State, and local with unimpaired authority. Do not say, then, that we attempted to overthrow your Government; for there it stood, after we left you, one of the greatest and most powerful nationalities upon the face of the earth.

There was no dispute between the two sections about the form of government. Devotion to the Constitution, to the principles of American freedom, was the fountain at which both sections drank in inspiration for the stupendous war which they maintained. And when that war closed with defeat for the South and victory for the North the controversy was closed also. The result of that victory has been to embody in the Constitution two great principles—the legal indissolubility of the American Union and the universality of human freedom on the American continent.

But, sir, the North were not satisfied with these results. Holding that having plucked the black race from the shelter as well as the restraints of existing institutions, protection to that race was an imperative duty; and holding that they were further bound to fortify the results of the war against further disturbance and reaction into the organic law of the Republic, they adopted the thirteenth amendment, which was followed in quick and logical succession by the fourteenth and fifteenth amendments, for a stricter enforcement of which were superadded your reconstruction measures, whose pitiless provisions sunk the iron deep into the soul of the southern people. I refer to them not to complain or to arraign your policy, but simply to remind you how completely and effectually the logical results of the war have been interfused in the very elements of your national life. You have never comprehended how entirely the South realized that the fate of her labor system and her creed of separate State sovereignty were staked upon the issues of the war. From the day of the surrender of her armies to the present moment, in no part of her vast territory has one single hand of insurrection been raised against the authority of the American Union. Nowhere in the limits of your great empire has the national supremacy been maintained with such absolute omnipotence. Is not this fact of itself, unprecedented in the annals of civil war, occurring among a brave people, a sufficient gage of their fealty to your Constitution and laws? Have they not abided in good faith by your policies as you have successively established them?

Sir, my friend from New York read something from a Ku-Klux report and invoked from me either an indorsement or a repudiation of it. I cannot now give the language of that quotation, but I tell him, sir, that he was quoting not from a report of the democrats on that committee. It was the special report of a single member, for which the others should not be held responsible.

Mr. SMITH, of New York. The gentleman will allow me to correct him. It bears the signatures of eight democratic members of that committee.

Mr. LAMAR. If the gentleman will read the report he will find that those particular sentiments are those of one individual member, and not of the others.

Mr. SMITH, of New York. Those particular sentiments are repeated four, five, and six times over.

Mr. COX. I will say that they were the sentiments of Judge Van Trump. I was a member of that committee; we never read the report; it was the report of a sub-committee; and when it was made, several of us took occasion to disavow it. We never agreed to retrogression as to African slavery, but simply on the social question involved in it.

Mr. SMITH, of New York. I never heard that report retracted heretofore, and I am rejoiced to hear it now.

Mr. LAMAR. I am not indorsing or condemning the views or policy of either of the great parties. I think I can respond to the question of my friend more distinctly, than by repudiating or indorsing a detached sentence which, to say the least of it, is susceptible of different constructions. Mr. Speaker, upon a recent solemn occasion I announced on this floor that the southern people had not only submitted to but would abide the legitimate results of the late war. Sir, that sentiment has not met one dissent throughout the whole extent of the southern land. The occasion has been criticised by a few persons as not a proper occasion to utter it; but the sentiment itself is the all-pervading sentiment of the southern people. In reply to my friend from New York, [Mr. SMITH,] who has challenged me, I will distinctly enunciate what I conceive to be the position of the southern people on this subject.

Sir, the southern people believe that conquest has shifted the Union from the basis of compact and consent to that of force. They fully recognize the fact that every claim to the right of secession from this Union is extinguished and eliminated from the American system, and no longer constitutes a part of the apparatus of the American Government. They believe that the institution of slavery, with all its incidents and affinities, is dead, extinguished, sunk into a sea that gives not up its dead. They cherish no aspirations or schemes for its resuscitation. With their opinions on the rightfulness of slavery unchanged by the events of the war, yet as an enlightened people, accepting what is inevitable, they would not if they could again identify their destiny as a people with an institution that stands antagonized so utterly by all the sentiments and living forces of modern civilization. In a word they regard the new amendments to the Constitution which secure to the black race freedom, citizenship, and suffrage to be not less sacred and inviolable than the original charter as it came from the hands of the fathers. They owe allegiance to the latter; they have pledged their parole of honor to keep the former, and it is the parol of honor of a soldier race.

I repeat, your policy of securing the results of the war has reached its consummation.

There is no class of people in this country who have more liberty and who are more secure from the assaults of enemies than the colored people of the South. Every man, woman, and child of them can do precisely as they like without the slightest restraints from the whites.

Every black man of twenty-one years possesses a vote and exercises the same right and the same individual freedom as the wealthiest and proudest white man in America. *There is not a trace of privilege throughout the land.* Morally, mentally, politically, negro liberty is universal, thorough, and complete, and their equality before the law is without an exception. To go further is to make it a privileged race. Would it not be wise and statesman-like to pause before you push your policy to further extremes, and see the results of it as time will disclose them?

But, sir, is it true that in the establishment of the Union and the enfranchisement of the black men American statesmanship has exhausted its resources and absolved itself from all obligations growing out of the tremendous conflicts through which the country has passed? Is no regard to be had for the white population in these Southern States, to the seven million men in whose veins runs the blood of the races that uphold the Christianity and civilization of the world; a population in which reside the intellectual culture, the moral strength, the material interests, the skilled labor, the useful capital of that entire section, as well as its political experience; a population which, whatever heated partisans may say of it, has in every period of your country's history furnished its due proportion of Presidents for the Federal Republic, ministers in your cabinets, judges upon your bench, statesmen in your national Legislatures generals in your armies, and troops of unsurpassed bravery upon your battle-fields; a population whose leaders guided your country for sixty out of seventy years of her existence, and only fifteen years ago surrendered her to your control, to use the language of one of them upon that occasion, "without a stain upon her honor, matchless in her glory, incalculable in her strength, the pride and admiration of the world?"

But in a speech to which I believe by the rules of this House I am not allowed to refer more particularly, it is said, statesmen as they were, "they were engaged in a wicked rebellion to overturn the Government which was intrusted to their hands;" and "though they have surrendered their arms they are rebels still, cast in the mold of rebellion and cannot bend." "You can no more conciliate them by giving them back their privileges than you can conciliate the rattlesnake by restoring to it its fangs." And another, to which I am precluded from alluding, says that "things are in a bad way down in the South, but it is the legitimate fruit of their own misconduct. They have sown the wind and they must reap the whirlwind." "It is said that the black people have governed badly, and are of a lower order of intelligence; but give to me the lower order of intelligence that is loyal, rather than the higher order of intelligence that has derived its culture from the blood of the Republic."

Sir, the inevitable effect, if not the direct object, of such views will be to fix upon the Government a policy that works the degradation, humiliation, wretchedness, and torture, for its own sake, of the southern people. But I believe, sir, that this spirit is passing away even from the minds of my friends on the other side. It is condemned by the spirit of the age. You can find no sanction for it in the ethics of Christian or American statesmanship. And the authors of the sentiments might have learned even a nobler lesson from the allegories of heathen mythology. When Prometheus was bound to the rock it was not an eagle, the proud bird of Jove, but a vulture that buried its beak in his writhing frame. This is not the spirit which animated your northern people to war upon the South, nor was it the spirit that fired your brave men to follow McClellan and Grant and Sherman.

Sir, the issues of that war are well defined. The people of the South believed that if the States of this Union, whose institutions were so discordant that they could not live together under a common government, "part slave and part free," could divide into two great American republics, each pursuing its own destiny, the freedom, the progress, and the greatness of its own people, without interfering with the other, it would furnish the grandest example and the grandest argument in favor of free institutions that the world had ever seen. The North believed that such separation was death to the Americanism of government; that it was dissolution to the whole system, and it proclaimed and waged war to give effect to the principle that the people of each State and every section must pursue their freedom and their greatness and their glory only in the freedom and greatness and glory of the American Republic, which would make them freer and greater and more glorious than they could become in two separate confederacies. And the whole theory upon which your war was fought, was, that it was as much for the good of the southern people to fail in their cause of secession as it was for the good of the northern people to succeed in the cause of the Union.

If this be not so, then you must admit you were waging a war of aggression upon the southern people to bring them back into the Union for your own sectional aggrandizement, and the terms "constitutional liberty" and "American Union" were mere subterfuges. Assuming that it is your desire and your aim, having brought us back into the Union, to give to the southern people the blessings of good and honest government, to secure to them the prosperity and well-being that ought to be enjoyed in this great Union, I ask you, not by way of complaint—I ask you has such a desire been realized or such an aim been attained in that unhappy country?

I do not propose here to enter upon any detailed description of the condition of our people. I shall do so if the opportunity occurs on some future occasion. I prefer to-day to take the language of a northern gentleman, not because he is northern, nor because he is republican, but because when I first read his words they struck me as solid and thoughtful and wise, exhibiting a maturity of judgment and a tremulous anxiety for the welfare of his country which I did not expect from so young a man:

> For the last few years the infamy and disgrace of certain Southern State governments have been constantly on the increase. There have been corrupt electors and corrupt elections. There have been corrupt legislators and corrupt legislation. There have been double Legislatures, double governors, double Representatives in this House, and double Senators year by year in many States. There have been bad men in these States who have bought power by wholesale bribery, and have enriched themselves at the expense of the people by peculation or open-handed robbery. *Corruption and anarchy have occupied and possessed these unfortunate States.*

I read from a speech delivered by the gentleman from Maine [Mr. HALE] in 1872, at the second session of the Forty-second Congress. Now, Mr. Speaker, I have heard gentlemen allude, with some significance of manner, to the fact that the pains and penalties of treason have not been inflicted upon the South; that their leaders have not been hanged or exiled or subjected to confiscation. I ask you, gentlemen, can a greater calamity, a more awful curse be visited upon a people than to commit them to the possession of anarchy and corruption? Confiscation passes away with its victims and its authors; but anarchy and corruption entail ruin, wretchedness, and blood upon untold generations.

[Here the hammer fell.]

Many MEMBERS. Go on.

Mr. SYPHER. I move that the gentleman's time be extended.

The SPEAKER. If there is no objection, the gentleman will proceed.

There was no objection.

Mr. LAMAR. I was saying that confiscation is not the worst of evils when it is followed by good government, for then it gives you security for the present and a promise of guarantee for the future. But anarchy and corruption are the lingering death that brings decay with life enough to realize its own loathsome degradation.

We have, indeed, as a bare recital of facts—known to many and denied by none—would show, a condition there that even the eloquent words of the gentleman from Maine fail to depict. Language is inadequate to convey a distinct conception of it. There is, however, one mistake, which I must correct before I leave this topic. The evils of that condition are in no way, as is so often alleged, the result of a terrible civil war and the social convulsion produced by the abolition of slavery. Those States were far removed from the field of invasion, except for a short time, and to a small extent. They were never torn by civil strife until the desolating furies of peace came among them. They were not subjected to intestine commotions. They were united during all the war. But, sir, the border States, Virginia, Tennessee, Kentucky, Missouri, were the field upon which the great armies of the two sections met. They were the theater of the conflict. They passed through the same social transformations, and were besides ravaged by the war of factions locally intermingled. Yet those States, their affairs restored to the control of their own people, rebels as they were, have staggered to their feet, and are exhibiting a degree of prosperity and progress remarkable when compared with the blight and ruin of their unfortunate sisters farther south.

Why this difference? If I have not trespassed too long upon your time I will give you a brief analysis of the cause. Mr. Speaker, the point at which government affects most vitally the interests of a people for weal or woe is its fiscal action. "The fisc is the state," once said a great French statesman. The function of collecting and disbursing the revenues places the entire resources of a community at the command of those in whom it is vested. It has in all ages been the machinery by which arbitrary governments and those who rule them can plunder a people and raise themselves to the greatest degree of riches and splendor. According to the views of a great American statesman and profound thinker, (Mr. Calhoun,) even in the best-regulated governments, the action of this part of the system naturally divides society into two antagonistic classes—those who pay the taxes and bear the burdens of government, and those who receive the taxes and are supported by the government; the latter class being interested in swelling the revenues and expenditures to the highest amount, and the former in keeping them down to the lowest figure. There is but one principle by which the people who bear the burdens of taxation can keep themselves from being despoiled and ruined by those who impose and consume the taxes; that is the principle which will not permit taxes to be imposed except with the consent of the tax-payers—or, in other words, which makes the tax-consumers, the men who impose and receive the taxes, responsible to the men who pay them.

Such was the relation of these two classes of the South before the war. Men who imposed the taxes were responsible to the people who paid them. The consequence was, their governments were models of republican simplicity and prudential economy and virtue in the administration of affairs.

Sir, the events since the war have reversed these relations. When, in order to consummate your policy, you divided the southern country into military districts, your military commanders, distrusting the purposes of the southern people and knowing the negroes were incompetent to manage the affairs of government, called to their aid and installed into all the offices of the States, from the highest to the lowest, a set of men from the North who were strangers to our people, not possessing their confidence, not elected by them, not responsible to them, having no interest in common with them, and hostile to them to a certain extent in sentiment.

I am not going to characterize these men by any harshness of language. I am speaking of a state of things more controlling than ordinary personal characteristics. Even if it were true that they came to the South for no bad purposes, they were put in a position which has always engendered rapacity, cupidity corruption, grinding oppression, and taxation in its most devouring form. They were rulers without responsibility, in unchecked control of the material resources of a people with whom they had not a sentiment in sympathy or an interest in common, and whom they habitually regarded and treated as rebels who had forfeited their right to protection. These men, thus situated and thus animated, were the fisc of the South. They were the recipients of all the revenues, State and local. Not a dollar of taxes, State or local, but what went into their pockets. The suffering people on whom the taxes were laid could not exercise the slightest control, either as to the amount imposed or the basis upon which they were laid. The consequence was that in a few short years eight magnificent Commonwealths were laid in ruins. This condition of things still exists with unabated rigor in those Southern States. For when, by your reconstruction measures, you determined to provide civil governments for these States, the machinery by which these men carried their power over into those civil governments was simple and effectual. Under your policy generally—I repeat, my purpose to-day is not arraignment—under that policy you disfranchised a large portion of the white people of the Southern States. The registration laws and the election laws in the hands of these men kept a still larger proportion away.

But there was an agency more potent still.

By persistent misrepresentation a majority in Congress was made to believe that the presence of the United States Army would be necessary not merely to put these governments in force, but to keep them in operation and to keep them from being snatched away and worked to the oppression and ruin of the black race and the few loyal men who were there attempting to protect their rights. Thus was introduced into those so-called reconstructed civil governments the Federal military as an operative and predominant principle. Thus, with a quick, sudden, and violent hand, these men tore the two races asunder and hurled one in violent antagonism upon the other, and to this day the negro vote massed into an organization hostile to the whites is an instrument of absolute power in the hands of these men. These governments are in external form civil, but they are in their essential principle military. They are called local governments, but in reality they are Federal executive agencies. Not one of them emanates from the uncontrolled will of the people, white or black; not one which rests upon the elective principle in its purity. They have been aptly styled by a distinguished statesman and jurist in Mississippi, (Hon. W. P. HARRIS,) State governments without States, without popular constituencies." For they are as completely insulated from the traditions, the feelings, the interests, and the free suffrages of the people, white and black, as if they were outside the limits of those States. Where is the public sentiment which guides and enlightens those to whom confided the conduct of public affairs? Where is the moral judgment of a virtuous people to which they are amenable? Where is the moral indignation which falls like the scathing lightning upon the delinquent or guilty public officer? Sir, that class and race in which reside these great moral agencies are prostrated, their interests, their prosperity jeopardized, their protests unheeded, and every murmur of discontent and every effort to throw off their oppressions misrepresented here as originating in the spirit which inaugurated the rebellion. Sir, the statement that these southern governments have no popular constituencies is true, but they nevertheless have a constituency to whom they bear a responsibility inexorable as death. It is limited to the one point of keeping the State true and faithful to the Administration; all else is boundless license. That constituency is here in Washington; its heart pulsates in the White House. There is its intelligence and there is its iron will. I do not exaggerate when I say that every one of these governments depends, every moment of their existence, upon the will of the President. That will makes and unmakes them. A short proclamation backed by one company determines who is to be governor of Arkansas. A telegram settles the civil magistracy of Texas. A brief order to a general in New Orleans wrests a State government from the people of Louisiana and vests its control in the creatures of the Administration. Sir, even conceding that the decision in one or two of these cases accorded with the rights of the

people, there stands the startling fact that all the rights, peace, and security of those people hang upon the precarious tenure of one man's will or caprice. Is it wonderful that beneath the chill shadow of such a colossal despotism the hope and enterprise and freedom of that people should wither and die?

Mr. Speaker, my heart has on more than one occasion thrilled under the tributes of applause paid by northern members, who were Federal officers in the war, to the valor of southern troops and the fortitude of southern people during the war. Sir, if the conquest over self is the greatest of all victories, then that people deserve a still higher meed of praise for their conduct in peace; for, sir, they have borne unprecedented indignities, wrongs, oppressions, and torture with unexampled patience and dignity.

It is true, sir, that in some districts, for a time tortured, goaded, and wounded, there were neighborhoods in which misguided men rose up, sometimes disguised, and inflicted bloody retaliations. And like all such blind vengeance, the blow fell upon the innocent instead of the guilty, and it served only to call down upon the naked and defenseless heads of the people of the South the wrath of this Government, which misunderstood the outbreak, considering it as the indication of the temper of the southern people when it was only the indication of their agony. These outbreaks that flamed up here and there, without concert and irregular in their succession, were but signal-guns of distress.

Sir, the condition of these States is fully illustrated by the events in which this contested election originated, and but for which it would never have existed.

I have before me the House document referred to by the majority report. The official dispatches contained in that report show that the executive department of the Federal Government, by its own hand, in a time of profound peace, hurled out of existence the civil government of Louisiana—I mean the Warmoth government—which itself had recognized as legal and constitutional, and created another in its stead. We have often heard it said that all the President did in Louisiana has been to enforce the decisions of the courts. Sir, these dispatches show on the contrary, that the entire plan for establishing Kellogg's government by the military power was in advance communicated to the Federal authorities at Washington from the very first step to its final consummation in every detail, and that this plan received their full sanction and promised co-operation. Strong as this statement seems, you will be satisfied that it is simply just if you will briefly examine with me the record in this document.

On the 27th of November, 1872, W. P. Kellogg writes to Attorney-General Williams, in which he recites certain measures of Governor Warmoth, whose purpose is to have "the result of the recent election declared in favor of the republican party," letting fall, however, the remark:

> The details of his action in this particular you are probably familiar with; if not, some of our members of Congress who have just left for Washington will post you fully.

Then, referring to his application for an injunction against Warmoth, (of which the Attorney-General had been informed eight days before,) he unfolds the first step in his scheme of having himself and the other candidates who were rejected by the people of Louisiana installed in the offices of that State:

> I inclose herewith a copy of the bill marked E. This application is being now elaborately argued before the court, and I am of the opinion that the court will maintain its jurisdiction.

Now, sir, here is the whole case—the measures of Warmoth, the bill of Kellogg to thwart him, and Durell's anticipated action—all laid before the Attorney-General of the United States.

But what, sir, is the next step in the scheme? He informs the Attorney-General that "the supreme court is known *to sympathize with us and has incidentally passed upon the legality of our returning board.*"

Again he says:

> *Our* returning board being held as the legal returning board and as in nowise affected by the promulgation of the recent election bill, *may make the returns required by law, which will show the republican State ticket elected, and a republican majority in the Legislature.*

But he proceeds to disclose the third step in this monstrous scheme of perfidy:

> I ought to mention that the supreme court will next Monday pass upon the case of Bovee, ejected over a year from the office of secretary of state by Governor Warmoth, without any legal right or showing. *They will reinstate him in the office.* * * * Under the State election law the returns of the canvassing board come to the secretary of state and he makes a return of the members elected to the Legislature to the secretary of the senate and the clerk of the house, *who are both republicans.* You will at once appreciate the full effect of this point.

But, sir, all these steps accomplished, one more yet is indispensable to consummate the scheme of placing himself and his confederates in possession of the government of Louisiana. That final step he does not hesitate to propose. Here it is, sir, with the reason for making it prefaced:

> I say to you frankly that this fight is extremely distasteful to me, and I would be glad to get rid of the whole matter, but I feel bound, in the position in which I find myself, *to do all I can to avert a condition of things such as will inevitably follow the accession of the democratic party to power in this State.*
>
> I therefore respectfully suggest that General Emory, who I think *appreciates the necessity and sympathizes with the republican party here, be instructed to comply with any requisition that the United States courts may make upon him in support of its mandates and to preserve the peace.*

Sir, what is the response which comes from the law officer of the President's Cabinet to this disgraceful disclosure and this infamous proposal for his aid and co-operation in carrying it out?

I give it without a word of comment:

DEPARTMENT OF JUSTICE, *December* 3, 1872.

S. B. PACKARD, Esq.,
United States Marshal, New Orleans, Louisiana:

You are to enforce the decrees and mandates of the United States courts, no matter by whom resisted, and General Emory will furnish you with all necessary troops for that purpose.

GEO. H. WILLIAMS,
Attorney-General.

Sir, at once the plot began to be carried out, without the omission of a detail, in the precise order in which they are given beforehand to the Attorney-General of the United States.

Durell *did* maintain his jurisdiction. The supreme court *did* "decide *our returning board* to be the legal returning board." "*Our returning board*" *did* so count the returns, and that, too, without having a single one before them, as to show the republican ticket elected and a republican majority in the Legislature.

The supreme court *did* decide in favor of Bovee, and reinstated him as secretary of state. Bovee *did* make a return of the members elected to the republican secretary of the senate and the republican clerk of the house.

Durell *did* issue the anticipated mandate, and that mandate *was* executed by the United States troops under General Emory. Hear the result:

NEW ORLEANS, *December* 6, 1872.

President GRANT:

Marshal Packard took possession of State-house this morning at an early hour with military posse, in obedience to a mandate of circuit court, to prevent illegal assemblage of persons under guise of authority of Warmoth's returning board in violation of injunction of circuit court. Decree of court just rendered declares Warmoth's returning board illegal, and orders the returns of the election to be forthwith placed before the legal board. This board will probably soon declare the result of the election of officers of State and Legislature, *which will meet in State-house with protection of court.* The decree was sweeping in its provisions, *and if enforced will save the republican majority and give Louisiana a republican Legislature and State government, and check Warmoth in his usurpations.* * * * *

JAMES F. CASEY.

NEW ORLEANS, LOUISIANA, *December* 9, 1872.

Hon. GEORGE H. WILLIAMS, *Attorney-General:*

Senate, by vote of 17 to 5, have resolved into high court of impeachment. Senator Harris elected president of the senate, Lieutenant-Governor Pinchback being now governor.

S. B. PACKARD,
United States Marshal.

Have I not made good the statement that the legal and constitutional government of Louisiana was destroyed by the Federal Executive by military force? There was not a member of that lawless cabal who was not an officer of the Federal Government. And, sir, is it not manifest that these criminals would never have dared to do what they did but for the assurance given them of aid and co-operation from Washington? Would that besotted judge have dared to debase his court as he did if the Attorney-General, knowing beforehand what he would do, had not instructed General Emory to sustain his acts and enforce his mandates?

But, sir, that Government thus set up and put in operation had no power to sustain itself.

On the very first day of its existence it appealed to the President for military protection. It was a lifeless thing, incapable of movement except when galvanized into action by the military power which created it. Here is the appeal:

NEW ORLEANS, *December* 9, 1872.

President GRANT:

Having taken the oath of office and being in the possession of the gubernatorial office, it devolves upon me to urge the necessity of a favorable consideration of the request of the General Assembly as conveyed in the concurrent resolution of this day telegraphed to you, requesting the protection of the United States Government. Be pleased to send the necessary orders to General Emory. This seems to me a necessary measure of precaution, although all is quiet here.

P. B. S. PINCHBACK,
Lieutenant-Governor, Acting Governor of Louisiana.

What do they want protection against—violence? Not at all, for he expressly declares "all is quiet here;" and on the next day he telegraphs "I do not regard any outbreak imminent." What is it, then, that causes these conspirators, in the very moment of their success, to tremble and to send eight dispatches in one day urging the President to recognize them and to send the military of the United States to protect them? You will find the cause in the following dispatch. It seems that the ghost of the murdered legal government will not down at their bidding:

NEW ORLEANS, *December* 11, 1872.

Hon. GEORGE H. WILLIAMS,
Attorney-General, Washington, District of Columbia:

The Warmoth legislature are now in session at the city hall, in defiance of the restraining order of the court.

S. B. PACKARD,
United States Marshal.

But what possible danger can possibly arise from the mere meeting of a body of men divested of all official authority if "no outbreak is imminent?"

The true danger is revealed in this dispatch, sent on the same day:

NEW ORLEANS, *December* 11, 1872.

President GRANT:

Parties interested in the success of democratic party, particularly the New Orleans Times, are making desperate efforts to array the people against us. Old citizens are dragooned into an opposition they do not feel, and pressure is hourly growing; *our members are poor and adversaries are rich, and offers are made that are difficult for them to withstand. There is danger that they will break our quorum. The delay in placing troops at disposal of Governor Pinchback, in accordance with joint resolution of Monday, is disheartening our friends and cheering our enemies.* If requisition of Legislature is complied with all difficulty will be dissipated, *the party saved*, and everything go on smoothly. If this is done, the tide will be turned at once in our favor. The real underlying sentiment is with us if it can but be encouraged. Governor Pinchback acting with great discretion, as is the Legislature, and they will so continue.

JAS. F. CASEY, *Collector.*

Well may this Federal collector characterize as "our quorum" this miserable contrivance that needs the presence of United States troops to prevent its dissolution from sheer imbecility and poverty.

But, sir, the legal government of Louisiana, though disseized of its capital and deprived of its insignia of political authority, still asserts its existence and its right. In the name of justice to an outraged people it lifts its voice in imploring invocation to the President at least to give their cause a fair hearing through the governor of their choice and a committee of a hundred of their best citizens. Here is the response they receive:

DEPARTMENT OF JUSTICE,
December 13, 1872.

Hon. JOHN MCENERY, *New Orleans, Louisiana:*

Your visit with a hundred citizens will be unavailing so far as the President is concerned. His decision is made and will not be changed, and the sooner it is acquiesced in the sooner good order and peace will be restored.

GEO. H. WILLIAMS,
Attorney-General.

Sir, can anything be more imperial in its tone than this? The President's decision is made and will not be changed! He does not want to hear from the people! Let them acquiesce in his decision. But, sir, they came in spite of this imperial ukase. An investigation in Congress began. The conspirators shrunk from the threatened exposure; they began to talk of a compromise with the government they had subverted—a compromise which promised at least peace and tranquillity to the State. But, sir, the idea was discountenanced. The following private dispatch was sent, and afterwards got into the papers:

WASHINGTON, *February* 26, 1873.

T. W. DEKLYNE, *Deputy United States Marshal:*

Tell Kellogg to keep his shirt on. His talk of a compromise only irritates authorities. The only compromise is for members elected to go in and take their seats in the Legislature, and that excludes all contest. The McEnery government *must be broken up as soon as Congress adjourns.*

S. B. PACKARD.

This command was obeyed to the letter. All thought of compromise was abandoned. After Congress adjourned "the McEnery government was broken up" and dispersed by a brigade of metropolitan police backed by the United States troops.

Mr. Speaker, the real issue pressing upon us for decision did not originate with this Louisiana case. It underlies our political system, and in its results we are to find solved the great question of self-government; not for the South alone, but for every part of the Union. I know, sir, that in the blind fight of factions the great peril is lost sight of in the presence of the evils that more immediately affect the contestants. But there is that involved in the real issue which is of infinitely greater importance than questions of races or the material interests of many generations.

The antagonism of races, as to the cause of which I differ so widely from my friend from New York, [Mr. SMITH,] cannot last always. With thirty-seven millions of white people, increasing not only by the ordinary laws of population, but by the tides of immigration pouring in from Europe, to only four million of blacks continually falling off in its percentage of growth, with no supplies from any foreign sources, it does not call for a scientist to calculate how long it will take for the weaker and smaller race to disappear before the more populous and stronger.

So, too, the prosperity of the South may be utterly destroyed, and with it no small part of that of the North, whose present distresses are in my opinion not so much due to the contraction or expansion of the currency, as to the rapid closing up of the North's best market and the impoverishment of her best customers. But, sir, the land and climate of the South will still remain, and, long after we have passed into oblivion, her deep rich soil will respond to the wants of humanity, and the great Mississippi will bear whole continents in solution to the Gulf, depositing and creating wider and richer fields for cultivation.

But the people of the United States cannot afford to have destroyed the principles of constitutional government and representative liberty. I need not waste your time nor my strength in eulogies upon our political system. What it was previous to the late war we all recognize and rejoice over. What it is to be we cannot tell, for we are in the midst of one of those great political transitions in which a people, deceived by the retention of the form, are in danger of losing the substance of free government. Because their rights and liberty have to be won by bloody and violent struggles, it is difficult for them to realize that those very rights and liberties may silently disappear through the subtle, insidious usurpations of power and the unseen and covert attacks of political chicanery and fraud. Yet such has been the history of the failure of republican institutions in all ages.

Were not this so, the wrongs, the usurpations, and the undisguised tyranny so forcibly depicted in the record I have just read were not possible. That which has happened to Louisiana, Texas, Arkansas, Alabama, and South Carolina originates in an abuse of power that is applicable to Massachusetts, New York, or Ohio. The appeal I make for my own unfortunate section I make for the entire people of the United States. In what I have said I mean no assault upon the character of the President. It is the system which I protest, a system which is not merely centralizing all powers in the General Government, but is also permitting one department to usurp and hold them to the utter ruin of the other two. I deplore the acquiescence of Congress in these usurpations.

There are in our Constitution important checks upon presidential power and ample and efficient means by which Congress can protect the States and people against the unconstitutional action of executive administration.

It is only the consent of Congress that makes it possible for the will of one man to wipe out all State authority, and with that authority all vestige of free government.

Louisiana Contested Election.

SPEECH OF HON. P. B. S. PINCHBACK,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

June 8, 1874,

On his right to a seat as Representative at large from the State of Louisiana, as against the claim of Hon. George E. Sheridan.

Mr. PINCHBACK, (contestant.) Mr. Speaker, I appear under great disadvantage, from the fact that I have not had an opportunity of acquiring that knowledge which would enable me to indulge in such high flights of oratory as the distinguished gentleman who preceded me. The remarks of the gentleman from Mississippi [Mr. LAMAR] were expressed with a beauty and a power such as I have scarcely ever heard before; but his argument I came near saying was full of sophistry. I will not, however, be so harsh as that; but it was the more calculated to deceive, because it seemed to come from a spirit of conviction and of honesty. Sir, there is no argument so fraught with evil, so fraught with the power of deception, as that which seems to emanate from an honest purpose and an honest conviction. I have no doubt but the argument of the gentleman from Mississippi sprang from a heart as pure and as unsullied as was ever found in the breast of man. I am willing to admit he religiously believed every sentence he uttered, but I beg respectfully, notwithstanding, to differ from him in his premises as well as in his conclusions. I will take them up, however, later on in the discussion.

I propose first to bring the House to the direct question at issue. You have not, Mr. Speaker, permitted us to express our opinions on this floor for a display of oratory, however entertaining such displays may be. I understand the House desires to get at some of the facts which underlie this question.

What are these facts? If this report of the committee has shown the House any single thing, it is in the first instance that I am entitled *prima facie* to a seat in this body. I am told by some of the best legal minds in this Capitol that it is a well-established rule in the House where the member has a *prima facie* right, that right holds good on its merits until it is overturned.

But, I repeat, what are the facts? These gentlemen say I present myself before the House on credentials coming from myself as acting governor of Louisiana, and they go on to say myself and friends have shown a lack of interest in this case because we have not prepared the evidence to meet the case properly before the committee. They fail to recognize this other important fact of history that, after my election as Congressman at large, I was elected *by the Legislature of Louisiana, which had been and still is recognized by the President of the United States* through the Attorney-General as the legal Legislature of that State, to a seat in the United States Senate and have been and am now contending for a seat in that body.

This fact, I am told, sir, has been used both in the committee and on the floor of this House to prejudice the House against the recognition of my claim upon the flimsy, the false, and the absurd idea that I in some manner acted contrary to the dignity of this House when I saw fit to make application for a seat to which I had been chosen in the Senate of the United States and at the same time contest for a seat in this House. Why, sir, let me ask any republican member of this House or any democratic member whether if he had been in my position, elected on the 4th day of November to the Congress of the United States by a popular vote of his State, and his State had subsequently elected him to the Senate of the United States by what was recognized as the legal Legislature thereof, would he have done otherwise than I did; whether the gentleman would have been so patriotic and considered the dignity of this House so far above that

of the Senate as to have said "I will not take the seat in the Senate, I will take the seat in the House?" If this House is composed of gentlemen of that character I am frank to admit that they are more disinterested patriots than I have yet found in my brief political career. The rule adopted by all those I am acquainted with has been to take the best office they could obtain. And if I follow in the footsteps of my illustrious predecessors I suppose they must attribute it to the characteristic which they are pleased to ascribe to our race, that of being imitative, and say I have simply imitated them. Now, sir, I do not believe there is a single member of this House who situated as I was would have acted in a single particular otherwise than I have done as to this preference.

Mr. Sheridan comes before this House without any claim whatever. He has not even a *prima facie* case. He has no authority before this House, on the admission of the committee itself, to show that he is entitled to a seat, except so far as the report of the minority goes. And why? Why, sir, the only authority that he has brought here, in the language and by the admissions of the committee, is a certificate—from whom? From ex-Governor H. C. Warmoth, which certificate was made, it appears, on the 4th day of December, when the report of the committee abundantly shows that no promulgation of the vote for Congressmen at large of the State had been made until the 11th day of December—seven days thereafter. Now, I would like to know right here how Governor Warmoth obtained the extraordinary power of ascertaining seven days before the result was declared by the returning board the vote which Mr. Sheridan obtained. It appears to me that it is a problem which would puzzle some of these gentlemen here. I would like to ask any member of this House coming from a well-regulated State whether in your State any man could foretell seven days before the return of your vote the exact number of votes you were to get as a member of this House? If the House needed any evidence of the manifest tampering with these returns on which they base so much, I think it is found in the fact that Governor Warmoth gave this certificate seven days before the promulgation, with the exact result of the count of the votes Mr. Sheridan had received. I say, then, Mr. Sheridan has not even a valid certificate. If Governor Warmoth was the undisputed governor of Louisiana today, the certificate issued in that manner is illegal, null, and void. What is the law of Louisiana, sir, upon that point? In the Digest of the Statutes of Louisiana, section 33, will be found this language:

As soon as possible after the expiration of the time of making the returns of the election of Representatives in Congress, a certificate of the returns of the election for such Representative shall be entered on record by the secretary of state, and signed by the governor, and a copy thereof, subscribed by said officers, shall be delivered to the person so elected, and another copy transmitted to the House of Representatives of the Congress of the United States, directed to the Clerk thereof.

That is the law, sir. It does not say that *before* the promulgation of the returns the governor is authorized to *guess* out the result and make a certificate for his men that they may run here ahead of the legal Representatives and get a *prima facie* case, as was done with indecent haste, it appears to me, in the case of Mr. Boseman, from the fifth district.

But it is said that the governor shall give his certificate "as soon as possible" *after* the result of the election is ascertained. He has no choice; the duty is mandatory. And being in the position of acting governor of Louisiana, when the time arrived I made out the certificates of the returns of the several persons who had been elected to the Congress of the United States; and unfortunately I am afraid the duty devolved upon me of certifying to my own election.

But let us see whether those certificates are worth anything or not. I have heard some gentlemen say that by reason of all the disturbances down there of which they had to take judicial cognizance these certificates are not worth anything. If that be the case, I ask by what authority do Mr. MOREY and Mr. DARRALL sit upon the floor of this House? They hold the certificates of P. B. S. Pinchback, acting governor of Louisiana, which is the only evidence they have presented and upon which you speedily admitted them; and they sit here to-day with their seats uncontested.

It is urged that my certificate, by reason of the irregularities charged, does not carry with it a *prima facie* right. I think the seating of those two gentlemen shows the absurdity of such reasoning, because if it did not convey at least a *prima facie* right, how in the name of common sense could the House seat Mr. MOREY and Mr. DARRALL? But, sir, the House has gone further than this. On the 3d day of December, I think the second day of your session, a resolution was offered in this House to the effect that J. HALE SYPHER, LIONEL A. SHELDON, and P. B. S. Pinchback be declared *prima facie* entitled to seats on this floor, and the House, on a vote taken by yeas and nays, by a very large majority declared that J. HALE SYPHER was entitled to a seat *prima facie*. The question had been divided, and swiftly following that vote came a motion that LIONEL A. SHELDON was also entitled to a seat *prima facie*, and both these gentlemen were seated. It must be remembered right here, and it is important that republican members should take cognizance of the fact, that in seating Mr. SYPHER you seated what was considered the very worst case from the State of Louisiana, and I have heard several members declare that if Mr. SYPHER was elected, then the whole team was elected. You accorded that gentleman his seat on a *prima facie* right; I now propose to hold you to your ruling. If Mr. SYPHER and all the other members of the delegation are entitled to seats *prima facie* with precisely the same credentials presented by myself, there can be no question as to my right *prima facie* to a seat in this House. I ask the House to preserve its consistency. Do not discriminate between citizens in Louisiana. I say that if you refuse to accord me the *prima facie* right to the seat, you make "flesh of one and fish of another." You cannot dodge this question; it comes up face to face and teeth to teeth, and you must meet it.

Sir, I demand simple justice. I am not here as a beggar. I do not care so far as I am personally concerned whether you give me my seat or not. I will go back to my people and come here again; but I tell you to preserve your own consistency. Do not make fish of me while you have made flesh of everybody else.

My friend General Sheridan lays great stress on the assertion that I ran behind my ticket. How he arrives at that extraordinary conclusion I am at a loss to know. The contrary will be seen by a glance at the Foreman returns, and I propose to make the Foreman returns the basis of my contest for the sake of argument, as the gentleman swears by those returns. Now I say that I ran ahead of every colored candidate on the republican ticket. That is a point that I am afraid my astute friend overlooked. He has taken as the basis of his remarks the returns of a board which he admits are of no account whatever. He declares that the Lynch board had no authority whatever on which to base any count. Well, I will not debate that question. I take the returns of the Foreman board, and I will show that his assertion that I ran behind the ticket is false in every particular. Here is the condensed vote:

Kellogg	55,973
Antoine	53,194
Deslonde	53,594
Fields	54,848
Clinton	54,479
Brown	53,558
Pinchback	54,402

This shows that I received 808 votes over every other colored man on the State ticket, and ran only about 1,000 behind Mr. Kellogg himself.

Now, these are the returns the gentleman boasts of. I might add right here, since the gentleman took advantage of his position to give me a little poke in the ribs, that in every parish that I canvassed I was assured by the white people that they would vote for me in preference to a carpet-bagger, that they knew I had an interest in the State, and would either vote for me or not vote at all; and instead of my running behind my ticket, it seems to me that he ought to have run behind his.

But there are other reasons why the gentleman might be expected to run behind his ticket. His democracy, if indeed he has any—I do not know where he stands, although I have asked him several times—but his democracy was of such recent date that I do not think his friends had much respect for it. I think he has rather been used by others. They knew that he was gifted with oratory, that he had the power of indulging in oratorical flights and of rounding his periods eloquently, and they placed him on their ticket for that purpose rather than for any merit he possessed.

But there is another important point to which I want to call the attention of the House, and especially do I desire to appeal to the republican members in regard to it. The gentleman said he would make no partisan appeals. He might easily make that statement, because he has no partisan record. He has not been a consistent member of any party, and consequently he can make no partisan appeal.

But, Mr. Speaker, I have a clear and unimpeached party record. From the first day when you clothed me with the right to vote to the present, I have voted at every election the straight republican ticket. And what is more than that, I have done that in Louisiana which few men have done in any portion of this country; I have shown on several occasions that I held party success above personal interest. I will introduce an incident in the party campaign of 1872 in Louisiana that confirms this statement. You all remember the celebrated railroad race which was alluded to by the gentleman from New York, [Mr. SMITH.] How did that race come about? On that hangs a tale which, if I had time, I would like to tell. Right there will be found the cue to the whole of this contest. In the summer of 1872 the republican party was apparently hopelessly divided; two full tickets were in the field, headed respectively by William Pitt Kellogg and myself. No man in Louisiana will deny that my ticket was supported by a large number if not a majority of the republicans of that State, and yet for the sake of republican success, both in my State and the country, I agreed to terms of compromise among the contending republicans which necessitated the withdrawal of my candidacy for governor. It is always charged that I am not trustworthy, not reliable, if I dare to complain of the bad faith of some of my republican associates; and any attempt to expose their perfidy is held to be a betrayal of the republican party. This class of men have made all kinds of assaults on me; they have paid public journals, employed persons at heavy cost to write me down, and they have published papers in my own State to defame me; and if I complain, they say that I am trying to break up the republican party. If I strike a blow in defense of the colored man's interest, they say I am false to the party. These insidious attacks have lost their force. I recognize the fact that I am a full-fledged American citizen, and from this day on I propose to do that which I conceive to be right, no matter whether it subserves republican or democratic interests.

My faith in the republican party is as strong as any man's can be. I have given evidence of that fact. I gave evidence of it when I came down from the head of a ticket supported, I think, by a majority of the republican voters in Louisiana for governor, and which was very forcibly alluded to by my friend, General Sheridan. In that I showed a spirit of concession and a desire for unity, harmony, and republican success which few men in this country had shown. I did not stop here, but I started out in the country to keep the republican party in the great national contest. The national republican committee seemed to think that my humble services would be available for some good, and they invited me to come North in time to take part in the campaign in Maine. I accepted their invitation, and made several speeches in the interest of the republican ticket in that State. On my return to New York I met Mr. Chandler, secretary of the national committee, and told him the condition of things in Louisiana. I said unless by some means the iniquitous registration and election laws were stricken from the statute-books of Louisiana Governor Warmoth would count in the fusion ticket. He asked me how it could be saved, and I told him that there was but one way on earth; that was for me to take my life in my hands and start for New Orleans, and if I got there before Governor Warmoth I could save it. That is where the great railroad race came in. He asked me if I was willing to undertake it, and I said that I was willing to undertake anything that would save the republican party. I knew the dangers I should encounter, but was brave enough to risk it. My friend Warmoth, who is as full of tricks as a cat is of lives, managed to get control of the telegraph and railroads, and anticipating that I would expect telegrams from Mr. Chandler, arranged at Canton, Mississippi, an ingenious plan to defeat me. When the train stopped at that place the conductor awoke me from a slumber, and said "There is a dispatch in the telegraph office for you." I naturally rushed out of the car into the office for the telegram, presuming that the conductor would wait a moment for me. Upon entering the office the door was closed behind me and locked upon the outside—by the merest accident, of course. By the time I got out of the office the cars were miles on their way, and I consequently foiled in my object. I venture to say that had I been successful, Louisiana would have had a fair election, and this case would not now be before this House, and much of the disgrace resting upon our State would have been averted.

I now come back to the point I left, and to which I desire to claim the especial attention of the republican members of the House. I say that you have in every single instance recognized the certificate which I present here as *prima facie* right to a seat on this floor. I have been told by the best legal talent which I can command that the *prima facie* right carries with it all the merits of the case until overturned. Upon that ground I contend that I am entitled to a seat on the floor of this House.

If the House shall vote to adopt the report of the majority of the committee, I have no complaint to make. I accept the report, and desire the fullest and completest examination into this whole question. I am further strengthened in that desire because I find that the committee in their report use this language:

> If this case be remanded for further proof and be fully developed, the result, there is reason to believe, will either demonstrate that the Kellogg government is rightfully in power or will furnish the proof that it is a usurpation.

I find much comfort in these words, for they are conclusive proof that the trouble in this contest rests upon the validity of the Kellogg government.

I desire to know whether that government represents the majority of the voters of Louisiana or whether it is a usurpation? Therefore I am in favor of the report of the Committee on Elections. I would ask as a special favor to myself that that report be adopted. But in the mean time I contend that if you would be consistent, you must accord me that *prima facie* right which you have accorded to every other member upon my certificate.

But if you are not satisfied with my certificate, the committee has in its possession another certificate forwarded here by Governor Kellogg, a certificate made from a transcript of the returns now on file in the office of the secretary of state. If you can find any such returns there in favor of my friend, Mr. Sheridan, and if he can get such a certificate, I will waive my right. But he has nowhere on file any record of his election.

Now, sir, I want to take up two or three points of the argument of the distinguished gentleman from Mississippi, [Mr. LAMAR,] and I desire to say that I differ from him with reluctance, because I believe, as I said before, that he was sincere in what he said. I know something of his record in his State. He bears the character of an honest, fair-minded southern gentleman, and I am frank to admit that if there is any class of men on the face of the earth for whom I have great personal respect it is that class of gentlemen. Therefore I differ with him with a great deal of regret.

The first point I purpose to notice is his statement that there is only a contest in twelve parishes. Of course that would strike many members as extraordinary. But I say to the republicans here that if they will turn to the records they will ascertain that these twelve or thirteen parishes are all strong republican parishes. You will not find any contest in democratic parishes, because it was not necessary in those parishes to cheat in order to get a democratic majority. But you will find that every one of the contested parishes is largely republican. They had to get up a contest, they had to get up charges of fraud, they had to get up something of that kind to make up a democratic majority, or throw out the parish, which amounts to the same thing.

Now, if you wish to have a fair statement, I ask you to turn to the record. I ask you to go over the records of Mr. Foreman and his colleagues; and you will find that every parish in which these gentlemen have failed to make reports or in which they contend there is a contest, has a large republican majority. I ask any republican on this floor whether this of itself ought not to be sufficient evidence of fraud.

Another thing struck me as being very peculiar. The gentleman from Mississippi said that this report proposed to kill Sheridan, but did not intend to seat me. Now, I can scarcely conceive that that is correct, and yet I know from the remarks of gentlemen that I have heard—gentlemen probably who did not know me—that there is some kind of an undercurrent at work in this House. I heard one gentleman say that he intended to vote against me; but I will not tell the House the reason he assigned, because it is too ridiculous. But he assigned a very extraordinary reason why he proposed to vote against me and for Mr. Sheridan.

I repeat, I am not arraigning the committee, because it has done just the thing I desired. I want a full investigation. But I do hope that no republican will for any reason allow himself to be prejudiced against admitting my claim at least on the *prima facie* case. I say that to do so is unmanly and unjust, not only to me as an individual, but to the State of Louisiana. It is unjust to Louisiana, because as long as these contests are kept up both here and in the Senate I am made the instrument by which the sovereign State of Louisiana is deprived at this crisis of her life of two votes in the national Congress. I protest against it in the name of the whole people of Louisiana. I say that a speedy solution of these questions ought to be had without any respect to my personal inclinations.

This House must not be biased by anything that may happen at the other end of the Capitol, and which in no way concerns the question here. The question here is, "Am I entitled to a seat?" If so, it is the duty, I take it, of republicans here to so declare and allow me to be admitted to represent Louisiana, or else let me go about my business.

Gentlemen apparently fail to understand that I have some individual rights in regard to this question. Such of them as have spent much time here know what it costs to live in the city of Washington. They know what it costs to travel on railroads unless you have a free pass, which I do not happen to have; I never have had one in my life, and I never expect to have one. There is something due to me as a humble individual, a citizen of this great country. I want you to determine this question upon its merits and in the interest of fairness and justice. I hold that inasmuch as you have seated every other member from the State of Louisiana upon the self-same paper which I present, you are in justice compelled to seat me. There must be some party fealty and some fair play.

One other very important point was made by the gentleman from Mississippi. He stated that no party can sustain the iniquity, the rascality, the corruption, and the fraud of the southern governments. Now, have the members of this Congress, have the people of this country, ever stopped to consider what was after all the true cause of all the evils that are now the subject of complaint in the South. I know not what is true of the other Southern States, but I can state here, without fear of contradiction, that in the State of Louisiana the responsibility is largely upon the democracy. I can show here by irrefutable facts that in the first election held under the reconstruction acts the democracy of Louisiana, entertaining the insane idea that Seymour and Blair could be elected, treated the reconstruction acts as a nullity, and in many portions of the State instigated and thrust forward the most ignorant colored men that could be found for election to the constitutional convention, with the view of making that convention a farce; and in order to make success certain they put no competing candidates in the field. Of course these men were elected, held seats in the convention, in which they voted with their friends. The constitution was framed, submitted to the people, and ratified. The illiterate men returned home successful statesmen, and from that day to this nearly every man in Louisiana has felt himself every inch a statesman, and from this policy has arisen in a great degree the ignorance that has found its way into the public offices of our State.

But that is not the worst of it. In many instances this policy has been resorted to by white republicans when they have found a colored man with intelligence, cultivation, and sagacity, that they disliked and desired to destroy. The colored people have begun to understand this trick and to appreciate intelligence among their class, and to realize that they are held responsible for bad governments in the South; and I say if you will let them alone and only treat them with fair play, encourage them when they make an effort to do what is right, they will work out their own salvation. When they understand that all bad laws, all peculations, iniquities, frauds, and corruption which are charged upon these governments will at last be laid upon their shoulders and they will be held responsible for the same, in my judgment they will be swift to move in the right direction to rectify any wrongs which may exist by the selection of honest, intelligent, and competent men to administer the affairs of the Government.

Mr. Speaker, you will find the outcropping of this desire in Louisi-

ana to-day. You will not only find it there, but you will find it in Tennessee, in South Carolina, and wherever else in the South you may choose to push your investigations. What they require is that you shall encourage them in these laudable efforts toward reform. You should be the first to encourage them to do what is right. Do not tell them to follow blindly after this man or that man or the other man. Do not tell them that if they in the exercise of their rights dare to assert their manhood and elect from among their own people intelligent, honest, and capable men to fill a fair proportion of the offices it will destroy the republican party and lay them open to the charge of negroizing the South. I contended, Mr. Speaker, from the very outset that republican interests would be advanced by honest governments in the Southern States as well as in the Northern States, and honest governments in the South you will get just so soon as the colored people understand you will hold them responsible for the same, and not the men they elect.

Gentlemen on the other side have told us that the white people of the South accept the situation. I thought they had, at least I began to think they had, just before the last general election. It was believed at that time that I was inclined to favor the liberal republican movement in Louisiana. These gentlemen then began to find out that I was not so bad as they had been in the habit of charging. They had prior to this alleged that I was a fire-brand, that I was corrupt, and that I was everything that was bad; just as they say about republicans generally. But when they thought that I was inclined to democracy through the liberal republican party, and would accept a place on their ticket, the fusion convention of Louisiana tendered to me the unanimous nomination for Congress from the State at large on their ticket, the very place which was afterward given to General Sheridan. When they found that they could not get me, because I would not accept the position, not many days elapsed after this failure to compromise before they were restored to their former opinion.

Mr. SHERIDAN, (in his seat.) You wanted to be the lieutenant-governor?

Mr. PINCHBACK. O, yes; I had a hankering that way, but that was not the difficulty. I demanded the same representation for the colored people that they had on the republican ticket, but they could not see that; it would have interfered with their arrangement with Governor Warmoth to send him to the United States Senate.

Mr. Speaker, I ask you to look back over the political history of Louisiana for the last ten years. You will find that we have been in a most extraordinary condition, the last three of which have subjected me to much misrepresentation, and I fear that the judgment of some of the members of this House has been affected by what they have heard in reference to me. I do not blame them for it, if it be true. For notwithstanding I am a republican, working hard and earnestly always in the interests of the republican party, certain men in Louisiana who claim to be republicans have insidiously labored to destroy my power and influence in my State. I have been stabbed in the house of my friends. For two long years these men published a paper professedly republican, whose columns daily teemed with the vilest and bitterest denunciations of my character, only equaled, as I once told President Grant, by the New York Sun in its attacks upon him. The baneful influence of these assaults has overshadowed me in my contest in the Senate, and hangs like an ominous cloud over this body, and may prevent my obtaining a recognition *prima facie* to a seat upon the floor of this House.

It is but another dastardly attempt on the part of these men to deprive me of my right and the people of Louisiana of a vote in this House, because I am unwilling to be cheated by these false republicans, and too manly to be used as their tool. I shall not blame you.

But I shall hold those false friends responsible at home. I have skirmished heretofore; I shall fight hereafter. I do not believe that you gentlemen will be biased by these reports, so far as your action upon this case is concerned, but they may affect your opinion of me as an individual, and I humbly beg your pardon if I have trespassed upon your time in introducing this personal feature. But when you consider the attitude I have been in for two years nearly—that I have been held up before the American people in a manner that two of your ablest and best men could not stand, still I live. I will be pardoned I suppose for having made these personal references, for you know it is a trying ordeal for any man to pass when he is held up for two years before the American press, especially if he is an aspirant for office, and as in my case claiming a seat in the Senate of the United States. You may be sure if he ever committed an indiscretion of any kind in all his life they will be certain to find it out and hurl it at him greatly magnified.

Mr. Speaker, I will treat my friend, Sheridan, lightly, but I could give him a fearful rasping if I were inclined. I have heard him make most eloquent speeches in the interest of republicanism and on behalf of the poor and down-trodden in our State. He has made our rostrums ring with appeals on behalf of down-trodden humanity. But that was at a time when his interests were on our side, when his claims to a fat office were pending. Then he found that the poor and ignorant and helpless race needed the protecting arm of the Government. He did not complain then about Federal bayonets and Federal interference. I remember the time when he joined as heartily with me as did any black man in Louisiana in imploring Federal aid. I remember the memorable contest known as the Carter fight, when my friend came up valiantly to assist us in our attempts to keep off the forces of Colonel Carter and requesting Federal interference and aid; but at that time it was a matter which concerned his interest. And when I saw the extraordinary position which he took in this House to-day, I was reminded of the old adage, that it makes a great difference whose ox was gored. But I could tell a tale here on my little friend—but I know he is a clever little gentleman; I will let him off as lightly as he did me.

But there is one thing that he said that is really amusing. He gave you an argument of an hour and a quarter nearly, or of fully an hour, to show that you cannot attach any importance whatever to the return of the Lynch board, on the ground that they had no evidence before them of my election—that they had no returns; and he wound up his great rhetorical display by telling you he could not get the return and had to take the next best evidence. That is exactly what the Lynch board did. Mr. Warmoth had locked up the returns, and they made several and repeated efforts to get them. The Federal court was applied to to compel their production, but they were spirited off to New York or elsewhere, so as to prevent the Federal court getting them. And they had to do what Mr. Sheridan said was done in his case—they took the next best evidence.

But I base my claim to a seat on this floor on higher grounds than that. Let me say I know more of these election frauds perhaps than any other man, excepting Warmoth and Blanchard, in Louisiana. When President Grant refused to treat with us at Long Branch, I was one of the delegation that visited him. I knew there was a solemn conclave of our side of the house held, and it was agreed that by fair means or foul we would defeat the Federal ticket in the State of Louisiana—at least the white part of the conclave agreed upon that. I had a good many friends under Warmoth in office, and was comfortably housed myself. I concluded that I would drive along with him until I could get a convenient jumping-off place. I wanted also to see what his plans were, so as to be able to defeat them. O, I could tell you a tale that would harrow up your very soul. But you know enough of it without my telling you. The whole thing was a fraud; yet I venture to say that if there was any way on earth of getting at the facts, it would be found that the whole Kellogg ticket, including myself, were elected by 10,000 majority. But, I repeat, the whole thing was a fraud and a series of rascalities. Look at the proceedings. Why, sir, they rode rough-shod over laws, constitution, people, and everything until they got to a Federal judge, and they would have ridden over him also if it had not been for the President and the Federal troops.

Mr. Speaker, there are innumerable other points that I would like to touch upon; but I think the best thing I can do for the House and myself in this warm weather will be to quit. I think I have said enough either to save me or to dam me, and I submit the question to the House for its decision, and cheerfully await the result.

Louisiana Contested Election.

SPEECH OF HON. G. A. SHERIDAN,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

June 8, 1874.

On his right to a seat as Representative at large from the State of Louisiana, as against the claim of Hon. P. B. S. Pinchback.

Mr. SHERIDAN, (the contestant.) Mr. Speaker, I shall endeavor by being as brief as possible in my statement of this case, to show my gratitude to this House for so promptly bringing before them for final adjudication the rights that are at issue here. When I first presented myself before this House, at the beginning of the session, I believed I held a certificate which *prima facie* entitled me to a seat upon this floor. The House, however, decided otherwise, and I was compelled to enter into a contest to prove my right to the seat I claimed. I have succeeded in convincing the Committee on Elections unanimously that my competitor was not elected; I have succeeded in convincing a minority of that committee that I was legally, lawfully, fairly elected to a seat upon this floor.

I now propose to state my case to this House fully and fairly, so that every gentleman upon this floor may be able to vote intelligently upon it. I desire, however, before entering minutely into my case to state some propositions of a general nature which I think will enable this House to come to a conclusion upon this subject. And first I desire to remove from this House the impression which I know is general, that the black population of Louisiana is far in excess of the white population. According to the census of 1870 the black population of Louisiana was three hundred and sixty-four thousand, and the white population three hundred and sixty-two thousand. I desire further to remove from this House an impression sought to be made here by gentlemen who are sustaining the majority report that Governor Warmoth had anything whatever to do with this election in so far as the election related to his personal advancement.

It is true, as stated by the gentleman from Louisiana, [Mr. SYPHER,] that the liberal republican convention of the State did express their choice for him for the position of United States Senator, but immediately upon the fusion of the conflicting elements opposed to the republican party Governor Warmoth published a letter in all the papers of the city of New Orleans, declaring that he held no man who might be elected to a seat either in the house or the senate as pledged to vote for him as United States Senator.

Mr. Speaker, every man familiar with politics will concede that certain elements are essential to party success; that organization is a prime requisite; that satisfaction with the leaders of the party, satisfaction with the action of their convention, satisfaction with the nominees of the party, are all essential to the full development of party strength. I maintain, sir, that in the contest of 1872 the republican party had none of these elements for a successful contest. The convention that gathered at Baton Rouge, that wing of the republican party known as the custom-house party, was opposed by another wing of the party headed by the gentleman who ran against me for Congressman at large, Mr. Pinchback. The action of the Baton Rouge convention, under the manipulations and influence of Federal office-holders, disgusted the people of the State, black and white alike. For three days they sat in convention considering the credentials of the men elected to it. Whole delegations were swept out of it for no other reason save this: that they would not pledge themselves to vote for William P. Kellogg as nominee for governor, and men were put in their places as proxies whose only claim to a seat in that convention was their pledge that they would support and vote for Mr. Kellogg as the nominee for governor. The Packard convention, as it was known, was in direct opposition to the convention held and manipulated by that wing of the party that nominated Mr. Pinchback for governor.

Again, Mr. Speaker, immediately after the adjournment of this custom-house convention a mass meeting was held in New Orleans, protesting against its action as anti-republican and infamous in character. The protest was signed by men prominent in that convention. Delegates were sent here to Washington, and the President of the United States was asked to remove from power the Federal officers who had manipulated and controlled that convention purely in the interest of Mr. Kellogg. Again, sir, the nominees of that convention gave anything but satisfaction to the great mass of the republican party. Mr. Kellogg, as nominee for governor, had no record as a republican in the State. He had come to New Orleans as the appointee of Mr. Lincoln as collector of customs. Scarcely had the body of the great President felt the chill of death before this man became the firm friend and supporter of Andrew Johnson. He was a member of the convention called at Philadelphia in the interest of Mr. Johnson. He never returned to his republicanism until 1868, when the State went republican. It was well known that during his administration of the custom-house under Johnson no soldier of the Union could find a place within the walls of the granite building. No black man was found on the rolls, save here and there perhaps one to whom was given the most menial employment. It was known, too, that Mr. Kellogg had filled the custom-house with men elected to the first Legislature of Louisiana, who had pledged themselves to vote for him for United States Senator in consideration of the favor extended to them. Those of us who knew Mr. Kellogg well found little in his record to give us either faith in his political sagacity or confidence in his integrity. We had no faith in his veracity. Judged by their record, Ananias and his consort were shining examples of truth compared to Kellogg. It is on record, I believe, that they falsified only upon one occasion. It is nowhere upon record in Louisiana that Mr. Kellogg ever told the truth. In fact he had no record before the people whose suffrages he claimed for veracity or fair dealing. He was like Sir Agrippa, "for profound and solid lying much renowned."

The candidate of that organization for auditor was unknown to the republican party. He had never in any way participated in the action of the party in previous years. Mr. Field, the candidate for attorney-general, had a singularly brief record. It consisted of the fact that upon the floor of this House he made an assault upon the Hon. WILLIAM D. KELLEY, armed with a deadly weapon, because that gentleman dared to stand up here and say that Louisiana should never come back into this Union unless every black man in her borders was clothed with all the rights of a freeman.

Again, there was no vital issue at stake. There was nothing to draw out the full force and strength of the republican party, consisting as it did, nineteen-twentieths of it, of black men. The old cry that if they did not vote the republican ticket they would be re-enslaved had lost its power. They knew full well that the grand question of their liberty had long ago been taken out from the jurisdiction of courts where lawyers plead and interplead out from the Halls of Congress where statesmen pondered and debated, and argued in a court where God was judge and surging armies were the advocates. They knew that forth from the tribunal of Omnipotence the decree had gone that in this broad land all men were free and equal, they knew that decree could not be reversed; that it was fixed and firm as are the hills and mountains of the earth upon their everlasting pillars.

They were not a people oppressed and cast down. They were a people who realized the grand fact that the sun was shining for them as for other men; that in answer to their toils the fields would yield up their harvests for them to garner; that the only barrier to their advancement was their own inability to achieve and maintain. They, far from being a people cast down and oppressed, were rather a people who had seized with joy their harps which for a century and more had hung in silence upon the willows that grew beside the streams of their Babylon, swept their strings and lifted up their voices in a song of praise and exultation grand and triumphant as the melody that of old burst from the lips of Moses and of Miriam; as with hands outstretched over the sea they thanked God for a nation redeemed and a people set free from their oppressors. Thousands of black men throughout our State owned property and paid taxes. They are as much interested in good government as white men.

The assertion has been repeatedly made that no black man in Louisiana voted against the republican ticket. Sir, that is false. Black men have reason, sense, and intelligence as well as other men. And where their vital interests are stricken down by bad legislation they are as quick to take the alarm as any other class of citizens. To say that black men follow party leadership unthinking and unquestioning is to declare them unfit for suffrage, is to give the argument to their opponents and those who oppose their right to vote in this country.

If my statements are correct, the republican party was disorganized; it had no confidence in its leaders. It was dissatisfied with the action of its convention; the nominees of that convention were unpopular. There was no great issue at stake to develop the full party strength.

How was it upon the other hand? White men and black men alike in our State were dissatisfied with the course of the government, and were determined to make an effort for a better government. Various and conflicting interests were harmonized. A ticket was nominated with a democrat for governor, a liberal republican for lieutenant-governor, and the other officers upon the State ticket were equally divided. Upon that basis the people went into the contest. They were anxious to take from the hands of the men who controlled that government the power which they wielded not for the advancement and prosperity of the State, but for their own advancement and prosperity. They were a class of people whose sole duty seemed to be to malign the people of the State at home and misrepresent them abroad.

Good men of all parties wished to crush these men out; they wished to take from them the power to carry into effect doctrines which if pushed to their legitimate conclusions would have made unholy the very ground where Louisiana's dead sons were sleeping, would have rudely torn from the widow and orphan the tribute of respect they sought to place upon the grave of husband and father, would have stilled the laughter of little children and hushed into silence the voices of the birds that sung in the groves of the land.

Sir, there is a vast difference between the republicanism of the North and the republicanism of Louisiana. Republicanism in the North means love, hope, prosperity, and advancement; it means justice to all men, black and white alike. With us in Louisiana republicanism means decay and destruction and the utter wiping out of all the interests of our great Commonwealth.

Just look at it for a moment. The republican party went into power in 1868, and the State then had a debt of $14,000,000. In 1872 the State had an absolute debt of $25,000,000, and a contingent liability of $15,000,000. During that time Governor Warmoth had vetoed bills passed by that Legislature making appropriations aggregating $42,000,000. So that but for those vetoes the debt in 1872 would have amounted to $87,000,000.

Taxation when the republican party took control in Louisiana was thirty-seven and a half cents on $100. In 1872 it had risen to $2.15. The Legislature had granted giant monopolies. Day by day they had imposed new burdens upon commerce until scarcely a vessel folded its sails in the harbor of New Orleans, and desolation reigned supreme where of old the busy hum and throb of commerce were heard. Do you wonder that the people of that State groaned under these burdens? Do you wonder that they combined for the overthrow of a government that had brought upon them such disasters as these? I ask you, men of New England, I ask you, men of the Middle States, you men of the giant West, how long would such a condition of things be tolerated in the States from which you come? Would not the people rise in their might and grandeur and sweep from existence so completely that its name would never be heard of again (or if heard of, only spoken of with scorn and contempt) a party that should bring such misfortune upon the people of your section of the country?

The men of Louisiana differ in no respect from the men of other States, and as men in any other State would do they did. They placed in nomination the best men to be found in the various parishes of the State for the Legislature. They rigidly excluded democrats who had in any manner been identified with the corruption of past legislation. They placed upon their State ticket three democrats, one colored man, two unquestioned republicans. They made a thorough and effective canvass of the State; mass meetings, at which thousands of black and white people gathered, were addressed by the ablest men in the State. Louisiana never before saw such a canvass. Certainly, Mr. Speaker, if ever men on earth had reason to work hard for success the men of

Louisiana had. They hoped to check the corruption that was destroying the State, hoped to make the waste place glad again with harvests, hoped to rehabilitate Louisiana and place her once more with unclouded brow among her sister States. The canvass closed, the election was held, votes were cast, the returns were made in accordance with law and transmitted to the custody of the person charged by law with receiving and preserving them. Those returns show that I received a majority of 10,614 votes.

Well, sir, strange as it may seem, there are some things not disputed in this Louisiana contest. It is not denied that Louisiana was a State in 1872; that she was competent in all respects to hold an election; that an election was held; that returns were made out; that they were duly transmitted to the governor, who by law was their custodian. None of these things are denied. The returns of that election show my election as Representative at large by 10,614 votes.

Under the law of Louisiana the only basis upon which any board of return can estimate the votes cast for any candidate is the returns themselves. The Lynch board solemnly under oath declared that they did not have those returns before them. They were therefore utterly incompetent to decide who was or was not elected.

But it is said the supreme court of Louisiana has decided the Lynch board to be the legal board. So it has; but the supreme court of Louisiana has never decided that the Lynch board had before it competent testimony in the shape of returns upon which to base a calculation or make a certainty of the election of any man who ran in 1872.

Much is said of Governor Warmoth's signature of a new election law. Under the constitution of our State he had the right to do as he did. His right had been affirmed by the supreme court of the State in the celebrated Slaughter-house case. Judge Dibble was appointed judge of the eighth district court, under a law signed by the governor, after the Legislature of Louisiana had adjourned. I place no stress whatever upoon the action of these various returning boards. The question before this House is not of returning boards, not of Lynches or Longstreets or Herons, not of De Fericts or Formans or Mitchells. The simple question is, whom do the returns show to have been elected in Louisiana as Congressman at large by the votes of the people upon the 4th of November, 1872?

The Lynch board had no returns before them. How, then, did they make up any vote for Mr. Pinchback? They simply waited until the returns canvassed by the De Feriet board had been promulgated by the governor, and taking those returns as a basis they figured out their whole ticket elected. Let me call attention to the facts.

Look at the testimony of John Lynch, president of this famous Lynch returning board. He swears (page 144, Senate report) that his board had returns from United States supervisors and affidavits of individuals—evidence unknown to the laws of Louisiana; swears (page 145) that his board did not have even the above evidence from all the parishes of the State; swears (page 148, Senate report) that the returns from United States supervisors were often very incomplete; swears (page 149) that this board did not have statements of supervisors from half the parishes of the State; swears (same page) that his board took statements of individuals as to votes cast at certain polls without even requiring them to swear to such statements; swears (page 150) that his board declared results in parishes from which they had no statements or returns of any kind whatsoever; swears (page 158, Senate report) that in many parishes his board estimated the vote at what they thought it ought to be and so declared it; swears (page 164, Senate report) that the returns of United States supervisors, which they relied upon as evidence of votes cast, were signed by only one of the supervisors, and that one invariably a republican; swears (page 165) that his board counted votes which had never been polled at all.

Longstreet, another member of the board, swears the same.

The testimony of George E. Bovee, another member of the board, is to the same effect.

The returns showed my election by 10,614 majority. By what process was the Lynch board enabled to destroy my majority of 10,614 and give my opponent a large majority over me? By a process utterly unknown to the laws governing elections, but familiar to schools, the process of addition and subtraction. There are fifteen parishes in the State in which the returns, as made by the Lynch board in my case, differ from the legal returns. Let us examine these parishes one by one. In Avoyelles the Lynch board take 509 votes from me and add them to my opponent. Certainly a simple and effective way of securing him a majority. In Caddo they strike 1,139 votes from the number cast for me; in De Soto 643 votes are taken from me and 444 added to my opponent's vote. In Natchitoches my entire vote is disallowed and 659 votes given to Mr. Pinchback. In Rapides 910 votes are taken from me and 757 added to the votes cast for my opponent. In Saint Helena 264 votes are stricken out for me and 155 added to the vote of my opponent. In Saint Mary 333 are taken from me and 160 added to Pinchback. In Union I lose 824. In Vermillion 420 are taken from me; but, strange to say, none are added for my opponent's benefit. This omission, however, is quickly remedied in East Baton Rouge by taking 422 from me and piously adding 1,611 to my opponent. In Webster I lose 404 and my opponent has 204 given to help him along. In Morehouse an addition of 268 is made to the vote cast for Mr. Pinchback. Plaquemines adds 1,076 to Mr. Pinchback. In Bossier I lose my entire vote, and Mr. Pinchback has added to his needy side 596 votes.

Pinchback presents himself before this House with a certificate. A certificate signed by whom? Signed by himself as acting governor of Louisiana. How came he acting governor of Louisiana? By virtue of the impeachment of Governor Warmoth. Who impeached Governor Warmoth? The Legislature of Louisiana? No, sir; but a Legislature created by the injunction of a Federal court organized in accordance with the terms of that injunction, in a building filled with United States soldiers, within whose portals no man was permitted to enter unless his name was found in that injunction, or he was the well-known partisan and supporter of the usurpation. The Legislature that impeached Governor Warmoth and gave Pinchback power to sign himself as "acting governor of Louisiana," derived none of its power, none of its authority, from the people of Louisiana. It sprang full-armed, with all its deadly power for wrong, from the corrupt brain of a United States judge who, fresh from his haunts of infamy and shame, reeking with the stench and fumes of midnight debauchery, with the kisses of harlots yet warm on his lips and the music of their wanton songs lingering in his ears, sheltering himself behind the robes of his high office, dared, in violation of an express provision of the very law under which he claimed jurisdiction, to issue a decree creating a Legislature for the people of Louisiana, and invoking the unwilling bayonets of the United States to save it from the fury of an outraged and insulted people.

This, sir, was the Legislature which gave my competitor the right and power to sign himself "acting governor of Louisiana" and certify to his election to this body.

Why, Mr. Speaker, what was done in Louisiana in the winter of 1872 could not have been done in the North. If it had been attempted the rocks and the trees would have cried out against it. The very streams would have burst asunder the icy barriers which bound them and gone surging through this land chanting a solemn requiem for the dead Republic. If it had been attempted in Massachusetts, within sight of Bunker Hill, the mighty mass of granite which crowns its summit, trembling with indignation from turret to foundation-stone, would have reeled from its broad base, carrying destruction swift and sure to the impious one who dared in the nineteenth century, in the face of American civilization, strike a blow so deadly at the liberties its giant shaft was reared to commemorate.

It is pleasant in these days of disaster, pleasant when from every quarter of this Republic comes the cry that men are forgetting in their selfish purposes the common good of the country, to see a gentleman like my competitor, so willing to sink all considerations of a personal character in order that he may serve his constituents. So abiding is this feeling in his heart, so desirous is he of serving his constituents, that he to-day holds credentials to both ends of this Capitol, and has been hovering over us all winter up to the present time, undecided where he would light. He holds his credentials as Senator of the United States. He has been making his contest before that body, has been making it for six long months for a seat, and at the same time he has kept up a fire on me here, resolving if he should lose his chance there why then he would come over here. He is bound to serve his constituents some way. Not only that, but he goes still further. He is willing to take both salaries and spend them if need be.

Now, Mr. Speaker, the Lynch board could not declare my opponent elected.

First. The Lynch board could not declare my opponent elected because they had no returns upon which to act.

Second. Supposing the Lynch board to have been in possession of lawful returns of the election, they would have violated the clear provisions of the law under which the election was held in every case where they added a vote to the number returned as cast for my opponent or deducted votes from the number cast for me.

Third. Supposing the Lynch board to have had in their possession the legal returns, they were not in possession of the evidence required by section 29 of the law under which they were acting by which they could determine fraud; therefore, in declaring frauds to have been committed, they would have acted upon evidence unknown to the laws of the State.

Fourth. Had the Lynch board been in possession of evidence required by law to prove fraud, under the law they would have been compelled to throw out all votes cast where fraud had vitiated the election. By throwing out the votes cast for me and retaining in the same precinct those cast for my opponent, they would clearly have violated section 55 of the law governing the election of 1872.

Fifth. If the Lynch board had been in possession of the lawful returns they would have violated the law of the State in counting for my opponents as votes cast the *ex parte* affidavits of individuals. Such a proceeding is utterly unknown to the laws of Louisiana and not justified by the enforcement act of Congress, under which they claim authority for their high-handed proceeding.

Sixth. Conceding to the Lynch board the right to count affidavits as votes, they were limited to counting affidavits wherein it was alleged the party making the statement was deprived of the right to register or vote on account of race, color, or previous condition of servitude. (Enforcement act, section 23.) *None of the affidavits counted by the Lynch board for my opponent contained this, the only allega-*

tion that would give them validity, even under (so far as members of Congress are concerned) *a forced construction of the enforcement act.*

Seventh. Had the Lynch board been in possession of the lawful returns, they would under the laws of the State have been compelled to declare me elected, leaving to my opponent the task of proving to this House, the only tribunal that has final and absolute jurisdiction in the matter, that my election was the result of fraud. Such, gentlemen, briefly stated, are the claims my opponent has to a seat upon this floor.

In face of the facts I have stated Mr. Pinchback comes here and asks that he be seated upon his certificate; and he asks this in the face of the fact that upon the very evidence he asks you to seat him upon *here* he has thus far been rejected in the Senate. In the face of the report of the Election Committee unanimously declaring him not entitled to a seat, in face of all this, he still claims a seat here.

I want to say a word now about frauds in Louisiana. I want to call your attention, however, to one single thing in connection with those frauds. There is no question but there was fraud practiced in Louisiana in connection with this last election—not a particle of doubt about it. But is it not a singular fact, if it be true that these gigantic frauds were perpetrated, that no man in the State of Louisiana, with the courts all in the hands of Kellogg, has been arraigned for this fraud? The only case that has been tried is the case of Baton Rouge, where it is alleged that stupendous frauds were enacted. The parties arraigned before Judge Durell upon that charge were dismissed because of want of evidence. When brought before the court there was no evidence showing fraud.

The question of seating me upon this floor is not a party question. It rises high above mere questions of party. It is the question of whether a State in this Union is entitled to a Representative upon this floor. It is made a party question only by men whose cause is weak, who see the shadow of their political downfall close upon them, and who for the sake of maintaining themselves in power yet a little longer raise this cry that you hear ringing through this House time after time about the necessity of standing by the party organization. No party, be it republican or democratic, can afford to override the plain dictates of justice when they are called upon to decide between conflicting claimants.

I desire now to say a word, Mr. Speaker, personal to myself; purely so. I should not have uttered these words were it not that I know that an attempt has been made upon the part of some gentlemen from Louisiana seated here, not by the judgment, but by the sufferance of this House, who have sought to create an impression that I had allied myself to people who were hostile to the authority of the United States Government in Louisiana, and that I was in fact disloyal to the Government myself. Mr. Speaker, I yield to no man upon this floor or elsewhere in my loyalty to this Government or in my devotion to its institutions. And, sir, my lesson of loyalty was not learned at home. My devotion to this Union was not proved in dressing-gown and slippers, surrounded by wife and children, and the comforts of peace. I learned my lesson of loyalty in the camp, on the march among the mountains and beside the streams of the South. I proved my devotion to this Government as many a man before me proved his, in the ranks of the Army, upon the field of conflict, in the days when this continent shook beneath the tread of contending hosts, in times when the air was filled with the tempest of battle, in the hours when Death rode sublime upon the clouds of war, and the chivalry of the North and South alike went down before the sweep of his terrible arm.

The people I represent are not disloyal. Never in the history of this world has so little of turmoil and commotion followed civil war as in our own country. For a century and a half the fair face of England was crimsoned with the blood that flowed in the contest between the Norman barons and the people of that island. Eight centuries of English rule has not yet stilled the voice of rebellion in Ireland. Scotland, though often defeated, has not until recent times yielded to the will of England. In France, since the days when the mailed band of Charles Martel fell in destruction among the thronging Saracens at Tours and Poitiers, the land has been filled with resistance to the authority of established government. Even in the days of her grandeur, the days when the crown of iron rested on the brow of Charlemagne, the days when crafty Richelieu held sway, the days when Louis the Grand sat upon the throne, the land felt the shock of rebellious provinces. Even the great ruler who to-day sleeps beneath the dome of the Invalides, the mighty soldier under whose reign the eagles of France swept with their wings the summits of the Alps and shadowed Europe from the Seine to far beyond the frozen Vistula, even he was only able to hold his empire together and partially hush the voice raised against his authority.

Eight years have passed since the close of our civil war. The people of the South lost all in that great contest. Since the war the entire philosophy of their Government has undergone a change. A race of men that for near a century had been their serfs, made so by the common Constitution of the land, their right to hold them as such decided unquestioned by the highest tribunal of the nation, have been raised to political and civil equality with them. I care not how strong a republican a man may be, he cannot but confess that the people of the South have suffered much from bad government in the last few years; yet during all this time the people of the South have not raised their hand in rebellion against the Government; no act of disloyalty stands upon the record of my State.

Away with the cry that Louisiana or the South is disloyal; it is the cry of men who can only live by keeping it before the people. It is not from the hearts of men who fought rebellion down that this cry comes, not from the men who at Gettysburgh, in the Wilderness, upon the hills of Vicksburgh, the mountains of Georgia, and the slopes of Mission Ridge, rolled in resistless columns against the armies of the South, does this cry of treason come. No demand that punishment shall be meted out to the South comes from them. In their hearts no hate is found; brave themselves, they yield willing tribute to the valor of their old-time foes. Mourning for their dead, they respect the South because they too mourn the loss of gallant sons. Sir, this is not the spirit that animates the people of the great North. This spirit of hate that these men breathe finds no resting-place among the people of New England or the people of the Northwest. This spirit of hate and vengeance is not the spirit which animated the brave men and fair women of this great city, who but a day ago, on yonder sacred heights of Arlington, paid their tributes of respect and love to valor, nor asked whether the grave their offerings beautified held within its icy arms one who wore the Federal blue or one who died in gray. It is not the spirit of hate and vengeance that pervades in this country; but it is a spirit of love and devotion and good will and good wishes to the suffering and struggling people of the South. Thank God, only here and there in this broad land we find men who for selfish ends and sordid purposes seek to mislead the people of the North as to the hopes and aspirations of the people of the South. They are men who forget that in presence of the dead the eye of anger should lose its baleful fire, and fill with the warm and holy light of kindness. They are the men who forget that vengeance should doff its casque of steel, take off its shoes of mail, and tread with reverent footsteps and uncovered head beside the graves where brave men sleep. They are the men who forget that while it is possible to crush the armies and bury the banners of a people, it is not possible to entomb their memories. Memory, sir, is a monarch who holds unbounded sway in enchanted realms, and when he waves his mighty wand bolts and bars and all the contrivances of human ingenuity to stay his progress are of no avail. At his behest all that is grand or beautiful or worth recalling in the history of a people, marching with noiseless footsteps to music unheard of mortal ears, sweeps by his throne in grand procession.

Mr. Speaker, it seems to me that the time has about arrived when demagogues, black and white alike, should cease to arraign the republican party for its want of fidelity to the interests of the black men of this country. Sir, the republican party has lifted them up from the house of bondage; it has clothed them in the garments of freemen; it has given them all the rights of citizens. They stand, as my eloquent friend from Mississippi has well said, before the people of this country clothed with every right that you and I possess. The republican party has advanced them in a decade to a position that it has taken the Anglo-Saxon race centuries of blood and turmoil and strife to achieve. The time has come when they should cease to reproach that party for lack of fidelity to their interests.

Mr. Speaker, if our crime against this race and people has been great, so too has been our expiation. We have paid the judgments recorded against us in the tribunals on high, principal and interest, with the richest currency that ever yet flowed through an empire—a nation's blood. Six hundred thousand braves scattered from the hills of Vermont southward to the Rio grande, and from Maine westward to the Gate of Gold, bear witness to us, as they will to the generations who shall follow, of the bloody sweat and agony through which this nation passed in its effort to right a wrong.

Let it not be written, let it not go down in history, that we struck chains from the limbs of four millions of black people only to bind them upon the limbs of eight millio white people. I believe that the black race of this country should have every right that we possess. But I do not believe they should have any more. Not for them, as has been the case in Louisiana, should armies be invoked to destroy the sanctity of the ballot and silence the voice of the people. Not under the pretense that it is for their elevation should eight million people, in whose hearts to-day throbs the same blood that throbs in yours and mine, be made to pass under the yoke and be smitten with thongs—all the law gives for their equality. But their supremacy, if supremacy they achieve, should be the result of his own efforts, not enforced by Federal bayonets. Armies if need be to sustain them in their rights, but no armies to sanctify their wrongs and give them force of law.

I am admonished by the clock that I have but a few moments left, and I will conclude briefly.

The SPEAKER *pro tempore*, (Mr. CESSNA.) The gentleman has fifteen minutes left.

Mr. SHERIDAN. So far as Mr. Pinchback's claim to a seat on this floor is concerned, first, there is great doubt of the legality of the Lynch board, even under the decision of the court; second, there is no doubt whatever that they lacked all the elements necessary to make a legal and legitimate return. The majority of the Lynch board admit that their canvass was utterly in defiance of the laws of Louisiana. Well may the Committee on Elections unanimously agree that

Mr. Pinchback is not entitled to a seat on this floor. I suppose, of course, therefore, that the House will reject Mr. Pinchback's claim to a seat whatever they do with mine.

Now, so far as I am concerned, it is not denied—

First. That an election was held in November, 1872, in Louisiana.

Second. That peace and quiet reigned throughout the State on the day of election.

Third. That returns of the election were duly made out and transmitted to Governor Warmoth, lawfully their custodian.

Fourth. That such returns were the only legal evidence of the election of any officer.

I think I have in my argument established the following facts:

First. That Warmoth received the returns of the election of 1872.

Second. That those returns show my election by 10,614 majority.

Third. That no such frauds as alleged were perpetrated in the election of 1872.

Fourth. That if the frauds alleged were committed, I am still elected.

Fifth. That but for the unwarranted and grossly illegal interference of Judge Durell in Louisiana no question would have been raised as to the fact of my election.

Sixth. That the races are equally divided in Louisiana, and that just grounds exist for believing many colored men voted the fusion ticket.

Seventh. That owing to bitter quarrels among leading members of the republican party, its organization and efficiency were destroyed.

Eighth. That the nominees of the republican convention were obnoxious to the great masses of the party and deservedly unpopular.

Ninth. That under the circumstances existing in 1872 the defeat of the republican party was the legitimate result of their dissensions and corruption.

Mr. Speaker, if this House decide I am not entitled to my seat they do so in the face of such facts as these, namely: conceding, as you must, that the returns of an election are the only means of deciding who is elected, it appears—

First. That Governor Warmoth had in his possession the election returns of 1872;

Second. That he was lawfully entitled to their custody;

Third. That as governor he certified to my election as Congressman at large by a majority of 10,614 votes;

Fourth. That he delivered the returns of the election of 1872 to the De Feriet board, believing it to be the only legal board in existence;

Fifth. That the De Feriet board in turn delivered the returns of the election of 1872 to the Forman board, whom they regarded as their legitimate successors;

Sixth. That the Forman board finished the canvass begun by the De Feriet board, and declared under oath that I was elected Congressman at large from Louisiana by a majority of 10,614 votes, thus affirming the correctness of the governor's certificate issued to me; and,

Seventh. That the original returns of the election of 1872 from every ward, poll, precinct, and parish in Louisiana, save six, were before the Senate investigating committee, and examined and compared with the tabulation of the Forman board, and that tabulation admitted to be a correct summing up of the returns before the committee by all the parties to the contest, including Mr. Pinchback, who was in effect a party to the contest from the fact that upon the result of that investigation depended his title to a seat in the United States Senate to which he claimed to have been elected.

Such, Mr. Speaker, are some of the facts in my case, and yet in face of such facts a majority of the committee to whom my case was referred ask you to declare me not entitled to a seat upon this floor, because, forsooth, these facts are set forth in the case of the United States against Louisiana, instead of a case bearing the title of "Pinchback *vs.* Sheridan;" there is no other reason alleged against seating me. "The evidence is not sufficient," and why? Because some technical errors are alleged.

Mr. Speaker, law was made to advance, not bar, the footsteps of justice. Yet this committee, arming itself with a sword called technicality, strikes justice prostrate, and asks this House to cry amen to the unholy murder. Sir, a fact is always a fact immutable as God, and no clouds charged with passion should be allowed to dim the splendor of its changeless face.

I appeal to you to shield the people I represent from the outrage and insult your rejection of the claim I make in their behalf would cause to fall upon them.

I appeal to the Representatives upon this floor of that party at whose behest a million men left their homes and marched through fire and tempest, battle, pestilence, and death to secure justice and advance humanity not to cloud the splendor of its mighty record not to tarnish the greatness of its name by refusing justice to the people of a State their valor saved to this Republic.

Now, I claim that this report of the Committee on Privileges and Elections of the Senate should be considered in settling this question between Mr. Pinchback and myself. The Committee on Elections consider it unimpeachable when they want to show I am not elected But when it leans toward showing that I am elected, then it becomes extremely unreliable. That is not a fair way of treating this testimony. If it is good to show that Mr. Pinchback is not elected it is good to show that I am elected.

Whatever this House may do with me I shall be content. It is for you to say which claim, mine or that of my competitor, is paramount, which is based on the best evidence. And it is for you to decide whether he or I shall occupy a seat on this floor.

If you decide against me it will not weaken my faith in this Government. I shall still hope some voice more eloquent than mine will bring this House of Representatives to a consideration of the facts involved in this Louisiana contest. If you seat me I shall be grateful, because it will be evidence to my people in Louisiana they still have a voice here.

For myself I ask nothing. I speak for Louisiana. I claim for her the justice which is her birth-right. Clothed in the garments of woe, bending her queenly head in sorrow, suffering such oppression as never before fell to the lot of any State in the Union, she yet maintains her faith in the Federal compact, her belief in the justice of this great nation. Weak and tottering as she is, her hand would be among the first to seize the sword if war's alarm were sounded in the land; if danger threatened, side by side, shoulder to shoulder, the men who live beneath her tropic skies would march with the men of the North in defense of this nation's honor.

I ask such judgment at your hands as I am entitled to expect. I ask no republican votes because I have been a republican. I ask no democratic votes because I have in the last election affiliated with the democracy. I simply ask you shall do the people of Louisiana justice in the person of the representative they have sent here. Whatever shall be my fate, as I have already said, I shall be content. I shall not lose faith in my land. I shall still be thankful that out of the fiery ordeal of war this nation has come triumphant; thankful that the bow which spans our sky to-day gives promise of perpetual peace; glad to believe that—

> No more the thirsty etrance of this soil
> Shall daub her lips with her own children's blood;
> No more shall trenching war channel her fields,
> Nor bruise her flowrets with the armed hoofs
> Of hostile paces: those opposed eyes,
> Which, like the meteors of a troubled heaven,
> All of one nature, of one substance bred,
> Did lately meet in the intestine shock
> And furious close of civil butchery,
> Shall now, in mutual, well-beseeming ranks,
> March all one way; and be no more opposed
> Against acquaintance, kindred, and allies:
> The edge of war, like an ill-sheathed knife,
> No more shall cut his master.

After the call of the previous question Mr. SMITH, of New York, yielded five minutes to Mr. Sheridan to reply to Mr. Pinchback.

Mr. SHERIDAN. Mr. Speaker, I simply desire in the five minutes allotted me by the kindness of the chairman of the committee to call attention again to the fact that the question before this House is not what any returning board may or may not have done in this Louisiana contest. The fact is patent to every man who has listened to this discussion, or who is at all familiar with the events that have occurred in Louisiana during the last two years, that the returning boards are in such a mixed-up condition that no man can tell which was and which was not the legal board. The question resolves itself simply into this: What do the returns of the election show? Did the Lynch board have any returns before them? The Lynch board swear they did not have any returns. Were there returns made? It is conceded that returns were made. What did those returns show? They showed my election by 10,614 majority. Was there fraud sufficient to overturn that majority? Concede to Mr. Pinchback all the frauds he claims and I am still elected. The question, then, before the House rises above the question of returning boards, above Lynch and Warmoth and Longstreet and everybody else; it is the question of the right of eight hundred thousand people to representation on this floor. I present a claim before you, based upon the returns of the election. And my friend presents a claim before you, based on the dictum of the Lynch board, which he himself acknowledges were not in possession of returns.

He holds this House to its consistency. He says you must not make flesh of one and fowl of the other. He says that you have made flesh of Mr. SYPHER, and that therefore you must make flesh of him. God knows you do not want any more such flesh as Mr. SYPHER here. If you made flesh in that case you made a mistake, and there is no reason why you should make the same mistake in the case of my friend, Mr. Pinchback.

The republican party will live, and the democratic party will live, whether you seat Mr. Pinchback or seat me on this floor; that does not depend upon our being seated or unseated. I say that under any circumstances you may choose to invent, save the actual taking of the Lynch board returns, I am elected. Give Mr. Pinchback the republican vote and me the democratic vote of 1870 in these parishes and I am elected. Put the returns of the Lynch board in the disputed parishes in place of the returns of the Foreman board, and I am elected. Throw out the disputed parishes altogether and I am elected. There were 120,000 undispnted votes cast in that State, and of them I have a majority. As the judgment of the committee is that both certificates are worthless, thus it would seem to me to be but fair and honest that the man having the best showing should be entitled to the seat on this floor, leaving to the other the right of contest.

Fire-Alarm Telegraph.

SPEECH OF HON. ELI PERRY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

June 17, 1874.

On the bill for the rebuilding of the fire-alarm telegraph system in use in the District of Columbia.

Mr. PERRY. Mr. Speaker, as one of the sub-committee of the Committee on Public Buildings and Grounds, to whom this bill was referred, I desire to make a few remarks in its favor, setting forth the necessity for rebuilding the fire-alarm telegraph in the District of Columbia.

The following extracts of reports from the superintendent of the fire-alarm telegraph to his excellency the governor, also the report of the fire commissioner and chief engineer of the District, will show its present condition:

OFFICE FIRE-ALARM TELEGRAPH,
Washington, D. C., April 21, 1873.

To his Excellency H. D. Cooke, Governor, and the honorable Legislature of the District of Columbia:

In reporting the condition and wants of the fire-alarm telegraph, I feel it my duty to call your attention to the necessity of building anew all the lines within the city of Washington. The great conflagrations of Chicago and Boston are still fresh in the memory of all, and serve to admonish us that every precaution ought to be adopted to prevent the occurrence of a similar disaster in our own beautiful city.

The fire telegraph of this city was erected nine years ago, when the state of the art in this branch of telegraphy was in its infancy, and therefore I need scarcely tell you that the instruments in use here are of the most primitive character, and in comparison with the later inventions are quite worthless. The lines, owing to the combined chemical and atmospheric action upon them, are rapidly becoming unfit for use. The joints, which were never soldered, are so rusted that it is with difficulty that a circuit can be maintained. Lines not more than ten miles in length show a resistance equal to seventy miles of good wire properly put up.

The only way to remedy the defective lines is to rebuild; and this, in my judgment, cannot be longer deferred without great jeopardy to the lives and property of our citizens. And while rebuilding, the lines ought to be so extended as to become available for giving prompt alarms from every part of the city.

The old-time "crank-boxes," upon which we rely in great part for our alarms, in comparison with the signal-boxes now in use by all the other great cities in the Union, are entirely unfit for the purpose and ought to be discontinued at once by substituting the latest improved automatic instruments. In no other way can the system of telegraphic alarms be made reliable. There are fifty-five of these crank-boxes now in use in Washington City.

To supply this city properly with alarm stations, about one hundred boxes are necessary. I most respectfully suggest, therefore, that authority be given by the Legislature to erect new telegraph lines throughout the city of Washington, and that not less than one hundred new automatic boxes be purchased for this city, and that an addition of five or six boxes be made to the Georgetown circuit, and that all the crank-boxes now in use be retired as soon as new ones can be erected to take their place.

I have the honor to be, gentlemen, your obedient servant,

HENRY R. MILES,
Superintendent Fire-alarm Telegraph.

[Extract from the report of the board of fire commissioners of the District of Columbia on the condition and wants of the fire-alarm telegraph, May, 1873.]

One of the most pressing needs of our department is the reconstruction and extension of the fire-alarm telegraph. Saving of valuable time by the use of the electric fire-alarm effects the rescue of millions of dollars' worth of valuable property from the flames every year; without it the best organized force is comparatively inefficient; with it the usefulness of the department is increased in a ratio which makes the expense insignificant in comparison. Our city was one of the first to adopt the fire-alarm telegraph, but that was many years ago, and now a large portion of the most valuable property in Washington and Georgetown is outside the limits of the area guarded by the wires. This may result at any time in a disastrous conflagration. Worse than that is the fact that the area covered by the system is very inefficiently protected, and misplaced confidence in the alarm-boxes may lead to worse results even than the absence of the telegraph.

As stated above, Washington adopted the electric fire-alarm many years ago, and the now old-fashioned crank-boxes furnished us (then the best in use) are not always reliable. An alarm turned in from them by ignorant, careless, or reckless hands may strike the wrong number and mislead the firemen, thus wasting instead of saving time. The wires, too, have been so long in use that they have become unreliable in transmitting signals, and are subject to frequent breaks.

Then, too, numerous complaints are made by citizens of the unpleasant humming of the wires attached to their residences, while the work of detecting and remedying the imperfections in the wires is made much more difficult and expensive when they are thus attached. There should be new wires on poles, reaching every section of the two District cities, with a sufficient number of alarm-boxes to make them convenient to all our residents; also, two or three additional bell-strikers, which may be heard everywhere in the District. The old crank-boxes should be replaced with the latest improved boxes, which are certain in transmission, no matter how ignorant or careless the person turning in the alarm may be.

In this connection we respectfully refer you for further information to the accompanying report of the chief engineer and the superintendent of the fire-alarm telegraph. Both of these officers enlarge upon the necessity for the work, and urgently recommend it. A careful estimate of the cost by the superintendent of fire-alarm telegraph is also submitted herewith; and while the total may seem large, yet it should be remembered that a failure to signal one fire, or the turning in of a wrong number by these old boxes, by which the department is misled, might cost our citizens ten times the amount required to do the needed work.

[Extract from the report of the chief engineer of the fire department in regard to the fire-alarm telegraph.]

It must be apparent to all that the efficiency of the fire department depends in great measure upon the fire-alarm telegraph, I therefore beg leave to call your favorable attention to the necessity of enlarging and improving the fire telegraph, as recommended by the superintendent. The small supply of the latest improved automatic boxes now in use in this city and in Georgetown have proved so entirely reliable and satisfactory since their adoption as to leave no doubt whatever of their superiority, and by contrast exhibits the utter worthlessness of the old crank-boxes now in use.

MARTIN CRONIN,
Chief Engineer Fire Department, District of Columbia.

A year has elapsed since the above reports were written. Meanwhile the condition of the wires has become worse, and hence the argument in favor of rebuilding is more forcible now than then. A reliable fire-alarm telegraph is the mainspring, so to speak, of an efficient fire department. As well might a city dispense with steam-engines for the purpose of subduing a fire, as to be without a telegraph to signal the alarms; and that signal should be in every respect reliable. The city of Washington, the nation's capital, is to-day almost without the much-needed fire-alarm telegraph.

Mr. Speaker, ought this to be so in a city like Washington, with its numerous Government buildings and no fire-alarm to point the way to the firemen in order that they may subdue the flames and protect the property of the Government and its citizens? Shall we deny them this important apparatus by which the department is linked together and enabled to discharge its usefulness? I hope not.

A little more than ten years ago, when the system of fire-alarm telegraph was in its infancy, the city of Washington, moved by the spirit of enterprise, adopted and put in active service their present system, and to its efficiency the citizens of the capital and the General Government owe in great part their preservation from conflagrations similar to the devastations visited upon many other cities within our land. But its day of usefulness is now past; the city has so far outgrown the circumference of the telegraph that not more than one-half the present area is at all protected, and indeed the character of the instruments employed are so far behind the present state of the art as to make it a matter of wonder that the persons in charge of the office can make the system work at all. To remedy the defects of the present system and to give ample protection to the entire city, the local authorities of the District determined about a year ago to construct a new fire-alarm telegraph, and to that end the Legislative Assembly made an appropriation of $45,000, and required in the act that one hundred new signal-boxes should be procured for the city together with an entire outfit of office and engine-house instruments, the proper distribution of which will require about one hundred and fifty miles of wire. After advertising extensively for proposals it was found that only about half that work could be accomplished for the money appropriated, and hence nothing has been done.

At an early day of the present session of Congress a bill to aid in the construction of a fire-alarm telegraph in the District of Columbia was introduced and referred to the Committee on Public Buildings and Grounds. The sub-committee having the bill in charge made diligent inquiry of the heads of the different Departments of the United States Government whether such protection as this bill provides for the public buildings in this District is really needed. These inquiries have been affirmatively answered in every case.

During the ten years which have elapsed since the city of Washington inaugurated the fire-alarm telegraph, the General Government, equally with the resident citizens, has enjoyed free of charge the unrestricted use of the telegraph—never having paid a dollar toward its erection, aid, or maintenance. And now that the old system is worn out and since a new, better, and more extensive system must be supplied for the protection of life and property, it is but an act of justice that the United States Government should pay an equal share of the expense.

Mr. Speaker, every Government building in the District and all the valuable archives of the nation are in a greater or less degree exposed to destruction by fire. And how, sir, can protection be afforded more readily and cheaply than by aiding the District authorities in building a reliable fire-alarm telegraph?

This bill in conjunction with the act of the local Legislature of the District provides for the erection of one hundred and twenty signal-boxes, twenty of which shall be placed in and for the use of the public buildings in the District at such points as the engineer in charge shall designate. While the percentage of signal-boxes which the Government is to have for its share may seem disproportionate to the respective sums to be paid for by each government, yet it must be borne in mind that the signal-boxes are but a small percentage of the cost of constructing an entire system, and that the local government pays all expense of repairs and manipulating the telegraph when built. So that, leaving out of view the legal obligations which might be urged in support of the bill, equity steps in and says that one-half is not any greater sum than the Government ought to pay, since it is to receive an equal benefit from the telegraph when erected.

To sum up the whole subject in a few words: The old lines or wire now in use have become worthless, and should be replaced as soon as practicable with new material. The signal-boxes and all the office instruments are badly worn and not reliable in case of an alarm, and entirely out of date, and should be thrown aside and new and more improved instruments substituted. Only about one-half the present area of the city is at all protected by the present limits of the telegraph, and hence the lines ought to be extended so as to afford equal protection to all the inhabitants, and to do this will require a large outlay of money.

The Government buildings need and ought to have the most ample protection, and this can be most economically and effectually secured by aiding the District of Columbia in constructing a reliable system

of the latest and most approved fire-alarm telegraph to be obtained in this country—a telegraph which will be not only a safeguard to life and property, but one which will reflect credit and bestow a lasting honor upon the capital of a great and prosperous nation.

Mr. Speaker, if my time would permit I would like to refer to the report of the board of fire commissioners, which has been read in our hearing. Suffice it to say that the report speaks for itself and every member on this floor must see the importance of the reconstruction and extension of the fire-alarm telegraph in this city. I ask, sir, if the great conflagrations of Chicago and Boston are not still fresh in the memory of all, and should serve to admonish us that every precaution ought to be adopted to prevent the occurrence of a similar disaster at the capital of the nation, where millions upon millions of property relies upon its safety from destruction by fire of a well-regulated and efficient fire department?

Mr. Speaker, as an old fireman, the best way, in my experience, is to give all the facilities required by a well-regulated fire department, and such a department I understand existshere, with this one exception, and that is the much-needed want of a reliable fire-alarm telegraph. Let us therefore extend the aid required by this bill and all will be right. The firemen encouraged, the citizens gratified, and their property well guarded will be the result, and the evil that now exists will be remedied.

Soldiers of the Mexican War.

SPEECH OF HON. W. S. HERNDON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

June 9, 1874,

On the bill (H. R. No. 2403) to grant pensions to the soldiers of the Mexican war.

Mr. HERNDON. Mr. Speaker, I propose to offer some remarks on the bill now pending before the House to grant pensions to the soldiers and sailors who enlisted in the Mexican war. And in order to more accurately understand the provisions of the measure I will here read the bill itself:

Whereas the Federal Government early adopted the policy of rewarding its soldiers and sailors who periled their lives in the military and naval service to save the life of the Republic with donations out of the public domain and by moneyed pensions, which policy has been steadily adhered to as wise, just, and humane; and whereas the soldiers and sailors in the Mexican war of 1846 and 1847 suffered incredible hardships under a tropical sun and in a malarious climate, and by endurance, valor, and indomitable energy vanquished their foes and brought victory to our arms in a manner so glorious as to deserve well of their country; and whereas the fruits of the Mexican war resulted in adding an immense area of rich territory to our public domain, out of which new States have been carved and others are yet to be added, besides a mineral wealth that has not only given great impetus to, but has enlarged and diversified the industry and commerce of, the western continent; and whereas more than a quarter of a century has elapsed since the termination of the said war, and the soldiers and sailors who fought its battles and won its victories are growing old and passing off the stage of action, and very many of the survivors by reason of the late war and for other causes are poor and destitute, and for their meritorious public services deserve the friendly assistance and protection of that Government for which they offered their lives: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the soldiers and sailors who were mustered into the military and naval service of the United States in the war with Mexico under the act of Congress approved May 13, 1846, or the acts supplemental to or amendatory thereof, be, and they are hereby, declared to be entitled to receive a pension from the United States; and the Secretary of the Interior is hereby authorized and directed to place on the pension-roll the names of all the surviving officers, non-commissioned officers, musicians, and privates of the military and naval forces of the United States who were mustered into the service in the Mexican war, and who were honorably discharged for any cause, either during the war or at the close thereof, and the surviving widows of such officers and men. And no test-oath of loyalty to the United States, for or on account of anything done during the late war between the States, shall be required to entitle said officers or men, or the widows of either, to the provisions of this act, and no other oath than that to support the Constitution of the United States, except to establish the proof of identity and service, as now required by existing law.

SEC. 2. That pensions under this act shall be at the rate of eight dollars a month, and shall be paid to the persons entitled thereto from and after the passage of this act, and for and during their natural lives: *Provided*, That no person who is now receiving a pension from the United States at the rate of eight dollars per month shall be entitled to the provisions of this act.

It is not my purpose to treat of all the causes that led to and p o-voked that war. It will be sufficient for my purpose to say that Texas before her independence in 1836 was a part of Mexico. And although she had established her nationality and had maintained it for ten years, yet during that time she was almost constantly engaged in warfare with the Mexicans. Mexico had never lost sight of this rich province, had never abandoned her intention of reconquering and reducing it again to possession. The forces of the two countries were very unequal. Texas then had about two hundred thousand inhabitants, and Mexico nearly eight millions. The boundaries of Texas were unsettled, her resources small, and her expenses of separate government necessarily great. Besides all this she was in open hostility to Mexico with forces actually in the field to maintain her authority. Hence it was obvious that she by annexation to the United States would shift the responsibility upon the General Government of settling the question of boundary and giving her protection on the frontier, as well as relieve her of the crushing weight of carrying on a war and a separate government at the same time. But the strongest reason was that she was to enter the family of States on an equal footing with the others, and to have a republican form of government like that which she had created for herself.

On the 29th day of December, 1845, when she formally became a State of the Union, the United States by that act was bound to afford her protection. And Texas being engaged in war with Mexico at the date of annexation, the direction of the war was merely transferred from Texas to the United States. The incorporation of Texas into the Union was regarded by Mexico as sufficient cause for war, and a declaration of war on the part of Mexico soon followed. And to meet this announcement of hostilities against the General Government the act of 13th May, 1846, and the acts supplemental thereto, mentioned in the bill, were passed, and under which a large military and naval force were called out. Large bodies of troops were rapidly mustered into service and marched into Mexico, which became the seat of the war.

It is not my purpose to speak here of the glorious victories that crowned our arms at Monterey, Buena Vista, Vera Cruz, Cerro Gordo, Churubusco, Chapultepec, city of Mexico, and other fields. History has done ample justice to the bravery, discipline, magnanimity, and gallantry of our troops on those occasions, and has built for them a monument that will long survive the noble actors in those scenes. Americans have always borne themselves gallantly on the field of battle, and during no war that has occurred in our history did they win greater glory for themselves or sustain the national honor more proudly. I prefer to leave the individual acts of the brave soldiers and their battalions in the hands of those who were eye-witnesses of their daring feats, and who have already celebrated their praise in poetry and song. They not only did enough to live in history, but to deserve the lasting gratitude of their countrymen.

I wish to notice first the number of and composition of the troops that were enlisted in that war, and then trace some of the results that followed the war, or rather the fruits of their victories. I will here submit a table showing the aggregate of the regulars and volunteers employed during the war, with their average duration of service and casualties incident to each force.

General view of the subjects of inquiry, showing the aggregate of the regulars and volunteers employed during the war, with their average duration of service, and the casualties incident to each description of force.

	Forces employed and mustered into service.		Discharges.				Deaths.									Wounded in battle.			Resignations.	Deserters.
	Aggregate officers and men.	Average months of service during the war.	By expiration of service.	For disability.	By order and civil authority.	Aggregate number of discharges.	Killed in battle.		Died of wounds.		Total killed and died of wounds.		Ordinary.		Accidental.	Aggregate number of deaths—officers and men.	Officers.	Men.	Aggregate.		
							Officers.	Men.	Officers.	Men.	Officers.	Men.	Officers.	Men.

* In the reports of the deaths of volunteers of ordinary diseases, officers are not discriminated.

It appears from this table that in May, 1846, at the commencement of hostilities, our old establishment consisted of all arms of the service, 15,736, and this force was increased by 11,186 soldiers and 548 marines, aggregating a regular Army of 27,470, and showing that the total addition to this establishment was 11,734. I will also submit a tabular statement, showing in detail the volunteer force in each arm of the service, the casualties, and the number mustered out of service.

General recapitulation—volunteer service.

Description of force.	Number of regiments.	Number of companies.	Mustered into service, and joined and recruited since muster.			Officers resigned.	Discharged.	Deaths.		Desertions.	Mustered out of service.		
			Commissioned officers.	Non-commissioned officers, privates, &c.	Aggregate.			Killed in action, or died of wounds.	Ordinary.		Commissioned officers.	Non-commissioned officers, privates, &c.	Grand aggregate.
Whole mounted force	19.7	197	740	16,147	16,887	38	1,674	113	1,094	285	758	12,645	13,403
Whole artillery force	1.1	11	50	1,079	1,129	2	96	1	27	114	51	823	874
Whole infantry force	58.9	589	2,341	52,903	55,244	239	7,399	493	5,287	3,477	2,318	33,978	36,296
Total number of three, six, twelve months', and war volunteers, mustered into service	79.7	797	3,131	70,129	73,260	279	9,169	*607	6,408	3,876	3,127	47,446	50,573

*Of this number (six hundred and seven) fifty are commissioned officers. See statement D, page 34, in which, under the head "Recapitulation," the States are designated, and the losses in battle in the respective volunteer regiments specified.

R. JONES, *Adjutant-General.*

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, *Washington, December* 3, 1849.

From this table it will beseen that the whole number of volunteers mustered into the service from May, 1846, was 73,260; of which 16,887 were mounted men, 1,129 artillery, and 55,244 infantry, including 3,131 commissioned officers.

But it will no doubt be considered by many that there should be a large deduction from this force, that is of troops who volunteered and were received as three months' and six months' troops, and the number that were called out neither by the authority of the War Department nor the act of May 13, 1846. In this class the three months' and six months' men, two regiments of twelve months' men from Ohio and Missouri, and one company from Iowa are embraced, amounting in all to 14,448; of which 2,778 not being required to proceed to the seat of war were discharged a few days after being mustered into the service. If this force should be deducted from the aggregate mustered into service, 73,260, the force enrolled under the act of May 13, 1846, and the fifth section of the act of March 3, 1847, which authorizes the President to accept the services of "*individual volunteers*" to fill *vacancies*, &c., there will remain 58,812 officers and men. This would be an act of great injustice, as will be seen by a short examination of the statistics of the three and six months' men. The strength of three months' men when mustered into service was 1,390, and when discharged, 1,269; being a loss of 121. Discharged before their term of service expired, 82; of which, 3 for disability; deaths, 18; ordinary, 8; killed in battle and died of wounds, 10; and desertions, 22. The six months' men were actually held in service three months, and numbered when mustered into service 11,211, and when discharged, 9,620; loss, 1,591. Discharged before expiration of term, 825, of which 370 were for disability; deaths, 127; ordinary, 107; killed in battle and died of wounds, 6; accidental, 14; desertions, 524.

While it is apparent that these troops did not suffer all the hardships and losses that troops of longer service did, yet it is equally apparent that they were actually in battle, and suffered in killed and wounded and by death from sickness. They were ready, willing, and did expose themselves to all the hardships and risks incident to a soldier's life during their term of service. Where should the line be drawn? Are they to take nothing for their service? They volunteered with as high notions of patriotism no doubt as any soldier of the Army, and bore themselves as gallantly on the field, and laid down their lives as cherfully. It matters not that they were not all called out under a special act of Congress; they were actually received and mustered into the service, armed and rationed and used as other soldiers. They deserve all the more consideration for not waiting until the law demanded their service. They felt that the emergency existed; that their country needed their service, and like true patriots did not wait for but anticipated the call of their country. And were they mistaken in this? The President and the officers in the field believed that their services were necessary to save the honor and glory of their country, and acting upon such belief actually mustered them into the service. It is too late now to raise the objection that they were not lawfully accepted into service, or that they did not serve as long as other troops who had enlisted at a prior date. The only question worthy of consideration now is, did they volunteer, were they mustered into the service and accepted as soldiers? Of this there can be no mistake. Therefore I am in favor of making no distinction, but for treating all alike.

The total number of troops engaged in the war with Mexico, regulars and volunteers, was 100,454, and the total land force in service at the time of the reduction of the war establishment in July, 1848, was as follows:

Regulars:	
Commissioned officers	1,338
Non-commissioned officers and men	22,695
Aggregate regulars	24,033
Volunteers:	
Commissioned officers	1,527
Non-commissioned officers and men	21,590
Aggregate volunteers	23,777
Aggregate regulars and volunteers at the close of the war with Mexico	47,150

For the purpose of arriving at the approximate number of soldiers and widows that would be entitled at this date to a pension under this bill, I here read a letter from the Statistical Bureau, which by comparison with life tables, gives the number sufficiently accurate for our present purposes:

TREASURY DEPARTMENT, BUREAU OF STATISTICS,
April 1, 1874.

DEAR SIR: In reply to your communication of the 28th instant, I have to say that the aggregate United States force, regulars and volunteers, engaged in the war against Mexico, 1846-'47-'48, was 100,454. Of these there died during the war 12,896, leaving of survivors at the close of the war 87,558. Deducting from this 6,725 for desertions leaves the number of survivors at the close of the war, *less* desertions, 80,833.

The average age at the close of the war may safely be assumed at twenty-five years, to which adding twenty-six years for the period elapsed since July, 1848, the time when the troops were withdrawn from Mexico, gives the present average age of survivors as fifty-one years.

According to standard life tables about 68 per cent. of persons in the population at large, age 25, survive to the age of 51, at which rate there would be now surviving 54,880 persons out of the 80,833 soldiers above mentioned. The number of survivors among the soldiers must, however, be somewhat smaller than this, as their rate of mortality doubtless exceeded somewhat that of the population at large. Deducting 15 per cent. for this assumed larger rate of mortality leaves 46,600 as the probable number of these soldiers surviving; the corresponding number of deaths to the present time having been 34,200 out of the 80,800 soldiers who were surviving and entitled to honorable discharge at the close of the Mexican war. In default of want of accurate data we may assume that eight-tenths of the 34,200 soldiers dying since the close of the war left widows who still survive, the number of such surviving widows consequently amounting to 27,360, or somewhat over 27,000.

It has not been possible for me at this time to separate those enlisted in the Southern from those from the Northern States.

I inclose a table relative to the United States forces engaged in that war.

The number of disabled soldiers of that war now in the receipt of pensions is about 4,000, and the number of widows of deceased soldiers disabled in that war about 1,800.

I have the honor to be, very respectfully, yours,

EDWARD YOUNG,
Chief of Bureau.

Hon. W. S. HERNDON,
Member of Congress, House of Representatives.

By these statistics, which seem to be fixed at a maximum, there would still be surviving 46,600 soldiers and 27,360 widows of soldiers entitled to a pension of the whole number of 80,833 who survived the war, or a total entitled to pension of 73,960. While I have used this estimate from the Bureau of Statistics, I will here state that it is the largest I have yet seen. The estimate made by the Commissioner of Pensions is 39,000 survivors, being 7,600 less than the above. And I think the estimate for the surviving widows, 27,360, still more out of proportion. But it should be remembered, however, that this estimate includes the 11,186 men that were added to the regula

Army. But large as it is I propose to use it as a basis of calculation, for I suppose that the number will hardly ever be fixed at a higher approximate number.

But it also appears that of this number 4,000 disabled soldiers and about 1,800 widows of deceased or disabled soldiers in that war are now in receipt of pensions; which aggregate of 5,800 should be deducted from 73,960, which will leave 68,160 who by this calculation will be entitled to receive a pension at this date. If this result be practically correct, then this bill provides for the payment of eight dollars per month to each pensioner, which will amount to $6,543,360 per annum, decreasing annually, however, in proportion to the decrease by death of this number.

This is a large sum of money to be drawn from the Treasury each year, but it may be answered that great sacrifices were made by these men and mighty results were achieved which have been of incalculable benefit to the whole nation. Besides it has constantly been the policy of our Government since its establishment to reward meritorious services not only with honors but with a moneyed consideration. The soldiers of the Revolution and of 1812 and the disabled soldiers of all subsequent wars have been placed upon the pension-rolls and protected from want in their declining years. There is an exception to this, however, to which I desire once more to call the attention of the House.

By legislation since the war of a proscriptive character, and which I regard as a blot upon our statute-books, and which, I believe, history will rank among the follies of our Government, all the pensioners of 1812 and the disabled pensioners of subsequent wars, residing in the Southern States lately in rebellion, were stricken from the pension-rolls, and a test-oath, odious to most of them, required, with certain proofs of the same character, before they can be replaced on the pension-roll and receive their pensions. Thousands in that section of the Union are cut off by this proscriptive measure. I do not remember of any legislation so evil in its character as this and so odious in its nature.

It is leveled at the most helpless and yet meritorious class of our citizens, old, decrepit, and diseased men and women, who were unable to take any other part in the late war except in sympathy, and whose crime consists in their residence in this land and having sons who engaged in the war. Even if some of them did commit errors during the war in the eye of the Government, yet by reason of their distinguished services in behalf of their country they had, in the language of another, "earned the right to do wrong." These persons deserve and justly have the respect and sympathy of their fellow-citizens, and no action of the Government against the strong and vigorous citizens of our country, however malignant in its nature, could excite the derision and contempt that these proscriptive acts have produced.

I cannot complain of the House of Representatives. They have twice passed an act wiping out this wicked proscription, and I believe the Executive is ready and anxious to approve such a measure; but the Senate has so far refused to act favorably upon it, and ought to bear the whole responsibility. I trust, however, that before the end of this session a returning sense of justice will induce them to save the nation from the further disgrace of allowing these persons to die in want and accord to them their just rights. The acts striking them from the pension-lists should be branded, as they deserve to be styled, acts of confiscation. And for a mighty government to confiscate the property and rights of the helpless and allow the strong to hold them, presents an attitude before the world of disgrace and humiliation of which I am heartily ashamed.

We have placed upon our pension-rolls since the late war a vast number of pensioners, consisting of disabled soldiers, widows of deceased soldiers, and children under sixteen, who were dependent upon a father or brother who was slain or died in the service, and other dependent relatives, until the number has become frightful.

By examination of the statistics it will be found that the pension-rolls of June 30, 1871, show 207,495 pensioners, at a cost of $33,077,383.63. But they had increased 24,734 to June 30, 1872, composed as follows:

Army invalids	95,405
Army widows and dependent relatives	113,518
Survivors of the war of 1812	17,100
Widows of soldiers of same	3,027
Navy invalids	1,449
Navy widows and dependent relatives	1,730
Total	232,229

At a cost of $30,169,341 for the year 1872. And when it is considered that there were 2,688,523 soldiers who served in the late war, and but 176,000 have yet made claim for pensions on account of disability, it is reasonable to conclude that a large number will be added to the list annually, and thus keep the expenditures to at least thirty millions per annum.

The tendency is to increase the amount of pension and the number of pensioners. By act of June 8, 1872, the pay of three grades of pensioners were increased respectively from $15, $20, and $25 to $18, $24, and $31.25 per month, and these classes numbered about 16,000, making $750,000 per annum, without increasing the number of pensioners. The pay of other classes is respectively as follows: Army invalids, $90.26 per annum; $7.52 per month. Army widows and dependent relatives, $128 per annum; $10.66⅔ per month. Navy invalids, $94.23 per annum; $7.85 per month. Navy widows and dependent relatives, $135.61 per annum; $12.97 per month. To form an adequate idea of the rapid increase of pensions, I compare the payment of 1862 with 1871. In 1862 the total pay of pensions for eleven previous wars was $852,170.47. For same item 1871, $33,077,383.63, or an increase of $32,225,213.16 over that of 1862, or over 900 per cent. in nine years.

And under the disgraceful and wicked legislation referred to not one of these pensioners of 1862, who had defended their country through eleven wars, who resided in the Southern States, can draw a dollar unless proof of loyalty during the late war is made, although they are taxed to pay the pensions of others. I do not complain that pensioners justly entitled are paid. This is just and noble in the Government; but I do complain that most of this large annual appropriation is stolen and diverted from its object and never reaches the soldier. Mr. GARFIELD, chairman of the Committee on Appropriations, said on 30th January, 1872, in the House, that more than one-fourth of all the means appropriated for pensions was stolen by claim agents, sharpers, and swindlers; in effect, that more than eight millions per annum were stolen from this fund alone. This can and ought to be stopped. If this sum was saved from the thieves who plunder, it would be more than enough to pay all the persons now entitled and the soldiers of the Mexican war besides.

I will also submit another table showing the Navy pensions, the Army pensions paid in sundry wars, and the number of soldiers engaged in the different wars of this country, a portion of whom have been placed on the pension-rolls:

Statement of the number of pensioners on the rolls who served in the Army, Navy, and on board of privateers, with the amount which has been paid in each year in the several States and Territories, including the sums paid at the Treasury Department for unclaimed pensions, for special-act pensions, and for revolutionary claims of Virginia under the act of July 5, 1832.

Year.	Invalid and soldiers.		Widows and dependent relatives.		Total.		Remarks.

Number of soldiers serving in New York frontier disturbances, 1838-'39		1,128
Number of soldiers serving in Aristook disturbances, 1838-'39		2 reg'ts.
Number of soldiers serving in the war of the rebellion, 1861-'65		2,688,523

But there is another consideration which should be remembered, one which ought to have more than ordinary weight, that out of this vast sum of $30,000,000 annually appropriated hardly one dollar of it finds its way to the South. The soldiers and their representatives to whom it is paid reside North, and unless, as is rarely the case, a soldier has removed South, not a dollar will be paid there. This makes the benefits and burdens very unequal. The South pays annually a large share of the taxes that are applied to this force, while she receives hardly a dollar in return therefor, and cannot hope to ever receive much from this source. The burdens and benefits could not be equalized except by granting a pension to the confederate soldiers in like manner as they are granted to the Union soldiers, the number being comparatively about equal according to population. But for this we cannot reasonably hope in this generation. As the laws now exist the South is called upon to bear burdens, to pay immense taxes, but is not allowed to receive any of the benefits. It is hardly necessary to remind sensible men that this is very unjust and cannot add much to that fraternal and patriotic sentiment which is the strongest bond of our Union.

But it will be asked how can we better equalize these benefits if we do not demand that confederate soldiers shall be placed on the pension-lists? The first step to take in that direction is to repeal all the proscriptive acts which dropped from the pension-rolls all soldiers and widows who were entitled to pensions for services in the wars prior to the last. And the next step is to pass into law the present bill. But how will this equalize the benefits or aid the South more than the North? This is quite apparent by a short analysis of the forces furnished by each State. The total number of States that furnished troops were Alabama, Arkansas, California, (not a State then,) Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Mississippi, Missouri, New Jersey, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia, Wisconsin, being twenty-five States, and the District of Columbia, and from what has since become the Territory of Utah, leaving twelve States and nine Territories that furnished no troops for the Mexican war, and these being Connecticut, Delaware, Kansas, Maine, Minnesota, Nebraska, Nevada, New Hampshire, Oregon, Rhode Island, Vermont, and West Virginia, (the last was then a part of Virginia and will come under that head,) and the Territories of Arizona, Colorado, Dakota, Idaho, Montana, New Mexico, Washington, Indian Territory, and Wyoming.

By comparing the States south with those north that did furnish troops (I mean the volunteer forces which are here taken for example) it will be seen that they stand thus:

Alabama	3,026
Arkansas	1,323
Florida	370
Georgia	2,132
Kentucky	4,842
Louisiana	7,947
Mississippi	2,423
Missouri	7,016
District of Columbia and Maryland	1,355
North Carolina	935
South Carolina	1,077
Tennessee	5,865
Texas	8,078
Total	47,649

And in the eleven Northern States and Utah they stand thus:

California	844
Illinois	6,123
Iowa	253
Indiana	4,585
Massachusetts	1,057
Michigan	1,103
New Jersey	425
New York	2,396
Ohio	5,336
Pennsylvania	2,503
Wisconsin	146
Utah	585
Total	25,536

This shows that of the whole volunteer force of 73,260 the South furnished 47,649 and the North 25,536, or but a little over one-half what the South did; or, to put it more sharply, four of the Southern States, Missouri, Louisiana, Tennessee, and Texas, furnished 28,846 men, being 3,310 men more than all the States and Territories north put into the service. Or again, if you take the single State of Texas, although she then had less than two hundred thousand inhabitants, you will find that she mustered more men by 135 into the service than the nineteen States north, to wit: Connecticut, Delaware, Iowa, Kansas, Maine, Minnesota, Massachusetts, Michigan, New Jersey, New York, Nevada, Nebraska, New Hampshire, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, and Wisconsin, and nine Territories. So that in receiving pensions under these statutes the South would receive in the ratio of about two-thirds while the North would take one-third. But the State of Texas would not only receive the largest sum of any State in the Union because she had more troops in the service, but because a large number of those soldiers who enlisted in other States have since removed to that State; enough, I estimate, to make up the number now equal to the original enlistment. Hence approximately the South would receive something over four millions per annum of the $6,543,360. And if my estimate of the number of these soldiers now in Texas who would be entitled to pensions be correct, that is, 8,000, then there would be $768,000 annually disbursed in the State of Texas.

The benefit, to say nothing of the justice, of this measure to the South of disbursing over $4,000,000 per annum in that impoverished and almost ruined country is too obvious for comment. Every one must know the impetus that the disbursement of thirty millions annually paid from the Treasury to the people of the North gives to industry and commerce. I submit that this measure ought to commend itself strongly to the people of the North, not only because it is just and due to these soldiers for meritorious services long since performed but because it is perhaps the only just method now by which the South can be relieved of some of those burdens that threaten to crush out her existence.

But let us look for a moment to the fruits of this short, decisive, and glorious war. It commenced in the spring of 1846, and our soldiers were disbanded in July, 1848. Thus in about two years, with 100,454 men, we marched into an enemy's country of vast extent, lying more than a thousand miles from the center of our population, containing eight million people, subdued them, and dictated our own terms of peace. What did we gain by that war? The great State of Texas was involved. The Mexicans claimed all that vast territory. This peace enabled us to establish her present lines and sever her forever from Mexican domination.

By the treaty of Guadalupe Hidalgo of February 2, 1848, and the Gadsden purchase of December 30, 1853, Mexico ceded to the United States the territory now covered by the States of California, Nevada, part of Nebraska, also all claim to the territory covered by the State of Texas, and by the Territories of Utah, Arizona, and New Mexico, by portions of the Territories of Wyoming and Colorado, and by by the unorganized territory lying west of the Indian Territory, embracing all about 937,875 square miles. This vast area contained more territory than all the organized States of the Union did at the time of its acquisition. To form some estimate of its richness and fertility, its value and commercial importance, we have but to examine its statistics for the past few years. The entire population of this newly acquired territory in 1850 only numbered 406,657 inhabitants, and in 1870 had increased to 1,772,060 persons. The total wealth in 1850 was $81,062,899, but in 1870 it had swelled to $965,622,071. But so rapidly have the population and wealth increased within the past few years, that at least one-fifth may be added to these figures for the last four years since the taking of the census, which will give us over two million inhabitants and about $1,200,000,000 of wealth. And in all the industries of the country this section will bear a favorable comparison according to population and wealth. In mining resources, however, it outstrips all the balance of the Union together; it is literally the great gold field of America and the world. Take, for example, the year 1860, and the total product of gold and silver in the United States amounted to $61,500,000; of which sum the following amounts were produced, to wit:

California	$22,500,000
Colorado and Wyoming	4,000,000
Arizona	1,000,000
New Mexico	500,000
Nevada	14,000,000
Total	42,000,000

And if this should be taken as an average year since 1850, say for the past twenty-four years, then we will have a yield of $1,008,000,000 or over one billion dollars. This enormous sum has been sufficient of itself to give an impetus to the commerce of the whole continent

and has had its influence on the civilized world. But the mining resources of this section are believed to be inexhaustible. We have but just commenced, as it were, to dig the hidden wealth imbedded in this El Dorado of America. But this territory was not only valuable in itself on account of its intrinsic wealth and resources, but it became the great highway to the Pacific Ocean and the East for the older and more densely populated States of the Union. In this respect alone it would more than compensate for all the expenditures of the Mexican war. Who is capable, or by what method can the value and importance of this acquisition be estimated? If you undertake to fix a value upon it you must do so by statistics of what it is now and what it was when acquired, comparing the one with the other in all the changes that have been wrought. But this must fail to give any just idea of its greatness and value to the country. We can form a better idea by asking the question, for what consideration would the General Government part with this 937,875 square miles with its two millions of people and untold resources and commanding position on the continent, holding in its arms the great gateway to the empires of the East?

No money consideration could buy it at all; its value is beyond price; we could not do without it. We can see in it a bright and glorious future of a dense population containing all the true characteristics of wealth, refinement, and a high order of civilization. No war with a foreign country has produced such results in so short a time, and no troops acquitted themselves with more honor and made greater sacrifices during their period of service. Having gained for the whole country that which for value cannot be estimated, and having reached a period when many of these veterans are in need, will the country refuse to reward such faithful and worthy patriots? These soldiers by estimation are now over fifty years of age. I know very many of them in the South; a vast majority lost their property during the war, and are penniless and too old and feeble to labor.

Nothing that they did during the late war should be remembered against them. They deserve well of their country for services performed long prior to the late war, they are entitled to compensation and reward, and a grateful country having received such immense gain for the personal sacrifices of those patriotic men, will not long delay in meting out that justice which they claim at her hands. I have not discussed the merits of the soldiers who served in the several Indian wars since 1812, and who are entitled to pensions. This bill does not embrace them because another bill before the House does, but for many of the reasons urged here, and many more that can be offered, I am in favor of including them under the proper limitations in the same act and bestowing upon all patriotic defenders of the peace and liberties of our country alike the bounty of a great, just, and generous Government.

Department of Manufactures and Mining.

SPEECH OF HON. E. CROSSLAND,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

June 9, 1874,

On the substitute for the bill (H. R. No. 1246) to establish at the seat of Government a Department of Manufactures and Mining, and for other purposes.

Mr. CROSSLAND. Mr. Speaker, the substitute reported by the Committee on Manufactures involves a very small expenditure of money and is so much better than the bill that I feel no inclination to antagonize it. The statistics sought to be collected will be interesting and useful. We have been entertained by the members of the Committee on Manufactures, the gentleman from Ohio [Mr. WOODWORTH] and the gentleman from Pennsylvania, [Mr. BIERY.] Their speeches were able and instructive. Unlike some others here who represent manufacturing constituencies, they seem to recognize the interest of other branches of industry. Still they betray the fact that they desire "protection" for the pursuit they represent. I commend their *comparative* liberality, and will assist them to obtain the information desired, for the reason that if the statistics are faithfully collected we will be able to prove conclusively that the manufacturers do not need protection.

We have had but little discussion of this question during the present session of Congress. I was hopeful that the committee in charge of the subject would report a measure looking to the reduction of customs duties and relieving the people of the grievous burdens the present law lay upon them. The history of the country proves that a reasonable reduction of the tariff is always followed by increased imports and the revenues never lowered. We import under the present high rate enough to raise all the revenue required from that source; and there can be no doubt that if it was reduced 50 per cent. our imports would be doubled and the same amount of revenue collected. The only reason that can be urged against a measure fraught with so much relief to the tax-payers and consumers is that the increased imports would interfere with the profits of the manufacturers, and the present high rate must be maintained to protect home industry, meaning the home manufacturers.

Contemplating the monstrous wrongs imposed on the general consumers and tax-payers of the country by this "protection" doctrine that belittles the interest of every other pursuit, that oppresses the many to enrich the few, I can scarcely discuss the question in good temper. One of the advocates of this ruinous and atrocious doctrine alludes to agriculture as a *rude* industry, and I suppose in his estimation not of sufficient dignity or consequence to entitle those who pursue it to any legislative attention whatever. Now, sir, as before remarked, I hope my friends on the Committee on Manufactures will succeed in getting the figures the substitute provides for in order that the country may see what branches of industry need "protection," and demand such legislation as will equalize taxation and relieve consumers of the tribute they are forced to pay to "monopoly."

I have collected some statistics which I offer for the consideration of the "protectionists" and the country.

Compare, sir, the number of people engaged in agriculture, the capital invested, and the value of the annual products with the number engaged in manufacturing, the amount invested, and the value of the annual products, and every fair-minded man must be disgusted at the results of protective-tariff laws. Look at the facts as they appear in the records of the country:

The last census tells us that there are in the United States 5,922,471 people engaged in agriculture, and that they have capital invested as follows:

In farms	$9,262,803,861
Farming implements	336,878,429
Live stock	1,525,276,457
Total	11,124,958,747

They have an investment of over $11,000,000,000. On this investment the gross annual product is only $2,447,538,658.

There are about 2,033,996 people engaged in the business of manufacturing; they have a capital employed of $2,118,208,769, on which their annual product is $4,232,325,442.

Six million farmers on a capital of $11,000,000,000 make only $2,000,000,000 per annum; while two million manufacturers on a capital of $2,000,000,000 make $4,000,000,000 annually.

In further comparison, I invite the attention of gentlemen to an extract from the able speech of my friend from Missouri [Mr. CRITTENDEN] on the East and the West, delivered in the House a few days ago:

If we divide the whole amount of agricultural capital by the total number of persons engaged in agriculture, we have an average of $1,878 to each, and if we divide the value of the gross product of agriculture by the total number of persons engaged in that business, we find that each person thus engaged, on an average of $1,878 capital, produced $412 of gross values. By a similar computation we find that the average capital to each person engaged in manufacturing was $1,211, and that each person thus engaged on this average amount of capital produced $848. The labor and capital of a farmer therefore yielded less than half as much as the labor and capital of a manufacturer. The census figures do not tell us what the net profits of agriculture were, but it will not be claimed that they were over 10 per cent. on the capital involved. Indeed, if we estimate a farm hand's labor at fifteen dollars per month and his board at ten dollars per month, both together costing $300 a year, and deduct this from the average annual product ($412) of each person engaged in agriculture, we have $112 as the farmer's average net profit on the labor of his hired hands—or only a little over 6 per cent. on his average capital of $1,878. The profits of the manufacturing capitalist are more easily and more accurately determined. Adding together the total amount paid for raw materials ($2,488,427,242) and the total amount paid in wages, ($775,584,343,) and deducting the sum ($3,264,011,585) from the gross manufacturing product, ($4,232,325,442,) we have $968,313,857 as the net profit on a total manufacturing capital of $2,118,208,796—or over 45 per cent. And it is this business, paying an average of 45 per cent. per annum, that is "protected" by the Government at the expense of another business that pays only 6 per cent.

I turn to the record and ask gentlemen to look again, and the census will tell them that in the great agricultural State of Kentucky the wealth of the people does not amount to over $150 *per capita*, while in the manufacturing States of Rhode Island, New Jersey, Massachusetts, Connecticut, and Pennsylvania it is nearly $2,000 *per capita*. Look again to the statistics, and you will see that the value of farms and farm products is at low prices, that thousands of farmers are scarcely able to keep even. Then look and see what profits are realized by the manufacturers. They do not tell us what dividends are made, but when we see the prices that the stocks in the associations and companies sell for, we know that they must yield enormous profits. I give a few: The Chicopee Mills capital is divided into shares which cost $100, and sell readily in the market at $325; Merrimack Mills shares which cost $1,000 sell for $1,700; Middlesex Mills shares of $100 sell for $400; Pacific Mills shares of $1,000 sell for $2,240; Salisbury Mills shares of $100 sell for $360. Many others could be given which would show equally as high prices for shares. They may conceal the amount of dividends, but we know a business must be uncommonly profitable when shares of stock on the market sell for three and four times as much as they cost.

Now, sir, why is it that the manufacturers almost double their capital every year while the farmers scarcely make 6 per cent. on theirs? Why is it that the people of the manufacturing States are all rich and the people of the agricultural States nearly all poor? The solution is easy. It is the effect of protection, as I will now proceed to show. I will take four of the common articles of consumption in this country. We imported during the last fiscal year—

Cotton goods valued at the sum of	$31,810,680
Tariff taxation imposed, gold (per cent.)	.35½
Revenue collected	11,557,173

Woolen goods valued at	$72,892,742
Duties imposed, (average per cent.)	.52¼
Revenue collected	38,490,628
Iron and steel, value of imports of	57,333,157
Duties imposed, (average per cent.)	.31.8
Revenue collected	18,237,388
Leather and manufactures of, value of imports	11,812,147
Duties, (average per cent.)	.31 6.10
Revenue collected	3,734,828

Add these figures and you will see that the value of the cotton goods, woolen goods, iron, steel, leather, and manufactures of leather imported during the fiscal year was $173,848,726, on which the Government collected $72,020,017.

I hold in my hand a table showing the value of the cotton and woolen goods, leather and manufactures of leather, manufactured in the United States during the last fiscal year. They were sold to the people at the same price of the imported goods; or, in other words, the same percentage charged by the tariff on the value of the foreign manufactures and paid to the Government was added to the value of the domestic manufactures and was paid to the manufacturers.

Commodities.	Value.	Duty.	Total.
Cotton goods	$187,000,000	36½ per cent.	$67,943,333
Woolen goods	193,000,000	52⅝ per cent.	101,646,666
Iron and steel	230,000,000	31⅓ per cent.	70,000,000
Leather, &c.	198,000,000	31⁹⁄₁₀ per cent.	62,568,000
Total	798,000,000		302,157,999

This table contains the production of the commodities as shown by the statistics at hand. I have no doubt it is much larger than indicated by the figures exhibited.

The total amount of these four commodities imported and manufactured at home is $971,848,726, in which the consumers under the tariff laws paid a tax of $374,178,016, of which the Government received $72,020,017, and the manufacturers $302,157,999. When we remember, sir, that this tariff taxation is laid on more than three thousand articles, and generally the heaviest tax imposed on articles consumed by the agriculturists, we do not wonder that the manufacturing East is thrifty and rich and the agricultural section unprosperous and poor. The manufacturers, as I have shown, produce annually over $4,000,000,000 worth of goods. They export less than one hundred millions; the balance is consumed in this country. The average tariff taxation is 38¼ per cent. gold, or about 43½ per cent. currency. Now, calculate and find the amount that this percentage adds to the cost of the total consumption of the country, and you will see the many hundreds of millions of dollars consumers pay annually to this favored class. A gentleman suggests that I speak to flatter the grangers. I would not

> Flatter Neptune for his trident
> Or Jove for his power to thunder.

I speak in the interest of truth, fairness, equality, and equity. I represent an agricultural constituency mainly; their interest is no dearer to me than any other class. They ask for no exclusive legislation; they require no "protection" that will injure any other pursuit. I know but little of the organization commonly called grangers. So far as I am informed I approve their organization. Their utterances have been made in truth, wisdom, moderation, and perfect fairness. They have been oppressed and goaded by your unjust laws until they have found it necessary to organize for self-protection. They may not engage in political strife, but I warn gentlemen here that they are not ignorant of their wrongs, whatever may have been the patience with which they have endured them, and they seem no longer inclined to bear the oppressions they have submitted to in the past.

I beg pardon for this digression from the line of discussion I intended to pursue. I have not time to present a tithe of the evils that result from this customs-tariff system, but have shown enough to prove to the country that this legislation has been shaped to suit the interest of a single branch of industry and destroy the prosperity of all other classes. When the people see the statistics provided for in the substitute they will conclude it is a puny statesmanship that has been unable to devise a plan of taxation that would relieve them from the ruinous vices of this system.

In the name of economy and the pretended fear of taxation honest claimants who furnished provisions, animals, &c., for the armies during the war have been refused payment. A class of the glorious veterans of the war of 1812 have been told that the Government cannot afford to pay them pensions, and they must continue to struggle with want and poverty in their feeble, helpless old age. And yet you have given more than $700,000 in subsidies to the steamship companies, and keep in force this protective-tariff system, which in an indirect manner robs the people of hundreds of millions of dollars every year.

Frauds in Arkansas—The Fruit of Carpet-bag Rule.

SPEECH OF HON. R. MILTON SPEER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

June 9, 1874.

The House having under consideration the bill (H. R. No. 3622) to amend the act to establish the judicial courts of the United States, approved September 24, 1789, in relation to bonds of clerks of courts of the United States—

Mr. SPEER said:

Mr. SPEAKER: A few months ago, on the motion of the gentleman from Arkansas, [Mr. HYNES,] who now objects to the consideration of the resolution which the committee desired to report a few minutes since, for the protection of the Government against the payment of fraudulent claims, an investigation was ordered by this House into the expenditures of the western district of his own State, to be made by the Committee on Expenditures in the Department of Justice. In obedience to that order the committee proceeded to the discharge of its duties, and it has been faithfully and laboriously engaged since that time until a few days ago. It gives me pleasure to be able to say that the committee, the chairman and every member, sought to reach the truth and do their duty.

The investigation reveals the most alarming condition of fraud and corruption that I think the people of this country have ever heard of, familiar as they have become with revelations of this character. I propose briefly, with the indulgence of the House, to review the history of affairs in the western district of Arkansas since its organization, showing the causes and extent of this corruption, its object, and its remedy.

Arkansas was admitted into the Union in 1836. Until 1851 the whole State composed but one judicial district. In 1851 the State was divided into two judicial districts, embracing then as now a portion of the Indian country, as it is called, in the western district, but having but one judge. The expense for the whole State, covering both districts, comprising the same territory which is now embraced in the two districts, was in 1850, the year before the division, only $12,000. Since that time the expenses of the western judicial district alone have increased as follows: In 1858, $25,000; 1859, $19,000; in 1860, $26,000; in 1866, $15,000; in 1867, $24,000; in 1868, $34,000; in 1869, $56,000; in 1870, $108,000; in 1871, $138,000; in 1872, $321,000; and in 1873, $283,000. These figures show an increase of expenditure so extraordinary and alarming as to arrest the attention of every man who desires to see an honest government, be he republican or democrat. And that this increase, so rapid and so enormous, is the result of the most infamous fraud and corruption, the evidence taken by the committee abundantly proves.

The population of the whole State of Arkansas in 1870 was 484,471, less than half a million. The population of the western district was perhaps between two and three hundred thousand. The western district embraces about thirty counties of the State, with a large portion of the territory occupied by traders and Indians, called the Indian country or Indian Territory. In 1872 the judicial expenses of this one district alone, embracing a population of only two or three hundred thousand, were more than the expenses of all the New England States, New Jersey, Pennsylvania, and Ohio combined, those States having a population of 10,581,320. Until 1871 Judge Caldwell, the present judge of the eastern district of Arkansas, presided over the western district also. He is said to be an honest, upright, and able judge. In 1871 a person by the name of Story, I believe from Wisconsin, was appointed, and from that time until the present he has remained there to mock and disgrace the administration of justice. If not personally dishonest, and I believe he is, he has been, during the whole of that time, the friend and the bosom companion of rascals and thieves.

A man by the name of William A. Britton was the marshal in 1870, and remained marshal until May, 1871, when he was removed and succeeded by Logan H. Roots. He remained as marshal until 1872, when he was removed and Britton was again appointed. He failed to be confirmed, or rather his nomination was rejected on the 3d of February, 1873, when John N. Sarber, the present marshal, was appointed.

In the year 1871 the disbursements or expenses of that district were $137,958.55; in 1872, $321,653.43; and 1873, $283,411.77. I desire here to say that the actual expenses for the years ending 30th of June, 1872 and 1873, and the amounts reported to have been expended as found in the reports of the Attorney-General, do not correspond for this reason: the reports of the Attorney-General simply embrace the amounts of the drafts that he sent to the marshal. The marshal expended all that was sent to him, and besides incurred large additional expenses with which he came to the Treasury, and not to the Attorney-General. Therefore the actual expenses to the Government for the years 1872 and 1873 are from sixty to eighty thousand dollars each, more than the report of the Attorney-General shows. The whole expense, paid and unpaid, for those three years for that district was $743,023.75. The Attorney-General *purports* to give the *whole* expenditure for the administration of justice in each State; but the facts revealed in this single district show that the *actual* expenses paid

by the Government may be hundreds of thousands of dollars more than he reports. It is difficult for the people to know how much they are plundered from year to year.

I have taken the time to make a little analysis of the items of this expenditure. The court of that district sat during the period covered by this expenditure of almost $750,000, just two hundred and ninety-three days. There was paid to grand jurors the sum of $14,791.85, to petit jurors $32,018.65, to witnesses $114,117.23, making a total of $160,922.73. The number of witnesses is given at 3,350, showing an average amount paid to each witness of $34. The whole expense for the three years being $743,023.75, and the amount paid to jurors and witnesses $160,922.73, there is left for the marshal, his deputies, and the clerk for those three years, the enormous sum of $582,101.02, or for each year to the marshal, his deputies and clerk, $194,033.67.

Mr. CESSNA. Permit me to make a single statement in regard to the last item the gentleman has referred to. It has been developed in the examination before the Judiciary Committee that for fourteen months and twenty days the office of marshal in that district has cost the Government of the United States a little over $403,000.

Mr. SPEER. This statement shows that for the years ending 30th June, 1871, 1872, and 1873, the marshal and his deputies and the clerk received $582,101.02. The court having sat two hundred and ninety-three days during that time, each day of session cost the Government $2,535.91. When it is remembered that there was not a Ku-Klux in the district, and no ground, therefore, for plundering the Government as there was in other States under the pretense of preserving the peace and protecting the negroes, but that the business was of the most trifling kind, consisting chiefly of alleged violations of the internal-revenue laws, violations induced in many cases by the deputy marshals in order to make expenses and fees, the enormity of these expenditures is without parallel.

Let me inquire at this point how a system of frand and plunder so complete, so gigantic, so audacious, was concocted and successfully carried on in this day and in this land. In the first place, the district was cursed in 1871 with a corrupt judge—a judge who, as the evidence shows, admitted to bail for capital offenses prisoners who had been tried and convicted, and allowed them to go forever afterward free; a judge who is shown to have bought the certificates issued to the jurors, witnesses, and others of his own court for their pay at a discount of forty, fifty, and sixty cents on the dollar; a judge who is alleged, if not directly proved, to have received a bribe of $2,500 for consenting that a *nolle prosequi* should be entered in a certain case; a judge whose records are marred, interlined, erased, confused; a judge who is shown to have approved under the law one of the marshal's accounts for $20,000 in blank, thus allowing it to be filled up afterward with these fraudulent claims; a judge who knew or had the means of knowing, all this time, that the Government was being plundered of hundreds of thousands of dollars in his court in the outraged name of justice, and yet remained silent!

It is due to that judge to say that in response to the invitation of the committee he appeared before us and made a statement in denial of the charges against him. It was lame and unsatisfactory. It was not the statement of a man conscious of his official and personal integrity; not the statement of a man who felt keenly the injustice that these charges would have done him if he had been innocent, but it was the statement of a cringing, shrinking, cowardly, corrupt man.

Next, the district had a corrupt marshal—infamously corrupt—William A. Britton. But how is he to carry out this programme of plundering the Government? He and his chief clerk, J. W. Donnelly, a fit instrument for such work, make up and keep in their office a list of fictitious deputies—a list of names of persons who do not exist. Deputies go into the Indian country without warrants or without authority for making arrests; they return in two or three weeks with a prisoner, or two or three; they come into the marshal's office and they return a posse with each prisoner arrested, the posse consisting of these fictitions, fraudulent, non-existing deputies, whose names are kept in the marshal's office, so that on each return of the arrest of a prisoner a posse of one, two, or three fictitious persons is credited with arresting him, and is allowed perhaps for five hundred miles' travel and twenty or thirty days' time. That account, so made out, is taken before a United States commissioner named E. J. Brooks, or some other one equally corrupt appointed by the judge, and he signs the jurat that that fictitious deputy named in the account appeared before him and swore to the correctness of that account; that he had performed the service, that the number of days charged and the number of miles stated to have been traveled were correct. He certifies that this non-existing man appeared before him and took this oath. Upon his certificate the account is carried back to the marshal and allowed. The marshal issues a certificate that there is so much due the fraudulent deputy, by the Government, and he keeps one-third of this amount himself, and gives the two-thirds to the deputy who makes the return.

There were numbers of these fictitious marshals, perhaps one hundred, whose names were used by all the real deputies when they brought in a prisoner or two; and by such means as this the enormous expense which these figures show as having arisen from the arrests of prisoners in that district, has been wrought up.

But that this charge of fraud may not rest upon my statement, I quote here a very brief part of the evidence which proves it. B. F. Shoemaker was one of Britton's deputies, familiar with the way things were done in Arkansas, and he was brought before the committee from Missouri, after it was apparent that efforts had been made to keep him away.

B. F. Shoemaker swears:

Question. Did you ever make arrests of prisoners, and return parties as *posse comitatus* who did not accompany you?

Answer. I did.

Q. By whose order or authority or suggestion did you do that—who told you to do it?

A. I think I had my first intimation on the subject from J. W. Donnelly—that gentleman there, [pointing him out.]

Q. Was he the chief clerk of William A. Britton as marshal?

A. He was.

Q. How many times did you do that to the best of your recollection?

A. I can't tell you; quite a number of times. I do not know how many.

Q. Do you recollect a special case in which you did it?

A. The first case, I think, was that of Joseph Nipp and Johnson.

Q. What was that for?

A. I caught them introducing whisky into the Indian country, near the Kansas line.

Q. Was there any *posse comitatus* employed by you in arresting them?

A. I cannot say whether there was more than one or not. I do not remember.

Q. Did J. W. Donnelly, the chief clerk in the marshal's office, hand you vouchers purporting to be for services rendered as *posse comitatus* in the arrest of Nipp and Johnson?

A. I think he did.

Q. What did he tell you to do with them?

A. I would have to get them signed, probably.

Q. By whom?

A. I would have to get them signed by some official competent to take an affidavit.

Q. Who were the persons that were named in those vouchers?

A. I do not remember.

Q. Were there any such persons in existence, or were they supposititious persons?

A. There were no such persons.

* * * * * * *

Q. Did the practice of returning supposititious persons as *posse comitatus* prevail generally or not?

A. I think it did.

Q. Do you know any other parties who returned the names of persons as posses who really did not serve as such?

A. Yes; I know one man, C. R. Stevenson.

Q. He was in the habit of returning posses who had not served?

A. Yes, sir; he used to ride with me at that time.

Q. Was he a deputy marshal?

A. He was.

Q. Did he tell you he did those things?

A. I do not know as he ever told me.

Q. But you know the fact?

A. Yes, sir.

Q. How did you know it?

A. I saw him sign them.

Q. And you knew that no such parties had rendered service?

A. I think they had not.

Q. How many posses did they usually return for every prisoner?

A. The deputy generally returned one posse.

Q. Any more ever?

A. Yes, sir; there were cases when two were returned, but the deputy got the benefit of only one.

Q. Who got the benefit of the other?

A. I do not know, sir, unless it was the office.

* * * * * * * *

Q. In some cases you say two supposititious posses were returned; how did you divide the money?

A. I got two-thirds of the fees.

Q. Who got the other third?

A. It was my understanding that the office got it.

Q. Was there any list of deputies, who, in reality, did not exist, kept in Marshal Root's office, to your knowledge?

A. Yes, sir.

Q. Where was the list kept?

A. On the time-book of the real deputies.

Q. What was the purpose of keeping that list of supposed deputies?

A. In order to keep the time correctly.

Q. I mean, what was the object of keeping a list of these deputies that did not exist?

A. To keep the time correctly, as you would those of the real deputies; the same as keeping the correct time of real deputies.

Q. What use did they have for false deputies?

A. To get more money, I suppose.

Q. Was that list of false deputies kept so as to use their names as deputies?

A. Yes, sir.

* * * * * * * *

Q. [Showing voucher of George M. Conrad, of Fort Smith, nineteen days' service, from July 27 to August 14, 1872, as *posse comitatus*, in the case of Joseph Bean, charged with intent to kill in the Cherokee Nation.] Do you know anything about that?

A. That was under William A. Britton's last administration.

Q. Is that a fraudulent voucher?

A. That is a fraudulent voucher.

Q. Whose handwriting is it made out in?

A. J. W. Donnelly's, to the best of my knowledge.

Q. Who handed it to you to sign?

A. I do not know whether J. W. Donnelly did or not; I got it out of the marshal's office from Mr. White or Mr. Donnelly.

Q. Who is Mr. White?

A. He was the head clerk in the office.

[The voucher was marked No. 5]

Here it is, as a sample of many other fraudulent vouchers identified by this witness:

United States of America, to George M. Conrad, Dr.

1872. For nineteen days' service as *posse comitatus*, from July 27 to August 14, 1872, both days inclusive, at three dollars a day, $57.

UNITED STATES OF AMERICA,
Western district of Arkansas:

I, George M. Conrad, of Fort Smith, in the county of Sebastian and district aforesaid, being duly sworn, depose and say that on the 27th day of July, 1872, I was employed under and by virtue of the third section of act of Congress of June 14, 1857, by B. F. Shoemaker, United States deputy marshal for said district, at my usual place of residence, as one of his *posse comitatus* to assist in executing a capias writ issued by James O. Churchill, esq., United States commissioner for the west-

ern district of Arkansas, dated the 8th day of July, 1872, against Joe Bean, charged with assault with intent to kill, at Cherokee Nation, in the Indian country, within the jurisdiction of the said district, returnable to the office of said commissioner at Fort Smith, in Sebastian County, Arkansas, forthwith, 187; and that, as such *posse comitatus*, I proceeded in company with said marshal to Cherokee Nation, in the Indian country aforesaid, and there assisted him in making the arrest of said Joe Bean, and immediately thereafter in bringing said Bean to Fort Smith before the United States commissioner; that no *posse comitatus* could have been employed at a nearer point to the place where the said deputy informed me he expected to find the said Bean, to wit, Cherokee Nation, than my place of residence aforesaid; that I actually traveled from my said residence to said place of arrest for the purpose aforesaid 250 miles, and in the transportation of said Bean, and was actually and necessarily employed 19 days, as set out in the foregoing account, as *posse comitatus*, solely in the execution of said process and transportation of the said Bean as aforesaid; that I furnished the means of, or actually paid for my own travel or transportation, and that I have received from said marshal, and signed duplicate receipts therefor, the sum of fifty-seven dollars in lawful currency of the United States in full satisfaction and payment of my said expenses and services; that I have never received or been paid, or agreed to receive or expect to be paid, any other compensation, remuneration, or consideration whatever for said expenses and nineteen days' services from any person or persons or sources whatever. So help me God.

GEO. M. CONRAD.

Subscribed and sworn to before me this 22d day of August, 1872.

EDW. J. BROOKS,
United States Commissioner, Western District of Arkansas.

[Indorsements.]

I have examined the within account, and certify that the services were performed as herein stated, and that the amount charged therefor is reasonable and just, and that I have no interest in the same.

B. F. SHOEMAKER.
Deputy United States Marshal, Western District of Arkansas.

Received of William A. Britton, United States marshal for the western district of Arkansas, fifty-seven dollars in full of the within account.

GEO. M. CONRAD.

The following from page 46 of the testimony of L. B. Whitney, indicates the extent to which this villainy was practiced:

Question. Did you find any such cases—such *posse comitatus* and such deputy marshals—not to exist?

Answer. I did, sir.

Q. As you have stated before?

A. Yes, sir.

Q. And to what extent did you find such fraudulent accounts?

A. Most of those *posse comitatus*, upon the rolls sent to the Department, were said to reside at Fort Smith; there were some three hundred and odd names of men purporting to reside in Fort Smith, and out of that number I disremember just how many I found that did live in Fort Smith, but I think it was twenty or thirty.

Q. Out of the three hundred?

A. Yes, sir; and the balance, I could not find that they had a residence anywhere; they were entirely unknown.

Q. Had these alleged accounts found form and shape in the nature of approved vouchers; in other words, had these alleged accounts been sworn to by Britton and approved by the court?

A. This, Mr. Chairman, must go on a roll; for instance, here is the district and the judge approves here, [illustrating,] and then the vouchers are designated on this roll, No. 1, and so on down the roll.

Q. Were they regularly listed, sworn to by Britton, and approved by the judge, those vouchers which you found to be fraudulent?

A. Yes, sir.

Q. And you say that out of three hundred that you went to investigate, you found no more than thirty genuine names, *bona fide* residing in Fort Smith?

A. Yes, sir.

By Mr. SPEER:

Q. Did you make inquiry as to whether such persons ever lived in Fort Smith?

A. They were entirely unknown by men that I inquired of there.

Q. Either their then existence or past existence as citizens?

A. Yes, sir.

Mr. Whitney is an intelligent man, and had been sent to Arkansas, when things got so rank there, to learn what was wrong.

But what further? After they get these fictitious accounts against the Government, Britton says, "I have no money to pay them; go to Scott, the postmaster, and he will discount them for you." Then these returned accounts are taken by the deputies to the ring of which Britton no doubt at that time was a member, and Roots after him—a ring composed of the marshal, the postmaster of the town, perhaps the marshal's chief clerk, and some others. This fraudulent account against the Government is taken to the postmaster, who acts as the cashier of this infamous ring to plunder the Government. He discounts the account at thirty, forty, or fifty cents on the dollar; and then afterward it is paid by Britton or the Government in full, the profit of the shaving business being divided among the members of the ring. The evidence shows that those vouchers of jurors, witnesses, and deputies were down so low as to be bought for "two bits" by the cart-load. Yet every one of them has been paid in full by the Government except fifty or sixty thousand dollars tied up in the office of the Comptroller, an honest officer, on account of the suspicion he had that they were fraudulent.

To show the thriving business done by this "court-house pool," I refer to the following extracts from the evidence:

L. B. Whitney swears:

I called upon Mr. Donnelly, Mr. Britton's chief clerk, to give me a statement of what had been done with the money that the Department had sent to Mr. Britton. He made a statement in writing. He also remarked that he had opportunities to make a great deal of money there, if he had been a man to avail himself of it. Speaking of the court in session then, the adjourned part of the November term, he said that when they commenced the term Mr. Lanigan and Mr. Scott came to him and said: "Mr. Donnelly, if you will issue certificates to witnesses, jurors, &c., and give us a chance to buy them in, we will divide with you." Donnelly said that he did not enter into the arrangement; but the certificates were issued, however, and they bought up a very large amount of them. There was a check came on there to Mr. Britton while I was there of $20,000, and I think Mr. Britton, at the time the check came, was at Little Rock, attending the senatorial convention there, and Mr. Scott took the check and went to Little Rock, and got the check cashed and took out whatever was due him, some seven or eight thousand dollars of these checks that he brought in; and I don't know but more, for I heard it stated in two different ways; one man stated $13,000 and another $7,000 or $8,000. Mr. Scott himself, I think, said $7,000 or $8,000—that he deducted that amount from the check. The check was sent to the post-office, and Mr. Scott got it out of the office and took it to Little Rock and saw Mr. Britton, as I understood, and got the money, and when he returned, after deducting his amount and a certain amount for Mr. Lanigan, he told me that he left with Mr. Britton a portion of the check, and he returned to Mr. Donnelly, the clerk, some $2,000 or $3,000 out of the $20,000. The major part of the check was consumed in redeeming Mr. Britton's checks that had been issued that term of court, and the balance was turned over to Donnelly to pay juror fees, &c.

Q. At the time the $20,000 were there these checks were selling at twenty cents?

A. Yes, sir; Mr. Britton, as I understood from Mr. Scott, usually deposited in Scott's office in the safe of the post-office. Scott's office was the depository of the marshal, on account of his having a safe there. I know that the money was deposited in that safe, because Scott told me so.

I have seen Judge Story, and I had a talk with him before I called on Mr. Scott. Judge Story's court was then in session, and he wanted some money sent there by the Department, to defray the expenses of his court. I said to him, "Judge, the Attorney-General has just sent $20,000 here." "Well," his reply was, "that has all been gobbled up." I said, "Who has got it?" He said, "Scott and Lanigan, and a portion of it has gone to pay Britton's debts down in Little Rock." I said, "Won't that be the result if there is more money—won't it be gobbled up too?" "No," he said; "the money can be sent here to somebody to disburse, paying the expenses of this court."

Q. What was the common sentiment there?

A. The common sentiment there was that the United States district court was a stench in the nostril of the community.

Q. That was the general opinion of almost everybody there?

A. Of almost every person—that this United States marshal's office was run in the interests of a very few men, and that they had a very ruinous way for all men in Fort Smith—business men, merchants, boarding-house men, and everybody else; that the United States court was a curse to them instead of being a benefit.

Q. What was the result in brief of your investigation there; did it satisfy you that that district was thoroughly corrupt?

A. Yes, sir; it was the opinion of the attorneys at the bar there that the judge was entirely incompetent; they did not seem to have any respect for him; they looked upon him as entirely incompetent for the position he held.

C. C. Ayres swears:

Question. When Captain Britton had no money did you have your accounts discounted?

Answer. No, sir.

Q. Did others?

A. Yes, sir; I have seen them sell for thirty, forty, and fifty cents; they got down to two bits the cart-load, and finally they were not worth anything.

Q. Who were the purchasers of them usually?

A. Different parties.

Q. Name them.

A. Captain Scott, the postmaster, bought a great many of them; and Polk & Jacob, dry-goods merchants, bought some of them.

Q. Were they friends of Captain Britton?

A. I do not know, sir. Mr. Lanigan also bought several of them.

A few words as to how Britton went out of office. These fraudulent vouchers were sent by him to Washington, and payment demanded. They were believed by the Comptroller to be fraudulent. About one hundred of them were returned to Arkansas with instructions to have Britton, his clerk, and one or two others indicted, and to investigate whether these vouchers were honest or fraudulent. An indictment was framed, and was presented, I believe, to the very jury that Britton himself had summoned.

Mr. SENER. Roots summoned the jury.

Mr. SPEER. That does not appear in evidence.

Mr. SENER. I think it does.

Mr. SPEER. The evidence shows that Britton did not go out until the 11th of May. I have looked it over carefully on this point, and I think it bears me out in the statement that the grand jury had been summoned by Britton, although he was removed prior to the time the bill went before them, when his successor, Roots, was in office.

What did they do when that bill was presented to the grand jury? The marshal's chief clerk, Donnelly, hands to the real deputy marshal, lists of names of these fictitious marshals and tells them "These are the men you must swear to before the grand jury, as the vouchers have been sent back from Washington alleged to be fraudulent; you account for this list of names (to one of them) and you account for that list," (to another,) and so on through the line of the deputy marshals.

We had one of these deputies before us, a man by the name of Shoemaker, who did not appear in the most creditable light. You could not, however, expect a man, guilty of such conduct to appear with much honor anywhere. If he is a bad man, it only shows that such was the kind of men this marshal selected to do his work. I have no doubt he swore the truth.

I hold in my hand the list of George Ross and others, seventeen in all, given to Shoemaker, covering three hundred and twenty-six days for one man, for which charge had been made against the Government and sent on and returned. Donnelly gives this list to Shoemaker, and tells him, "Now these are the fictitious men you must account for. These are the men you must make good before the grand jury." He does not want to do it, but Donnelly tells him "Do not be afraid, they will not ask specific questions. The foreman of the grand jury will see you to-night. He will only ask you general questions—questions that you can answer without difficulty." Shoemaker takes the list. Here it is:

	Days.
George Royce, February, 1871	30
Elias Reed, February, 1871	30
E. A. Jackson, January, 1871	15
Zachariah Brown, January, 1871	15
William Ward, June, 1870	30

	Days.
Charles Frost, June, 1870	30
Frank Williams, September, 1870	22
A. C. Beckwith, September, 1870	22
Charles Beck, February, 1871	14
William Boles, February, 1871	14
Robert Anderson, April, 1871	30
Francis Mays, April, 1871	30
Ned Hawkins, March, 1871	30
Charles Harris, March, 1871	30
George Arrington, April, 1871	7
J. H. Dennis, April, 1871	7
Edward	--

He meets the foreman of the grand jury, a man by the name of McKee, who was or had been the partner of Brooks, the villainous commissioner who had certified that these fictitious marshals had appeared before him. He was the foreman of the grand jury. Shoemaker met him at McKee's house during the night. They talked over this matter. The next evening about seven o'clock he appeared before the grand jury with two grand jurors present. Five persons were present, two being grand jurors. The district attorney was present, although he should have blushed with shame to be a party to such proceedings. The district attorney, when the shades of darkness were falling, seems to have sought the grand-jury room, not to protect the Government, but to be a silent witness of this systematized fraud. There were five persons in all in the room. They asked Shoemaker a few general questions. When he went out to the marshal's office, Britton thoughtfully and tenderly inquired of him whether "it was easy enough done!" Then that grand jury, after such an examination, went over all these fraudulent accounts returned from Washington in that way, and piously held there was no ground for finding a true bill against the marshal. They ignored the bill. He then returns to Washington flushed with triumph, and demands payment and gets payment of every dollar of these fraudulent accounts; and as a reward for the great wrong done to his good name he is reinstated in his office by the grateful President of a free people! He was reappointed in the absence of the Attorney-General. But let Shoemaker tell the story of the Arkansas grand jury in his own words. They need no comment or embellishment.

Question. What do you know about Britton, Roots, and Donnelly being indicted by the grand jury for a conspiracy?

Answer. The first information I had of that—C. R. Stevenson told me they were put under bonds. I think that was along in the earlier part of 1872, or perhaps in 1871. The fall following I had it from C. R. Stevenson that there was a lot of posse accounts that had not passed here in Washington, but were sent back to the office, and that among the rest there was a lot with my name signed to them—posse accounts gotten up on *non est* writs. The writs were returned as *non est*. The statement was that E. J. Brooks, when he signed his name, signed it simply "E. J. Brooks," and did not sign it as United States commissioner. I understood that was the way they were detected in Washington, and they were sent back there for investigation by the grand jury. C. R. Stevenson came to me and told me that there was a lot of them in my name, and said there would have to be something done about it in order to smooth the thing over.

Q. He told you that the thing would have to be managed and smoothed over?

A. Yes, sir.

Q. Have you stated all you know about that?

A. No, sir. When the grand jury convened in the latter part of November or December, I was asked if I would father those accounts. I refused at first to C. R. Stevenson; but we had another talk about it, and it was arranged that I should see the foreman of the grand jury.

By Mr. SPEER:

Q. Arranged by whom?

A. Donnelly, Stevenson, and myself. I went and saw the foreman of the grand jury and had a talk with him in regard to it.

By the CHAIRMAN:

Q. Tell us what you said to him, and what he said to you.

A. I do not remember all that I said to him. I said something in regard to those accounts; told him that I did not feel disposed to swear to those accounts as to those men having been employed by me; and we had some more talk about it, and he said that those questions would not be asked me.

Q. What questions did he say would be asked you?

A. I was asked the question whether it was customary for deputy marshals to have posses in the Indian country, and I answered that it was. He asked me if I had those warrants in my possession, where the names appeared as posses in the cases, and I told him I had a portion of them.

Q. Is that all he asked you?

A. I disremember what other questions were asked me.

Q. Were those substantially all the questions that were asked you?

A. I disremember. I think that he asked me some other questions probably, but I disremember what they were.

Q. How many of these posse accounts were there?

A. I do not know how many appeared in my name. It amounted to over $1,000.

Q. Were there any of them genuine? Had any of those men done service as posse?

A. No, sir.

Q. None of them?

A. No, sir.

By Mr. SPEER:

Q. They were all frandulent, and all paid?

A. It was my understanding that they were paid.

Q. Who got the money?

A. I do not know, except William A. Britton got it. It was my understanding that they were all paid.

Q. What was the name of the foreman of the grand jury?

A. Henry E. McKee.

Q. Is he alive now?

A. I cannot tell; I have not heard of his death.

Q. Where does he live?

A. At Fort Smith, the last I knew of him.

Q. Who summoned him on the grand jury?

A. I do not know.

Q. Is that all you know about that conspiracy? Was there any indictment found?

A. No, sir.

Q. Those accounts were held up to await the action of the grand jury?

A. That was my understanding.

Q. Who told you so; anybody connected with the marshal's office? Did Britton or Donnelly ever tell you so?

A. I do not remember whether they did or not. Donnelly and myself had one talk before I went before the grand jury.

Q. Did Britton have a talk with you on the subject?

A. No, sir.

Q. What did Donnelly say to you at that time?

A. The night we had conversation with Donnelly—Stevenson and myself—the arrangement was made for me to see Henry E. McKee, the foreman of the grand jury. Donnelly remarked that he did not want to be indicted under that. I was a little offish about making the proper testimony in regard to the accounts, and he said he could not stay there and stand the investigation, or something of that kind.

Q. Did Donnelly say that he had made arrangements with the foreman of the grand jury for you to see him?

A. He said that he would make an arrangement the night we had this talk.

Q. That he would make such arrangements that you would not be asked anything to embarrass you under oath?

A. I believe that was about the talk.

Q. You were sworn to tell the truth and the whole truth?

A. Yes, sir.

Q. And you intentionally concealed a portion of the truth?

A. Yes, sir.

Q. At the suggestion and instance of Mr. Donnelly?

A. Yes, sir.

Q. To protect him and Britton?

A. Yes, sir.

Q. Did they pay you for that?

A. No, sir.

Q. Did they promise you any pay?

A. No, sir.

Q. Did they say that if you did not they would be indicted?

A. I do not remember that they did. I do not remember what Mr. Donnelly said; but he said that he could not stay there and have the investigation go against him, or something of that kind.

Q. When you saw the foreman, did he tell you that Mr. Donnelly had seen him?

A. No, sir.

Q. Did you understand, from the way that he talked to you, that Donnelly had seen him?

A. I did; he was looking for me.

Q. What did you say when you approached him?

A. I told him that I came to have a talk about the accounts of the office.

Q. What did you say to him? Did you tell him to ask you so and so?

A. I told him that I could not swear that those men were ever in my employ.

Q. And he said he knew as to the accounts?

A. No; he said those were questions he would not ask.

Q. He said he would ask general questions?

A. Yes, sir.

Q. What time of night did you see him?

A. I went to his house about seven or eight o'clock in the evening, but he had company that night, and he told me that he could not see me, but to come back the next night; and I went back the next night, about seven or eight o'clock.

Q. That was at his private house?

A. Yes, sir.

Q. Who was in the grand-jury room when you went there to testify?

A. Five men belonged to the grand jury.

Q. Only five?

A. Five, I believe; that was all I saw.

Q. Do five grand jurors constitute a quorum there?

A. I do not know.

Q. Who were the five present?

A. Henry E. McKee, the foreman, was there, and Mr. Lockhart, the clerk of the grand jury, and Mr. Temple, who was acting as prosecuting attorney.

Q. That is only three?

A. I do not know the names of the others.

Q. *Mr. Temple is the present district attorney?*

A. *Yes, sir.*

Q. Then there were but two members of the grand jury.

A. Two, I think.

Q. Two who were inquiring about this bill?

A. I did not see any others.

Q. How many grand jurors were sworn that time?

A. About twenty-one, I think.

Q. What time was it that you were before the grand jury?

A. About seven o'clock in the evening.

Q. Don't you know that they were sitting there without the knowledge of other grand jurors?

A. I do not know that.

Q. Don't you believe that?

A. I do.

Q. Before you went up to the grand-jury room, were you handed by Donnelly a list of cases containing the names of posse to which you were to swear?

A. I was.

Q. How many names were on the list?

A. I disremember the number—seven or eight or ten.

Q. Were they all false or fictitious?

A. They were.

Q. And he wanted you to swear that these persons performed services?

A. I do not know that he asked me to.

Q. What did he mean by handing you the list?

A. He said that was the list that I would have to answer for.

Q. You knew it was false at the time?

A. I did.

Q. And he knew it was false?

A. He did.

Q. Knew there were no such persons?

A. I knew there were no such persons.

Q. You had handed in these very receipts before?

A. Yes, sir.

Q. Were the names of any such persons on them?

A. No, sir; not when I handed them in.

Q. Was there a list of fraudulent or fictitious deputies kept in the office to signed to warrants when the warrants were returned?

A. There was.

Q. Who kept that list?

A. I do not know.

Q. In whose office was it kept?

A. In the marshal's office.

Q. And when a warrant was returned the names of those fictitious persons were put on it as having served as *posse comitatus* or deputy marshals?

A. Yes, sir.
Q. That was the habit of the office?
A. A portion of the time it was.
Q. Was it done in all cases?
A. Not in all cases.
Q. Was it done in all cases when it could safely be done without detection?
A. It was done in a case where a deputy had a good many prisoners.
Q. And they divided the proceeds, one-third to the deputy and two-thirds to the marshal and clerk?
A. No, sir; two-thirds went to the deputy and one-third went to the marshal and clerk.
Q. You say they gave you those writs to have them properly sworn to. Whom did you go to to have them properly sworn to?
A. I went to more than one person.
Q. Name the persons.
A. The first person I ever went to was Frank Austin, who was acting as county clerk in Crawford County.
Q. Who was the next person you went to?
A. I reckon E. J. Brooks was.
Q. He was a United States commissioner?
A. Yes, sir.
Q. Appointed by Judge Story?
A. I do not know who he was appointed by.
Q. Who was the next person?
A. John Pritchard, the United States district clerk.
Q. Who else did you go to?
A. That is all.
Q. Did they all sign the *jurat* which had never been made? Did they certify that you had appeared and sworn to the contents of the affidavit when you had not done so?
A. I do not quite understand you.
Q. When you went before those officers with those writs what did you do, and what did they do?
A. They certified that those men had done service, and been before them, and had been sworn.
Q. There were no such persons to go before them?
A. No, sir.
Q. You were there?
A. I was.
Q. You saw this done?
A. I did.
Q. And you returned the writ as if it had been honestly sworn to?
A. Yes, sir.
Q. And that you did repeatedly, at the request of the marshal and of Donnelly?
A. I do not know as I ever had more than one intimation from them that I could do such a thing.
Q. It did not take more than one intimation?
A. It was to my pecuniary interest to do such a thing.
Q. Were you not told by Donnelly to keep a list of the fraudulent names you used, so that if there was trouble you could account for them?
A. I think I was.
Q. Don't you know you were?
A. It is my recollection that I was.

By the CHAIRMAN:

Q. Was Britton present the evening that you went before the grand jury?
A. He was in the marshal's office.
Q. What did he say to you when you came down out of the grand-jury's room?
A. I believe he asked if I got through all right, or if it was easy enough done, or something of that kind; I disremember the words, but it was something similar to that.

The coolness of Britton would be refreshing in almost any latitude except Arkansas; but there he spoke the "mother tongue." The Senate rejected his nomination in February, 1873.

That disposes of Britton; but in disposing of him the Government got a worse man, if possible, in his successor, Roots. He established a national bank with a capital of $50,000, three-fifths of which he held, and he continued to peddle out almost by the cart-load these certificates for the pay of witnesses and jurors and deputies, fictitious and real. Of course he was generally out of money, and hence his bank bought those certificates at a fearful discount, as the following testimony of B. T. Duvall, esq., an intelligent lawyer of Fort Smith, shows:

Question. You made some statement to me about the existence of a bank; please give the history of that bank, and of the purchase of vouchers by it.
Answer. I was going on to state that those persons received vouchers which had to be sold in order to raise money, and along about the 1st of April, 1872, while Mr Roots was marshal, the National Bank of Western Arkansas was established with a capital of $50,000. I think the bank was established in 1872. Mr. Roots was appointed marshal, I think in 1871, and the bank was established in 1872. It had a capital of $50,000, of which Roots was the owner of three-fifths, as appeared from the statement made by the bank. He took $30,000 of the stock. They are required by law to keep in a public place in the bank the names of the stockholders and the amount of their debt, and I examined the book which hung up by the cashier's desk. That bank I think went into operation about the 1st of April, 1872.
Q. Who were the other stockholders?
A. The other stockholders were Richard C. Kearns, B. Bear, Arthur Gunter, E. S. Mitchell; and Elias R. Duvall, my brother, had a small share in it, a thousand dollars.
Q. Was that the first national bank that was established at Fort Smith?
A. No, sir; there had been a bank there, the First National Bank of Fort Smith, which had gone into liquidation. During the time that Mr. Roots was marshal, and after the establishment of this bank in which he was interested, the vouchers that I speak of that were issued for the payment of the expenses of the court were purchased freely at that bank, usually from about 25 to 30 or 35 per cent. discount. The bank made money I know out of the vouchers, because I had means of knowing from the interest of my brother, in which I had an indirect interest. I know that a large part of the profits of the bank grew out of the dealing in those vouchers.
* * * * * * *
Q. Is that all the history of that bank you can give us?
A. The bank is still dealing in the vouchers which are issued from the marshal's department.
Q. Issued by the present marshal, Sarber?
A. Yes, sir. At the adjournment of the last term of the court there was no money there to pay the jurors, and a large number of them sold their vouchers to the bank at 30 per cent. discount.

It will be remembered that Roots was appointed in May and was removed in June, 1872, and the expenditures for the year ending 30th June, 1872, were $321,653. The May and November terms of 1871, all that would be covered in the above expenditures, occupied eighty-one days; which shows that each day's court cost the Government $3,962.

For the same terms there were paid to grand jurors $4,297.95; to petit jurors $11,977.20, and to witnesses $42,022.95; making in all, $58,298.10; and leaving in this year for the marshal, his clerks and deputies the startling sum of $263,354.90! Does any civilized government on the face of the earth present a parallel to this villainy? And yet there was no alarm given by any of the Departments here, and no cry for help. These plunderers became bold from their repeated successes, and from the senatorial influence at their backs. Root's bank did a flourishing business and everything seemed lovely. Britton had labored under some disadvantage in not having a bank; but Postmaster Scott struck good figures for him, and if a fair division of the plunder was made, neither party could complain.

On one occasion when a draft for $20,000 reached Fort Smith for Britton, Scott opened the letter, took out the draft, and went to Little Rock, where Britton was attending a senatorial election—a fit place for such a man, when we remember how Senators have been made in Arkansas. This fact shows the relations existing between these men. So intimate were they that Britton's letters were opened at pleasure by Scott. The money was drawn on the draft, and Britton got but a few thousand dollars of it, the large portion being kept by Scott in payment of the fraudulent vouchers which he had bought.

The disgraceful scene was presented in this district of the United States court being run on the *marshal's due-bills!* The judge on one occasion wanted more money sent on, and when he could not get it, he declared that he would hold court anyhow. The money furnished by the Government, and which should have been applied to the payment of jurors and witnesses, was paid to this miserable ring for the vouchers which they had bought. And as there was an inexhaustible supply of fictitious deputies, there was no end to these fraudulent vouchers or certificates; and it also became important to go on with the court, so that the jurors and witnesses, to whom payment was refused, would sell their certificates at ruinous rates. The judge must have known this; *he did know it*—everybody about Fort Smith knew it—and yet this infamous plunder went on! Britton was reinstated in June, 1872, and remained marshal until 3d February, 1873, when he was rejected by the Senate and John N. Sarber, the present marshal, was appointed. There has been little if any improvement, and there will be none until the law establishing the district is repealed or the judge is impeached. The sale of these certificates is continued to Root's bank, and the jurors and witnesses of the United States are paid in due-bills! No citizen can read this record of his country's dishonor without hanging his head in shame.

But there is another explanation of the large amount of expenditures in the western district of Arkansas in 1872. That was the year of the presidential election. Twenty or twenty-five at the outside, were all the marshals required for the public business; and yet for months preceding the election of that year there were as many as two hundred and fifty-seven marshals employed at one time. When a man would be arrested in the Indian country, as they call it, for some alleged offense, he would be taken down to Fort Smith, and in a few days he would come back a deputy marshal, the charge condoned and he rewarded. The inference is irresistible that the charge was dismissed and the reward given, on condition of his party service. And to show the devilishness of these deputy marshals, I will state that a most respectable witness, by the name of Jones, appeared before the committee, a minister, I believe, of the Baptist Church, and swore that he knew of one instance where two of these scoundrels were traveling through the Indian country and met a poor negro by the name of Jack Davis. One of them induced him to sell him twenty-five cents worth of tobacco. The other then immediately arrested him for violation of the internal-revenue law, and they took him right away to Fort Smith, one hundred and twenty miles. They got all he had, about eighty dollars, and he was then sent home; and then those two scoundrels charged the Government mileage for six hundred miles and a posse of three, and the voucher for the payment of this claim was produced before the committee by an officer of the Treasury Department.

But in 1872 these marshals multiplied, and I send to the Clerk to have read a portion of the testimony of a man by the name of Ayers, who was very reluctant to tell what he knew, and was evidently in the interest of the "ring," to show how they increased and how crime decreased immediately after the election. It will be observed that while the committee was prosecuting this investigation, and before Ayers was sworn, his old father accidentally arrives in Washington and is appointed a watchman in the Treasury; nobody knows how or by whom; but we can all infer for what purpose.

The Clerk read as follows:

By Mr. SPEER:

Question. What is your name?
Answer. C. C. Ayers.
Q. Where do you live?
A. Fort Smith, Arkansas.
Q. What is your age?
A. Twenty-four years.
Q. What is your business?
A. I have been acting as deputy marshal.
Q. State when and how long you have so acted.
A. In September, 1870, I was appointed deputy marshal by Captain Britton. I was reappointed under Logan H. Roots in 1871, I think. Then I was suspended. I was reappointed in July, 1872. Then I was suspended. Then I was reappointed under General Sarber.

Q. Are you still acting as deputy?
A. I have been up to the time we were all suspended—within the last two months.
Q. Suspended by whom?
A. By Mr. Sarber.
* * * * * * *
Q. How many deputies were there?
A. At different times there were different numbers. I could only tell you what I heard others say. There were so many that I do not know how many there were.
Q. You have some approximate idea of the number, have you not?
A. When Captain Britton first took charge of the office in 1872 my understanding was that there were to be twenty-five deputies; that number was increased at the time of the election, by how many I do not know.
Q. About how many were there at the time of the election; what was your judgment and belief as to the number? I want the truth.
A. That is what I propose to give you.
Q. I am not asking you the number; I am asking you what your belief is as to the number.
A. There was a great number of deputy marshals; I do not know how many there were.
Q. Have you been in conference with Captain Britton on the street here since you came to Washington?
A. I saw him, and he asked me what they expected to prove.
Q. Do you believe there were one thousand deputy marshals under Captain Britton?
A. They said there were from one hundred and eighty to two hundred and fifty-seven under Captain Britton; that was the report.
Q. And in July it was understood that there were to be but twenty-five?
A. That was my understanding.
Q. Why was this large increase of deputy marshals made between July and the election?
A. I do not know, except that crime was on the increase, and there was a railroad building there.
Q. Do you believe that because there was a railroad being built there, that was the reason for an increase?
A. Well, it always appeared to me as if a fewer number of deputies could have done the work.
Q. That is not any answer to my question.
A. You want my judgment?
Q. I asked you whether you believe that that was the reason of the increase, the building of the railroad there?
A. That is the only reason I know of.
Q. Do you believe in good faith that that was the reason?
A. My belief and my knowing would be quite different.
Q. I am asking you your belief?
A. If I would tell you what I believed I would want to know what to found my belief on.
Q. Was it the rumor of the country?
A. It was the street talk.
Q. What was the street talk?
A. That the number was increased for the purpose of carrying the election.
Q. After the election, was the number of marshals decreased?
A. *The commission of crime immediately ceased.*
* * * * * * *
Q. Is your father here?
A. Yes, sir.
Q. What is his name?
A. Willard Ayers.
Q. What is he engaged in?
A. He is a watchman in the Treasury Department.
Q. When was he appointed?
A. Last March.

Mr. SPEER. "*The commission of crime immediately ceased after the election!*" What a blessing it is to live in a free country.

James Auld, a clerk in the office of the First Comptroller of the Treasury, testifies:

The WITNESS. The question was asked me at the last meeting whether the Comptroller had recommended the advance asked for by Mr. Britton—the first advance asked for by Marshal Britton. His request was dated the 6th of July, 1872, and the amount he requested was $20,000. It was returned to the Attorney-General on the 12th of August, with the recommendation that $20,000 be advanced. The next was dated the 9th of September, for $26,867. It was returned to the Attorney-General on the 18th of September, with the recommendation that $26,200 be advanced. The next request bore no date, it was for $55,297; and on the 8th of November, 1872, the Comptroller recommended an advance of $13,500; and then on the 9th of November, the next day, he recommended that the balance, $41,797, be sent, making the amount asked for in the request.

Here we have the startling fact that in less than three months, from the 12th of August until the 9th of November, 1872, $101,297 were sent to this corrupt marshal. This was the year of the presidential election, and much of this exorbitant amount sent in the midst of the campaign was doubtless used for political purposes. And even this sum seems not to have been enough, for in less than two months after the election $40,000 more were sent. And yet at *this very time* the expenses of the court were paid with the due-bills of the marshal. Does any sane man believe that the just expenses of this court for three months in the fall of 1872 were over $100,000? Or could any honest officer of the Government, with common intelligence, believe that they were? It seems to me impossible. This system of public robbery was known to the reckless and bankrupt politicians who then controlled that unhappy State, and they resolved to turn a portion of the spoil to their own benefit; and as the national Administration was then on trial before the high court of the people, it permitted Judge Story's court in Arkansas *to extend its jurisdiction*, having less fear of its judgments than of the judgment of the people.

There is another fact to which I must call attention. The accounts and vouchers of the marshal first go before the Auditor in the Treasury. The duty of examining and approving them devolves upon certain clerks. The western district of Arkansas was in the division of a clerk named Miller. In the fall of 1872, when Marshal Britton had a large claim against the Government consisting of these fraudulent vouchers, amounting to fifty or seventy-five thousand dollars, and at the very time that they were being examined by Miller in the Auditor's office, Miller's son was mysteriously appointed a clerk in Britton's office in Arkansas at a salary of $250 per month. He and Britton had had no previous acquaintance, and no person, so far as appears, asked the appointment or knew anything about it. The father swears that his son told him he was going to Arkansas, and that is all he knows about it! But the important fact followed *that Britton's accounts were approved* by Miller, and hence by the Auditor, who signed his name to all papers of the kind, when Miller said they were correct! The accounts then went to the Comptroller, but so strong were his suspicions of their being fraudulent that notwithstanding the Auditor's approval he refused to pay a large part of them, and perhaps some of these same vouchers yet remain unpaid, notwithstanding the pressure from the Senators and Members of Congress from Arkansas for "*a settlement.*" Miller's son remained a few months in Arkansas, and after the accounts then pending had been approved by his father, he returned to Washington, where he now is. This is a circumstance the value of which the people can determine.

Marshal Britton appeared before the committee in person and by counsel, and on being informed that the committee would hear any sworn statement he desired to make, replied that "while he might refute considerable of the testimony that had been given against him on this examination, *he did not think it looked well for a man to be a witness in his own case, and therefore he would not like to do it, unless it was a case of great necessity.*" It might be difficult to tell what he would regard as "a case of great necessity." Logan H. Roots did not put in an appearance, but, tempering his valor with discretion, found enchantment in the distance at which he viewed us. John N. Sarber, the present marshal, doubtless thought that the investigation would show that he was *no worse* than his predecessors, and he did not ask to be heard.

Poor Arkansas! While the General Government pays the bills, her citizens suffer the outrages of these desperadoes who claim to be armed with the authority of the United States. Hundred of persons have been there arrested simply as a blackmailing process. If they had no money, an old horse or mule would do, and after being literally plundered of all they had, they were suffered to return home. It was the usual practice for deputy marshals to go out on these marauding expeditions without warrants and seize the first man they would meet, against whom a pretext could be alleged, and then return with him to the United States commissioner, who would give them a warrant antedated twenty or thirty days, as desired, to enable them to charge the Government for the time from the date of the warrant to the date of the hearing, and perhaps two or three fraudulent posses would be added.

It is the popular belief that the curses sent upon the Egyptians were terrible in their severity. But they were only boils and blains, locusts and lice. It was reserved for the nineteenth century to develop and for America to witness in full growth and horrid form the worst of all curses known to civilization, *the curse of carpet-bag rule!* It pollutes the fountain of virtue; it eats up the substance of the people; it bankrupts whole communities and States; it destroys social order and manhood and honor; it blights the very earth so that it refuses to yield its harvest; and having trampled out every green and living thing and left nothing but desolation in its track, it seeks new fields for conquest, and failing there covers itself with the infamy of its brief but terrible career and, hated of God and man, sinks down and dies.

Geneva Award.

SPEECH OF HON. S. W. KELLOGG,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

June 10, 1874.

The House having under consideration the substitute reported from the Committee on the Judiciary for the bill (S. No. 7) for the creation of a court for the adjudication and disposition of certain moneys received into the Treasury under an award made by the tribunal of arbitration constituted by virtue of the first article of the treaty concluded at Washington the 8th of May, A. D. 1871, between the United States of America and the Queen of Great Britain—

Mr. KELLOGG said:

Mr. SPEAKER: In the few minutes allowed to me I have no time to examine in detail the respective reports upon this subject. All I wish to say to the House is that as I look upon this whole matter it is a simple question of common honesty with us whether we will pay this money to the parties for whom we collected it under the submission to the arbitration at Geneva. I look upon this question simply as one of common honesty, justice, and decency on the part of this great Government; and for that reason I oppose entirely the idea advanced by the gentleman who has just taken his seat, [Mr. ELDREDGE,] and by other gentlemen, that the United States Government can take this money and cover it into their own Treasury and stand justified in the eyes of the world.

We submitted the claims in behalf of our citizens who had suffered losses on the high seas against Great Britain to this arbitration; and there were certain losses proved to have resulted from injuries inflicted by the negligence of Great Britain; and those losses were the

subject-matter of the award made in that arbitration, for which the government of Great Britain was held liable. If we go aside from the decision of that arbitration we are at sea without rudder or pilot. We never can do justice in this matter unless we take the one honest course to pay this money to the parties for whom we collected it. I care not whether they are insurance companies or individuals who have met with these losses for which the $15,500,000 was awarded; I say it is a violation of the conclusions of that arbitration if we do not take action, and take action too without delay, to pay the money precisely as that tribunal decided that Great Britain was liable and to meet those claims for which she was held liable. Suppose the distinguished chairman of the committee, the gentleman from Massachusetts, [Mr. BUTLER,] should have put into his hands two claims of $10,000 each, one against John Jones, the other against John Stiles. He has these claims to collect for A and B, his clients. He goes to work to collect them; and suppose he collects the claim against Jones, but fails to collect the one against Stiles; and then deciding that the creditor having the claim against Jones does not need the money half so much as the one having the claim against Stiles, he takes the money and pays it over to this one of his clients whom he considers the most needy. I say, Mr. Speaker, we never can stand on any such position as that, or justify ourselves in our own eyes, or in the eyes of the world, by any such miserable perversion of power in the distribution of this award.

Our duty is to pay this money precisely as this arbitration intended it should be paid. Here we have the result of the arbitration stating what losses were considered by them for which Great Britain was liable, and what losses she was not to be held liable for. I say we should legislate so as to pay the money to the parties for whom this money was collected if we mean to act honestly as a Government.

Mr. STARKWEATHER. I wish to ask my colleague a question.

Mr. KELLOGG. I have only eight minutes and have no time to yield.

Mr. STARKWEATHER. Let me ask my colleague whether he is in favor of the seamen, who lost their wages and whose claims were never presented to the arbitration at all, amounting to a great many hundred thousands of dollars—good, honest claims? I wish to know whether my colleague means to let the insurance companies come in for a second time for payment, and utterly to exclude the claims of these seamen who lost their wages and whose claims were never presented to this board of arbitration?

Mr. KELLOGG. I say if their claims were never presented to this board of arbitration they should have been, and it is their own fault if their claims were not presented. They had several years' time to file them with the Secretary of State before the arbitration was made. And they have a right to come upon this fund for payment of their claims, if they were seamen upon vessels destroyed by rebel cruisers, for which Great Britain was held liable.

And now, Mr. Speaker, how are we going to stand before the civilized world in the future, in regard to this great question of national arbitration, if we deliberately, as one of the first powers of the world, when we have submitted these claims and the award has been made, refuse to abide by the result? How will we stand if we ever want to submit a matter of national arbitration again, if we refuse to abide by this award? I say, sir, if you divert this money from the purpose for which it was collected you will do the same species of injustice which was done seventy years ago in regard to the French spoliation claims. We all know what odium has justly been brought upon us for the last seventy years for our course in refusing to pay those claims, and God forbid there should be any such new disgrace now. God deliver us from any such action as proposed here which would allow the world to say of us: "You went into a national arbitration; you presented certain claims of your citizens against Great Britain; the tribunal allowed them; you took the money, and when you got the money you did not pay it over to the parties for whom the claims were collected, but to other parties who needed it, as you thought perhaps, a little more, or you took it with the strong arm, and put it into your own Treasury, because you had the power." I say there is no justice, there is no equity, there is no right and no decent respect for the moral sense of mankind in any such dispositions of this fund as that; and having said thus much, I have said all I intended or which I have time to say.

Mr. STARKWEATHER. I should like to have five minutes in which to reply to my colleague, who seems disposed to keep the poor men out of their pay.

Mr. KELLOGG. No, sir. Poor men out of their pay! I want to pay it to those who are entitled to it.

Mr. STARKWEATHER. That is the result of your argument.

Mr. KELLOGG. Not at all. My colleague is entirely mistaken in this matter.

Mr. POLAND. What vessels does the gentleman refer to?

Mr. STARKWEATHER. Vessels destroyed by rebel cruisers, whose seamen have not been paid.

Mr. POLAND. What rebel cruisers? If they were seamen in the vessels destroyed by the rebel cruisers for which Great Britain is liable, then they will get their pay under my bill.

Mr. KELLOGG. That is precisely the view I hold and which I have attempted to express to the House. I want every seaman and everybody else who is entitled to a share of this money, to get it without further delay; and this is the only honest disposition we can make of the award we have received.

Geneva Award.

SPEECH OF H. H. STARKWEATHER,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

June 10, 1874.

The House having under consideration the substitute reported from the Committee on the Judiciary for the bill (S. No. 7) for the creation of a court for the adjudication and disposition of certain moneys received into the Treasury under an award made by the tribunal of arbitration at Geneva—

Mr. STARKWEATHER said:

Mr. SPEAKER: I endeavored early in this discussion to obtain a little time to discuss this bill. On a question like this, coming from the committee having charge of the subject, it is proper they should occupy all the time they have taken, and I would not ask a few minutes now except for the fact that the district which I represent suffered heavy losses from these rebel cruisers. The amount of claims presented for losses in my district was over $1,000,000, or one-fifteenth of the entire amount of the award at Geneva. I was surprised that gentlemen should have taken the position they have in the discussion of this bill. It is stated that this award was made for the benefit of the insurance companies, no matter if they have already received premiums much larger than their aggregate of losses; and it is further stated that no claimants should participate in the award unless their claims were presented and allowed by the tribunal at Geneva.

This, Mr. Speaker, is substantially the purpose of the amendments proposed to the bill of the majority. In other words, the amendments take good care of the interests of the insurance companies, and sacrifice the interests of other honest claimants.

Among the claims passed upon by the international board of arbitration were those resulting from the destruction of seven merchant or whaling vessels belonging to my district and for their cargoes. Five of these vessels were from New London, one from Mystic, and one from East Lyme. All of these vessels with one exception were burned, and their officers and crews robbed and left in the inhospitable regions thousands of miles from home.

The first vessel named was the bark Albert from New London, owned by Richard Chapell, Williams & Haven, and William Williams, and commanded at the time of her destruction by Edwin Church, master. While after a whale near the Island of Flores, the most westerly of the Azores, she was suddenly overhauled by the Alabama and burned. Her crew were landed on the Azores. Her proprietors suffered a loss of $22,000, the value of the vessel and her outfit, besides the breaking up of the voyage. She would in all probability have returned to New London with a cargo of oil worth $140,000 had she not been destroyed by the Alabama. The whole claim in this case lodged in the State Department was $196,000.

The next loss was that of the ship B. F. Hoxie, of Mystic, George B. Crary, captain. She was a trader of large size and valued at $70,000. She sailed from Altata, coast of Mexico, with a valuable cargo of silver bars, dye-wood, and silver ore, bound for Falmouth. She was overhauled by the Florida in latitude 10° 30′ north, longitude 36° 30′ west of Greenwich, and burned. The clams for this ship amounted to $98,000.

The third loss was the fishing-schooner North America, of East Lyme, Captain David C. Manwaring. Near the coast of Nova Scotia she was captured by the Tallahassee, robbed, and sunk. A claim for $5,500 was put in by her owners.

Then followed the capture of the Pearl, the Nile, and the General Williams, of New London, and the L. A. Macomber, of Mystic.

The amount of losses from my district, as I have stated, was over $1,000,000, or one-fifteenth of the entire amount allowed, and upon which we are to pass. I am aware the House is impatient to take a vote, and I would not occupy time now, but this is a very important question in which my constituents are largely interested. Seamen from my district engaged in the whaling business on the northwest coast have in many instances sustained greater losses in proportion to their means than the owners of the vessels even. The officers of these rebel cruisers took from them their clothing and property of every kind, and in many instances they were left on desolate islands to get home as best they could. These men, hundreds in number, representing families, are all interested in the just distribution of this award, and I have never heard of a single individual in my district who desired any bill such as is proposed and advocated by the minority of the committee. Some of these men were engaged in seeking their livelihood at the time the conference was in session at Geneva. At the time of the award they were seeking a livelihood for themselves and their families in the Arctic Sea. I was surprised, therefore, to find gentlemen advocating the claim of these insurance companies who have been paid, as has been proved, two or three times over, while at the same time these hardy seamen, who lost everything, are to be excluded from payment altogether because they had not presented their claims.

Mr. KELLOGG. The gentleman interrupted me with a long question, and I hope he will allow me a word. I did not advocate the claim of the insurance companies. I am willing your constituents should come in and my constituents should come in if they have any honest right or title to their money.

Mr. STARKWEATHER. Mr. Speaker, in several cases these men have never had an opportunity of proving their claims. I look upon this as a fund collected by the Government and held in trust to pay the losses of all, and any person who proves a loss is entitled to receive just payment of the claims, whether they were proven heretofore or not.

At the first session of the Forty-first Congress, on the 28th of January, 1869, I introduced a resolution of inquiry as to the loss of vessels by these rebel cruisers, and on the 3d of April following the honorable Secretary of State submitted a reply on that subject showing the vessels and other property lost for which claims had been made and filed with the State Department.

Among the list of vessels was the schooner L. A. Macomber, of Mystic, in my district, destroyed by the Tacony, a tender of the Florida. By the finding of arbitrators vessels destroyed by the Tacony, as well as the Florida, were included in the award. Now, while this case was properly filed with the State Department, it was overlooked by the arbitrators in making up their award. It is certainly equitable that the owners shall not suffer on account of the oversight or carelessness of the arbitrators.

And, Mr. Speaker, this is not the only case of omission, and by the terms of the bill of the majority of the committee payment is made not only for these claims, but for the losses of officers and sailors who by absence from the country or other circumstances, were prevented from presenting their claims to the arbitrators. There are hundreds of these men with their families, interested in the just distribution of this award who ought not to be excluded from its benefits in order to advance the interests of insurance companies. Many of these at the time the conference was in session at Geneva were engaged, as I have already shown, in the most remote seas of the globe, and had no opportunity to present and press their claims.

Mr. Speaker, there is no time now to discuss the general principle. It was understood by Congress during all the discussion that preceded the arbitration that these claims that were presented there and any other claims of seamen that could come in afterward should be paid out of this general fund. The correspondence of the Secretary of State shows this. And to cut off men now on account of absence from the country who were away on long voyages from an equitable distribution, and to pay it to parties who have never suffered any loss, would be the greatest injustice the United States could perpetrate. It would be such an act of injustice as would stamp this whole transaction as un-American in character and unworthy of a great nation.

Civil-Service Reform.

SPEECH OF HON. T. J. CREAMER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

June 11, 1874.

The House being in Committee of the Whole, and having under consideration the sundry civil appropriation bill—

Mr. CREAMER said:

Mr. CHAIRMAN: I move to amend the amendment by inserting $50,000 instead of $25,000.

I am surprised, Mr. Chairman, that my friends here should oppose the amendment offered by the gentleman from Connecticut, [Mr. KELLOGG,] for it seems to me if there is anything needed at the present time, if there is anything which the people are demanding, it is a thorough reformation of the entire civil service of the Government from head to tail. The difficulty with these civil-service reformers heretofore has been that they have directed all their efforts to the drilling and disciplining of minor officials and petty clerks. Unless subordinates of whatever grade recognize ability and honesty in their superiors, how can the country expect that they, with examples of unparalleled incompetency and unparalleled dishonesty before them, shall do better than those whose duty and privilege it is to guide and instruct them?

To-day we have presented the strange spectacle of the incompetency of the executive branch of the Government to suggest, and the inability of the legislative branch to devise, any remedy for the financial distress that has afflicted the country during the past year. I ask you, gentlemen, on the other side, is it not strange that this Executive, surrounded by a Cabinet whose ability, according to the harpings of your own well-paid party organs, is only exceeded by the surprise with which their names, often unknown outside their States, were sprung upon you to your utter disgust and dismay—is it not strange that this President, in daily association with these "wise men of the East" and West and South, whose statesmanship you never dreamed of until your chief had chosen them, should be unable to suggest a financial scheme upon which you, his blind and faithful followers, could agree?

My amendment *doubles* the sum suggested by my friend from Connecticut, who so enthusiastically supports civil-service reform. The country would willingly pay a hundred fold the amount I name, yes, millions of money, to obtain a reform that would secure sufficient competency in its Executive to evolve a financial system that would harmonize the views of his admirers and supporters upon this floor. Gentlemen may think I am exaggerating. I am not. I come from the commercial and financial center of this country, as much its center in every respect as the heart is the center of man's physical organization, and I repeat that the country, through its business men who have suffered so severely by the imbecility of this administration, would willingly pay millions for a practical reform in this particular direction. Why, gentlemen, each of you well knows the lamentable failure of the President (whose official wink you were wont to properly interpret and as readily to obey) to suggest a financial policy, for your agreement has cost the country hundreds of millions!

A widely known New York merchant whom I met here a few days ago put it in the following terse style: "We will pay almost any price, only let us know what it is and what we may expect after paying it. Do not keep us waiting in this state of uncertainty and embarrassment. Let Congress adjourn rather than keep on floundering after a financial policy that will prove after all a thing of shreds and patches."

Personally I have nothing whatever against the President. We remember that at the close of the war both political parties were anxious to reward him for his great services in the field; and when I grant that those services were great, you of the republican party will admit that as great as they were the rewards which so quickly followed them were far greater. His obscurity, succeeded so quickly by distinction, belong to history. I need not refer at length to the great change, unequaled in its suddenness and completeness in modern times. That change, Mr. Chairman, has already cost the country so much in material wealth and prosperity that it is not likely to forget it in years to come. Hereafter let the people look to it that military heroes are rewarded in some other way than by foisting them into great offices. Their peculiar education in itself is the greatest barrier to the proper performance of the functions of a civil position in a republic.

> One science only will one genius fit;
> So wide is art: so narrow human wit.

Hero worship, after all, is but a worthless legacy of the past. It should find no recognition in a government of the people like ours nor in an age of iconoclasm like this.

Let us glance at the inauguratory acts of the present Executive. The very first was one well calculated to disgrace and degrade the civil service of the country. Without the slightest attempt at a concealment of his purpose he gave to Mr. Washburne for a few days the high and honored office of Secretary of State. As part of the programme that gentleman, in his turn, at once proceeded to give the important diplomatic positions abroad to the close friends of the President and of himself. What followed? Mr. Washburne resigned and was appointed minister to France. What could be more calculated to reduce the tone of the civil service than such an act?

As I have before intimated, considering the President's career previous to the rebellion, he has made a much better Executive than we had any reason to expect. Liberally educated at the expense of the Government, the highest position in civil life he ever reached prior to the war was to drive a team of mules or to act as clerk in a leather store! How can we expect a man who followed such pursuits, after receiving such advantages of education, to dictate to the country at this critical time a financial policy of any merit? Under the administration of such a man should we be surprised that for nearly twelve months our distressed financial condition has been continued without the slightest effort being made to remedy it, and without, I regret to say, the slightest complaint from the leaders of the dominant party on this floor against the course pursued by the Executive? The trouble with the President is that he does not more frequently associate——

[Here the hammer fell.]

Several MEMBERS. Go on!

Mr. O'BRIEN. I rise to oppose the amendment, and yield my time to the gentleman from New York, [Mr. CREAMER.]

Mr. CREAMER. If the Executive would consult and associate more with the leaders even of the majority of this House, which more directly and more intelligently represents the views of the people than any other branch of the Government—if he would inquire of them what are the views and wants of the masses under the present deplorable condition of business throughout the country, instead of associating constantly with millionaires, it would have been far better for the great interests that have so terribly suffered. Why, sir, no man, it seems, is fit to be his adviser unless he can count his wealth by millions. Within the past few days we find an apt illustration of this. Witness the Executive in consultation with a Senator, a representative of "a rotten borough," removed from the real centers of trade and commerce, a State whose entire population is not much larger than that of an election district in any of our eastern cities!

A widely different state of affairs must sooner or later prevail, or else our Government must be remodeled and reconstructed to restore it to that state of efficiency which gave it strength and stability in the early days of its existence. Sir, from the head of the Government down we need reform in many respects. How long, think you, would such an administration as this last in Great Britain after the weakness and incompetency exhibited during the last six months? Such an administration, thwarting the business interests of the

country, an obstacle in the way of progress, and heedless of the loud complaints of an outraged people, would not last forty-eight hours in Great Britain. Are we going to confess here on the eve of the one-hundredth anniversary of our independence that we are behind that power, that our Congress is unable to grapple with the questions of the day, and that we cannot give to the people a government that will benefit, but one that retards their progress? For months past the inexperience and unfitness of a Cabinet officer, promoted by the Executive, have worked such ruin in the monetary market as to keep the business interests of the country in a state of feverish excitement to the final ruin of many and to the dismay of all! And when the people actually forced his removal from the Cabinet, the Chief Magistrate assigns him to a high judicial position, and a republican Senate approves the appointment by confirming it.

Not only have we been affected at home by such appointments, but the national character has suffered abroad, and not a word has been uttered on this floor concerning the transaction to which I will now call attention. Not long ago at great expense we strove to have the United States properly represented at the Vienna exposition by displaying to the world evidences of American genius, skill, and industry. Before the commencement of the exposition our minister, anxious to ignore our commissioner, forced on him a quarrel, and much to our disgrace exhibited us in the eyes of all Europe as a pack of Yankee peddlers eager to turn an honest penny and held us up to the scorn and sneers of the civilized world. We were disgraced by Minister Jay, or "poppinjay," as his manners describe him. I believe he is a constituent of mine, and I know whereof I speak. He has antique claims on the affections of the American people; the oldest is that he degenerated from the greatness of a worthy grandfather, and the newest is that he is the father-in-law of a German baron! Has Minister Jay ever been punished? Has he been called home? No; he still remains in office. Sir,

> I feel my honest indignation rise
> When, with affected air, a coxcomb cries;
> * * * * *
> And through his favored ancients dares to claim,
> Not pardon only, but rewards and fame.

These are but a few of the many instances wherein a reform is so greatly needed. The dominant party promised the people a reform of the civil service, and commenced at the wrong end; began by puzzling candidates for petty clerkships with useless conundrums in geography, history, &c. The people, after witnessing the operation of this farcical measure, discover that there was a wrong beginning; and they now, disgusted with the performance, exclaim with Hamlet, "O, reform it altogether." Need I refer you to an additional evidence of their general condemnation of the present state of affairs? Did you not recognize it when the President attempted to foist upon us an incompetent and corruptionist for the office of Chief Justice of the United States?

[Here the hammer fell.]

Currency.

SPEECH OF HON. JOHN M. BRIGHT,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

June 13, 1874,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. No. 1572) to amend the several acts providing a national currency and to establish free banking, and for other purposes.

Mr. BRIGHT. Mr. Speaker, I have heretofore spoken on the insufficiency of our currency, its unequal distribution, the way it should be increased, and its equilibrium restored. I shall not repeat those arguments.

I propose now to speak on the *quality* of our currency, which is a different thing from the quantity, the unwise policy of the Government in relation to it, and the true road to financial prosperity and relief.

Before proceeding to the work laid out, I shall notice several fallacies and misconceptions on which the President's recent veto message seems to have been based. The pith of the veto was that the financial bill was against the interest of creditors, and that there was a sufficiency of currency, because there were about four millions not taken of the fifty-four millions authorized by the act of 1870 for banking purposes. So far from sanctioning an increase of currency, he demanded an increase of taxation to pay Government expenses and provide a surplus of gold in the Treasury to redeem the Government currency. The newspapers and people understood the President to mean that the four millions "not taken" had not been "called for." The statement fell short of the truth, and was made in the face of the fact that there were one hundred and twenty-nine applications for national-bank charters then on file in the office of the Comptroller of the Currency. Some of these applications had been on file more than a year before the veto of the President.

Hear the proof:

TREASURY DEPARTMENT,
OFFICE OF COMPTROLLER OF THE CURRENCY,
Washington, April 16, 1864.

SIR: In reply to your letter of the 15th instant, you are informed that the whole amount of the $54,000,000 authorized by act of Congress of July 12, 1870, remaining to be issued to banking associations is $4,315,528.

The whole number of applications on file awaiting action of Congress is one hundred and twenty-nine.

Very respectfully,

JOHN JAY KNOX,
Comptroller of the Currency.

Hon. JOHN M. BRIGHT,
House of Representatives, Washington.

This letter of the Comptroller is subversive of the President's veto. Doubtless other applications for banking privileges would have been made if they had not been forestalled by the assurance that they could not be granted without "the action of Congress." The excuse of the Comptroller for not issuing the balance of the fifty-four millions cannot avail him; that is, that the 3 per cent. certificates should be canceled in equal amounts to the national-bank notes issued. No fair construction of the law can make the redemption of the 3 per cent. certificates a limitation upon the issue of the fifty-four millions. Their redemption was only incidental to the issue of the fifty-four millions, and was but a process for their retirement; and when they were retired the law was imperative to proceed with issue of the national currency; and when the fifty-four millions were exhausted, then it was his duty to have called in the twenty-five millions from those States having more than their proportion and to have given them to those States having less than their quotas. But as long as there remained any part of the fifty-four millions unissued the Comptroller could not call for the return of the twenty-five millions. And here he stuck, with one set clamoring for more currency and another set secure in the possession of their twenty-five millions excess, at the same time furnishing a stumbling-block to precipitate the President on his financial blunders.

The people asked for bread and the President gave them a stone; they asked for more currency, and he demands more taxation. He proposes to stop the people's complaints of "the whips" with the scourge of "the scorpions." After heading off this mischievous statement of the President, I shall make a passing remark upon a currency fallacy.

It has been argued that because gold is worth from 12 to 15 per cent. more than United States currency, there is a superabundance of currency. This is not true. The value of money is determined by the use which the law may assign to it, as well as by its quantity.

We have two legal-tender acts; the coinage acts of 1837 and 1849, making gold and silver a legal tender for all purposes, and the act of February 25, 1862, making Treasury notes a legal tender for all purposes except duties on imports and interest on the public debt.

With these two laws in force no amount of contraction of legal-tender notes will bring them to a par value with gold. The contraction may be extended until there shall be only two dollars, the one gold, the other a legal-tender note, and still the merchant and the Government being compelled to have the gold dollar, the one to pay the duty, and the other to pay the interest, would give the same premium for the gold that is now paid. I feel confident in asserting that if all the money in the United States were converted into gold, it would not be sufficient to float our vast and varied industries, to pay our enormous debts and taxes, and to meet the ever-increasing demands of trade and commerce. In my former speech on the currency I presented authentic statistics which would verify this assertion.

In this connection, perhaps it would be well to bring home to the American people a sober, practical question—the power of the Government over its own currency directly through its laws, or indirectly through its banking corporations. The Government may control the quantity, regulate the value, and prescribe the use of its currency.

Let us take an example growing out of our recent civil war. In the Legal-tender cases, (12 Wallace, 540,) Justice Strong tells us that—

> The entire amount of coin in the country, including that in private hands as well as that in banking institutions, was insufficient to supply the Government three months. Foreign credit we had none.

The demand for money was immeasurably beyond the supply of gold. Besides, gold was too great a coward to mingle in the robust diversions of war, but it fled from the strife, hid itself in vaults, burrowed in the ground, and sought security in foreign lands. The Government was forced to anticipate its resources and "to coin its credit." Treasury notes were employed, but the first issues were defective in not being made a legal tender. Justice Strong, in the same opinion, says:

> It is a historical fact that many persons and institutions refused to receive and pay these notes. * * * The vast body of men in the military service was composed of citizens who had left their farms, their workshops, and their business with their families to be provided for.

Congress met the exigency by making the next issues of Treasury notes legal tenders. The effect was galvanic to the paralyzed industries and magical to the Army and Navy. Although it has been said that "a nation may almost as well go to war with paper guns as a paper currency," yet we know that the whole national machinery, civil and military, was moved under the propelling power of legal-tender notes. The Government, however, was forced to change its unit of value from the gold dollar to the legal-tender Treasury note,

and to run up its paper obligations to about $2,700,000,000. Besides, all money contracts and property values were changed, and were represented by the legal-tender note as the money of account.

But the war came to an end, and then came the greatest financial blunder of the age. I proved in a former speech that there was circulating as currency in different varieties on the 31st of August, 1865, $2,192,395,627; and from that date to the 1st of November, 1873, that the Government reduced that amount to a total available currency of $631,488,676, making a reduction of $1,560,906,851. The Government was seized with a contraction mania and attempted to tumble the whole financial system from the appalling precipice of expansion, with almost unbroken fall, crushing down upon an imaginary gold level, instead of descending with slow and cautious steps safely along the shelving declivities. There were financial advantages to be obtained even in the financial calamity. The New England and Middle States managed to float their industries by securing a lobsided volume of the remaining currency. The property of the Southern and Southwestern States has been shriveling up from a fair commercial value to a distress value, while the debtor classes have been postponing the day of retribution by loans and mortgages. The bondholder and the money capitalist, while they delude the Government with the specious arguments of prosperity, gloat upon the harvest of speculation which is already ripe for their sickles.

Our country is not without experience in being lifted upon the flood of expansion and then stranded by the sudden ebb of contraction. Hear Mr. Jefferson on the subject in his letter to H. Nelson, March 12, 1820:

> This State [Virginia] is in a condition of unparalleled distress. The sudden reduction of the circulating medium from a plethory to all but annihilation is producing an entire revolution in fortune. In other places I have known lands sold by the sheriff for one year's rent; beyond the mountain we hear of good slaves selling for one hundred dollars, good horses for five dollars, and the sheriffs generally the purchasers. Our produce is now selling at market for one-third of its price before this commercial catastrophe, say flour at three and a quarter and three and a half dollars the barrel. * * * I fear local insurrections against these horrible sacrifices of property.

"Contraction" and "gold" are the shibboleths of the money oligarchs. No matter what the financial distress, we must contract our currency and debts to the gold basis.

They appealed to the supreme judiciary of the United States to pull down the pillars of our national currency. Hear the rebuff of the court:

> The debts which have been contracted since February 25, 1862, constitute, doubtless, by far the greatest portion of the indebtedness of the country. They have been contracted in view of the act of Congress declaring Treasury notes a legal tender, and in reliance upon that declaration. Men have bought and sold, borrowed and lent, and assumed every variety of obligations, contemplating that such payments might be made in such notes. Indeed legal-tender Treasury notes have become the universal measure of values. If now, by our decision, it be established that these debts and obligations can be discharged only by gold coin; if, contrary to the expectations of all parties to these contracts, legal-tender notes are rendered unavailable, the Government has become an instrument of the grossest injustice; all debtors are loaded with an obligation it was never contemplated they should assume; a large percentage is added to every debt, and such must become the demand for gold to satisfy contracts that ruinous sacrifices, general distress and bankruptcy, may be expected. These consequences are too obvious to admit of question. (12 Wallace, 529, 530.)

Baffled by the courts, the contractionists laid siege to Congress; repulsed by Congress, they appealed to the President, whose views are singularly in accord with theirs, to bar the gap of legislation with his veto, except a plastic Congress shall mold a finance bill which shall be in agreement with his manifesto. Heaven defend the country from such additional calamity! He drives a tilt at the Supreme Court, at Congress, and a prostrate and imploring people. He would have the legal-tender clause of the act of 1862 repealed, to take effect on the 1st July, 1875, being within about one year. He would have the currency issued by the United States redeemed in coin on the 1st July, 1876, within two years. And to raise the gold he would issue more bonds, payable in gold, principal and interest. He would have all taxes after resumption begins paid in coin or United States notes. And with these preliminaries he would authorize free banking without limit.

The President's plan is like a sea which conceals the treacherous rocks beneath its smiling surface. Let us sound it before we launch upon it. He would repeal the legal-tender act. This would leave the coinage acts of 1837 and 1849 in force, and nothing but gold and silver would be a legal tender after one year. Hence after that date all the five-twenty bonds and other bonds stipulated in the bonds to be payable in "lawful money," all State and corporation bonds, and all private debts must then of necessity be payable in gold. This would give an additional value to the demands of the creditor of 12½ per cent., and subtract a corresponding value from the productions and property of the debtor. The public and private debt of our country amounts to about $8,160,469,000. To pay it in gold it would require a premium of about $1,000,000,000, and a corresponding increase of the value of the interest on the debt by making it payable in gold. The aggregate annual taxation of our country amounts to about $611,180,320; it would add an annual value of about $80,000,000 if paid in gold. The result—$1,000,000,000 profit to the creditor, $1,000,000,000 confiscation to the debtor, $80,000,000 additional annual taxation to the people. Comforting pictures for a distressed people!

But this is not all. The President would have the legal-tender notes redeemed in gold at the end of two years. The result would be that their increasing value would equal the interest of a gold-bearing bond, and many of them would be withdrawn from circulation and hoarded with the bonds. This would operate as another tightening cord on the property and industries of the country.

Again, to provide gold to redeem the legal-tender notes the President would crowd more gold bonds bearing gold interest on the market. To get out of debt he would get deeper in. He would pay gold interest on the bond, when he pays no interest now on the legal-tender note. He would increase instead of lightening the burden of taxation.

And this is not all. Let us give a turn or two to the big gold wheel in the President's financial machinery and see how it will operate. The American bondholders would have undisputed sway over the gold which is fortunate enough to remain in the country. They would become gold brokers, buy up the currency, make it scarce, and force the people to pay high premiums on gold to pay debts and taxes. These taxes in part would return to the bondholders in payment of interest on their bonds, and be used in repeating the process of forced sales of gold to a circumvented people. The first revolution of the wheel shows that it cuts like a dredging-machine into the finances of the country.

But this is not all. After packing down our financial system under the weight of such a gold pressure, the President thinks that free banking will give the country ease. Let us try a little logic upon this. The national bonds constitute the exclusive primary capital of the national banks. The deposit of these bonds in the national Treasury is a preliminary condition to the grant of the bank charter. The trump cards are in the hands of the bondholders. In addition to filling the office of gold brokers, they are prepared to be installed national bankers and thus complete their supremacy over the national finances.

The national banks, now freed from the competition of legal-tender notes, our only free currency, would have the power to control the quantity of our currency, regulate the rates of interest, and fix the prices of labor, commodities, and property.

Look at the fearful consummation! The Government would be the tributary slave of the bondholders, and the people the victims of the broker-shops and the banks. Our country once abandoned to the juggling cupidity of the bond rings, the gold rings, and the bank-rings which would be born with a *nexus* out of the President's policy, they would form a financial triumvirate which in time would grow to equal the rapacity and spoliation of the old Roman triumvirate headed by Cæsar, Crassus, and Pompey. A money oligarchy is the most odious and merciless of all others. Bearing only a financial relation to the people, it regards them only as fit subjects of extortion. It goes for the last dollar of the poor and helpless. As tersely said by another:

> To an aristocracy existing on the annual interest of a national debt, the people are only of value in proportion to their docility and power of patiently bleeding golden blood under the tax-gatherer's thumb-screws.

The bondholder may now say that he is not—

> A dog, that he should do this great thing.

He has not yet taken the gradations to the extremities of avarice.

> No man e'er reached the heights of vice at first;
> By just degrees we mount from crime to crime,
> And perfect villain is the work of time.

But all this would not end our chapter of financial woes. We can endure great evils when we know that they soon will have an end. But the President's gold policy, once fastened on the back of the people, will make them swelter under the burden for ages. The gold will be dug out of the mountains, perhaps a century hence, to pay the last of our public debt. To aggravate our evils our country is under the double curse of a foreign debt as well as a home debt. Our great national foreign debt was not only a political blunder but a political crime. It was the folly of the general who marched his army into the Sarbonean bog. But what is the amount of this foreign debt, and what are its demands upon our gold resources? Hon. D. A. Wells, Special Commissioner of the Revenue, in his last report (1869) estimated our foreign debt as follows:

National securities	$1,000,000,000
State, railway, municipal, and other securities	465,500,000
Total	1,465,500,000

Hon. E. Young, Chief of the United States Bureau of Statistics, in an article published in The Independent (New York) April 9, 1874, says:

> Although there were no national securities held abroad at the commencement of our late war, yet some of the bonds of the Commonwealth of Pennsylvania, and probably of Massachusetts and other States, as well as railroad shares and securities, were owned in Europe. In the absence of accurate data on the subject, it is believed that fifty million is an ample estimate for these *ante-bellum* securities. With this addition our aggregate foreign debt amounts to about $1,200,000,000, and our annual interest charge to nearly $72,000,000.

What is our gold capacity to meet even the $72,000,000 annual interest on our foreign debt? The Statesman's Year Book, 1874, page 590, gives the following statistics:

> The yield of the precious metals in the United States in the year 1871 was estimated at $66,663,000. Nevada produced the largest amount, $22,500,000; and after it came California, $20,000,000; Montana, $8,050,000; Idaho, $5,000,000; and Colorado, $4,663,000. Oregon, Washington, Utah, New Mexico, and Arizona Territories produced smaller amounts.

This shows that the annual productions of our gold fields are not equal to our annual foreign interest. When the interest has the odds

against us, what will we do when we come to wrestle with the debt? To show that our country is already squeezed and sucked of its gold like an orange by our foreign debt I refer to the following table, furnished in the same Year Book, page 588, showing the total value of the gold and silver bullion and specie imported and exported from the United States in each of the six fiscal years ending June 30, from 1868 to 1873:

Years.	Imported.	Exported.
1868	$14,188,368	$93,784,102
1869	19,807,876	57,138,389
1870	26,419,179	58,155,666
1871	21,270,024	98,441,989
1872	13,743,689	97,877,534
1873	21,480,937	84,608,574

For 1873 $84,608,574 were exported and $21,480,937 imported. These figures show that the drain upon our gold has been equal to the productions of our mines. Let us look to a few facts in verification of this statement. Since the creation of our foreign debt the most wonderful activity and increase in the coinage of the precious metals has taken place in England, France, and Germany.

Mr. Freemantle, deputy master of the royal mint of England, says:

The gold coinage of 1872 has exceeded £15,000,000, ($75,000,000.) as against £10,500,000 ($52,500,000) coined in 1871, the average annual coinage before the latter year having been £5,000,000 ($25,000,000) only.

In his report for 1872 he adds:

No less than 672 tons of metal have passed through the melting department during the year, and this pressure of work has so fully engaged the attention of officers and men as to leave no time for the prosecution of experiments.

Again he says:

The coinage of gold in Germany has been carried on with energy during the year 1872, and the total amount of coin already struck is understood to exceed £31,000,000, ($155,000,000.)

A large part of the German coinage was from bullion and coin lately transmitted by France on account of the indemnity to Germany. While our country did not furnish all the material to swell the coinage of the European mints, yet it did contribute a large portion. My design has been to show that our foreign debt has made Europe the reservoir of American gold.

England, after her last French and American wars, was sinking under the burden of her debts and had been so depleted of her gold by foreign exportation that it required the omnipotence of Parliament to lift her out of the bog. Parliament prohibited the melting and exportation of the coin until the country was replenished by importation, and when the Bank of England was authorized to pay out coin for its notes it was only in sums under five pounds.

France, though recently prostrated by a terrible military disaster and burdened with the vast expenses of her own armies, was forced to submit to a foreign debt of five milliard francs, equal to one billion dollars. Yet she was not forsaken of political wisdom. Her first thought was to get out of the financial clutches of her German conqueror. Her policy was to make it a home debt, and to pay the gold interest to her own people and keep it at home. Her call for the loan was like a resurrecting trump. All the private burial-places of her gold gave up their treasures and her people hastened with it, in sums small and great, in bags and stockings, to pour it at the feet of the government. Thus she was enabled to anticipate a part of the German indemnity and to wipe out the balance at maturity. Long will her "stocking-loan" be memorable in the annals of finance.

Russia has tried the experiment of a foreign debt. In 1873 her foreign loans aggregated $550,059,000. Although her mines yielded annually $20,000,000, yet she was so drained of her gold in the payment of foreign interest that she was compelled to give her own people a forced paper currency of seven hundred and fifty millions, which for many years has been at a discount varying from 10 to 15 per cent. But she has changed her policy and is now cleaning out her foreign debt as fast as practicable.

But to recur to our own country. We see our financial life-blood ebbing away through our foreign debt without any efficient plan to arrest it. Our Constitution allows the free export of all commodities; therefore Congress, like the British Parliament, cannot prohibit the citizen from exporting gold. But were it otherwise, Congress has voluntarily pursued the opposite policy by creating the foreign debt, thereby giving free vent to the outflow of our gold. The gold which goes out to pay the Government debt goes out not to return; but it is run through foreign mints and is stamped with regal dies. It is not like the commercial debt of the citizen contracted abroad, for he brings in return valuable commodities as the consideration to combine with the labor and natural resources of the country, and in this way makes his debt a producing capital. The gold interest paid on our foreign debt is not only without compensating advantage, but it is a positive commercial and financial evil as I have already shown.

And this is not all. This foreign debt, as it is our curse in peace it will be our weakness in war. It may tie up the sword-arm of our nation when justice and honor would require that it should strike. In war, muscle and money are in close alliance. If the nation has not the money it must have its substitute, credit; and the larger its debt the weaker will be its credit. Among the great nations our country stands the richest in mines but the poorest in coins.

It is not practicable for our Government to overcome the large export balance of gold against her in the exchange of merchandise with other nations. The trade balance has been against us for a number of years. For the year 1873 our imports stood $642,030,539 against exports $626,595,077. But time will not permit me to dwell further on the foreign aspect of our finances.

Then it will be seen that the obligation of our foreign debt will have a controlling influence on our finances at home.

After our large annual export of gold, as I have shown, whence will we derive the gold to pay interest and sinking fund to the American bondholders, to redeem the legal-tender notes, to provide for specie payments by the banks, and to furnish sums under ten dollars to circulate among the people? When tested by the facts, the theory of the President and those of his mode of thinking will turn out to be a "beautiful impossibility." It is estimated by Mr. Young, Chief of the Bureau of Statistics, that $140,000,000 will cover the aggregate gold and silver coin in the United States, to wit:

In the Treasury of the United States, as per last report of the Treasurer	$83,145,324 22
Held by national banks, as per last report of the Comptroller of the Currency	19,868,469 45
Estimated balance held by gold-brokers and private persons	31,987,207 00
Total gold and silver coin	140,000,000 00

Of this sum the Government requires $127,918,856, according to last estimates of the Secretary of the Treasury, to pay interest and sinking fund.

The President confesses that we have not gold enough, because he calls for more gold bonds and more taxation.

The Treasurer of the United States in his last report, November 1, 1873, says:

There has been a large falling off in the receipts, amounting to $28,280,764.07 on customs, (gold,) and to $16,912,863.58 on internal revenue.

He adds:

Either taxation must be increased, an expedient that can hardly be thought of, or appropriations must be kept largely below the receipts. Otherwise the rapid reduction of the public debt will be arrested, if not abandoned.

So it will be seen that the Treasurer is already pushed to the wall. He can see but two alternatives for escape—taxation, or retrenchment.

The Treasurer inclines to retrenchment, the President to taxation and bonds. It cannot be disguised that all the tendons of our revenue and financial systems are now strained until they are ready to snap. As things now stand, our Government can do nothing but nibble off the excrescent interest of the public debt, and to do this it has to push the fibers of its revenue system into the pockets of all the people in the land, except the bondholders who must be protected, like Goshen amidst the plagues of Egypt, though famine may smite the rest of our land.

Now we are prepared to assert that if the quality of our legal-tender notes is not equal to gold the fault does not lie at the door of the people. If our currency departed from its former unit of value—the gold dollar—it was done by the force of law. If it was increased or contracted in quantity it was by the act of the Government. If gold has become scarce by leaving the country, it was not expelled by the inferior paper currency as some may think, but it went at the bidding of the Government. Nor was it depreciated by any distrust of the public credit, for the legal-tenders stand on the same credit with the public bonds, which are the equal of gold in the market. So that our legal-tender notes were a necessity, and not enough of them at that by a large amount, as I think I demonstrated in my former speech. The only difference between them and the bonds is that the Government pays a semi-annual gold interest on the bonds and none on the notes. If they were made to bear an equal interest with the bonds they would instantly spring to the bond value and disappear from circulation and be hoarded with the bonds. Or if they should be made convertible into bonds bearing a like rate of interest, for the same cause they would disappear from circulation. The only way to keep them in free circulation is to pay no interest on them, nor to make them convertible into interest-bearing bonds to tempt the cupidity of the money-hoarder.

To the extent of our legal-tender notes the people would be sure of a currency and without taxation for its use. On the contrary, to have them absorbed in gold-bearing interest bonds it would not only aid in shrinking the whole value of the property and productions of the country to a gold basis, but it would require an annual tax of $20,000,000 in gold to pay the interest alone on the bonds substituted in their place. What imaginable profit can it be to the people to get rid of the present difference between gold and greenbacks, if it not only costs them a general loss on all their productions and property but the payment of $20,000,000 annual taxes in gold for years to come? In fifteen years the interest alone would cost the people $300,000,000 in gold. And to add to the injustice and folly of such a scheme, it would, perhaps, open another financial orifice for the outflow of our gold to foreign countries. To convert them into gold bonds it would not only shrink the whole value of the property and productions of the country, to that extent, to the gold basis, but it would also require an annual tax of twenty millions in gold to pay the interest on the bonds substituted in their place.

If, then, the Government has not been able to raise more than enough gold from its revenue laws to pay the interest and 1 per cent. per annum sinking fund on the public debt, and now, for the want of gold to redeem the legal-tender notes according to the proposed plan, would be forced to make gold bonds to raise it at the expense of $20,000,000 per annum interest, it becomes too plain for argument that after the Government has thus taken the lion's share there would be no gold left for circulation among the people, and not enough left to furnish a pretext for specie payment by our national banks. Should the banks attempt it the experiment would be as pitiable as the specie resumption of Secretary Richardson.

Then what means the clamor of the President and the contractionists for reducing our currency to a gold basis? It means that the regal-tender notes shall be converted into gold interest bearing bonds; el means more debt and more taxation. Such is the drift of the currency bill which recently passed the House, as well as the amendments to it reported by the conference of the two Houses. Sections 7 and 8 of the amendments proposed by this conference report show the manner in which the legal-tender notes were to be disposed of.

SEC. 7. That the entire amount of United States notes outstanding and in circulation at any one time shall not exceed the sum of $382,000,000, which shall be retired and reduced in the following manner only, to wit: within thirty days after circulating notes to the amount of $1,000,000 shall, from time to time, be issued to national banking associations under this act in excess of the highest outstanding volume thereof at any time prior to such issue, it shall be the duty of the Secretary of the Treasury to retire an amount of United States notes equal to three-eighths of the circulating notes so issued, which shall be in reduction of the maximum amount oi $382,000,000 fixed by this section; and such reduction shall continue until the max-f mum amount of United States notes outstanding shall be $300,000,000; and the United States notes so retired shall be canceled and carried to the account of the sinking fund provided for by the second clause of section 5 of the act approved on the 25th of February, 1862, entitled "An act to authorize the issue of United States notes and for the redemption and funding thereof and for funding the floating debt of the United States," and shall constitute a portion of said sinking fund. And the interest thereon, computed at the rate of 5 per cent., shall be added annually to said sinking fund. But if the surplus revenue be not sufficient for this purpose, the Secretary of the Treasury is hereby authorized to issue and sell at public sale, after ten days' notice of the time and place of sale, a sufficient amount of the bonds of the United States of the character and description prescribed in this act for United States notes to be then retired and canceled.

SEC. 8. That on and after the 1st day of January, 1878, any holder of United States notes to the amount of $50, or any multiple thereof, may present them for payment at the office of the Treasurer of the United States, or at the office of the assistant treasurer at the city of New York; and thereupon he shall be entitled to receive, at his option, from the Secretary of the Treasury, who is authorized and required to issue, in exchange for said notes, an equal amount of either class of the coupon or registered bonds of the United States provided for in the first section of the act approved on the 14th of July, 1870, entitled "An act to authorize the refunding of the national debt," and the act amendatory thereof, approved the 20th day of January, 1871, which bonds shall continue to be exempt from taxation as provided in said act: *Provided, however*, That the Secretary of the Treasury, in lieu of such bonds, may redeem said notes in the gold coin of the United States. And the Secretary of the Treasury shall reissue the United States notes so received either in exchange for coin at par, or, with the consent of the holder, in the redemption of bonds then redeemable at par, or in the purchase of bonds at not less than par, or to meet the current payments for the public service; and when used to meet current payments an equal amount of the gold in the Treasury shall be applied in redemption of the bonds known as five-twenty bonds.

Now, permit me to uncover one of the most cunning devices for additional taxation hidden beneath the artful phraseology of the seventh section.

Eighty-two millions of legal-tender notes are to be retired and canceled and carried to the account of the sinking fund provided for by section 5, act 25th February, 1862, "and shall constitute a portion of said sinking fund. And the interest thereon, computed at the rate of 5 per cent., shall be added annually to said sinking fund."

Now, to understand the meaning of this language, we must refer to section 5 of act 25th February, 1862, which is as follows:

SEC. 5. That all duties on imported goods shall be paid in coin, or in notes payable on demand heretofore authorized to be issued and by law receivable in payment of public dues, and the coin so paid shall be set apart as a special fund, and shall be applied as follows:

First. To the payment in coin of the interest on the bonds and notes of the United States.

Second. To the purchase or payment of 1 per cent. of the entire debt of the United States, to be made within each fiscal year after the 1st day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt as the Secretary of the Treasury shall from time to time direct.

Third. The residue thereof to be paid into the Treasury of the United States.

The sinking fund was commenced by Secretary BOUTWELL in 1869. Secretary of the Treasury Richardson, in his Public Debt and National Banking Laws, page 83, gives us the operation of the funding system, as follows:

Within each fiscal year, which ends June 30, the Secretary applies coin received from duties to the purchase of bonds to the amount of 1 per cent. of the entire debt of the United States. The bonds so purchased were all registered in the name of the Treasurer of the United States in trust for the Government, and were stamped with the words "Sinking fund" on the face of each bond. The interest thereon was regularly collected in coin semi-annually and applied to the purchase of other bonds, which, in like manner, were added to the same fund.

So that it will be seen that the eighty-two millions legal-tender notes proposed to be "retired and canceled," instead of being carried to the "destruction account" in the Treasurer's office and an end made of them, are to be carried to the account of the sinking fund and stamped "Sinking fund," and 5 per cent. interest in gold collected on them annually out of customs duties until the whole of the public debt shall be extinguished; and the interest upon these canceled notes would require an increase of four millions annual taxation to pay it.

This is an ingenious specimen of the hocus-pocus science of taxation—to take the free currency from the people and at the same time tax them under the guise of retiring it.

The eighth section disposes of the remaining $300,000,000 legal-tender notes by providing for their exchange into coupon or registered gold bonds. Here we reach the bottom of this so-called specie basis. It means contraction, gold bonds, and taxation, leaving a distressed people to contend as best they can with the rapacity of the national banks, which have superseded all other banks of issue.

Let the country understand its financial position and its financial relations. The money monopolists, with a skill equal to that of the successful military leader, have been advancing under blinds and gaining position after position until they have reached an eminence of power from which they can rake all the resources of the people.

The present Administration has reached a financial extremity. It could not, if it would, give the people a currency based on coin. It has not increased the gold coin of the country one gold dollar in five years. Its bewildered financiers are like mariners in strange waters making experimental soundings to escape from the reefs. The people need not look to them for any permanent relief. It will not come. The wretched sons of toil, who go out with the opening of the day to make their bread in the sweat of their brow, may look in vain for a season of respite. Thousands of them have put the last strain upon the virtues of industry and economy and have failed to save their shelters from the inexorable grip of the tax-gatherer.

But the people are to be turned over to free national banks. If these banks were required by law to begin specie payments after the Government sequesters nearly all the gold for its own use, they would wind up and leave the country without a currency. They do not rest on a gold basis. To the extent of their issues they rest on the credit of the Government, and the Government rests its credit on the productions and property of the people.

The deposit creditors of the banks rest upon the personal credit of the stockholders to the amount of their respective stock. When the banks break their bonds held by the Government stand as security for their notes, while the depositors are left to work for anything they can find amidst the *detritus* of the remaining assets in a court of bankruptcy. Let not the people cherish the illusion that the national banks are to usher the golden era upon the country. The past history of American banking is by no means prophetic of golden realities. According to Mr. Walker, in his Science of Wealth, the average proportion of specie to currency has been only one dollar to five dollars from the existence of our Government.

About once in every nine years since 1784, coincident bank panics in England and the United States have rocked the lands with financial convulsions. They have become historic as the panics of 1784, 1793, 1810, 1819, 1826, 1837, 1847, 1857, 1873, passing over "Black Friday"—each one leaving an attendant loss to the respective countries of at least $1,000,000,000.

But I have said enough to show that the financial policy of the Government is a failure. Its inexcusable blunder was in converting its floating debt into a funded debt. This floating debt would have been much easier to pay, and could have been paid in a shorter time than the funded debt, and paid, too, without material damage to contracts and shrinkage in the value of property. To have applied our gold receipts from customs, say at the rate of $150,000,000 per annum, in the payment of this debt, it would have resulted in keeping the gold in the country, diminishing the public debt, making more valuable the remaining portion of the debt by contraction, encouraging it to combine with the industries, and giving to it all the multiplying powers of production and reproduction. This would have been no injustice to the holders of the floating debt. Three-fourths of it were used as currency, and a part of it was already bearing interest. The annual contraction would have been equal in value to a paying interest on the deferred balance of the debt. And besides it could have been lent out as money and received interest for the use. But suppose at times it might have lain idle and unproductive; this is nothing more than nearly every farmer has to submit to in carrying over his idle capital through the unproductive seasons. His lands, his implements of husbandry, and work beasts are of but little value, but more often an expense, to him during the winter months. This process of paying off the floating debt would have filled the land with gold, which would have added to the permanent wealth of the country and furnished the best of all currency to the people.

The only way that I see open now to repair the blunder is to reverse the policy of the Government. As the currency was swallowed up in the bonds, let the bonds give back the currency. Let the five-twenty bonds be paid off in legal-tender notes. This would loosen the bands of contraction on the country and the country would "breathe freer and deeper;" it would appreciate the value of lands and furnish a currency for their purchase, so that the distressed debtor might sell off a part and save a part for his home, and we might say enable hundreds of thousands of tax-ridden debtors to redeem their homes which have been sold for taxes. Then let the legal-tender notes be redeemed in gold as fast as financial prudence will dictate—redeemed in the same gold collected from customs and which is now applied to the payment of interest and sinking fund to the foreign and home bond-

holders. This would turn the tide of the gold flow. It would bring it home from abroad and keep at home a due share of the products of our mines.

I know that it is a disputed legal problem whether the five-twenty bonds, which are by their terms payable in "lawful money," are solvable in legal-tender notes. I affirm that they are by principles decided by the Supreme Court of the United States, which court in part was created by the present Administration.

Time will not permit me to discuss the question now; but I should not fear to meet it before any judicial tribunal in any of its aspects of law, equity, or national faith.

The bondholders should remember that they received bonds worth about $2,500,000,000 for about $1,250,000,000 in true value. They should remember also, that their bonds acquired a threefold purchasing power by the contraction of the currency consequent upon funding it in the same bonds. They should remember that the bonded debt constitutes about one-seventh of the assessed value of all the property in the United States, and by the grace of the Government this debt has sanctuary against taxation. They should remember that they made gain and "waxed fat" out of the calamities of their country. They should remember that while they *lent* a depreciated currency, the toil-worn and battle-scarred soldiers *gave* blood, the last, best gift, to their country's cause. And let them remember that, while they are insolent and dictatorial in the conscious supremacy of their money power, and stimulate the Government remorselessly to wring tribute from the poor and toiling millions, yet they have a slumbering power which will, sooner or later, be aroused to wield the ballot for the reform of the Government and their own vindication.

Currency.

SPEECH OF HON. W. A. PHILLIPS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

June 13, 1874,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. No. 1572) to amend the several acts providing a national currency and to establish free banking, and for other purposes.

Mr. PHILLIPS. Mr. Speaker, it is with the utmost reluctance I rise to address this House on a question of such vast importance. A new member, I desired to profit by the experience of those older than I am in legislation. I have listened to speech after speech on finance with curiosity, if not with patience, and have fretted anxiously, if not wisely, over this financial question which has embraced the interests and progress of the people of a great nation. I have not dismissed the hope that the American Congress will be equal to emergencies so great, and yet, sir, I am free to express my fears for the manner in which this subject has been treated.

The gentlemen from Pennsylvania [Mr. CLYMER] has said "there is but one standard, gold and silver." These are two standards, often differing widely in value. He has claimed that the democratic party was a party of "sound money." What are the facts. The democratic party was the first to debase the coinage of the United States. This they did first in 1834; afterward much more decidedly in 1837 under President Van Buren. In 1834 the gold coinage was reduced from 562 to 537. In 1853 the silver coin of the United States was debased nearly 7¼ per cent. At that time the millers and merchants of the West bought wheat and other cash produce with silver half-dollars of this debased coin of the time of Mr. Pierce. There was no apology for this, as there was no war, and there was a surplus from the sales of public lands, about which Congress was quarreling.

Since that time the American coinage was still further debased, and all in the face of a depreciating value of the precious metals. Debasing the currency was one of the grounds of complaint of the fathers of the Republic. In what was called "Wood's money" in 1723 they had the effrontery to make thirteen shillings out of a pound of brass.

In 1782 the first plan for American coinage was submitted to Congress. In 1785 a plan of national coinage was submitted by Jefferson. In 1792 a code of laws was established to regulate a mint, and the coinage under this continued until the debasement of the coin occurred under Jackson and Van Buren.

There are two great interests—the interest of aggregated wealth, the interest of daily labor. And in the outset I wish to lay down as a fundamental maxim that the day's labor is the only honest standard of values in the market of the world. It may vary. There may be educated labor, and the mere power that works a pump and enters into competition with the steam-engine. Whatever a day's labor produces for the advancement of mankind, and whatever it is relatively worth to that end, fixes it as the safest standard of all other values. For wealth is only the accumulated product of labor that was not necessarily consumed in its production. What shall represent it? Some say coin, which they allege has a fixed value. Nothing could be more absurd. A penny used to be the price of a day's labor. It is now one hundred and fifty pennies, partly by the increase of wealth and partly by the depreciation of what we are pleased to call the precious metals. What made them precious? Scarcity.

A successful miner who had procured a trunkful of emeralds, took one of them to a lapidary, for which he obtained one thousand scudo. Overjoyed he took the lapidary to his room, and showing him the remainder of the glittering stones, asked what they were worth, and was amazed when the dealer in jewels answered, "These, senor, are worth one scudi." And so when we print on a Treasury note the words "one dollar," it represents the credit of the nation for one dollar. It represents its proper proportion of all the property in the country, for all the property in the country may be taxed to pay it. In other words, it represents the aggregated wealth of the nation. Some men have said here, "These notes have a lie on their face." Very well. Do you see this nickel? On one side of it is a circle of thirteen stars, and outside of them "United States of America," 5 cents. Now this is hard money. It is *very hard* money, and the announcement from the United States of America that it is five cents is another lie. Who would give five cents for it to work into ice-pitchers and drinking mugs? We are used to that kind of lying, however, and I might overlook it, but in turning to the obverse of this remarkable coin I find the legend "In God we trust." To stick such a profession of faith on such a fraud as this is a piece of political executive blasphemy, and fearfully significant of the modern spirit to steal the livery of Heaven to serve the devil in. Now, I mention this merely to introduce a branch of the subject not yet discussed, but which we must consider. You have seen the stamp on our silver dollar and half dollar. It says under our name it is worth that much. Now as a mere piece of silver it is not now, and never was worth that much in the market of the world. You could not sell them outside of the country for what they purport to be. They are worth that much simply by the credit and power of the Government. It is so with the gold eagle and half-eagle. Not the amount of gold in them, but the credit of the Government stamps them as worth that much.

There is another fact away behind this of far greater moment. Since the discovery of America in 1492, (by reference to the first authorities, such as M. Chevalier,) we find that silver is now worth less than one-sixth of the value it possessed at that time. This is a very rigid estimate. My own impression is from a careful study of the changes in the prices of wheat, beef, and labor, that it has scarcely one-tenth of its former value, and the greater part of this depreciation has taken place in the last two hundred years. Hallam, on an estimate of values, puts it one to twenty. The change in the value of gold is not much less, for since the discovery of the gold mines in California, Australia, and elsewhere, it has been proposed to make silver the sole standard, as less liable to fluctuations.

Now, sir, the depreciation of our national-bank notes and greenbacks as a marketable commodity in the commerce of the world has never witnessed anything as bad as that; and yet, sir, all these represent the price of labor and property. Since the discovery of gold in California in 1849 there has been a change in nominal value of 60 per cent.; but the real change, owing to the increase of expenditure, is far greater. Now, this has affected all contracts as well as all values. It divided the price of a man's labor with some other man who had not done so much. It disturbed values instead of regulating them. It was no standard; it was simply the means, under the defective systems of law, of making the rich richer, the poor poorer.

I rise before you in no agragrian spirit. The honest sacredness of contracts and the honest value of a day's labor shall ever have the support of my voice and vote. *But, sir, they must be inseparable.* We are constantly speaking of fixed values; no term is used more vaguely and less understandingly. When we say that a pound of meat is worth two pounds of bread, we can understand that; when we say a day's labor is worth ten pounds of bread, we can understand that; when we say a day's labor is worth a certain number of yards of cotton cloth, we can understand that; for it has taken a certain amount of labor and of expenditure, or labor in educating labor, to produce them. But when we measure the value of gold by the relative value of silver, or *vice versa*, we are the victims of a fallacy; because both have been for many hundreds of years continually depreciating, often in a few years changing almost 100 per cent., and temporarily vibrating backward and forward. Thus when a poor shepherd in Potosi discovered silver where his herds were grazing, and when under the impetus of an improved system of mining an immense amount of the precious metal was shipped to Europe, it depreciated in value so much that it was feared it would soon be worth no more than lead, and ceased to be esteemed as a representative of wealth, and some nations discarded it as coin. So when the mines in California and Australia were discovered a few years ago, gold became so abundant and depreciated so much that several great powers, including Austria, made silver the only basis of value.

And thus we see that the modern civilized nations, with a few exceptions, have three standards of value, gold, silver, and paper credits; all varying in value and not maintainining the same relations to each other. Some nations, Austria, as I have mentioned, have but two—silver and paper credits—and it is a noticeable fact in the case of Austria, the paper currency or credit system, is the real medium of bal-

ances and exchange. I believe it is one of the recognized evidences of civilization to use what is called money to effect exchanges. The man who has a few bushels of wheat to sell and a coat to buy may not be able to find a man who has a coat to sell and wants his few bushels of wheat, and so in all transactions. Now to overcome this difficulty money, so called, was invented.

Aristotle says in regard to this:

> It was agreed to give and receive a substance which useful in itself was easily transferred from hand to hand in the ordinary transactions of life; it was iron, for instance, or silver, or some other substance of which the size and weight were in the first place determined, and on which to escape the inconvenience of continual measurings a particular stamp was affixed as a sign of its value.—*Aristotle; Politics*, book 1, chapter 3.

Now this, although the first crude essay at making money, was not money. That is, the element of money it had was the "stamp affixed" that regulated its value. I need not stop to further prove that the equivalent value of these and other products of labor were constantly changing. A pound of iron might be worth a day's labor to-day and not worth half a day's to-morrow. The simplest illustration I can give of this is in the article used as money by the more advanced Indian tribes at the date of the discovery of the New World. They had two standards; one a fine and very rare shell, sometimes called cowries, and the other wampum beads which were cut and polished from another shell. The first of these shells were laboriously hunted for, often unsuccessfully; were sometimes found in great abundance, just like the uncertainties of our gold and silver mining of the present. A man might find several hundred dollars' worth in a single day. This always arouses the gambling spirit; it is the inheritance that comes from the dead dreams of the alchemist. The wampum, on the other hand, was the product of great labor and skill; the material itself had little or no value. It had to be carefully polished and a fine hole drilled through it. It represented just so much labor, and the Indians prized it highly as a medium of exchange. While the shells were confined to a few tribes, the wampum had its value from the lakes to the gulf. One of these was a genuine representative of labor, and therefore did not fluctuate among real or relative values. The other represented the gambling, speculating element.

I have said the fluctuations in gold and silver have been very great, and amid all these fluctuations a steady downward tendency. For this reason in many countries laws have been framed to recognize other more reliable standards. Thus in long leases and similar contracts provision has been made to fix the rent or agreed price at the value of a measure of wheat.

A careful examination of the whole money system has been rapidly turning the whole public mind that way. While in our country there is a constant clamor from the holders of Government notes and securities that these shall be appreciated in value, just the reverse of this has been going on in regard to the national debt of Great Britain. Since the discovery of gold in California, Australia, and Russia in thy last twenty-three years, and the application of improved machinere to procure it, it has declined so much in the face of other articles estimated by labor, that the holder of British bonds only gets 40 per cent. of what he got at that time. Nor can we see any probable limit to this downward tendency. In our case there has been a steady and very rapid appreciation. In 1864, or ten years ago, our credit had so declined as a marketable commodity, that gold stood toward it as 2½ to 1. Since that time the holders of all our notes and securities have received a profit on them, or enhanced value of 130 per cent. In other words, taking into account real values, we have more than doubled the war debt. This was done under the most sacred of all sentiments, honor, and a desire to redeem our pledges, real and imaginary.

But, sir, as this question has another aspect, as it affects the value of labor on the one hand as much as it does wealth on the other, let us examine what "specie payment" means. I have said that some nations have two standards of value, silver and paper credits; others three, gold, silver, and paper credits. Now, our Government has *four*. The coined gold and silver of the Republic, the trade dollar, and paper credits. Now, while it takes one hundred and twelve and a half cents of greenbacks to get one dollar in American gold coin, it takes 10 or 12 per cent. more to get a trade dollar. Does any one here propose to resume specie payments on the basis of the "trade dollar," and if not, why not? And yet every one means by specie payment putting all money on the basis of our gold and silver coin. But if we can stamp ninety cents' worth of silver and call it a dollar, why not fifty cents' worth, or twenty-five? It will thus be seen that our coin receives its value not from its intrinsic worth, but from our credit and authority. As I have already said gold and silver are continually fluctuating and steadily declining, I wish to call your attention to another fact in this connection. The circumstance that gold and silver are in demand for coined money gives them the greater part of their value. Gold is used as a representative in coin. It is also used for jewelry, gilding, and, to a limited extent, in plate. But the amount required formanufacturing purposes is very small. If we estimate the billions on billions of gold and silver that have flowed into civilized countries during the last three hundred years, if you destroy the demand made for it by governments creating it into money, the other uses of these metals is so insignificant they would have been worth little more than iron, if as much, for iron is in unlimited demand. As silver has a great many more uses in the arts and sciences, it has a greater relative value than gold outside of its use as coin. From this we simply see that the value of coin in measuring exchange is not derived from the intrinsic worth of the gold and silver from which it is made, but from the fact that governments by their stamp and authority clothe it with the power of money in effecting exchanges. Against this stamp and political authority the fluctuations of gold and silver have continually warred.

What men have constantly demanded of money is that it shall have a fixed and unalterable value, that it shall uniformily represent the same amount of labor—wheat, beef, and cloth, the equivalents of labor—subject to the variations of production. These are real values. Neither gold, silver, nor paper money are so to any appreciable extent. When a man contracts a debt in currency at ninety cents he does not wish to be compelled to pay a dollar. To speak more correctly, when he buys on credit the product of four days' labor, he does not want by some action of his Government to be compelled to pay for five.

That is precisely the condition of this country at the present time. A great deal of money is locked up because those who have it are afraid that a change of values might strip them of more than their profits. What the country to-day demands is a fixed and definite system as far as that is possible. The people want to know what to depend on, and just that much Congress owes to its constituents all over the United States, and I entreat you, gentlemen, not to adjourn until you have exhausted every effort to secure it. Those who hurry home to work for a re-election and neglect this duty may learn that they got back too soon. And thus when the interest of capital demands governmental action to force us to specie payment against the interests of labor, when the holders of Government securities demand that we appreciate their property 13 per cent., and wring some hundreds of millions from the suffering business of the South and West, we cry halt! We say that nothing can legitimately carry us to specie payment but the increasing wealth and resources of the nation, and its increased power to pay its debts. All artificial maneuverings in that direction by law or executive interference are not only subterfuges, but dishonest.

I admire the patriotic spirit which, influenced by a chivalric sense of honor, has made this nation in the eight years pay so many hundreds of millions of her debt. But, sir, there is another side to the picture. Could the decade ending in 1860 have borne such a burden? No, sir. The war decade was a decade of expansion and inflation. Was it ruinous to the prosperity of the country? Not at all, sir. In no period in the history of our Government has the country so thriven. All the real wealth of the nation increased as it had never increased before. We spanned the country with railroads, adding infinitely to its power and possibilities. Houses and cities were built and farms and orchards made as they never had been before. Comforts and luxuries increased. Under the enterprise begotten of that elastic, inflated system, the whole nerve of the nation was actively employed in producing real wealth. Strong as a Titan, the country could bear great burdens, and she bore them. Then came the era of contraction. There is only a certain point to which taxation is wise, and there is only a certain extent to which such burdens can be borne without crippling the industries of the country. We have doubled the wealth of the rich and weakened the producing power of labor. We have increased the power of capital, and in virtually doubling the value of our national debt have placed an additional mortgage on the bones and sinews of millions yet unborn. In doing all this so rapidly and not naturally we were draining away the wealth that the years of inflation had produced, and no longer stimulated by the enterprise provoked by plenty of money the tax-gatherer was brought face to face with diminishing revenues. Then came the panic. Money locked itself up and industry was paralyzed. Some said we had built too many railroads; some that we had been too extravagant, that we should not construct such fine houses or wear such expensive clothes or eat such costly food, that we must retrench in all expenditures.

There are no doubt often individual cases of extravagance, but all this doing without things we enjoy and might have paralyzes industry, and if persistently carried out on the same line would take us back to the spear and the wigwam.

The aggregated wealth of this country is ample security for its debts. We are expected to devise a system of resumption toward the standards of other countries only so fast as our prosperity carries us there. I think the time ought to be computed as still far ahead, and with the same authority with which we stamp one dollar on ninety cents' worth of silver, give guarantees to business men as to what will be the action of the Government in this matter.

Money in itself is not substantial wealth. It is a representative, and should represent the wealth and business of the country and be in sufficient volume to do it, so that industry can be employed and fair prices paid. But when capital besieges government by artificial means to increase its wealth, when it fights a bill that would take twenty-five millions of the reserves of other banks from the city of New York and scatter it where it ought to be, when it enters these Halls and makes such demands upon us in behalf of the great interests of capital against the interests of labor so much more entitled to our sympathy, then, sir, are the Representatives of the people called upon to rise and scourge the money-changers from the temple.

Condition and Wants of the South—Political, Material, Legislative.

SPEECH OF HON. FRANK MOREY,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

June 15, 1874,

On the political and material wants of the South, and the means of remedying them by legislation.

Mr. MOREY. In speaking of the political condition of the South, Mr. Speaker, we must bear in mind that the Southern States have since the war had an experience unlike that which the northern portion of our country has ever experienced.

At the surrender of General Lee the people of the South found themselves the residents of a country made desolate by war. The exhaustive war had had a demoralizing effect upon the people, and at its close society was in a very disorganized condition. Many who had never known the necessity of either mental or physical labor found themselves reduced to penury. As a general rule the confederate soldiers returned to their homes glad that the war was at an end, though the fond hopes which they cherished at the commencement of the struggle had been blasted and overthrown.

The general sentiment among the soldiers was one of satisfaction upon learning that the General Government proposed that they should be allowed freely to engage in the ordinary occupations of life untrammeled by any restrictions not imposed upon other people. The most violent manifestations of opposition to the General Government came from those who had not seen service in the field, but who as a class, at the breaking out of the war, were violently in favor thereof, provided that the fighting was to be performed by somebody else than themselves. True to their ideas they kept out of harm's way, and at the close of the war, fresh from their long repose, they were again found at the front ready and anxious to incite hostility of feeling against and lead a bloodless opposition to "the most despotic government that the world ever saw." The mass of the people, however, heeded not the advisers during the first year of peace, but set to work hopefully and earnestly to retrieve their broken fortunes, and did not think that they were being dealt with otherwise than generously until President Johnson proclaimed a policy in hostility to that maintained by the majority in Congress and led the people of the South to believe that they were being deprived of their constitutional rights, &c.

It is human nature to believe readily that you are being ill-treated if people insist that such is the case. This is as true of communities as of individuals. The non-combatants before referred to were eager and ready to take up the cry of "despotism," "unconstitutionality," &c., to enlarge thereon, and to influence the minds of the people and dissatisfy them with the administration of the Government.

I regret to say the seed thus sown fell upon good ground. The result of the attempt by the southern planters to resuscitate themselves financially in 1866 proved most disastrous, inducing a sentiment of despair, and in the case of many of desperation. Under the influence of this state of feelings and the pernicious doctrine of the President and the followers of his policy, the fourteenth amendment to the Constitution of the United States was rejected by the Legislatures of the Southern States in several cases with marked expressions of contempt.

Encouraged by the attitude of the President, who had arrayed himself against Congress, the lawless element in the South indulged in lawlessness that found its outlet in most cases in outrages upon the unoffending negro, who was regarded as the cause of all the trouble. In New Orleans a riot was inaugurated that was participated in principally by the city police, in which a peaceable gathering of white and colored citizens, claiming to be a State constitutional convention, were fallen upon and many of whom were massacred in cold blood. Those who are not familiar with this page of modern history will find it recorded in a volume in the Library entitled Riots in New Orleans in 1866. The following are some of the acts passed at this period of the history of the Southern States by the Legislatures or police juries thereof:

MISSISSIPPI.

An act to confer civil rights on freedmen, and for other purposes, November 25, 1865.

Section 7 provides that every civil officer shall, and every person may, arrest and carry back to his or her legal employer any freedman, free negro, or mulatto who shall have quit the service of his or her employer before the expiration of his or her term of service without good cause; and said officer or person shall be entitled to receive for arresting and carrying back every deserting employé aforesaid the sum of five dollars, and ten cents per mile from the place of arrest to the place of delivery, and the same shall be paid by the employer and held as a *set-off against the wages* of said deserting employé.

An act to punish certain offenses therein named, and for other purposes November 29, 1865.

SECTION 1. *Be it enacted, &c.*, That no freedman, free negro, or mulatto, not in the military service of the United States Government, and not licensed to do so by the board of police of his or her county, shall keep or carry fire-arms of any kind, or any ammunition, dirk, or bowie-knife; and on conviction thereof in the county court shall be punished by fine, not exceeding ten dollars, and pay the costs of such proceedings, and all such arms or ammunition shall be forfeited to the informer; and it shall be the duty of every civil and military officer to arrest any freedman, free negro, or mulatto found with any such arms or ammunition, and cause him to be committed for trial in default of bail.

SEC. 2. That any freedman, free negro, or mulatto committing riots, routs, affrays, trespasses, malicious mischief, and cruel treatment to animals, seditious speeches, *insulting gestures, language*, or *acts*, or assaults on any person, disturbance of the peace, exercising the functions of a *minister of the Gospel without a license* from some regularly organized church, vending spirituous or intoxicating liquors, or committing any other misdemeanor the punishment of which is not specifically provided for by law, shall, upon conviction thereof in the county court, be fined not less than ten dollars, and not more than one hundred dollars, and may be imprisoned, at the discretion of the court, not exceeding thirty days.

SEC. 3. That if any white person shall sell, lend, or give to any freedman, free negro, or mulatto, any fire-arms, dirk, or bowie-knife, or ammunition, or spirituous or intoxicating liquors, such person or persons so offending, upon conviction thereof in the county court of his or her county, shall be fined not exceeding fifty dollars, and may be imprisoned, at the discretion of the court, not exceeding thirty days.

SEC. 4. That all the penal and criminal laws now in force in this State defining offenses and prescribing the mode of punishment for crimes and misdemeanors committed by slaves, free negroes, or mulattoes, be, and the same are hereby, re-enacted, and declared to be in full force and effect, against freedmen, free negroes, and mulattoes, except so far as the mode and manner of trial and punishment have been changed or altered by law.

SEC. 5. That if any freedman, free negro, or mulatto, convicted of any of the misdemeanors provided against in this act, shall fail or refuse, for the space of five days after conviction, to pay the fine and costs imposed, such person shall be hired out by the sheriff or other officer, at *public outcry*, to any *white* person who will pay said fine and all costs, and take such convict for the shortest time.

ALABAMA.

December.—Bill passed making it unlawful for any freedman, mulatto, or free person of color in this State to own fire-arms, or carry about his person a pistol or other deadly weapon," under a penalty of a fine of $100 or imprisonment three months. Also, making it unlawful for any person to sell, give, or lend fire-arms or ammunition of any description whatever to any freedman, free negro, or mulatto, under a penalty of not less than fifty dollars nor more than one hundred dollars at the discretion of the jury.

TENNESSEE.

January 25, 1866, this bill became a law:

That persons of African and Indian descent are hereby declared to be competent witnesses in all the courts of this State in as full a manner as such persons are by an act of Congress competent witnesses in all the courts of the United States, and all laws and parts of laws of the State excluding such persons from competency are hereby repealed: *Provided, however*, That this act shall not be so construed as to give colored persons the right to vote, hold office, or sit on juries in this State; and that this provision is inserted by virtue of the provision of the ninth section of the amended constitution, ratified February 22, 1865.

LOUISIANA.

December 21, this bill became a law:

SECTION 1. That any one who shall persuade or entice away, feed, harbor, or secrete any person who leaves his or her employer, with whom she or he has contracted or is assigned to live, or any apprentice who is bound as an apprentice without the permission of his or her employer, said person or persons so offending shall be liable for damages to the employer, and also, upon conviction thereof, shall be subject to pay a fine of not more than $500, nor less than ten dollars, or imprisonment in the parish jail for not more than twelve months nor less than ten days, or both, at the discretion of the court.

GEORGIA.

March 20.—Crimes defined in certain sections named as felonies are reduced below felonies, and all other crimes punishable by fine or imprisonment, or either, shall be likewise punishable by a fine not exceeding $1,000, imprisonment not exceeding six months, whipping not exceeding thirty-nine lashes, to work in a chain-gang on the public works not to exceed twelve months; and any one or more of these punishments may be ordered in the discretion of the judge.

SOUTH CAROLINA.

An act preliminary to the legislation induced by the emancipation of slaves, October 19, 1865.

Section 10 provides that a person of color who is in the employment of a master engaged in husbandry shall not have the right to sell any corn, rice, pease, wheat, or other grain, any flour, cotton, fodder, hay, bacon, fresh meat of any kind, animal of any kind, or any other product of a farm, without having written evidence from such master, or some person authorized by him, or from the district judge or a magistrate, that he has the right to sell such product; and if any person shall, directly or indirectly, purchase any such product from such person of color without such written evidence, the purchaser and seller shall each be guilty of a misdemeanor.

Section 13 states that persons of color constitute no part of the militia of the State, and no one of them shall, without permission in writing from the district judge or magistrate, be allowed to keep a fire-arm, sword, or other military weapon, except that one of them, who is the owner of a farm, may keep a shot-gun or rifle, such as is ordinarily used in hunting, but not a pistol, musket, or other fire-arm or weapon appropriate for purposes of war. The district judge or a magistrate may give an order, under which any weapon unlawfully kept may be seized and sold, the proceeds of sale to go into the district court fund. The possession of a weapon in violation of this act shall be a misdemeanor which shall be tried before a district court or magistrate, and in case of conviction, shall be punished by a fine equal to twice the value of the weapon so unlawfully kept, and if that be not immediately paid, by corporal punishment.

Section 22 provides that no person of color shall migrate into and reside in this State unless, within twenty days after his arrival within the same, he shall enter into a bond, with two freeholders as sureties, to be approved by the judge of the district court or a magistrate, in a penalty of $1,000, conditioned for his good behavior and for his support, if he should become unable to support himself.

Section 27 provides that whenever, under any law, sentence imposing a fine is passed if the fine and costs be not *immediately* paid, there shall be detention of the convict, and substitution of other punishment. If the offense should not involve the *crimen falsi*, and be infamous, the substitution shall be, in the case of a white person, imprisonment for a time proportioned to the fine, at the rate of one day for each dollar; and in the case of a person of color *enforced labor*, without unnecessary pain or restraint, for a time proportioned to the fine, at the rate of one day for each dollar. But if the offense should be infamous, there shall be substituted for a fine, for imprisonment, or for both, *hard labor, corporal punishment, solitary confinement*, and confinement in *tread-mill* or *stocks* one or more days, at the discretion of the judge of the superior court, the district judge, or the magistrate who pronounces the sentence. In this act, and in respect to all crimes and misdemeanors, the term servants shall be understood to embrace an apprentice as well as a servant under contract.

December 21: An act to establish and regulate the domestic relations of persons of color, and to amend the law in relation to paupers and vagrancy.

A parent may bind his child over two years of age as an apprentice to serve till twenty-one if a male, eighteen if a female. All persons of color who make contracts for service or labor shall be known as servants, and those with whom they contract as *masters*.

Colored children between eighteen and twenty-one, who have neither father nor mother living in the district in which they are found, or whose parents are paupers, or unable to afford them a comfortable maintenance, or whose parents are not teaching them habits of industry and honesty or are persons of notoriously bad character, or are vagrants, or have been convicted of infamous offenses, and colored children, in all cases where they are in danger of moral contamination, may be bound as apprentices by the district judge or one of the magistrates for the aforesaid term.

It provides "that no person of color shall pursue or practice the art, trade, or business of an artisan, mechanic, or shop-keeper, or any other trade, employment, or business, (besides that of husbandry, or that of a servant under a contract for service or labor) on his own account and for his own benefit, or in partnership with a white person, or as agent or servant of any person, until he shall have obtained a license therefor from the judge of the district court, which license shall be good for one year only. This license the judge may grant upon petition of the applicant, and upon being satisfied of his skill and fitness and of his good moral character, and upon payment by the applicant to the clerk of the district court of $100, if a shop-keeper or peddler, to be paid annually, and ten dollars if a mechanic, artisan, or to engage in any other trade, also to be paid annually: *Provided, however*, That upon complaint being made and proved to the district judge of an abuse of such license he shall revoke the same."

FLORIDA.

An act to punish vagrants and vagabonds, January 12, 1866.

Section 1 defines as a vagrant "every able-bodied person who has no visible means of living and shall not be employed at some labor to support himself or herself, or shall be leading an idle, immoral, or profligate course of life;" and may be arrested by any justice of the peace or judge of the county criminal court and be bound "in sufficient surety" for good behavior and future industry for one year. Upon refusing or failing to give such security, he or she may be committed for trial, and, if convicted, sentenced to labor or imprisonment not exceeding twelve months, by whipping not exceeding thirty-nine stripes, or being put in the pillory. If sentenced to labor, the "sheriff or other officer of said court shall hire out such person for the term to which he or she shall be sentenced, not exceeding twelve months aforesaid, and the proceeds of such hiring shall be paid into the county treasury." All vagrants going armed may be disarmed by the sheriff, constable, or police officer.

An act prescribing additional penalties for the commission of offenses against the State, and for other purposes, January 15, 1866.

Section 1 provides that whenever in the criminal laws of this State, heretofore enacted, the punishment of the offense is limited to fine and imprisonment, or to fine or imprisonment, there shall be superadded as an alternative the punishment of standing in the *pillory* for an hour, or *whipping* not exceeding thirty-nine stripes on the *bare back*, or both, at the discretion of the jury.

Section 12 makes it unlawful for any negro, mulatto, or person of color, to own, use, or keep in possession or under control any bowie-knife, dirk, sword, fire-arms, or ammunition of any kind, unless by license of the county judge of probate, under a penalty of forfeiting them to the informer and of standing in the pillory one hour, or be whipped not exceeding thirty-nine stripes, or both, at the discretion of the jury.

Section 15 provides that persons forming a military organization not authorized by law, or aiding or abetting it, shall be fined not exceeding $1,000, and imprisonment not exceeding six months, or be pilloried for one hour, and be whipped not exceeding thirty-nine stripes, at the discretion of the jury. The penalties to be threefold upon persons who accepted offices in such organizations.

No. 35.—An ordinance relative to the police of negroes recently emancipated within the parish of Saint Landry.

Whereas it was formerly made the duty of the police jury to make suitable regulations for the police of slaves within the limits of the parish; and whereas slaves have become emancipated by action of the ruling powers; and whereas it is necessary, for public order as well as for the *comfort and correct deportment* of said freedmen, that suitable regulations should be established for their government in their *changed condition*, the following ordinances are adopted:

SECTION 1. *Be it ordained by the police jury of the parish of Saint Landry*, That no negro shall be allowed to pass *within* the limits of said parish without a *special permit in writing* from his employer. Whoever shall violate this provision shall pay a fine of $2.50, or in default thereof shall be *forced to work four days* on the public road, or *suffer corporal punishment*, as provided hereinafter.

SEC. 2. *Be it further ordained*, That every negro who shall be found absent from the residence of his employer after ten o'clock at night, without a written permit from his employer, shall pay a fine of five dollars, or in default thereof shall be compelled to work five days on the public road, or suffer corporal punishment, as hereinafter provided.

SEC. 3. *Be it further ordained*, That no negro shall be permitted to *rent* or *keep* a house within said parish. Any negro violating this provision shall be immediately *ejected* and *compelled* to find an employer; and any person who shall rent or give the use of any house to any negro in violation of this section shall pay a fine of five dollars for each offense.

SEC. 4. *Be it further ordained*, That every negro is required to be in the regular service of some white person or former owner. But said employer or former owner may permit said negro to hire his own time by special permission in writing, which permission shall not extend over seven days at any one time. Any negro violating the provisions of this section shall be fined five dollars for each offense, or in default of the payment thereof shall be forced to work five days on the public road, or suffer corporal punishment as hereinafter provided.

SEC. 5. *Be it further ordained*, That no public meetings or congregations of negroes shall be allowed within said parish after sunset; but such public meeting and congregations may be held between the hours of sunrise and sunset, by the special permission in writing of the captain of patrol within whose beat such meetings shall take place. This prohibition, however is not intended to prevent negroes from attending the usual church services conducted by white ministers and priests. Every negro violating the provisions of this section shall pay a fine of five dollars, or in default thereof shall be compelled to work five days on the public road, or suffer corporal punishment as hereinafter provided.

SEC. 6. *Be it further ordained*, That no negro shall be permitted to preach, exhort, or otherwise declaim to congregations of colored people, without a special permission in writing from the president of the police jury. Any negro violating the provisions of this section shall pay a fine of ten dollars, or in default thereof shall be forced to work ten days on the public road, or suffer corporal punishment as hereinafter provided.

* * * * * *

SEC. 14. *Be it further ordained*, That the corporal punishment provided for in the foregoing sections shall consist in confining the body of the offender within a barrel placed over his or her shoulders, in the manner practiced in the Army, such confinement not to continue longer than twelve hours, and for such time within the aforesaid limit as shall be fixed by the captain or chief of patrol who inflicts the penalty.

Congress then became impressed with the belief that the government of the Southern States could not be left with safety in the hands of those who had warred upon the Government, and military governments were placed over these States. The reconstruction acts were passed, and the policy therein laid down was inaugurated throughout the South.

Constitutional conventions, composed of members elected by all citizens without regard to race or color, were held for the purpose of framing constitutions in accordance with the amended Constitution of the United States and the statutes thereunder, and in Louisiana, in the spring of 1866, the constitution was accepted by the people and the State officers, and a Legislature thereunder were chosen, who entered upon their duties in July, 1868. In view of the fact that it has been charged that many of the State officers and members of the Legislatures were ignorant or dishonest, it may be well to recall right here that which has passed into history, that the democratic leaders and the democratic press throughout the State of Louisiana (and what was true of Louisiana was also true of most or all of the Southern States) made a determined and bitter opposition to the white people taking any part in the election of members of the constitutional convention or the first Legislature elected thereunder.

In many cases notoriously ignorant colored men were set up by the democrats as opposition candidates in order to turn the election into ridicule, while men who took part in or countenanced the constitutional convention, or who had acted with the republican party, were threatened with ostracism, both business and social. In the summer of 1868 a candidate for the Presidency was nominated by each political party. The policy announced by Hon. Frank P. Blair in the famous Brodhead letter which secured him the nomination for Vice-President on the democratic ticket, and which became thereby virtually incorporated in the democratic party platform, gave new hopes to the democratic party of the South.

Under the leadership of the worst element of that party, and acquiesced in or feebly opposed by the best element of the party, the secret order of the "Knights of the White Camelia," better known as the Ku-Klux Klan, was organized throughout the South for the purpose of carrying those States for the democratic party. The policy inaugurated was that of intimidation of all republicans, but more especially of colored republicans, and where intimidation failed, the midnight visits in disguise, whipping, or assassination were resorted to, and, as in the case of the Bossier Parish riot, the colored men were shot down like cattle. The repetition of the massacre of 1866 in 1868, in which the State officers and Legislature of Louisiana, as well as all leading republicans, would have been the victims, was only prevented by the result of the October elections of that year in Pennsylvania and New York. So thoroughly was the policy of intimidation carried out in Louisiana that in New Orleans the republicans as a rule did not dare to go to the polls. In some parishes in North Louisiana not a republican vote was cast; in others having a majority of colored voters and a majority of republicans, one or two votes were cast. In many cases the colored men were coerced into joining democratic clubs, and were given "certificates," generally known as "protection papers," the possession of which it was understood was necessary to have immunity from outrage.

In 1869 General Grant was inaugurated as President, and the passage and vigorous enforcement of the Ku-Klux laws brought peace and security in a considerable degree to the republicans in the South. Since this, through the failure of crops, a new system of labor that moved at first with considerable friction, and an increase of debt due largely to the fact that the ignorant legislator was an easy prey to the scheming lobbyists, composed in many instances of those who moved in the first business as well as social circles, but who were ever ready to denounce their tools in pharisaical style, the South has not had that material prosperity and advancement that could be wished.

Notwithstanding all these drawbacks and the disasters resulting to Arkansas, Mississippi, and Louisiana more especially, from the destruction of the levees of the Mississippi River, there has been, until the present year, a gradual improvement in the material prosperity of the South. Railroads have been built and manufactories have been started to some extent. The absentee system on the part of the planters, which prevailed extensively prior to the war, has been found to be incompatible with prosperous planting, and the continued presence of the planter, enforced by the changed system of labor, has been productive of increased thrift, has tended to foster public spirit, and has caused a more home-like feeling to be developed in the owner of the soil, who has gradually learned to seek for comfort in a highly improved home on his plantation rather than in a summer whirl of pleasure at Saratoga or a brief winter season in the Crescent City.

The "State—rights" doctrine so generally accepted as correct in the South in the *ante bellum* days was opposed to internal improvements at the expense of the General Government, and previous to the war the doctrine referred to was advocated strennously on the floor of Congress, while the Representatives of more northern constituencies, not troubled in any great degree with this doctrine, when it assumed a practical shape meekly took the lion's share of the appropriations for the improvements of rivers and harbors, (a practice I may be allowed to remark they are perfectly willing to follow to this day.) There is a marked change in public opinion on this subject throughout the South since the war. Petitions come up here every year, through the press, through boards of trade, through commercial conventions, and through legislative memorials asking for Government aid for the improvement of its navigable streams, for the building of ship and boat canals, and for the improvement of the

harbors of the South from Norfolk to the Mexican border of the Gulf. Much has been lately said of the commercial decay of New Orleans during the past few years, and this decay like all other ills which afflict the body-politic has been charged to the republican party.

Though it is popular to join in this clamor, there is not a banker or merchant of enlarged views in the city of New Orleans but knows to the contrary. There is not one such who does not know that New Orleans has lost a large share of her Texas trade because Saint Louis has extended her iron fingers through Missouri across the waste of the Indian Territory and into and through the heart of Texas to the thriving city of Galveston, while New Orleans has been vainly striving to secure a railroad connection with Texas. It is a fact patent to everybody that the great weight of taxation that rests on New Orleans has been caused from the fact that while her area is great and her expenses in the department of street improvements and repairs as great as that of other cities of similar area—yes, greater—on account of the increased cost, because she pays in depreciated paper; she has comparatively no manufactories or other concentrated capital like other large cities from which to draw a large share of her revenues. It is also a well-known fact that capital has been deterred from going to Louisiana, and much that had gone has been driven away because of the constant political agitation, the incendiary tone of a portion of the public press which reflected the views of the democratic leaders, whose doctrine has been to accept nothing that has been done through the supremacy of the republican party, but to continue to strive for power by all available means with the ultimate object to undo as far as possible all that has been done for the advancement, politically and intellectually, of that class of our population who were formerly property and who now as freemen, constituting as they do in a very large measure the bone and sinew of the State, are a valuable and indispensable portion of our population, and who, like all other laborers, are valuable in proportion as they are intelligent.

In order that I may not be said to charge that which I fail to sustain, let us for a moment glance at the history of the late political struggle in Louisiana in 1872. Besides the republican ticket there were nominated two other tickets, namely, a "liberal" ticket and a "democratic" ticket. The convention which nominated the "liberal ticket" was managed to a large extent by the friends of and in the interest of Governor H. C. Warmoth, who was one of the leaders of the Greeley movement in the State and who was announced by the liberal party as their candidate for United States Senator. Colonel D. B. Penn, a prominent merchant and planter, was nominated for governor. The democratic convention was composed of the "straight-outs" who were opposed to both the republicans and the liberals, but more particularly to the latter. During the first weeks of the active campaign on the part of the democrats the burden of their song was denunciation of the liberal movement, but more particularly of its leader, Governor Warmoth, whom they charged with being responsible for most of the evils under which the State suffered. While the campaign was in progress on this basis the wire-pullers of both the liberal and democratic parties, conscious that the policy they were pursuing would result in defeat to both, were working vigorously to secure such a union of both parties as would insure success. The negotiations were conducted in the spirit of barter, each claiming to have the largest political capital and desiring to secure the larger number of places on the "fusion" ticket.

The democrats claimed to have the bulk of the voters, while the liberals had Governor Warmoth, whom they claimed controlled and who could manipulate the machinery of the registration and election laws in such a manner as to insure success. It was unblushingly claimed by fusionists that the control of the registration and election machinery was equal to twenty thousand votes. Finally a bargain was struck. The democrats were to have the governor, and the gubernatorial candidate of the liberals was to have the second place on the fusion ticket. The party thus formed was to be called the "fusion" party, and in a few weeks the people who had listened to the denunciations hurled at Warmoth were bewildered or disgusted by finding their chosen orators and candidates campaigning as fusionists and Governor Warmoth traveling *with* them and *of* them—in fact, as one of the chief performers, if not the star of the combination. The people, the masses, did not understand it, and many do not to this day, but on the part of the leaders it was a piece of the most shameless and barefaced abandonment of principle for the purpose of insuring themselves success, whether a majority of the people indorsed them or not, that has ever been known in the history of political parties.

Under these auspices the campaign progressed. Those who had denounced Warmoth as the chief villain now explained that it was all a mistake, that he was the prince of good fellows, and united with him in denouncing Kellogg and the "custom-house gang." The republicans made a thorough canvass of the State, and besides being united and enthusiastic, gained large accessions of voters from those who were disgusted at the bargain which united the democrats and liberals. The effect of the trade now began to appear in the removal of numbers of supervisors of registration and the appointment of well-known and reliable "fusionists" in their places, and these were in many instances men in whose moral character the fusion party had no confidence and who it was apparent belonged to the class from whom are selected those who do the "dirty work" for a party when any is to be done. There was much to be done in the State of Louisiana if the State was to be carried for the fusion ticket. The character of the frauds perpetrated by the fusion party in their attempts to carry the State is pretty clearly shown by the following affidavits which are hereto appended:

Sworn statement of B. P. Blanchard, State registrar of voters under Warmoth.

UNITED STATES OF AMERICA,

District of Louisiana, State of Louisiana, city of New Orleans:

Be it known that, on this 21 day of September, A. D. 1873, personally appeared before the undersigned, a United States commissioner in and for the district of Louisiana duly commissioned and sworn, Brainard P. Blanchard, who, being duly sworn, deposes and says: That he was appointed by Henry C. Warmoth, governor of the State of Louisiana, to the office of State registrar of voters, being also, by virtue of said office, *ex officio* supervisor of registration in and for the parish of Orleans; that he filled the said office during the years 1870, 1871, and 1872; that in the last-named year he was in full political sympathy with the liberal movement, and subsequently, upon the fusion of the liberal and democratic parties, with what was known as and styled the fusion party, and, in conjunction with others of the same political party, he devised plans for carrying the general election in the State of Louisiana, on November 4, 1872, in favor of the said fusion party, and their candidates for presidential electors, Congress, and State and municipal offices; that, with this object in view, he proposed to take advantage of all the powers conferred upon him by the acts of the General Assembly of the State of Louisiana, numbered respectively acts Nos. 99 and 100, approved March 16, 1870, and known as the registration and election laws of 1870.

That, in furtherance of this scheme, he caused a careful compilation to be made of the lists of deceased male persons over twenty-one years of age, who had died since the close of the registration in 1870, which lists were required by law to be furnished to him by the sextons of the various cemeteries in the parish of Orleans, and that said lists, so compiled, were carefully collated with the registration books, and the registry numbered and the election precinct in which the deceased was registered were noted; that, instead of carrying out to the full letter the provisions of section 7 of the registration law above referred to, he caused to be erased from the lists of registered voters only the names of such deceased electors as were well known in the community, and in cases where the deceased was an obscure personage (a large majority of the whole number being composed of such) he caused to be made out a duplicate registration certificate in his name, the same to be retained and used at the general election, as hereinafter set forth; that for this purpose he caused to be printed *fac similies* of the blank forms of duplicate registration certificates used in 1870, which were in a different style of type from those intended to be used in 1872, in order to have them filled up with the names of deceased electors, as above stated; that the number of duplicate certificates so filled up for the purpose aforesaid was as follows, more or less:

For the—	
First ward	76
Second ward	8
Third ward	24
Fourth ward	4
Fifth ward	61
Sixth ward	52
Seventh ward	69
Eighth ward	35
Ninth ward	47
Tenth ward	51
Eleventh ward	44
Twelfth ward	21
Thirteenth ward	16
Fourteenth ward	7
Total	855

Deponent further says that, to his knowledge, a large number of certificates of registration had been issued in 1870, in the name of fictitious persons; that he caused a careful examination of the books of registration to be made, and of other records and memoranda in his possession, to ascertain the number of such fraudulent registries, and also made efforts to ascertain in whose possession such papers in the names of fictitious persons were, and that he obtained possession of some two thousand of such papers, and, in relation to such papers as he could not obtain possession of, the following course was pursued: Whenever he ascertained that they were in the hands of persons belonging to the republican party, he then, and during registration, caused the said fictitious names to be erased from the registry list as fraudulent; but in all cases where he ascertained that such papers were in the possession of persons in the interest of the fusion party, he instructed the assistant supervisors of registration not to erase such fictitious names from the books in cases where he had confidence in those officers, but in cases where he had reason to suspect the fidelity of any assistant supervisor to the fusion cause, or to believe that any of them would not assist in or abet such manipulation, he prohibited them from making any erasures whatever, reserving that work for himself or assigning it to some confidential clerk or confidential agent whom he could implicity trust, as will more fully appear by the documents hereto annexed, and marked A and B.

Deponent further says that he was aware of the existence of large numbers of fraudulent naturalization papers issued in 1868 by the clerks of district courts in the parish of Orleans and other large parishes, and that in 1870, in his circular of instructions to supervisors of registration, he directed them not to register any person naturalized between July 4 and October 24, except such as were naturalized in the first and second district courts of the parish of Orleans; that the number naturalized between the dates above cited was reported by his predecessor, Hon. William Baker, chairman of the board of registration, in his report to the General Assembly, dated New Orleans, January 10, 1869, as follows:

Table showing the number of persons registered in each ward (First excepted) of the parish of Orleans who were naturalized between July 4 and October 24, 1868.

First ward, (no record.)	
Second ward	538
Third ward	903
Fourth ward	320
Fifth ward	989
Sixth ward	359
Seventh ward	423
Eighth ward	484
Ninth ward	540
Tenth ward	438
Eleventh ward	333
Right bank, (Algiers)	161
Total	5,488

And that the result of these instructions not to recognize the validity of such naturalization was made manifest by the result of the registration of naturalized foreigners in 1870, the registration for Orleans Parish in that year being entirely new and complete.

Table showing the number of persons naturalized between July 4 and October 24, 1868, and July 4 and October 28, 1870, registered in 1870.

Total	1,636	1,175	2,811

As will more fully appear upon pages 6, 7, 8, and 9 of a report to the General Assembly of Louisiana, by the deponent, as State registrar of voters, dated January 31, 1871, a printed copy of which is hereto appended, and marked C. That the reason for such ruling by the deponent in 1870 was, that he knew that these naturalization papers, fraudulently issued, were in the hands of persons inimical to the republican party, with which party he was at that time politically affiliated; that the judges and clerks of courts were in 1868 entirely, and in 1870 with only two exceptions, members of the democratic party, and that he consequently endeavored to prevent the use of said fraudulent naturalization papers by the democratic party; that he repeated the instructions to supervisors of registration in this regard in his pamphlet of instructions in 1872, pages 7 and 8, a printed copy of which is hereunto annexed and marked D; but, upon the fusion of the liberal and democratic parties, deponent, knowing that large numbers of said fraudulent naturalization papers were in the hands of fusionists, and could be used in the interest of the fusion party, revoked his previous instructions, as will appear by circular No. 5, issued by deponent, hereto annexed and marked E, and that the result of such change in his ruling was that a large number of such papers fraudulently issued were used by persons registering in 1872.

Table showing the number of persons naturalized between July 4 and October 24, 1868, and July 4 and October 28, 1872, added to the registry lists in 1872, in each election precinct, parish of Orleans:

Precinct.	1868.	1872.	Total.
First	114	140	254
Second	131	202	333
Third	242	395	637
Fourth	93	212	305
Fifth	187	421	608
Sixth	92	228	320
Seventh	75	183	258

Eleventh	102	118	220
Twelfth	44	56	100
Thirteenth	12	39	51
Fourteenth	20	29	49
Fifteenth	63	64	127
Total	1,622	2,621	4,243

And deponent firmly believes that a large number of the naturalization papers issued in 1872, to the extent of two thousand at least, were improperly so issued.

Deponent further says that he instructed the assistant supervisors of registration for the parish of Orleans that in all cases where persons who had been registered in 1870, in other wards than those in which they resided in 1872, and who should apply for registration on account of change of residence, to require such persons to surrender the certificates of registration of 1870 to them, (the assistant supervisors,) to be by them returned to the office of deponent, State registrar of voters, ostensibly for the purpose of cancellation and erasure on the books, but in reality to be preserved and voted on at the ensuing general election, in the manner hereinafter set forth, and that this course was pursued and persisted in notwithstanding the formal protest of the United States supervisors of election, one of which is hereto annexed and marked F. The certificates of registration so returned deponent caused to be examined and sorted out in his office, and such as were not marked or checked in any way by the United States supervisors of elections were preserved to be voted upon in the wards from which they were originally issued, and only such were returned to the ward officers for cancellation and erasure as were deemed unfit or unsafe for use by repeating voters, as is more fully shown by the affidavit of H. L. Downes, hereto attached and marked G. The number so canceled was to the following extent only:

First precinct	80
Second precinct	43
Third precinct	101
Fourth precinct	79
Fifth precinct, record lost	....
Sixth precinct	115
Seventh precinct	83
Eighth precinct, record lost	....
Ninth precinct	14
Tenth precinct	36
Eleventh precinct	103
Twelfth precinct	11
Thirteenth precinct	....
Fourteenth precinct	12
Fifteenth precinct	2
Total	579

Deponent further says that he also instructed assistant supervisors of registration in the parish of Orleans that whenever they found upon the registry of 1870 names of persons making their marks, (+,) and supposed to be negroes and not known personally to them, to procure two persons, registered voters in their respective wards, to prepare a list of such names and make an affidavit that they "had reason to believe and did believe" that the persons named therein were not residing in the ward on the tenth day preceding the election, and the assistant supervisors were directed to erase from the lists of voters all names put down in said affidavits; and this was done, although the law made it the duty of the board of metropolitan police commissioners to cause a canvass of the city of New Orleans and prescribed that the names of such persons as should be reported by them as "not found" *only* should be stricken from the registry list. Such affidavits were made in form similar to the one hereto annexed and marked H, and resulted in the erasure from the books of the following number of names, supposed to be all colored men, namely:

First ward	182
Second ward	36
Third ward	280
Fourth ward	309
Fifth ward	223
Sixth ward	353
Seventh ward	386
Eighth ward	164
Ninth ward	122
Tenth ward	12
Eleventh ward	40
Twelfth ward	153
Thirteenth ward	51
Fourteenth ward	17
Fifteenth ward	144
Total	2,472

In this connection see affidavit of James Parker, hereto annexed and marked.

That this course was pursued notwithstanding the fact that the board of police commissioners did, in obedience to the provisions of section 50 of the election law, cause a canvass of the city to be made, (as will appear by the document hereto annexed and marked I,) and reported the names of persons "not found," and said names were by said deponent published in the official journal of the city and State, but that no names were erased from the list in consequence of such reports, but solely upon the affidavits above mentioned. Deponent further says that from the outset of registration in 1872 he was in constant communication with the democratic and liberal campaign committees, and conjointly with them instructed the supervisors and assistant supervisors of registration throughout the State verbally, in addition to written or printed instructions from time to time, to facilitate in every manner the registration of all white men known or supposed to be in favor of the fusion candidates, and to throw every possible obstacle in the way of colored applicants for registration, such as requiring them to produce two witnesses to prove their identity and residence, delaying them by unnecessary questions and by other means, and that in compliance with such verbal instructions the assistant supervisors of registration would and did frequently select from the crowd of applicants for registration white men known to them as democrats or fusionists and register them, and then close their offices before the hour prescribed by law, on the pretext that they were summoned to court or some similar excuse, thus leaving the colored men, many of whom could ill afford to lose their time, unregistered. The result of such instructions, and action consequent thereon, was the addition to the registry list of a large excess of whites over colored men, as appears from the following table:

Table showing the number of white and colored voters added to the registration of the parish of Orleans, in each precinct, in 1872.

Ward.	White.	Colored.	Total.
First	1,379	324	1,703
Second	1,672	418	2,090
Third	2,518	882	3,400
Fourth	1,143	407	1,550
Fifth	1,712	597	2,309
Sixth	1,359	474	1,833
Seventh	1,256	638	1,894
Eighth	903	212	1,115
Ninth	1,133	201	1,334
Tenth	1,479	442	1,921
Eleventh	1,278	404	1,682
Twelfth	593	192	785
Thirteenth	311	154	465
Fourteenth	144	125	269
Fifteenth	458	299	757
Grand total	17,338	5,769	23,107

Being entirely out of proportion to the relative number of the two races in the city, as shown by the late census.

Deponent further says that, in order to annoy and hinder colored men in registering, he instructed the assistant supervisors to throw every possible obstacle in the way of the United States supervisors of election and deputy marshals appointed to represent the republican party, such as refusing them access to the books or permission to remain behind the railing, &c., and the assistant supervisors were further instructed that whenever any considerable number of negroes were waiting for registration they should raise some frivolous objection to the action of the United States officials and refuse to submit to the requirements of the enforcement acts, which conduct frequently resulted in the arrest of assistant supervisors and the closing of their offices sometimes for the entire day, large numbers of voters being thus deprived of registration. That these instructions were carried out will appear more fully by the documents annexed and marked K, L, M, N, O, P, Q, R, S, T, and U; and that, in addition to the cases mentioned therein, there were many other arrests of assistant supervisors in consequence of adherence to said instructions, of which deponent has at present no record.

Deponent further says that commissioners of election for the parish of Orleans were all appointed by him from among persons known to be in the interest of the fusion party, and strong partisans thereof; that on the 2d of November he received from S. B. Packard, on behalf the republican State central committee, a communication, hereto annexed and marked V, requesting the appointment of one commissioner at each poll to represent the republican party, but that deponent refused to accede to the request, as will appear by his answer to said Packard, hereto attached and marked W; that the commissioners of election were instructed to facilitate in every possible manner the voting of persons known to be fusionists or who should offer to vote the fusion ticket, and to obstruct and hinder the voting of republicans; that they were instructed that whenever any person offered to vote the fusion ticket they should not question him closely, but should suggest to him the requisite answers, and should decide quickly.

Deponent further says that the polling places throughout the parishes were

selected with the view to the convenience of fusion voters, and were located as remotely and as difficult of access as possible from the neighborhoods chiefly inhabited by colored men; that whenever a poll was located in a colored neighborhood the commissioners were selected from persons notorious for their hostility to colored men, and said commissioners were instructed to hinder and delay all colored electors to the full extent of their power.

Deponent further says that in each ward of the city of New Orleans he employed persons whom he intended to appoint commissioners of election, and whom he did subsequently so appoint, whose instructions were to prepare written lists in advance of the names of all deceased persons, (being voters,) and of the wards in which they resided, whose names had not been erased from the registry lists as prepared by him, the said deponent; that these lists were ordered to be prepared upon paper similar to that provided for keeping the written lists of voters at the election, as required by section 11 of the election law of 1870, and they were instructed to strike from the poll-list in advance the names of such persons, as required by section 12 of the above-quoted law. Said commissioners were also instructed to see that a number of fusion ballots corresponding to the number of names thus erased from the lists were placed in ballot-boxes in their repective polls, so that the written lists and the number of ballots should tally exactly at the counting of the votes; they being left to devise their own mode of carrying out these latter instructions, but, the better to accomplish the object sought, they were instructed to open their polls in advance of the hour designated by law, so that when voters presented themselves at the regular hour it should appear that some votes had already been cast; and these commissioners were also instructed to insert the list previously prepared as aforesaid, sheet by sheet, among the lists kept during the day, making the running numbers correspond; and that these instructions were obeyed to the letter in every instance, and that the names of 855 deceased persons, obtained and prepared as before related, were so erased and fraudulently marked as voted, and the same number of fusion tickets were thus voted at the said election.

Deponent further says that, by a forced and strained interpretation of section 41 of the registration law, he appointed about three thousand persons in the city of New Orleans, who were known to be violent partisans of the fusion party, among them several of bad and dangerous character, to act as "peace officers," to take charge of the ballot-boxes in the city of New Orleans, as further appears from the documents hereto annexed, and marked X, Y, and Z, and that to some of these men were intrusted the certificates of registration of 1870, which had been surrendered by persons who had removed to other wards, and collected and sorted out as hereinbefore described, and also with such fraudulent certificates of registration of 1870 as were in the possession and control of himself, or of persons in the interest of the fusion party, for the purpose of voting thereon, and that said certificates of registration were so voted on, to the knowledge of deponent to the extent of 3,500 votes, as is also shown by the deposition of Walter S. Long, hereto attached and marked AA.

Deponent further says that the supervisors of registration appointed throughout the State were all in the interest of the fusion party, and were selected not only on that account, but because of their supposed willingness and ability to carry the election in favor of that party, by whatever manipulation was possible and necessary under the registration and election laws; that in parishes where there was known to exist a large republican majority, the supervisors were, in most cases, persons sent from New Orleans to the parishes in which they were to act, and men well known for their personal recklessness and unscrupulous character, and familiar with all the machinery used in manipulating elections and the powers conferred upon supervisors of registration by the laws; that said supervisors were instructed, verbally or otherwise, to impede in every possible manner the registration of colored voters, in such ways as closing their offices when large numbers of negroes were waiting for registration, alleging that they were out of blanks when, in truth, they were amply supplied; removing their offices to remote points; notifying only white men of their location, and giving no notice to the negroes; giving notice of the location of the office at one point, and establishing it at another without notice; establishing polling places without due notice, and so as to facilitate the casting of a large fusion vote, and obstructing the voting of republicans, especially of colored men; that to further carry out the before-recited determination to carry the election at any risk, deponent, without authority of law, directed that a new and complete registration should be made in the parishes of East Baton Rouge, West Baton Rouge Saint James, and Tangipahoa, each of which parishes was known to contain a large republican majority, and a large excess of colored over white population, on the pretext that the books of previous registration could not be found, said books having been previously purposely made way with. In this connection deponent refers to the documents hereto attached, and marked, respectively, AB, AC, AD, AE, AF, AG, AH, AI, AK, AL, AM, AN, AO, AP, AQ, AR, AS, AT, AU, AV, AW, AX, and AY, to show both the manner in which the new registration was ordered and inaugurated, and the spirit in which it was carried out. The result of this action will be made evident by a comparison between the registration and election statistics of 1870 and 1872, as shown by the following statement:

Comparative table of statistics of registration and election in the parishes of East Baton Rouge, West Baton Rouge, Saint James, and Tangipahoa, in the years 1870 *and* 1872.

Parish.	Registered in—		Republican vote in—	
	1870.	1872.	1870.	1872.
East Baton Rouge	3,099	3,048	2,440	1,168
West Baton Rouge	1,367	1,256	702	445
Saint James	3,498	2,723	1,873	843
Tangipahoa	1,868	1,530	845	611
Total	9,832	8,557	5,860	3,067

Thus showing a decrease of the number registered in 1872 from that of 1870, in these four parishes, of 1,275, and a falling off of the republican vote of 2,793, for that the fusionists registered their full vote there can be no doubt.

Deponent further says, that in several other parishes in which a large colored majority existed, the opening of the books of registration was delayed by various means for a considerable period after the time prescribed by law, September 2. Thus in Carroll Parish, containing, in 1870, a registered vote of 351 whites to 1,588 colored, the registration was not opened until October 12; Iberville, not until September 17; Saint James, September 12; Natchitoches, September 17; Franklin, September 18; Winn, September 23; Caldwell, September 26; Cameron, September 30; Vernon, September 20.

Deponent further says, that in the parish of Saint Landry, one of the largest and most populous parishes in the State, and in which the supervisor exhibited a desire to afford fair facilities for registration to all classes, he was constantly checked and hindered by directions to move his office to points remote from the districts in which the negro population had a respectable ratio, and to establish his office at places where there were but few negroes or white republicans, as will appear by the documents hereto attached, and marked AZ, BA, BB, BC, BD, BE, BF, BG, BH, BI, BK.

Deponent further states that he instructed the supervisor of registration in the several parishes to annoy and resist the United States supervisor of election in every manner possible, and that in most of the parishes his instructions were carried out and registration thereby greatly delayed, especially in the parish of West Feliciana, a very strong republican parish, as will appear by the documents attached hereto and marked BL, BLL, BM, BN, BO, BP, BQ, BR, BS, BT, and BU, and in regard to other parishes by those papers annexed and marked BV, BW, BX, BY, BZ, and B2.

Deponent further says, that besides the selection of supervisors on account of their political bias, many of them were appointed who were candidates for office on the fusion ticket at the general election of November 4, 1872, for the purpose of stimulating them to extra exertions to cause themselves to be returned, and thus contribute to the general success of the entire fusion ticket; that among the number J. H. Simmons, of Claiborne, was a candidate for police juror; G. H. Guptill, of Cameron, was a candidate for police juror; R. T. Carr, of De Soto, was a candidate for sheriff; G. D. Wells, of Livingston, was a candidate for recorder of his parish; P. E. Lored, supervisor's clerk for Lafourche, was a candidate for justice of the peace; E. L. Pierson, of Natchitoches, was a candidate for the house of representatives; I. G. P. Hoey, of Rapides, was a candidate for the house of representatives; A. Chalaire, of Plaquemines, was a candidate for sheriff; A. Estopenal, of Saint Bernard, was a candidate for sheriff; G. W. Coombs, of Saint John the Baptist, was a candidate for justice of the peace; R. C. White, of Saint Mary, was a candidate for senator; Charles E. Steele, of Tensas, was a candidate for clerk of court, (his brother being a candidate for district attorney;) George L. Stinson, of Winn, was a candidate for recorder; Thomas Duffy, assistant supervisor fourth ward, Orleans, was a candidate for clerk of the fourth district court; Thomas Fernon, same for seventh ward, Orleans, was a candidate for representative; W. C. Kensella, same for ninth ward, Orleans, was a candidate for representative; and C. C. Piper, clerk thirteenth ward, was a candidate for constable seventh justice court; all of whom were elected by their own count, except Thomas Fernon; that the question being raised whether survisors were elegible as candidates, and *vice versa*, deponent received from the chairman of the democratic campaign committee the communication hereto annexed and marked CA, to which he returned the reply hereto annexed and marked CB; and that this discussion was made to encourage supervisors to become candidates, and to return themselves elected.

Deponent further says that he issued from time to time circulars of instructions to supervisors and assistant supervisors of registration for their observance and guidance, copies of which are hereto annexed and marked CC, CD, CE, CF, CG, CH, CI, CK, and, in addition thereto with a view of preventing the United States supervisors of elections and other officials appointed and acting under the enforcement acts of Congress from taking any cognizance whatever of the results of the election for State and parish officers, he issued to all supervisors of registration a confidential letter of instructions, hereto annexed and marked CL, which, for greater security and secrecy, he caused to be sent to them by the hands of trustworthy agents, who were previously instructed by him as to the details necessary to be worked up to accomplish the object aimed at, namely, the success of the fusion ticket at the general election; and that he prepared and supplied to the supervisors and assistant supervisors of registration throughout the State two sets of blank forms of tally-sheets, statements of votes, &c., one set of which was to be used for returns for presidential electors and members of Congress, and the other for State, parish, and municipal officers only, with the intent of manipulating the vote for the latter candidates that those running on the fusion ticket should be returned and declared elected in parishes where the vote showed a majority cast for the republican candidates for Congress and presidential electors.

Deponent further says, that in order more effectually to defeat and counteract the effect of the supervision and inspection of the registration and election by the United States officials, he sent to all supervisors a telegraphic dispatch, a copy of which is hereto attached and marked CM, which instructions deponent believes were faithfully carried out in a majority of the parishes, with the effect of excluding a large republican vote at the election.

Deponent further states, that in the parish of Terre Bonne, containing a large excess of republican voters, the supervisor of registration originally appointed, Mr. C. A. Buford, a resident of the parish, having been taken sick, he was superseded by F. J. Stokes a resident of New Orleans, who was familiar with all the advantages possible to be taken by supervisors of registration under the State laws; that said Stokes upon assuming charge of the office, gave out that he had no blanks, though an ample supply had been furnished to him as is shown by documents hereto attached, and marked CN and CO; and that said Stokes without warrant of law did issue a notice to all registered voters of that parish to come forward and submit their certificates of previous registration to his inspection to be countersigned or vised, else they would not be allowed to vote on them, as is shown by a printed copy of his notice hereto attached and marked CP; and that the said Stokes did in this and many other ways hinder and impede the registration of republican voters; and that said Stokes knowing that a large republican majority had been cast at the election of November 4, 1872, did fail and refuse to make a count of the ballots in three or more boxes, but fled to the city of New Orleans, leaving said boxes uncounted, alleging intimidation, but really with the avowed purpose and design of having the return of said parish thrown out by the returning board, and the republican vote cast consequently excluded from the count, which was done; and furthermore, that the general bearing and demeanor of said Stokes toward republicans was overbearing and arbitrary in the extreme, so much so that it was made a subject of complaint by parties in the fusion interest to the effect that Stokes's manner and action were injuring the party.

Deponent further says, that in the parish of Madison, which always contained a large excess of republican voters, no returns of the election were made according to law, but that the supervisor of registration, W. J. Cahoone, a resident of New Orleans, sent to the parish because of his known skill in the manipulation of elections, knowing that there had been a large republican majority cast at the election, fled the parish at night, and came by rail to New Orleans, bringing with him only fragmental memoranda, such as tally-sheets, check-lists, &c., from which he proceeded to fabricate his returns of the election of that parish; that for that purpose deponent furnished the said Cahoone with the necessary blanks and directed his clerk to instruct and assist the said Cahoone in making out said fictitious returns; that said Cahoone prepared said fraudulent returns in a room on Gravier near Baronne street, in the city of New Orleans, and made oath to them before J. P. Montamat, at that time third justice of the peace for the parish of Orleans, having previously signed the names of the commissioners of election thereto, as having been sworn to before him in the town of Delta, parish of Madison, as supervisor of the parish; that said returns, as delivered to the returning board, did not exhibit the true vote cast in Madison Parish at the election aforesaid, but showed a decrease from the actual republican vote cast of about 550 votes; and that said Cahoone merely returned on said fabricated returns the vote for national and State officers, and omitted therefrom the vote cast for parish officers in order that such officers might be appointed by the governor, and thus prevent the republican candidates, who were in reality elected, from obtaining their offices.

Deponent further says that in the parish of Iberville, also a parish largely republican, the supervisor of registration, J. L. Tharp, a resident of New Orleans, and familiar with the manipulations of elections, finding that a large republican majority had been cast at the election, induced the commissioners of election to refuse to sign the returns, alleging intimidation, for the purpose of having the returns of election from that parish thrown out by the returning board, and the vote of the said parish for all local officers, which was 2,239 republican to 722 fusion, was excluded and thrown out by the said board, as expected and intended by said Tharp.

Deponent further says that in the parish of Saint Martin the supervisor, O. Delahoussaye, jr., knowing that a majority of republican votes had been cast at the election, abandoned his office, leaving one box uncounted, alleging intimidation and armed interference of the negroes, in order to have the vote of that parish excluded by the returning board, as appears by the telegram hereto attached and marked CQ.

Deponent further says that in the parish of Saint James the supervisor originally appointed, D. F. Melville, being suspected by the fusion campaign committee of favoring some of the republican candidates, was summarily removed, and J. C. Golding, a resident of New Orleans, was appointed in his place, and that said Golding, knowing that the republican candidates had received a large majority of the vote cast at the election, failed to finish counting the vote, abandoning three or more of his boxes, and returned to New Orleans with the avowed intent of having the entire vote of the parish thrown out on account of intimidation, and the returning board did so exclude the entire vote of that parish for local officers.

Deponent further states that the consequence of the action of said supervisors of registration in the parishes of Madison, Iberville, Terre Bonne, Saint Martin, and Saint James is shown by a comparison of the number of votes registered and of votes cast in 1870 and 1872, as follows:

Comparative table of statistics of registration and election in 1870 *and* 1872 *in the parishes of Madison, Iberville, Saint Martin, Terre Bonne, and Saint James.*

Parish.	Registered in 1870.	Republican vote in 1870.	Registered in 1872.	Republican vote in 1872, as returned by the Lynch board.	Registered vote in 1872, as returned by the Mitchell board.
Iberville	3,354	1,496	4,036	2,239	2,239
Madison	2,120	1,269	2,725	1,756	1,227
Saint James	2,498	1,873	2,723	1,852	843
Saint Martin	1,481	525	1,961	718	.....
Terre Bonne	3,891	1,422	(*)	1,593	.....
Total	13,344	6,585	11,445	8,158	4,309

* Not reported.

Thus showing that with an increase of the number of registered voters in these parishes (Terre Bonne excepted, from which no reports were made to the deponent by Stokes) of 1,992 voters, the republican vote, as returned by the Lynch board, was 3,849 greater than the same vote as counted in joint session of the fusion Legislature, and that the entire republican vote of two parishes, Saint Martin and Terre Bonne, was not only totally excluded from the returns of the fusion returning board, but was also excluded in the count of the votes for governor and lieutenant-governor in joint session of the fusion Legislature at Odd-Fellows' Hall, all of which was the natural consequence of the action of the supervisors of registration in said parishes, as hereinbefore set forth.

Deponent further states that in the parishes of Rapides and Natchitoches, in which the registration of 1872 was new and complete, in consequence of the formation of the new parishes of Vernon and Red River from their territory, and in both of which the supervisors were fusion candidates for the house of representatives, the registration reported by them was as follows:

Parish.	White.	Colored.	Total.
Rapides	1,719	1,629	3,348
Natchitoches	1,517	1,833	3,350

As appears from the reports of said supervisors hereto annexed, and marked CR, CS, and that the returns of election as made by said supervisors, namely, J. G. P. Hooe and E. L. Pierson, were as follows:

Parish.	Kellogg.	McEnery.
Rapides	1,169	1,960
Natchitoches	550	1,250

Showing manifest frauds in those parishes of about 700 votes in Rapides and of about 1,200 in Natchitoches, (in favor of the fusion ticket,) as it has been well established by the testimony taken before the committee of the United States Senate, and by other ample evidence, that very few colored men voted the fusion ticket. The manner in which these frauds were accomplished is clearly set forth in the report of said Senate committee, pages 306, 307, and 308.

Deponent further states that in the parish of Webster the supervisor of registration, E. C. Bright, in carrying out the instructions received from the deponent, refused to submit to the inspection of the United States supervisors of election, as is shown by the testimony taken before said Senate committee, and to be found on page 12 of their report, and the documents attached hereto and marked CT, CU, the result of which action was that said supervisor of registration made the returns of the election in that parish to the returning board as 977 for McEnery against 622 for Kellogg, while the report of the United States supervisors shows a vote of 377 for McEnery against 824 for Kellogg, a difference against the republican votes cast of 202 votes.

Deponent further says that in the parish of Morehouse, at poll No. 4, at which a republican majority was cast, the box was tampered with before it was counted, so that when it was opened more ballots were found in the box than there were names on the written list required by section 11 of the election law, the intention of the supervisor of registration being to have that box thrown out and have a small fusion majority in the parish for the State ticket of some 83 votes; otherwise there would have been a republican majority in the parish of about the same number.

Deponent further says that in the parish of Jefferson the box from the poll held at Camp Parapet (or Colcord's) was, either while *en route* to the office of the supervisor of registration, at the court-house of said parish, or after having been deposited there, opened or otherwise tampered with and fraudulent fusion ballots deposited therein to the number of about 400, to replace an equal number of republican ballots taken out which were known to have been voted, which is further shown by the documents hereto annexed and marked CV and CW.

Deponent further says that in the parish of Claiborne the supervisor of registration, J. E. Scott, being suspected of complicity with the republican candidates in that parish and congressional district, was removed from office, and one J. H. Simmons appointed to replace him; that said Scott did not turn over to said Simmons the records of his office, but that said Simmons did, nevertheless, hold the election in the parish of Claiborne without books or other formal evidence of his official position, and did conduct the said election without poll-books, poll-lists, or other necessary blanks required by law to be used, as is shown by the documents hereto annexed and marked CVV and CWW.

Deponent further says that in addition to instructing verbally the commissioners of election for the parish of Orleans, he issued for their guidance the circular of instructions hereto annexed and marked CX.

Deponent further says that in the parish of Orleans, besides the fraudulent and duplicated certificates of registration given to persons to be voted on, in the manner already described, duplicate ballot-boxes were provided for the different wards, as follows: Two to the third ward; two to the eleventh ward; one to the thirteenth ward; one to the fourteenth ward; two to the fourth ward; two to the fifth ward; two to the eighth ward; one to the fifteenth ward; labeled and marked ready for use in the same manner as those actually used on the day of the election, (see deposition of W. L. Catlin, hereto attached and marked CZ;) with the intention of having said boxes filled with a large number of fusion ballots and a comparatively small number of republican ballots, and of substituting them for the boxes actually used in cases where there was reason to suspect that said boxes contained a republican majority; and deponent has reason to believe, and does believe, that many, if not all, of said duplicate boxes were used from circumstances which occurred during the night after the election, and during the counting of votes at Mechanics' Institute; and the manifest discrepancy between the fusion vote and the republican vote in the boxes when opened, for instance, in the third ward, poll No. 4, the vote as counted was 384 for McEnery against 96 for Kellogg, and there were 80 more ballots in the box than names on the written list required by section 11 of the registration law; at poll No. 5, same ward, the vote as counted was 438 for McEnery against 72 for Kellogg, a totally disproportionate number for the locality where the poll was held. Both of these boxes were counted by the fusion returning board, although formal protests were filed in each case by the United States supervisors of election.

At poll No. 8, same ward, which was located in a neighborhood densely populated by negroes, the commissioners placed 50 republican ballots in the box after the closing of the polls, so that when counted there were found 365 ballots in the box and but 316 names on the written list, and the vote was for McEnery 24, for Kellogg 338; that in consequence of these discrepancies and the large majority against their ticket, the fusion returning board excluded the count of this box in making their compilation of the returns.

In the eleventh ward, poll No. 1, when counted, showed 311 votes for McEnery against 40 for Kellogg, although this box was located near the levee, where a large number of colored laborers reside; and at poll No. 5, same ward, the vote was for McEnery 306, for Kellogg 106. The count of both these boxes was also protested against by the United States supervisors, and the figures are totally irreconcilable with the political complexion of any portion of that ward.

At poll No. 6, of the same ward, where a majority of republican votes had been cast, additional republican ballots were put in the box to cause a discrepancy between the number of ballots in the box and the number of names on the written list, and thus have the vote of that poll thrown out by the returning board, and that the vote of said box was 115 for McEnery against 200 for Kellogg, and the poll was excluded by the fusion returning board.

In the thirteenth and fourteenth wards circumstances do not point so clearly to the substitution of boxes as in the case of the two wards above cited, but the inference is strong that they were used, as the returns show a large reduction from the republican vote of 1870, and a corresponding or greater increase in the democratic or fusion vote.

In the fourth ward, which was largely republican in 1870, at poll No. 1, located in the immediate vicinity of the sugar-sheds and lower steamboat landing, always thronged with colored laborers, the box contained 315 votes for McEnery against 92 for Kellogg; at poll No. 8, same ward, the vote was for McEnery 189, for Kellogg 94. No notice was given for the location of the last poll until the morning of the election, and it was not found by the United States supervisors, representing the republican party, until noon.

In the fifth ward also heretofore republican by large majorities, poll No. 1, as counted, was 350 for McEnery against 118 for Kellogg; and poll No. 9, same ward, 237 for McEnery against 70 for Kellogg. These polls were situated at the two extremes of the ward, the former near the levee and French market, always thronged by colored men, and the latter in the rear of the ward, where but few persons live, and these principally colored market gardeners.

In the eighth ward the box from poll No. 1, also located near the levee, and in the neighborhood of the old Pontchartrain Railroad depot and the Port market, contained, for McEnery 298, for Kellogg 24. The box from poll No. 4, same ward, contained, for McEnery 353 votes against 89 for Kellogg, and on the close of the polls, when the commissioners of election were bringing the box to Mechanics' Institute, the United States supervisor for the republican party was thrown out of the cab, and there is no doubt that the duplicate box was then substituted for the original one.

Deponent further says that after the receipt of all the ballot-boxes of the parish of Orleans at Mechanics' Institute on the night of November 4, 1872, he was about to proceed to make the count of the votes in the same manner as that in which he had already instructed the supervisors of registration in the country parishes to proceed, namely: "To count the electoral and congressional first, and then to deny to the United States officials the right of supervison and inspection of the count of the ballots for State, parochial, and municipal officers," and had already caused several boxes to be opened and the counting of ballots commenced, when General James Longstreet presented to him the communication hereto attached and marked CY; that on receipt of said demand he at first declined to accede to it, and caused the boxes already opened to be closed and resealed and the counting suspended, but after consultation with prominent members of the fusion party and several interviews with General Longstreet and others representing the republican party, he finally consented to the conditions demanded, but that he did so for two reasons only, namely: First, that he feared armed interference on the part of the United States authorities in the event of refusal or non-compliance with the demands or requests made upon him; and second, that from his knowledge of the manner in which the registration had been conducted and his instructions as before narrated had been carried out, as well as from his knowledge of the number of fraudulent votes cast for the fusion candidates at the election, and the number of prepared boxes substituted for genuine ones, he had so much confidence that the fusion ticket had carried the city by a majority sufficiently large to more than overcome any unforeseen failures in the country parishes, therefore he preferred to submit to the inspection demanded rather than risk a conflict between the State and Federal authorities and jeopardize the success of his party.

Deponent further says that, during the counting of the votes, which was resumed on the morning of November 5, every possible obstruction was thrown in the way of the United States supervisors of election and others representing the republican party; that they were discourteously treated in many instances, every advantage taken of them when absent even momentarily, and whenever they protested against any proceeding they were told that all protests must be made in writing before any attention would be paid to them, and when such written protests were filed they were taken possession of by deponent or his clerks and assistants and destroyed, or otherwise made way with, in order to prevent the returning board from having any knowledge whatever of the filing of such protests, and any action on the part of

said board detrimental to the fusion interests in consequence thereof; that said United States supervisors and other officials were allowed admission into the hall of said institute only upon passes signed by deponent or his chief clerk, and even then were required to exhibit their commissions to the policemen on guard at the door for identification; that admission was freely given to candidates for office upon the fusion ticket, and almost invariably denied to republican candidates, and every other possible studied annoyance offered to republicans and their friends and representatives.

Deponent further says that in counting the votes of the parish of Orleans, assistant supervisors and commissioners of election were instructed, when counting "scratched" tickets, that whenever the name of a fusion candidate was erased and the name of a republican candidate substituted therefor, that unless the name substituted corresponded letter for letter with the name of the republican candidate for the office voted for, as printed on the straight or regular republican ticket, such ballot was not to be credited to the said candidate, but tallied as "scattering;" but whenever they found the name of a republican candidate erased or scratched and the name of a fusion candidate substituted, the manner of proceeding was reversed, and the ballot credited to the fusion candidate without regard to the initials or orthography of the name of such candidate, as printed on the regular fusion ticket, and that these instructions were in the majority of instances thoroughly and systematically carried out.

Deponent further says that from the facts and statistics before related in this deposition, it is shown that the total number of votes gained to the fusion ticket in the parish of Orleans by means of fraudulent manipulation of registration papers, voting on the names of dead men, and by the substitution of duplicate and fraudulent ballot-boxes, amounted to 6,737 votes, divided as follows, namely:

Number of duplicates issued in the names of deceased voters and voted on for the fusion ticket at the election	855
Number of certificates of registration fraudulently issued in 1870, and of certificates of registration surrendered by persons removed from the wards in which they were registered in 1870 and voted upon for the fusion ticket in 1872	3,502
Number of fusion ballots contained in boxes subsituted for the ones actually used at the election, about	3,181
Against republican ballots placed in same boxes to avert suspicion	801
Or a fraudulent majority of fusion votes in said boxes of	2,380
Total given to the fusion party by frauds	6,737

And that the loss in votes to the republican party by fraudulent means was 3,010, divided as follows:

Number of names of colored voters erased from the registry by fraudulent affidavits, without sanction of law	2,472
Number of republican ballots contained in two boxes thrown out by the fusion board on account of stuffing by the commissioners	538
Total loss to the republican party by frauds	3,010

And that in the country parishes, so far as set forth by deponent in the foregoing portions of this instrument, the republican vote was reduced by the fraudulent means hereinbefore narrated to the extent of about 9,314 votes, divided as follows:

Republican votes excluded by fraud in the parishes of East Baton Rouge, West Baton Rouge, Saint James, and Tangipahoa, consequent upon the new registration ordered and made in those parishes	2,793
Republican votes cast but not counted in the parishes of Iberville, Madison, Saint James, Saint Martin, and Terre Bonne, in consequence of the refusal of the supervisors of registration to count the votes, or the abandoning of the boxes by said supervisors, about	3,849
Republican votes cast but not returned as counted in the parishes of Natchitoches and Rapides, about	1,900
Loss to republican vote by fraud and violence in Webster Parish, about	202
Loss to republicans by exclusion of poll 4, in Morehouse Parish, about	170
Loss to republicans by exclusion of Camp Parapet poll, parish of Jefferson, left bank, about	400
Total reduction from the actual republican vote, as shown or estimated above	9,314

Deponent further says that on the night of the 6th of December, 1872, his office of State registrar of voters was forcibly taken possession of by P. B. S. Pinchback, then holding possession of the building used as a State-house, and acting as governor of Louisiana; that in anticipation of such seizure deponent and his clerk and employés had removed from said office such important papers, records, and documents as they had time to remove to a place of security, but in consequence of the sudden manner in which such seizure was made he was forced to leave in the said office numerous papers, records, documents, and memoranda, intelligible only to himself or his clerk, bearing upon the subject of frauds committed at the general election of November 4, 1872, in parishes other than those embraced in this deposition, and also containing details of frauds committed in parishes hereinbefore mentioned, for which the figures are expressed approximately, and he has ascertained that said documents, papers, &c., were accidentally destroyed in the confusion of affairs existing at that time. And deponent believes and avers that were those memoranda, papers, &c., now attainable he could exhibit and show further frauds committed in several parishes not herein asseverated. Deponent further says that he believes, and has reason to believe, and knows that had not the fraudulent practices as above recited been resorted to and made use of by persons in the interest of the fusion party, and for the benefit and advantage of said fusion party as hereinbefore set forth, and had the election returns been properly and fairly made by the supervisors throughout the State, and had the large republican parishes which were thrown out unjustly, unfairly, and for the purpose of reducing the republican vote, been counted, as they should have been, the candidates for presidential electors, members of Congress, and State officers upon the republican national and State ticket would have shown to have been elected by a large majority of the votes cast in the State at the election held on the 4th of November, 1872. And deponent further says that he believes, has reason to believe, and knows that the republican national and State tickets received a considerable majority of the votes actually cast at the election held on the 4th day of November, A. D. 1872, in the State of Louisiana.

B. P. BLANCHARD.

Sworn to and subscribed before me on this 2d of September, 1873; and I hereby certify that the affiant, B. P. Blanchard, was State registrar of voters, &c., during the years 1870, 1871, and 1872.

Witness my hand and seal at the city of New Orleans on the day first above named.

F. A. WOOLFLEY,
United States Commissioner.

[NOTE.—The exhibits referred to are very voluminous and are omitted. They are mostly originals, and are on file with the depositions.]

Sworn statement of Walter Sully Long, chief clerk of the State registrar of voters.

UNITED STATES OF AMERICA, *District of Louisiana:*

Personally appeared before me Walter Sully Long, who, being duly sworn, upon his oath states as follows:

From March, 1872, to January, 1873, I was chief clerk to B. P. Blanchard, then holding the office of State registrar of voters for the State of Louisiana. In that capacity I was in the fullest confidence of my chief, and was aware of all and every transaction of a political nature in the office during the campaign of 1872.

The necessity of carrying the election for the fusion party was frequently a matter of discussion between Blanchard, myself, and others, and a plan of operations was finally adopted at my suggestion, and carried out, as follows:

1. The sexton's monthly returns of burials of persons over the age of twenty-one years were carefully compiled by wards, the registration number ascertained and noted, and a list made of them.

2. A thorough examination was made of the registry books of 1870, in order to ascertain the number of names of fictitious persons registered in that year. In every ward where the persons having control of these false registry papers were acting with the fusion party, these names were used, but in wards where the supervisors of 1870 were not acting in harmony with the fusion party, particular care was taken to prevent their using the fraudulent papers, and to detect any attempt at so doing.

3. A system was established requiring all persons who had been registered as voters in 1870, and who had subsequently removed, to deliver up their papers of that year before receiving certificates of registration in 1872. These were sent to the office of the State registar of voters every week, and were carefully sorted out by myself and others, and all that showed no evidence of having been examined by the United States supervisors of election were set aside to be used by repeaters on election day.

4. During the ten days preceding the election a list was made out by me of the registry numbers and names of the dead, removed, and fictitious persons before described, and given to each assistant supervisor of registration for the city wards.

Two or more persons in each ward, who were to serve as commissioners of election, were set to work making lists of those names upon sheets of paper similar to that designed to be used on the day of election in keeping the written list of voters required by law at each polling place.

5. The poll-lists were printed, containing the entire registration of both 1870 and 1872. No erasures were made until the Saturday and Sunday preceding the election, when the names that could not be made available for the fusion cause were crossed off in black pencil on the lists for certain polls in each ward, and in number to correspond with the written lists of names before alluded to.

These preliminaries having been completed, it was a mere question of manual dexterity on the part of the commissioners of election to get within the box a number of ballots to correspond with the names crossed off in black from the printed lists and written in advance upon the tally-lists.

The estimate of the number of votes required to carry the election was as follows:

For the first ward, 500; second ward, 500; third ward, 1,000; tenth ward, 500; eleventh ward, 500; twelfth ward, 250; thirteenth ward, 100; fourteenth ward, 50; making a total of 3,400 for the up-town wards; and for the fourth ward, 300; fifth ward, 500; sixth ward, 500; seventh ward, 500; eighth ward, 600; ninth ward, 600; fifteenth ward, none; a total of 3,000, and an aggregate of 6,401. To this must be added the number of papers to be voted on by "repeaters," which was estimated at 2,000.

6. The number of fraudulent votes actually counted, and which can be proved by own testimony and that of other persons concerned, is—

In the First ward		281
In the Second ward		243
In the Third ward		803
In the Tenth ward		306
In the Eleventh ward		330
In the Twelfth ward		101
In the Thirteenth ward		98
In the Fourteenth ward		26
Total up town		2,188
In the Fourth ward	186	
In the Fifth ward	155	
In the Sixth ward	336	
In the Seventh ward	...	
In the Eighth ward	393	
In the Ninth ward	244	
In the Fifteenth ward	...	
		1,314
Grand total		3,502

Beyond this the papers given to repeaters were about two thousand. I cannot at present remember the exact number, but I think that fourteen hundred were given out to be used in the first, fourth, and sixth municipal districts, and six hundred to be used in the second and third districts.

I further know and can produce, I believe, the men who acted as commissioners of election at the polls in each ward where fraudulent votes were cast or counted at the general election of November 4, 1872.

WALTER S. LONG.

Sworn to and subscribed before me this 4th day of September, 1873, at New Orleans, Louisiana.

F. A. WOLFLEY,
United States Commissioner.

Sworn statement of Robert H. Chadbourn, supervisor of registration of Saint Charles Parish.

STATE OF LOUISIANA, *City of New Orleans:*

Be it known that on this 4th day of September, A. D. 1873, personally appeared before the undersigned, a United States commissioner in and for the district of Louisiana, duly commissioned and sworn, Robert H. Chadbourn, of the State of Louisiana, who, being first duly sworn, deposes and says: That on or about the 7th day of September, 1872, he was appointed by Governor H. C. Warmoth assistant supervisor of registration in the parish of Saint Charles, in the said State of Louisiana; that on or about the 23d of October a communication was issued by Governor Warmoth to one Boutte as assistant supervisor of registration for Saint Charles in affiant's place; that affiant came to the city of New Orleans to see Governor Warmoth regarding this matter; that Governor Warmoth told him that the fusionists complained that he was a Grant man, and was not sufficiently in the fusion interests, and asked affiant what the vote was in Saint Charles Parish; that affiant told him about 1,500 republican and 300 democratic; that Governor Warmoth then asked him how much he could cut down Kellogg's majority in Saint Charles Parish; that affiant replied he could cut it down several hundred; that Governor Warmoth asked affiant if he could not cut Kellogg down to 300 majority, and affiant replied that he might do so; that Governor Warmoth told affiant he could do what he liked with the parish ticket, but Kellogg must be beaten; that Governor Warmoth promised affiant he would keep him in his position if he would do what the fusionists wanted him to do in making up the returns of the election in Saint Charles parish; that Governor Warmoth in this same conversation told affiant he wished Gibson to be counted in as member of Congress from this district, and Sheldon to be counted out; that on the morning before the election, namely, Sunday, November 3, 1872, affiant was informed that he had been removed as assistant supervisor of registration of the parish of Saint Charles, and he immediately came to the city of New Orleans and had an interview with Governor Warmoth in

a room at the Saint Charles Hotel; that Mr. Gibson was present during part of the interview; that Governor Warmoth said that the fusionists were raising hell with him for keeping affiant as supervisor; that in order to retain his position affiant must make strong pledge to work in the fusion interest in Saint Charles Parish, by carrying the election for them; that affiant said he would do what he could, but that there was a chief constable in the parish who did not work in harmony with him; that Governor Warmoth then gave affiant a blank commission for chief constable, saying affiant could appoint any one he pleased by just inserting his name; that if affiant would work right and cut down the republican majority affiant should be appointed tax-collector of Saint Charles Parish; that Governor Warmoth further said he could control any appointment in McEnery's gift, if he (McEnery) were elected governor; that affiant asked if Governor Warmoth was sure that McEnery would appoint him tax-collector, whereupon Governor Warmoth took affiant to McEnery in the same hotel, and introduced affiant as the gentleman to whom he (Governor Warmoth) had promised the tax-collectorship in Saint Charles Parish in consideration of his services to the fusion party as supervisor of election; that McEnery said it was all right. Affiant further says that he is and has always been a republican, and that he returned Saint Charles Parish as republican by 1,090 majority, which was what the republican party was entitled to in said parish.

ROBERT H. CHADBOURN.

UNITED STATES OF AMERICA, *District of Louisiana:*

On this 4th day of September, A. D. 1873, personally appeared before me Robert H. Chadbourn, who, being first duly sworn, declares that the statements made by him in the foregoing written statement subscribed by him are all true and correct.

WILLIAM GRANT,
United States Commissioner.

Sworn statement of Henry L. Downs, clerk in the office of State registrar.

UNITED STATES OF AMERICA, *District of Louisiana:*

Personally appeared, this the 21st day of June, 1873, before me, the undersigned authority, Henry L. Downs, who, being duly sworn, deposes and says: That during the registration preceding the election of November 4, 1872, he was a clerk in the office of State registrar of voters for the State of Louisiana; that during the two months of registration, certificates and duplicates of registration accumulated in said office; they were collected by the assistant supervisors of registration of the different wards of the city of New Orleans from voters changing their residence from one ward to another, to whom a new certificate would be furnished and the old one forwarded to the office of the State registrar of voters, who was *ex officio* supervisor of registration for the parish of Orleans, or city of New Orleans. These certificates and duplicates accumulated to the number of several thousand, and completely filled a large-sized ballot-box.

Deponent further states that he assisted in assorting them according to wards and availability for use by repeating voters. Some were canceled as being considered unsafe to use, or as having been marked in some manner by the United States supervisors; others, (and the larger portion,) upward of two thousand, were retained intact to be used on the 4th of November, 1872; and deponent further states that it is his belief that they were so used.

HENRY L. DOWNS.

Sworn to and subscribed before me on this 4th day of September, 1873, at New Orleans, Louisiana.

F. A. WOLFLEY,
United States Commissioner.

Sworn statement of Oscar F. Hunsaker, chairman of the fusion Warmoth returning board, and Samuel M. Todd, a member of the same board. (See canvass of fusion returns published in Senate report, pages 81, 82, and 83, purporting to have been signed by Hunsaker and Todd.)

STATE OF LOUISIANA, *City of New Orleans:*

This day personally appeared before me, William Grant, United States commissioner, Samuel M. Todd and Oscar F. Hunsaker, residents of the State of Louisiana, who, being first duly sworn, depose and say: That they were members of the State senate of the State of Louisiana, sitting in the Mechanics' Institute on the 9th day of December, 1872; that afterward, to wit, on or about the 10th day of December, 1872, said deponents left the senate sitting at the Mechanics' Institute, and united with the assemblage known as the McEnery senate, sitting at Lyceum Hall, in the city-hall building of the city of New Orleans; that the senate of the said McEnery assemblage proceeded to organize, and that on or about the date last named said senate proceeded to elect a returning board or board of canvassers, who were to correct, canvass, and compile the returns of election for State officers, presidential electors, &c., under the act approved by H. C. Warmoth, November 20, 1872; and said deponents, to wit, S. M. Todd and O. F. Hunsaker, together with S. M. Thomas, B. R. Forman, and Archibald Mitchell, were elected as said board; that the said board proceeded to organize by the election of O. F. Hunsaker, one of said deponents, president thereof; that the said returns were then produced from trunks and carpet-bags in a small room, on an upper floor of the Saint Charles Hotel; that said returns were brought to said room by one O. D. Bragdon, who appeared to be in possession of the same; that said returns had been opened, compiled, and canvassed before they came into the possession of said deponents and the other members of the board; that although said deponents did carefully examine said returns, and made themselves cognizant of the nature of the same, and the mode and manner in which said returns were compiled, and the result sought to be shown, yet said deponents neither jointly nor separately, nor in any way whatever, signed or authorized any person to sign for them the purported canvass of returns known in the congressional report on Louisiana affairs as the "Forman returns," dated December 11, 1872, by which returns it was made to appear that John McEnery was elected governor, and that the fusion State ticket was elected; neither did they or either of them at any time consent or agree that said purported canvass was or is correct, or authorize the publication of the same in any manner whatsoever; that soon after the meeting of said board of canvassers, above referred to, one of said board, to wit, S. M. Thomas, left the city, and if he ever resigned as a member of said returning board it was not known to either of said deponents, nor did said O. F. Hunsaker, as president of said board, ever at any time receive any indication or any communication of the resignation or withdrawal of said S. M. Thomas from the said board of canvassers; and that neither of said deponents ever met or participated in any canvass of returns after said S. M. Thomas left the city, nor did they ever complete the canvass of said returns, nor did they ever authorize any person or persons to do so for them; said deponents further state that by the pretended canvass of said returns as published without the consent of said deponents, the returns from the following parishes are shown to have been entirely thrown out, to wit, Saint Martin, Iberia, Terre Bonne, Iberville, and Saint James; that the said parishes were and are well known to be largely republican, the two parishes of Saint James and Iberville alone giving more than 2,500 republican majority; that there was no sufficient proof or good reason why said parishes should have been omitted; that had the vote of said parishes been included in the publication of said purported returns, as of right it should have been, it would have added several thousand votes to the republican ticket; and deponents further say that a fair, proper, and correct canvass of said returns would have shown that William P. Kellogg was elected governor of Louisiana at the election held on the 4th of November, 1872, and said deponents verily believe that said William P. Kellogg was elected governor of the State of Louisiana by actual votes cast at said election.

OSCAR F. HUNSAKER.
SAMUEL M. TODD.

UNITED STATES OF AMERICA, *District of Louisiana:*

On the 6th day of September, 1873, personally appeared before me Oscar F. Hunsaker and Samuel M. Todd, known to me as the persons they represent themselves to be, members of the senate of the State of Louisiana, and late members of the so-called fusion board of State canvassers, known and designated in the United States Senate report on Louisiana affairs as the "Forman board," who, being duly sworn, declared on oath that the facts stated by them in the foregoing affidavit are true and correct.

WILLIAM GRANT,
United States Commissioner.

Sworn statement of W. L. Catlin.

UNITED STATES OF AMERICA, *District of Louisiana:*

Personally appeared before me, the undersigned authority, W. L. Catlin, a resident of the city of New Orleans, who, being duly sworn, deposes and says that he was in full sympathy with the so-called fusion party at the last general election of November 4, 1872, in the State of Louisiana; that he was during the same year an intimate personal and business friend of B. P. Blanchard, then State registrar of voters, and, as such, aided him in many ways in carrying out his plans for securing the success of the fusion party at said election, and that, among other things, he aided in the preparation, labeling, and supplying with stationery, &c., the regular ballot-boxes for said election, and attended to their distribution to the various wards; there were in all one hundred and seventeen ballot-boxes used in the city of New Orleans, and that, in addition thereto, he attended to the distribution of sundry additional or duplicate boxes on Sunday night, November 3, for use at the said election, as he understood, to further promote the success of said party by substituting or otherwise, and delivered some of them personally to the parties whom it was intended should use them.

W. L. CATLIN.

Sworn to and subscribed before me this 2d day of September, 1873.

F. A. WOLFLEY,
United States Commissioner.

Sworn statement of John P. Montamat, justice of the peace of New Orleans.

STATE OF LOUISIANA, *City of New Orleans:*

Be it known that, on the 8th day of September, A. D. 1873, personally appeared before me, a United States commissioner in and for the district of Louisiana, John P. Montamat, of the city and State aforesaid, who, being first duly sworn, deposes and says that during the month of November, 1872, and for four years previously he was a justice of the peace in the parish of Orleans; that, in the month aforesaid, and after the election held in this parish for governor and other State and parochial officers, the precise day affiant does not remember, but it was while the votes cast at the said election were being counted at the State-house at the Mechanics' Institute, one Jack Wharton, of said city of New Orleans, came to affiant's house, No. 33 Exchange alley, in the said city, and requested affiant to come with him to a certain place in said city to administer the oath to the supervisor of election in and for the parish of Madison; that said affiant went at the request of said Jack Wharton, who took him to a house situated on Gravier street, near Baronne street; that the entry doors were closed; but at the signal given by said Jack Wharton (being three consecutive and hard raps) the doors were opened; that in a room in said house affiant saw one W. J. Cahoone, who affiant was then and there informed was the supervisor of election for the parish of Madison, appointed by H. C. Warmoth, governor of Louisiana; that said Cahoone told affiant that he wished affiant to swear him to the returns of the late election in said parish; that affiant then saw several persons who were making out tally-lists of the returns of the election for the said parish of Madison; that the tally-lists appeared to be signed in blank by the commissioners of election; that affiant inquired of said Cahoone how it was that he had not prepared a list and returns in the parish where he came from as he was required to do as supervisor; that said Cahoone told affiant he could not count the votes there, as it was a strong republican parish; that he had to run away to New Orleans, because he wanted to count the votes, and return only such as he saw fit, and he was determined to have it his own way, and return only such persons as he thought proper; that affiant finally swore said Cahoone to several tally-lists and returns, and affiant further says that the greater part of the tally-lists were in blank when he swore said Cahoone to them.

JOHN P. MONTAMAT.

UNITED STATES OF AMERICA, *District of Louisiana:*

On this 8th day of September, A. D. 1873, before the undersigned, United States commissioner, personally appeared John P. Montamat, who, being first duly sworn, on oath declares that the statements by him made in the foregoing affidavit, to which his name is subscribed, are true and correct; so help him God.

WILLIAM GRANT,
United States Commissioner.

Sworn statement of Thomas J. M. Carey, chairman of committee on naturalization for fusion party.

NEW ORLEANS, *September* 6, 1873.

Personally appeared before me, William Grant, United States commissioner in and for the district of Louisiana, duly commissioned and qualified, Thomas J. M. Carey, who, after being duly sworn according to law, deposes and says:

I was appointed chairman of the committee on naturalization in the ninth ward of the city of New Orleans by the democratic and fusion parties, and performed the duties assigned me during the last registration and election.

Our instructions were to naturalize all applicants, whether entitled to naturalization by law or not. The fourth and eighth district courts were reported as being favorable to issuing certificates to republicans, and the first, second, and sixth district courts were favorable to democrats and fusionists.

When we would find applicants to occupy the first, second, and sixth district courts, we would then go to the eighth district court and represent ourselves as republicans. Not an applicant was refused in the first, second, and sixth district courts.

The democratic or fusion party furnished the blanks for the first, second, and sixth district courts, and the republicans were reported as having furnished the blanks for the eighth district court. In the first, second, and sixth district courts, if a party was not vouched for by the naturalization committee, the judge would subject him to a rigid examination, and if he succeeded in getting the order of court, the clerk would not issue the certificates of naturalization without being paid for it. When parties were vouched for by the committee of which I was the chairman, few questions were asked by the judges, and no charge was made by the clerks. When we had few applicants we would take the same parties under different assumed names and get certificates of naturalization for them.

When we had doubts of the parties, we would retain the certificates and have them registered. In other cases the parties would be allowed to retain them. Our committee aided all applicants who were favorable to the democratic or fusion ticket, whether they resided in the ninth ward or not. Our instruction also required us to explain to all applicants what questions would be asked them by judges. Our committee were employed in this service about one month and a half previous to the closing of registration, and, to the best of my knowledge and belief, caused at least two thousand fradulent naturalization certificates to be issued, to be voted on on the day of election for the democratic or fusion ticket.

I was appointed commissioner for the poll corner of Moreau and Louisa streets

by B. P. Blanchard, esq., register of voters, on the recommendation of the democratic parish committee and the ninth ward auxiliary club.

On the day previous to the last election, the commissioners of election were ordered to assemble at the Mechanics' Institute, to receive instructions for the day of election. We were instructed to place every impediment in the way of voters who were not fusionists, by making them sign their names, demanding the numbers of their residences, or any other question to annoy them, and lastly to refer them to the officer of the ward supervisor before receiving their ballots, so as to harass and annoy them into abandoning the attempt to vote.

On the day of election the orders of the registrar of voters were faithfully carried out—in fact, the commissioners went further; when parties had the fusion tickets in their hands they were taken without question; when tickets were folded and the applicants not known to be favorable, they would be subjected to an inspection under the plea that the commissioners must be certain that the voter is aware what tickets he is voting. If the folded ticket proved to be republican, we would act as indicated by instructions; if democratic, it would be deposited in the ballot-box. We kept a correct account of every ballot deposited in the box. In cases where we were compelled to receive the vote of a republican, whether white or colored, we would write in large characters on his certificate so as to attract attention if attempt was made to vote a second time; but when a fusionist presented his certificate, the indorsement required by law to be made on certificates would be written in small characters on the corner, so as to facilitate him in repeating.

When a fusionist presented himself a second time on a certificate that had already been voted on, one of the fusion commissioners, who were placed at each poll, would hold the certificate in his hand so as to conceal the former indorsement, and call out to the United States inspectors, two of whom were placed at each polling-place, saying "This is all right." If, as in some cases, they would take the certificate in hand and discover the former indorsement, the ballot would be refused. This however, would be rarely the case.

There were about 600 fraudulent votes polled in the seventh ward, about 600 in the eighth ward, and about 1,200 in the ninth ward, making in all 2,400 fraudulent votes illegally polled on the day of election for the democratic fusion ticket.

THOMAS J. M. CAREY,
Corner of Moreau and Louisa Streets.

Sworn to and subscribed before me September 6, 1873.

WILLIAM GRANT,
United States Commissioner, District of Louisiana.

The following statement shows the number of registered voters, colored and white, at last election, as taken under democratic fusion auspices:

Parish.	White.	Colored.	Total.

* Bossier Parish, population by census of 1870, white, 3,505; colored, 9,170. Per report of United States supervisor the registered vote for 1872 was, white, 587; colored, 1,795.

† Vote of Saint Helena and Livingston Parishes small.

‡ In Orleans Parish it is well known that the registration of white votes for 1872 was excessive. See Blanchard's statement.

§ Terre Bonne Parish, by census of 1870, white, 6,080; colored, 6,172. Report of United States supervisor had registered voters, colored, 1,608; white, 1,201.

STATE OF LOUISIANA,
OFFICE STATE REGISTRAR OF VOTERS,
New Orleans, September 8, 1873.

I hereby certify that the foregoing statement has been carefully compiled by me from the final reports of supervisors of registration in the parishes above named, as made to B. P. Blanchard, State registrar of voters in the year 1872, at which time I was chief clerk to said B. P. Blanchard, and that the original reports and final reports are now on file in the office of State registrar of voters.

WALTER S. LONG,
Clerk State Registrar of Voters.

STATE OF LOUISIANA,
OFFICE STATE REGISTRAR OF VOTERS,
New Orleans, September 8, 1873.

I hereby certify that the original final reports of supervisors of registration, from which the foregoing has been compiled, are on file in this office, and that the compilation is correctly made.

THOMAS LYNNE,
State Registrar of Voters.

NOTE.—The registration of 1870 showed over 23,000 excess of colored voters over white. The above registration was taken under democratic auspices; hence the great reduction. Still, it will be seen giving in 1872 a colored registered vote over the white of 7,735

The republicans were not allowed in New Orleans a single commissioner of election at any poll.

It is not denied that nearly every colored man in the State voted the republican ticket, and that at least eight or ten thousand whites so voted, Grant and Kellogg running as shown, even by fusions returns, far ahead of their ticket.

The supreme court of the State has, since the 1st of January last, rendered no less than fifteen decisions, fully sustaining the legality of the Kellogg government.

The election took place on the first Monday in November. Governor Warmoth issued his proclamation convening the newly elected Legislature in extra session on December 9, 1872, and promulgated the so-called result of the election so far as to give the names of those who it was declared were elected to the General Assembly. Prior to the arrival of the day set for the meeting of the General Assembly, proceedings were instituted in the circuit court of the United States, on the equity side, under the provisions of the enforcement act, to make effectual the votes of several thousand colored voters whose votes had not been counted, and of nearly ten thousand others who had made affidavits that they had been deprived of the right to vote. The election returns in the hands of Warmoth's board were ordered turned over to the board which had been declared to be the only legal board of canvassers by the supreme court of the State, the highest and last court of appeals in the State. The Lynch board thereupon proceeded to make a canvass and declare the result, and the persons declared by this board to be members of the General Assembly convened on the day mentioned in the proclamation of the governor, namely, December 9, 1872, organized by the election of a speaker and officers, and then proceeded to impeach the governor for high crimes and misdemeanors in office. Under the constitution of Louisiana impeachment works suspension from office, and the lieutenant-governor, Pinchback, became acting governor. On the same day those who were by proclamation of Governor Warmoth declared elected members of the General Assembly assembled at the city hall and organized themselves into a Legislature, recognized by Governor Warmoth, who refused to recognize the validity of the proceedings of the body which impeached him. There being then two bodies each claiming to be the General Assembly of the State and two persons claiming to be governor of the State, the President of the United States was called upon during the recess of Congress to recognize one as the legal government of the State. He saw fit to recognize Pinchback as governor of the State, and up to this time that action has been acquiesced in by Congress.

The subsequent history of the Louisiana case is familiar to you, Mr. Speaker, and to us all. In brief, Governor Kellogg, who was inaugurated in January, 1873, as the successor of Acting Governor Pinchback, has administered the affairs of the State since that time. During his seventeen months' administration of the affairs of the State he has had much to contend with. As an evidence of his success I will only refer to his management of the finances of the State. He has by a prompt and thorough administration of the law, securing a uniform collection and honest disposition of the taxes, restored to a great degree the credit of the State by paying promptly the interest on the State debt to January, 1874, and by providing for the interest on the funded debt of the State and by paying all claims against the State contracted during his administration, besides paying large arrears of interest which was past due when he took office, as well as retiring a considerable amount of floating debt contracted by the previous administration.

A great evil which affects a portion of the people of Louisiana today is the wide-spread belief that this Kellogg government is a fraud saddled upon them by Federal power. That this is an honest and sincere belief on the part of numbers of the masses I have good reason to believe. They saw the official announcement of the result of the election, the newspapers which they read (and a majority of the people, unfortunately for themselves, are peculiarly addicted to reading and believing one side alone and entire) stoutly and consistently asserted the same thing. With the exception of the leaders or managers who planned the frauds and their tools who did the dirty work of execution, the people knew but little of the manner in which the registration and election were conducted or the way in which the result that they believed until a very recent date to be the true result was arrived at.

As I said before, having this belief, being burdened with excessive

taxation, heavy and hard to be borne because of the non-development of the country, and being greatly discouraged by a partial failure and the unremuneratively low price of the cotton and sugar crops, the main crops of the State, a most unenviable condition of public feeling has prevailed in the public mind. In addition, the uncertain position of Congress in this matter interpreted to suit the views and designs of the political agitators, has tended to keep alive the hopes of both parties without any certain condition of things being assured. The Senate seated neither Ray nor McMillen in the Forty-second Congress, and have seated neither Pinchback nor McMillen in the Forty-third Congress up to this time.

What Louisiana wants to-day at the hands of Congress is not an invasion of her rights as a sovereign State, not the application of a rule which Congress would hesitate, yes, *would not dare*, to apply to New York or Pennsylvania, but she wants a liberal policy in the matter of internal improvements. She in connection with the great West asks for the free outlet from the Mississippi River to the Gulf either by freeing the mouth of the river from obstructions or by building the Fort Saint Philip Canal. She in common with Missouri, Tennessee, Arkansas, Mississippi, and perhaps Kentucky, asks that, as an act of bare justice, the levees of the Mississippi, constructed and maintained at the cost of millions of dollars, and which were destroyed in great part during the war by the United States Army, and which are washed, abraded, and in many cases destroyed by the increased pressure of the river, caused by its navigation by powerful steamboats, should be taken charge of and maintained at the expense of the nation. That the maintenance of the Mississippi levees is of great benefit to the navigation of the Mississippi River has been clearly demonstrated after years of patient investigation by those United States engineers so eminent in the profession, Generals Humphreys and Abbot, in that able and exhaustive report which has given the authors a world-wide reputation as being among the ablest engineers in the profession, and which has been translated into foreign languages, and is now treated as a text-book by the profession. The measures I speak of are measures of *practical* not *sentimental* relief, measures which will infuse new life into the commerce of the State, will lift New Orleans from the slough of despondency into which she has fallen, (and New Orleans is Louisiana in the same sense that Paris is France,) will infuse new life into the minds and hearts of the agriculturists of the State, who, once more protected from the ravaging inundations of the Mississippi River, will never again feel the dire necessity which compelled them to ask this Government for bread to keep their families from starvation.

With a vigorous enforcement of the laws on the statute-book, for the protection of life and property, without which all inducements to capital and immigration will be futile; with a generous welcome extended to all who may come, granting the largest liberty of political opinion and action to every one, the natural advantages of the South, and especially of Louisiana, will assert themselves and bring about a development of the resources of the South which will be productive of an era of prosperity on a more lasting basis we trust than ever maintained under the old *régime*.

Canal Across the Florida Peninsula.

SPEECH OF HON. S. B. CONOVER,

OF FLORIDA,

IN THE UNITED STATES SENATE,

June 15, 1874.

The Senate having under consideration the resolution submitted by Mr. WINDOM, from the Select Committee on Transportation Routes to the Sea-board, instructing the Committee on Appropriations to report amendments to the river and harbor bill making appropriations for completing the surveys and estimates for each of the improvements recommended by the select committee upon the four routes indicated in their report—

Mr. CONOVER said:

Mr. PRESIDENT: I have submitted an amendment to the bill (H. R. No. 3168) making appropriations for the repair, preservation, and completion of certain public works on rivers and harbors, and for other purposes, which I request may be read, as it is on the Clerk's desk.

The Chief Clerk read the proposed amendment, as follows:

For surveys to ascertain the most eligible line in which a canal across the Isthmus of Florida can be constructed, and whether safe land-locked navigation between the waters of the Mississippi and the Gulf, along the coasts of Alabama, Louisiana, and Florida, and through the latter State to the Atlantic coast, can be had, to estimate the probable cost and practicability of construction of such works and of any artificial water-routes found necessary to provide a safe inland navigation between the Mississippi River and one of the sea-ports on the east coast of Florida, $25,000, or so much thereof as may be necessary, out of any money in the Treasury not otherwise appropriated.

Mr. CONOVER. Mr. President, in submitting this amendment——

Mr. WEST. I rise to inquire whether the Senator can interpose business of that kind when a resolution of a different kind is pending?

Mr. CONOVER. It is not of a different character. I wish to submit some remarks which are appropriate to this amendment and also to the resolution that is now under consideration. I ask the indulgence of the Senate to submit my views on that question.

The PRESIDENT *pro tempore*. This is not offered for adoption at this time, but was read for information.

Mr. WEST. Very well.

Mr. CONOVER. Believing in the present condition of the national finances as well as in proper response to the decided expression of the whole nation in favor of the most rigid economy, that no immediate expenditure of the funds of the nation can reasonably be expected for the actual construction of any new work of internal improvement, but that public expenditure should be confined absolutely to the unavoidable expenses of carrying on the Government and the economical progress of public works already commenced, I do not propose at this time to ask the immediate assistance of the Government in the present construction of that great line of southern inland navigation in which the trans-Alleghany and Gulf States have a common, direct, and engrossing interest.

But in view of the injurious effect caused by the actual inadequacy of transportation upon the agricultural, mechanical, and commercial interests acting upon an area of population and industry equal to one-half the extent of the Union, I have been led to the conviction that such preliminary steps should be immediately taken as shall satisfy the public mind that these important and far-extending interests are receiving from Congress the attention of which they are so well worthy. This much is demanded by the universal sentiment of the people; and so much at least we can afford and shall reasonably be expected to do; and when done, much will have been accomplished to allay existing excitement and quiet public anxiety.

With these views, without a vestige of hostility or opposition to any other of the various schemes of internal improvement that have been presented for consideration, and proffering to them my support in obtaining such measure of governmental assistance by way of a preliminary examination which I ask for that great work of internal improvement entirely national in its character, but in which my own constituents have a special interest, I invite attention to that important and extensive line of inland water communication which when completed will give close and safe navigation between the Mississippi and the Atlantic Ocean, and will pass across the peninsula of Florida. I allude to the canal which is proposed to be constructed from some eastern Atlantic sea-port across the State of Florida and along the border of the States of Alabama, Mississippi, and Louisiana.

The fact that this particular feature of the aggregate of the plans for water communications from the West to the Atlantic was specially intrusted to me seems not only to warrant but to demand that this route should receive my special attention, and that I should give facts and opinions more particularly and at length in regard to this proposed work than to any of the others however intrinsically worthy of attention.

Before entering to any extent into the details of this greatest commercial and economical question of the age, certainly after the completion of the Suez Canal, I wish to premise that this matter of inland communication between the Mississippi and the Atlantic across Florida is by no means a new question in any sense now recently sprung upon the public mind.

Upon the very organization of the Government, when the great Northwest was unknown, when the magnificent valley of the stupendous Father of Waters was an unbroken wilderness far beyond the then anticipated confines of our possible possessions; when Louisiana, Texas, Florida, and Alaska were of little account to and had little connection with the United States, even in the time of Washington and his immediate successors, such was the prescribed vastness of our then occupied national domain; so great were the every-day embarrassments to the business of the country, and such was the difficulty constantly experienced in the administration of the Government and the execution of its laws, that an immediate increase of the facilities of intercommunication between what was then deemed the remote portions of Virginia, the Carolinas, and Georgia, with the then developing Valley of the Ohio, and so far were they removed from the centers of business and trade, that this was deemed to be an object of first-rate national importance.

Much of the time of Congress was given to this subject, and internal improvements were leading topics of thought, of discussion, and of legislation.

National roads to connect the far-removed sections of our common Government first took precedence in public attention; then the improvement of existing rivers, as the Hudson, the Delaware, the James, and the Ohio; then the subject of the digging of artificial channels to connect the various natural water-courses became each in turn leading subjects for discussion in the State and national Legislatures, until the public attention was gradually drawn to the more practicable, the more useful, and the more convenient construction of canals.

At last, in the time of President Jefferson and under the supervision of Albert Gallatin, a very perfect theoretical system of inland communication by means of artificial connections of the numerous harbors, bays, inlets, and lagoons along the Eastern Atlantic coast was conceived and actually begun. And to-day the project to which I desire attention is in fact nothing more and nothing else than a continuation of the plan perfected by Mr. Gallatin and announced to the public during the administration of Mr. Jefferson.

Of this matter Hon. Edward Everett, of Massachusetts, in a letter

to Joseph M. White, then a Delegate from Florida, written in January, 1826, thus speaks:

Permit me to express the hope that we may, before many years elapse, behold in the Florida Canal *the most important link* in that grand chain of communication which was projected by Mr. Madison in 1796, in a national road extending from Wiscasset to Savannah, and matured by Mr. Gallatin, during the administration of Mr. Jefferson, in a series of canals coextensive with the Atlantic coast of the United States.

The subsequent accession of Florida presents a point where an artificial communication will be of more general utility to the country than any one of the Atlantic canals proposed in that admirable report of Mr. Gallatin.

In those early days statesmen of the caliber of Washington, Adams, Madison, Jefferson, Gallatin, and Everett seem to have been strongly impressed with the idea that a government "of all, by all, for the common benefit of all," was not only creditably and properly but constitutionally engaged in the legitimate sphere of their high duties, when engaged in practically promoting the business convenience, the agricultural and commercial prosperity, and the general happiness of the great body of their fellow-citizens.

Not only, as thus shown, was general attention given to the feasibility of water communication across the peninsula of Florida fifty years ago, but long before that time, during the Spanish and English occupation of the Territory of Florida, its twelve hundred miles of dangerous navigation, the perils of shipwreck and tedious voyage around, with the short distance across, had excited much appreciation of the desirableness of a water transit, but the very peculiar topography of the peninsula itself, more than four hundred miles in length and only one hundred miles in width—a vast level region almost destitute of any considerable elevation and abundantly supplied with rivers, lakes, ponds, and marshes, as never failing reservoirs—had created a universal belief in the feasibility of such transit, and the Spanish and English annals are full of governmental grants for the promotion of its construction.

But all these various grants were ineffectual; not so much from any want of appreciation of the necessity of some such transit, or from any special difficulty, topographical or otherwise, in its accomplishment, but perhaps from the peculiar and almost unique history of Florida, whether as a Spanish or an English colony, as a Territory or a State. Her record is briefly epitomized as follows: What a picture it presents! Discovered in 1497, permanently settled in 1565, ceded to Great Britain in 1763, with a population of only six hundred, after a colonial existence of two hundred years, receded to Spain in 1784, sold and ceded to the United States in 1819, receiving a territorial government in 1822, admitted to the Union in 1845, seceding in 1861, and reconstructed in 1868. Sacked and pillaged repeatedly by Europeans, shifting its nationality from time to time, and losing almost its entire population by each change; harassed and plundered by repeated Indian wars from 1816 to 1858, and just as prosperity began to dawn plunged unnecessarily in the useless slaughter of a hopeless rebellion, she has suffered every evil, political and social, that does not involve absolute extinction.

The wonder truly is, not that she has not attained a more flourishing condition, but that she exists at all, and that her boundless forests, her lovely rivers, and her beautiful lakes are not fast locked in the silent embrace of a nerveless desolation.

And at every period of her history and in every stage of her growth she has been continually striving through her representatives to secure some plan of water transportation across her territory, such attention as its national importance fairly seemed to demand.

Early in the present century various different plans of crossing the peninsula were brought to the attention of Congress. In 1826 a survey of a portion of the Territory of Florida was ordered and the results of such survey, which bears intrinsic evidence of its incompleteness, were presented to Congress and appear in the report of the board of internal improvement, which will be found in Document 147, volume 4, Executive Documents of the second session of the Twenty-second Congress, and many of the convincing reasons urging to the prosecution of this great work at the present time were very well understood at that comparatively early period, although the vast increase of the United States territory and the almost incredible expansion of all our commercial and agricultural as well as other special interests have in latter days clothed those reasons with tenfold their former power.

The historian Williams in his view of West Florida, published in 1827, in presenting the importance and necessity of some water transit across Florida, says:

It has been found that the insurance offices of the Atlantic cities during the year 1826 lost by wrecks on the coast of Florida the enormous sum of $500,000; a sum more than sufficient to complete a ship-canal across the peninsula from the Saint Johns to the Suwannee River.

Quoting from a presentation of the subject given in the Macon (Georgia) Messenger of January 14, 1826, Mr. Williams says:

Suppose a ship to leave Liverpool in pursuit of Alabama cotton. She must cross the Atlantic within two to four days' sail of Charleston, Savannah, or Saint Mary's; from thence she must now break away, make the Man-of-war Keys, sail down the dangerous coast of Abaco Island, pass the Hole in the Wall, cross the Bahama Banks, (if not cast away on Abaco,) steering her course through numerous small islands and crags of rock in every direction, for the Double-head Shot Keys; then steer up the north side of Cuba, through piratical waters, sail the extent northwestwardly of the Gulf of Mexico to the Balize, and from thence ascend the rapid current of the Mississippi one hundred and thirty miles to New Orleans. This would comprise a circuitous and dangerous route of at least fifteen or eighteen hundred miles, sailing distance, from the point where she was within two to four days' sail of Charleston, Savannah, or Saint Mary's, where at either port by the facilities of the proposed canal she could obtain her cargo of Alabama cotton and be on her return voyage to Liverpool before she could, upon an average calculation of the winds, arrive at New Orleans; and at the same time, while saving the worst half of her voyage would avoid those dangers which are sometimes incalculable.

January 19, 1826, Mr. Hendricks, from the Senate Select Committee on Roads and Canals, among other things said of the Atlantic and Gulf Canal:

The committee are of opinion, from all the information which they have been able to procure, that this work is not only practicable but much more easily accomplished than former estimates and opinions have supposed, and it is believed that through the lakes, bays, and inlets of this coast a perfect inland navigation may be effected to the Wacussassee Bay (at the mouth of the Suwannee River) a distance of three hundred and fifty miles by cutting at a few points, in all not exceeding twelve miles.

And in this opinion the committee is confirmed by the detailed statement of Delegate White, who says:

From Saint Andrew's Bay, Choctawhatchee, a cut of four miles would give connection from thence westward through Saint Rosa Bay and Sound by Pensacola, to within one-half a mile of Perdido. There is open steam navigation, and a four-mile cut from Perdido to Mobile Bay would give communication to New Orleans.

And the peculiar adaptation of Florida to the construction of extensive lines of artificial water transportation in aid of her natural water-courses is well described in a letter of Mr. White to Mr. Mercer, chairman of the Committee on Roads and Canals, published in 1826, wherein Mr. White says:

From Saint Mary's to Saint John's, within Amelia Island, a safe and convenient route already exists, with the aid of some inconsiderable improvement. A canal of seven miles in length would, by means of Pablo and North Rivers, connect the mouth of the Saint John's with the harbor of Saint Augustine. A second cut of six miles would open communication from Matanzas to Mosquito by means of the intermediate rivers and sounds. From Mosquito to Indian River a passage would be opened by a cut of one-half mile. Thus by three portions of canal, extending in the whole about thirteen and one-half miles, a line of coast of five hundred and eighty-six miles would be opened to a safe and commodious communication from Saint Mary's to Tortugas.

Evidently then the enterprise to which I am endeavoring to awaken deserved attention, namely, the practicability and desirability of the transit of the Atlantic and Gulf Canal across the Florida Peninsula, so far from being a new project in any sense, is one which has attracted much attention from leading minds during at least the last half century.

I now proceed to give in brief the main arguments in favor of a most thorough and complete scientific survey of that portion of the peninsula across which, and within certain not very extensive limits, the Gulf and Atlantic Canal, if feasible at all, must pass, in order to the attainment of certain knowledge as to the fact whether such a canal is practicable at all; and, secondly, if practicable, what is the best route for the line of its construction; and, thirdly, to obtain the most accurate estimate possible of its probable cost of construction.

First, then, I ask attention to the great saving, if such canal be practicable, that will be effected by its construction in the distance to which by existing routes our navigation is subjected, and the proportional economy of time; for in all commercial transactions time is an expensive element. The entire eastern and southern Atlantic and Gulf coast of the United States, extending from Passamaquoddy Bay in Eastern Maine to the mouth of the Rio Grande, is not far from thirty five hundred miles in its reach. The Florida sea and gulf coast combined extend for more than twelve hundred miles, thus constituting a little more than *one-third* of the entire eastern coast. Of this distance a canal from near the mouth of the Suwannee to the harbor of Fernandina or to the Saint John's River, would cut off at least one thousand miles of navigation, or would absolutely shorten the route from New Orleans to New York by one-third of its entire length.

Again, the coasts of Florida being generally shoal, the channels narrow and crooked, and the winds in these latitudes being capricious, while the whole extent of channel abounds in currents of an uncertain and often contrary character, the navigation of the canal would by dispensing with this vexatious and tedious navigation save very considerable time in the whole passage. This saving of time would amount to a saving of from five to ten days, and may safely be put at seven days. This is manifestly a consideration of great importance. I have alluded in a general way to the dangerous character of the navigation of the waters adjacent to the Atlantic coast of Florida, where the narrowness of the channel from the Tortugas on the south to Saint Mary's on the east compels all vessels passing north from the West Indies, the Gulf, or South American northerly ports to hug the shore with comparative closeness.

But with reference to this point I will borrow a clear and graphic statement from an author whose reputation in all marine matters lends more than usual authoritativeness to his statements in regard to navigation. Commodore Maury, in his preliminary report of the physical survey of Virginia, published in the interest of the Virginia canal, in speaking of the dangers of navigation of the coast of Florida, says:

These are what in navigation are called hidden dangers; they lurk there, in the shape of insidious currents, sunken rocks, reefs, and shoals. There is nothing on the surface to mark their existence. The water looks open and the way all clear; but an error in the reckoning of a minute, or even less, is often fatal to the ship and cargo, if not to the crew. To sailing-vessels the calms that prevail there at certain seasons increases the danger, for in them vessels are often silently swept by the currents and stranded with total loss. Added to these are the storms and hurricanes which, alternating with the most vexatious calms, rage from the middle of July to the middle of March. During these eight months the dangers increase and the rates of insurance go up; for the dangers to a vessel are greatly aggravated when she is overtaken by a storm in this crooked and narrow passage-way.

Scenes the most awfully grand and sublime that are known at sea, sometimes take place in the hurricanes or tornadoes that prevail there. In them the waters are piled up, the Gulf Stream is turned back or forced over reefs into new channels with a violence that no skill can countervail, no ship withstand.

Among the annals of that navigation nautical records tell of the Sedburg, an English vessel which was caught in one of these hurricanes. The waters of the Gulf Stream were backed up and piled to an enormous height. The scene of roaring waves and furious currents beggared description. She let go her anchors, thinking she had found smooth waters and a place of safety; but when the gale abated and the sea retired, she found herself high and dry, and her cables and anchors entangled among the tree-tops on Elliot's Key.

But we are not confined in our endeavor to set forth the importance of some practicable escape from this dangerous navigation to matters of mere theory or description, however forcible. The records of the admiralty courts at Key West unfold an account of judicial and historical accuracy of vastly more weight and importance.

I herewith append an authoritative statement, taken from the admiralty records of Key West, of the number and value of the vessels that within the last twenty-five years have been wrecked on the coast of Florida, and almost all on the eastern and southern coast, with the amounts paid for salvage in each case, and the total expenses in each instance, as adjudicated by the court:

Total number of vessels brought into the port of Key West in distress, with their values, amount of salvage, and total expense thereon, from 1848 *to* 1872.

Year.	Number.	Values.	Salvage.	Total expense.
1848	41	$1,282,000 00	$125,000 00	$200,060 00
1849	46	1,305,000 00	127,870 00	219,160 00
1850	30	929,000 00	122,831 00	200,860 00
1851	34	950,000 00	75,850 00	165,000 00
1852	23	675,000 00	80,112 00	163,000 00
1853	57	1,973,000 00	174,350 00	330,000 00
1854	59	2,469,600 00	82,400 00	211,808 00
1855	80	2,844,077 00	100,495 00	190,910 00
1856	71	2,000,000 00	163,117 00	262,664 00
1857	59	1,837,950 00	101,890 00	181,772 00
1858	52	2,692,000 00	142,182 00	247,557 00
1859	66	3,035,400 00	198,404 00	293,497 00
1860	16	320,195 00	57,666 00	111,804 00
1861	9	200,911 00	29,211 00	43,561 00
1862	7	42,894 00	16,248 00	24,341 00
1863	3	25,725 00	12,938 00	17,299 00
1864	2	10,246 00	5,269 00	6,714 00
1865	23	1,835,353 00	254,694 00	336,082 00
1866	10	317,688 00	47,578 00	78,133 00
1867	16	1,017,466 00	92,174 00	129,705 00
1868	6	249,880 00	35,525 00	53,657 00
1869	11	180,662 00	24,376 00	41,236 00
1870	3	3,696 00	28,930 00	1,533 00
1871	8	363,632 00	86,529 00	123,704 00
1872	12	351,632 00	42,649 00	57,975 00
Totals	746	27,736,027 00	1,228,298 00	3,701,031 00

From these figures we derive the startling conclusion that upon the shores of a single State of the Union, and this coast lying midway between the important ports of New York and New Orleans and in the necessary path of the Gulf, Mississippi, and South American commerce, the vessels saved from total wreck and adjudicated in the courts of Key West in one quarter of a century were 746 in number, having a total value of nearly $28,000,000, upon which was paid for salvage alone $1,228,298, and the total expense of adjudicating damages was $3,701,031. To this astonishing aggregate of actual loss, as adjudicated in the courts, must be added an unascertained amount for compensation for the immense losses by total wrecks of which no knowledge comes to the legal tribunals. What this aggregate for the twenty-five years would amount to I have no means of ascertaining with any exactness. But this I know, that in 1865 and again in 1870 or 1871 occurred storms of great severity and corresponding destructiveness, and in each of these cases, while the loss of many lives is known, the amount of pecuniary loss I have not been able to fix with precision; but I am confident that in each of these storms the losses of property by total wreck exceeded $3,000,000, giving for two years alone an aggregate loss of $6,000,000.

Here, then, to go no further, ample reason is certainly given for the exertion of every effort which science and skill can expend in the discovery and application of some practicable means of avoiding so enormous and continual and perhaps unnecessary risk of life and property.

But I wish to bring to your attention a consideration of no small consequence derived from an unnecessarily incurred risk of insurance. The expense which is heaped upon all the Gulf and South American commerce which passes around the Florida Keys, encountering the multiform, peculiar, and well-known dangers of its tortuous and uncertain channel by the added cost of insurance, is an item of no mean consideration, though of course ranking far lower in importance than the unnecessary peril of life there incurred. Still, in every such discussion, basing itself largely upon considerations of commercial convenience and economy, all arguments drawn from reliable sources on economical and pecuniary grounds will always have much weight. Hence in all commercial transactions, where water transportation enters as an element, the rates of insurance paid by the merchant upon his goods affect equally himself and the consumer directly, and the amount of insurance upon the vessel itself affects the cost of transportation as fully but not quite as directly. The usual rates of insurance between the sea-ports upon the Atlantic coast and the European ports may be stated to be ⅝ of 1 per cent. in steam-vessels, and 2 per cent. in sailing vessels. But if such vessel on starting from Liverpool should change her destination to the port of New Orleans, immediately an addition is made to her rate of insurance of from ⅝ to ¼ *of* 1 *per cent.*

The almost infinitesimal character of the terms thus used to indicate the cost of insurance has a tendency to lead the mind by means of the comparatively small amount required for a single venture away from the gigantic proportions assumed by the simple matter of insurance when applied to the workings of commerce upon a large scale.

The added cost of insurance is given by Lieutenant Smith in his report upon the transit across the peninsula to Congress at ⅝ of 1 per cent. This report is contained in Senate Executive Document No. 76, second session of the Twenty-third Congress.

During the year 1872 Mr. J. K. Roberts, of New York, in a discussion of the advantages of the Florida transit route by barges from New Orleans to Cedar Keys and thence across the peninsula to Fernandina, was assured by the board of underwriters of the city of New Orleans that they would place the rates of insurance by the Florida transit route "¼ of 1 per cent. lower than by the Florida Strait."

EXTENT OF NAVIGATION AND VALUE OF VESSELS AND MERCHANDISE PASSING ANNUALLY AROUND THE FLORIDA KEYS.

In order now to reach anything like adequate appreciation of the actual bearing of the considerations which I have adduced from the unnecessary risk of loss by shipwreck, the loss of time, and the expense of insurance, by the tedious and dangerous route around the Keys, and to measure accurately the true weight that should be given to them, a glance at the magnitude of this circumnavigatory commerce is indispensable.

In Mr. Andrews's report upon the colonial and lake trade of the United States, transmitted to the Senate and published by its order in 1852, will be found a letter addressed to him by W. L. Hodge, then Assistant Secretary of the Treasury, which furnishes full information upon this subject and which I herewith submit.

WASHINGTON, 1852.

MY DEAR SIR: In reply to your inquiry as to the probable annual value of the trade of the American ports in the Gulf of Mexico, I do not exactly understand whether you mean to confine it merely to the value of the merchandise which arrives at and leaves those ports, or to include likewise the value of the shipping employed in the transportation of that merchandise.

In connection with the question of a ship-canal through Florida, the Senate, in the late session of Congress, requested information from the Treasury Department as to the probable value of the property which annually passed round Cape Florida, which the Department, in its answer to the resolution, estimated at $250,000,000. This estimate seems large and was generally so considered at the time, but I am, on further reflection, now convinced that it was an underestimate instead of an overestimate, and I will give herewith the data on which this opinion is founded.

The great difficulty in arriving at the true value of the Gulf trade is the impossibility of ascertaining the amount of the coasting trade from the Atlantic ports, as no record is furnished to the custom-house of even the kind of goods shipped coastwise; and of course nothing even approaching to the correct value can be ascertained from the outward manifests. Perhaps the most valuable cargoes shipped in American ports are those by the packet-ships to New Orleans from Boston, New York, and Philadelphia, and I have no doubt that some single cargoes are not unfrequently worth $100,000,000, and that half a million is a very common value for them.

Some four years since one of these Boston packets—a vessel of 1,000 tons—was missing and considerable anxiety was felt for her safety, and from the inquiries made as to the amount of insurance effected on her cargo, and the ascertained value of some of the heaviest invoices by her, it was pretty well ascertained that her cargo was worth $700,000.

When it is recollected that the entire supplies of the States on the Lower Mississippi, and a large portion of those for the States higher up that river and its tributaries, are received through that city, the magnitude of them may to some extent be appreciated. The value of goods arriving at New Orleans from the American Atlantic ports I should think would at a low estimate be at least $50,000,000; but, in order to be perfectly on the safe side in this respect, I will estimate at that sum all the supplies thus received at all the Gulf ports, including New Orleans, Mobile, Pensacola, Saint Mark's, Apalachicola, and all the ports of Texas.

The value of foreign importations at New Orleans is about fifteen million dollars, and for the other ports of the Gulf not less than five millions more.

Very correct statistical details are kept at New Orleans of all the receipts of produce from the interior, with the quantity of each, and an annual statement is published with the estimated value, based upon the current prices of the year, approximating probably as near or more near to the true value than such statements usually do. These statements show that the value of this produce annually received at New Orleans from the interior ranges from ninety to ninety five million dollars, and allowing ten millions for the local consumption, it would leave eighty to eighty-five million dollars as the annual value of the export trade of New Orleans.

Mobile exports little but cotton, the average receipts of which there is about 500,000 bales, worth at present prices about $22,000,000. The exports, including cotton, from the ports of Florida and those from Texas, may in the aggregate be safely placed at ten millions more, showing a total of exports from the American ports on the Gulf of about $115,000,000.

Upon the above data, then, the statement of the merchandise entering and leaving the American ports of the Gulf will be as follows:

Foreign imports	$20,000,000
Coastwise imports	50,000,000
Exports	115,000,000
Making a total of	185,000,000

as the aggregate value of the merchandise shipped and received at those ports.

I have not at hand for a reference the record of shipping arriving from the ocean at New Orleans annually, but it exceeds 600,000 tons, and at all the other ports of the Gulf it would probably be 300,000 tons more, making an aggregate of 900,000

tons, which at the value of $75 per ton would be $67,500,000; and as these vessels make the voyage *in and out*, the entire value of the *tonnage* which annually passes Cape Florida would be $135,000,000; which, added to the preceding amount of merchandise, would make a grand aggregate of $325,000,000 of property which annually passes to and from the American ports of the Gulf of Mexico. Although the estimate is made up in round sums, without going very particularly into detail, I have no doubt it is considerably below the real amount.

The value of the *exports* from the ports of the Gulf could, with little care and attention, be very correctly ascertained, for they principally consist of articles of domestic produce, such as cotton, sugar, molasses, flour, lard, bacon, &c., the *quantities* of which can always be ascertained from the outward manifests; and the *prices* are a matter of record, from day to day throughout the year, in the daily publications of the public journals and price-currents. The custom-house record exhibits, of course, the value of foreign importations; and the only difficulty in arriving at the correct value of the trade of the Gulf would be in the coastwise shipments from the Atlantic ports. Nor do I see how this can be correctly ascertained, and it will have to remain as a matter of conjecture, though in placing it as I have done in this communication, at $50,000,000, I feel well assured it is considerably below the actual value.

I regret extremely that under the heavy pressure of official duties, particularly at this time, I cannot devote more time to the subject of your injury and am obliged to give you such a hastily prepared and crude communication.

Very truly and sincerely,

WILLIAM L. HODGE.

ISRAEL DE WOLFE ANDREWS, Esq.

And in this connection, as well as from its bearing upon the topics of saving in the expense of insurance, and in the time that will be effected in substituting the transit across the peninsula for the protracted voyage around it with all its various dangers, I desire to quote further from the report of Lieutenant M. L. Smith, (Executive Document 76, second session Twenty-second Congress,) where he says in concluding his report:

A few remarks upon the bearing a transit across the peninsula will have upon the Gulf trade and interest which center there may not be out of place.

First. If the Gulf of Mexico is appropriately considered a common expansion merely of the various rivers flowing into it, then its entrance may with evident propriety be considered the common bar of those rivers, particularly so as, like other bars, it is the point of danger to vessels wishing to enter or leave. A general description of the passage around the southern point of Florida will of itself serve to make its dangerous character evident, to wit: Comparatively narrow and some five hundred miles in length, coasts low, it is lined with hidden reefs extending many miles from shore; has a rapid current through it, constantly tending to carry vessels out of their course, and when so carried on account of the narrowness of the channel they are usually first warned of this danger by striking some reef; added to this it is subject to those tornadoes which, originating periodically in the West Indies, blow with such violence and expend themselves after sweeping up the Atlantic coast.

But this is more forcibly told in the loss of life and numerous shipwrecks annually occurring on those keys, some accounts of which are constantly meeting the eye. Trade, which hedges itself round with as many securities as in the nature of things is possible, has sought to overcome these dangers in the only way known to it, namely, by insurance, and it is the tax by insurance due to this dangerous navigation that will be first noticed.

The subject can be simply stated thus: To insure for a Gulf port costs ⅜ of 1 per cent. more on an average than for an Atlantic port. In a report made by Mr. Hodge, Acting Secretary of the Treasury, June 12, 1832, in answer to a resolution of the Senate, the commerce passing the Straits of Florida was estimated to exceed $250,000,000 per annum. Reflecting more upon the subject, Mr. Hodge subsequently concluded that it amounted to at least three hundred and twenty millions per annum.

It is proper to quote his own words in order to show why no precise amount could be given: "The Department cannot arrive at the correct amount of the commerce of the Straits of Florida, as it would be impossible to ascertain the value of the immense shipments coastwise to New Orleans, for the supply of the States bordering on the Mississippi and its tributaries, besides those to the ports of Florida, Alabama, and Texas." In order not to give amounts, which can possibly be thought exaggerated, the lowest value mentioned, to wit, two hundred and fifty millions, will be taken as the proper one; vessels of all classes will, when taken together, average in value about eight-tenths of their cargoes; hence to carry on a commerce worth two hundred and fifty millions will require shipping to the value of $200,000,000 to pass in and out of the Gulf yearly, making the total interest engaged in that commerce four hundred and fifty millions per annum, and this is the amount upon which the increased insurance is paid. Three-eighths of 1 per cent. upon this amount is $1,687,500, and is a loss borne by those producers whose outlet to market is by way of the Florida Keys. Losses by shipwreck are not taken into the above account, since being covered by insurance, to do so would make them enter thrice into the calculation.

Second. The gain in time by a transit across the peninsula may be stated as being about five days from New Orleans to a point equally distant with Saint Mary's from New York, and the gain will be greater as the point of departure is nearer the Gulf terminus. Taking the amount found above, namely, $450,000,000, and allowing 6 per cent. on it, which is not above the rate business men pay for money and somewhat below the profits expected to be realized; also, give one hundred and twenty days to every vessel in which to load, deliver her cargo, and return to her port again, and there is found $1,125,000 paid yearly for lost time. The amount is certainly large, yet that it is a fair method of making out such a loss seems confirmed from this consideration, that trade, without an exception, settles down into the shortest channels of communication, and unless the transshipments are numerous to prove that any particular line offers an advantage to trade, it is sufficient to show a gain in time. The amounts above stated, it is argued, the transit across the peninsula will save yearly. The commerce of the Gulf is destined, even through causes at present existing, to be so much increased that amounts named in connection with it, moderate now, must become very great after a lapse of years; hence there would be a propriety in going into minute details respecting it, confident that large sums are being dealt with, but it would require data not at present at hand.

Third. By means of the transit there can be a more rapid transmission of the mails between the North and New Orleans, hence to all points further West and bordering the Gulf. The time, according to the present rates of traveling, would be as follows: From New York to Saint Mary's, sixty hours; Saint Mary's to Cedar Keys, four hours; Cedar Keys to New Orleans, thirty-six hours.

Although this fact, disconnected from others, would not authorize the construction of a transit, still, once constructed, it will be a rather important circumstance.

Fourth. Another consideration is mentioned, and it may be more important than all others, according as circumstances eventuate.

Florida, by projecting so far south, makes the great and salient point in our coast, and like other similar points is the one most exposed. The fact that so large a proportion of our commerce must pass around it, and at the same time close to a foreign shore, has for years created much solicitude as to its safety in time of war.

The first and most obvious course pursued to give it security has been fortifying favorable points, such as Key West and Tortugas, making them suitable as depots and places of rendezvous for the Navy, or as harbors of refuge for unprotected merchantmen.

A second course has been an endeavor to acquire the ownership of this contiguous foreign shore, and thus have the channel in and out of the Gulf tributary to ourselves alone.

Without starting the question of how far this last would accomplish the desired object, the fact stands prominently before us, that notwithstanding diplomacy and conferences one coast with its harbors and fortifications is ours, the adjacent one, with equally good harbors and strong fortifications, is not ours, and that over the intervening passage we would not necessarily have, in time of war, more control than during the past year one of the belligerent European powers has had over the Baltic and Black Seas; further, that in the event of hostilities, an entire interruption of our commercial communications by water with the Gulf might take place.

It is well known that the channel between the West Indies and Florida is readily susceptible of being guarded by a vigilant enemy, who, stationed there, would look with equal facility into the Atlantic or Gulf, and that a vessel bound either way could be watched from hour to hour for several hundred miles.

As important as is the Gulf commerce, so important in time of hostilities would probably be another line of communication, which would enable this commerce to be carried on safely, and at no increased expense; and it is believed that in great part a transit as proposed would accomplish this. Let the extent of the communication thus connected and the facilities for trade afforded be briefly considered. A boat starting from New York could by either the Raritan or Morris Canal pass into the Delaware; through the Delaware and Chesapeake Canal into the Chesapeake; by the Dismal Swamp Canal into Albermarle; thence by the inland navigation along the coast of North Carolina, South Carolina, and Georgia, to Saint Mary's; crossing Florida to Cedar Keys, and following the coast westward, there is a succession of shoals, reefs, and sea islands, extending to lake Pontchartrain, forming west of Florida an inland navigation similar in character to the east of it. All communications with this line, from sea, are mainly fortified at present, and as it leaves the Atlantic at Saint Mary's, avoiding entirely the salient point made by the peninsula, it may be said, comparing it with the navigation around into the Gulf, to be securely fortified and safe from interruption by an enemy.

The United States presents the singular feature of having what may be termed river navigation almost encircling it, as follows: Starting from Saint Mary's we go to New York as already described; then pass into the northern lakes by the Erie Canal; from the lakes by various canals into the Ohio or Mississippi and to New Orleans; thence to Cedar Keys. Along this navigation is known to pass a large proportion of American produce, and on it is situated nearly every important city in the Union; and consequently that the transit being the connecting link which completes the great circle, and a portion of this grand thoroughfare of trade is at once demonstrated to be connected by its termini with the greatest producing areas of our country, as well as with every export city on the Atlantic and Gulf coast; this, too, by water, the cheapest of all kinds of communication.

It is not sufficient in an apposite view to state that there are other lines more interior and still less exposed that are available if ocean communication is interrupted.

This is true in theory, but is thought not to be so in point of fact. To illustrate by a single example, within the last five or six years the article of tobacco has been attempted to be brought to Baltimore from Saint Louis by river and railroad. The attempt was abandoned for the reason that the value of the article was consumed by the freight.

To force trade along any but natural channels is virtually to suppress it, and if in the the case of hostilities, as supposed, the interior lines of railroad only existed, doubtless the great staple articles of Gulf trade, which happen to be bulky, namely, cotton, sugar, and molasses, would be detained from market, or find their way there at expenses so greatly exaggerated as would be equivalent to a detention.

In conclusion, the object of the preceding remarks has been to show the necessity as well as utility of a direct connection between the Atlantic and Gulf, across Florida, from—

First. The heavy increased insurance the dangerous navigation through the Straits of Florida imposes on the Gulf trade.

Second. The loss of time, consequently the loss of interest on capital employed in that trade.

Third. The increased mail facilities that would be opened.

Fourth. The security that would be given to our commerce, particularly that coming under the head of coasting trade, during a period of hostilities.

* * * * * * *

M. L. SMITH,
First Lieutenant Topographical Engineers.

To Colonel J. J. ABERT,
Chief Topographical Engineers, Washington, D. C.

If such or similar results are deducible from careful official estimates and professional opinions from credible sources as far back as twenty-five years ago, what conclusions would be arrived at now were the same estimates or statistics of our present situation at hand? Not having these official statements at my control for use at this time, I submit that an application of the ratio of the increase of commerce for the preceding quarter of a century would be by no means unreasonable, but entirely fair as applied to the succeeding twenty-five years. This would give the value of vessels and goods annually passing the Florida Keys at double the amount estimated in 1852, and place the aggregate at $900,000,000 annually.

Does this seem to any to be an overestimate? Then let me direct attention to some of the statistics of trade and commerce which the recent discussion of cheap transportation has elicited.

The following is one of the best authenticated of the estimates of the Mississippi and Gulf trade, furnished to a recent national commercial convention:

The surface drained by the Mississippi exceeds 750,000 square miles, without regarding the fact that the column of States on the eastern slope and in the gorges of the Rocky Mountains will be compelled to draw their tropical commerce through the Mississippi outlet. The population of this area numbers little less than seventeen millions, upon an average of about twenty to the square mile of the settled portion, a density capable of almost indefinite expansion. To the normal rate of natural increase may be added a large accession of foreign immigrants. This region exhibited in 1869 the following statement of food production:

	Bushels.
Corn, Indian	650,000,000
Wheat	180,000,000
Rye	4,000,000
Oats	170,000,000
Barley	14,000,000
Buckwheat	5,000,000
Potatoes	40,000,000
Total	1,063,000,000

Of animal food there were received in 1869, at—

	Beef cattle.
Chicago	403,592
Saint Louis	222,000
Cincinnati, (estimated)	150,000
Louisville, (estimated)	75,000
New Orleans, (estimated)	100,000
New York, from Western States	186,000
Total	1,136,152
Hogs packed in the western cities, 1869–'70, (estimated)	4,000,000

This immense product, it must be remembered, is the surplus of live stock held in the country. These are computations of the leading articles of production. They omit wholly the manufactures, whose value may be inferred from the annual productions of the four chief cities of the valley:

Saint Louis	$150,000,000
Cincinnati	125,000,000
Chicago, (estimated)	100,000,000
Louisville, (estimated)	75,000,000
Total	450,000,000

The immense provision product will be combined with the coal, iron, lead, copper, salt, lumber, cotton, and innumerable other commodities which are or may be developed, so that if the export of provisions shall decline, their value will be more than made good in the exportable commodities into which they will have been transformed. Confining ourselves, however, to ascertain products which require an improved outlet to the ocean, we offer the following estimate of productions (exported and exportable) of the Mississippi Valley:

	Tons.
Cotton	350,000
Tobacco	36,000
Grain	2,000,000
Other provisions	120,000
Total	2,606,000

I proceed now, on the basis furnished by the statements and estimates already given, to endeavor to ascertain the saving of a pecuniary nature that would be effected by the construction of a water transit across the peninsula, if the same be practicable.

Suppose, as is claimed to be plainly reasonable, the amount and value of the shipping and commerce annually passing around the Florida capes to have increased in twenty-five years since 1852 as much as in the preceding twenty-five years, and thus to have doubled; then its value would amount to $900,000,000.

The saving on insurance of one-half of 1 per cent., as announced by the New Orleans underwriters to Mr. Roberts, would in each year amount to $4,500,000. Assuming the calculation of Lieutenant Smith and Commodore Maury to be correct, the loss of time saved at 6 per cent. would amount to $2,250,000 annually, or in these two items alone the annual saving would amount to $6,750,000. To these items of loss are to be added the losses on western and northwestern produce, which occur, first, from the inadequacy of existing facilities of transportation and the consequently enhanced cost of the produce actually transported; and second, the entire loss on that part of the products of the more remote region which become to a great extent valueless from stagnating in the hands of producers from the absence of transportation facilities.

The entire strangeness of the state of affairs in these fruitful yet remote regions at certain times is most forcibly yet truthfully represented by the well-known fact that more than once within recent years it has happened that while the hunger-stricken inhabitants of some portion of the world were suffering from the terrible torments of famine, and simultaneously the commercial marine of the world has been prostrated for the want of paying freights, the inhabitants of the remote West and Northwest have actually been using for fuel the very corn for the want of which other thousands have been starving.

We are all aware that during the excitement of recent and pending discussions of the importance to western producers of an increase in the facilities for transportation, and the reduction of its expense, the saying has so often been repeated as to have passed into a proverb, that of every three bushels of grain raised in the far West "it takes two of them to place the third in market."

And whatever allowance may be made for the suspected *hyperbole* of stating the fact in this way, the facts patent to the observation or knowledge of all indicate a most serious annual loss to western producers and manufacturers from the inadequacy of existing and available transportation. And a statement in general of this loss, as amounting on an average to one-fifth or 20 per cent. of the actual market value of the various articles produced, would be universally and deservedly recognized as coming entirely within the bounds of truth.

But here again, although to a banker or stock-dealer, or merchant, an impending loss on pending transactions would be startling in the extreme, still many do not fully gather the full force of a statement of 20 per cent. loss on the agricultural and manufacturing products of this section of the country.

And, as in the case mentioned of the measure of the loss by increased insurance, it becomes necessary to aggregate the probable losses in order that all may appreciate the entire force of the statement just made by giving the actual loss thus caused upon the closest possible estimate of the products of the West.

The quantity of marketable articles produced by the West every year is fully forty million tons. The Saint Louis Democrat states the grain productions of the Mississippi Valley in 1872 at 1,036,000,000 bushels, which is equivalent to 31,500,000 tons. The grain, cattle, and hogs of twelve of these States are stated by another authority at quantities which give 14,000,000 of tons. Of this vast production 20,000,000 tons would go east, if freights were cheap enough to tempt it from its places of production, and if adequate facilities of transportation could be supplied. Not half of this tonnage does go to the east, the other half not moving at all, either because transportation is too costly or else because it is not available.

Take 500,000,000 bushels, less than half of the above estimate, as the annual grain crop of the Mississippi Valley, and allow a loss of 20 per cent. on its value at 50 cents per bushel, and immediately you have a loss on the grain production of the central portion of the Union alone of $50,000,000, caused by the want of adequate facilities of transportation. The proportion of this loss which properly may be attributed to the lack of adequate transportation at all to the inadequacy and high rates of railroads, and to the existing difficulties which from the obstructions at the mouth of the Mississippi River and the expensive tonnage, with the costly delays attending, I am not able to designate with the means of knowledge now at hand. But I beg leave here to introduce a carefully prepared and uncontradicted statement, taken from an elaborate report upon the general subject, as follows:

Trade, like water, will flow to the lowest channel. Establish the fact that grain can be carried a cent per bushel cheaper by one route than by another and, all other things being equal, the cheaper route will get the business.

A steam-tug can safely take down the Mississippi four barges loaded with two hundred thousand bushels of wheat. It would require six hundred cars and at least thirty locomotives to transport the same quantity of grain by rail. Wheat can now be carried from Saint Paul to New York, by way of New Orleans, at a saving of about six days in time and fourteen cents per bushel over every other route. The saving from Saint Paul to Liverpool is eighteen days in time and twenty cents freight per bushel.

The following is the cost of shipping grain by the Mississippi compared with the lake, railroad, and canal routes; also the comparative time required:

Freight charges from Saint Paul to New Orleans, 18 cents; shipping charges at New Orleans, 2 cents; freight to New York, 12 cents; total, 32 cents.

From Saint Paul to New Orleans and shipping charges at New Orleans, 20 cents; freight to Liverpool, 24 cents; total, 44 cents.

Time from Saint Paul to New Orleans, 15 days; time to Liverpool from New Orleans, 30 days; total, 45 days.

From Saint Paul to Chicago, 18 cents; charges at Chicago, 2 cents; by lake to Buffalo, 20 cents; charges at Buffalo, 4 cents; by canal to New York, 14 cents; total, 58 cents.

From Saint Paul to New York, 58 cents; charges at New York, 4 cents; freight to Liverpool from New York, 16 cents; total, 78 cents.

Time from Saint Paul to New York, 39 days; time to Liverpool from New York, 24 days; total, 63 days.

The Mississippi route is open the whole year. The New York route is closed several months by ice. The opening of the proposed canal will considerably shorten the time and distance, and lessen the cost via the Mississippi route, and make Pensacola the main shipping point from the Gulf, where better and cheaper coal can be furnished for steamers than any sea-port in the United States on the Atlantic or Gulf coasts.

The barge business is in fact fast revolutionizing freight transportation upon the Mississippi. The barges are managed just like freight-cars—dropped here and there for loading or discharging, as occasion may require. The tug does all the work. It carries fuel for the entire route; it makes no long stops; by economizing time it almost equals the speed of the steamboat. A very few men manage the whole fleet. The rate of insurance should be much lower than on steamboats; the danger of accident is less. These enormous carriers transport grain from Saint Louis to New Orleans for the trifle of ten cents a bushel. They carry emigrants back for three dollars, with all the baggage they choose to take. Coal is now carried from the Kanawha Valley to New York via the Mississippi River, with profit to the miner and shipper.

Freight transported on the Mississippi by means of barges is exempt from many difficulties which beset railroad transportation, although it is estimated that a double-track railroad could be so operated as to transport forty-five million tons of freight per year, still no railroad in this country can ever exceed five millions. On a river like the Mississippi there is practically no limit to transportation. The average dead weight transported on a railroad is much greater than on rivers; except on through lines there is little competition on railroads. The river is a liquid highway for all, costing nothing, while the first and generally enormous cost of railroads is so much capital sunk; the bonded debt of all the railroads in the United States would nearly represent their value. The relative cost of transportation by river and rail is as 1 to 5.

Many and great as are the natural *disadvantages* of New Orleans, still she does an immense business, as it is the largest city in the Southern States, and has the capital, means, and wealth to supply the wants and do the business of that section of the country; and the country has been and will be compelled to seek her markets for the sale of its products and to obtain its supplies until railroads and canals are built to put us in direct connection with Pensacola; but when the improvements are made the business of the country can be done at one-half the present cost.

In the rear of the city of New Orleans are two canals furnishing six feet depth of water terminating in Lake Pontchartrain, and with their heads or basins nearly one mile back from the Mississippi. By means of these canals and the Pontchartrain Railroad, also some six miles in length and connecting with lines of steamers, all of which routes involve the frequent and expensive handling and hauling of shipments, New Orleans carries on her extensive commerce with the lake and Gulf ports east of the Mississippi. The receipts of the Pontchartrain Railroad in 1867 from passengers and freight were $158,877.23. During the last year the freights, consisting largely of western produce, have averaged one thousand tons per day; the steamboats and sailing-vessels running into the canals have also done a large business in addition to the transportation of lumber, bricks, shells, &c. The cost of drayage upon all these transshipments exceeds the receipts of the canals and railroads together; all of which expense comes out of the section of country east of New Orleans.

The opening of the Mississippi and Atlantic Ocean Canal below the

city of New Orleans, and thence into Pensacola Bay, Saint Mark's, &c., so that vessels on the Mississippi and proposed canal will not only save in this costly transhipment at least from one to two dollars per ton and the damage to goods therefrom, now a great burden to commerce and an impediment to the growth of the Northwestern and Southwestern States, but also save many miles in distance. After the completion of the canals, steamboats and barges can be loaded at Saint Paul, Saint Louis, Pittsburgh, Cincinnati, and any other shipping point on the Mississippi and Missouri Rivers and their tributaries, and unloaded at New Orleans, Mobile, Pensacola, Apalachicola, Saint Mark's, and then on to the sea-ports of the Atlantic Ocean.

Another great disadvantage to New Orleans is the great distance of one hundred and thirty miles from the Southwest Pass. The cost of towage upon sailing-vessels up and down is from one dollar and forty cents to one dollar and fifty cents per ton. This, with the exorbitant port charges, makes New Orleans the most expensive port in the world, with the exception probably of Calcutta and London. Shippers say when they can find no other destination for their vessels they send them to New Orleans.

The following is a list of the expenses of the Bremen ship Jupiter, of twelve hundred and fifty tons register, at New Orleans, on her fourth voyage, October, 1869, furnished by the house of Shuback & Co., of Hamburg:

Towage from sea to city	$1,274 00
Towage from city to sea, (less than the usual price)	675 00
Stevedore work on 3,581 bales cotton	2,471 65
Compressing of same	3,381 95
Discharging cargo and ballast	557 50
Pilot inward	65 25
Pilot outward, (drawing 17 feet 4½ inches)	70 50
Foreign dues	376 40
Levee dues	240 35
Harbor-master's charges	38 07
Survey $15, (measuring $22.50)	37 50
Advertising $48.50; watchman $55	103 50
Consul's fees $8; divers expenses $142	150 00

The following is the statement of the New Orleans Times on the same subject:

We have endeavored to ascertain what it now costs a ship of a thousand tons burden to come into port, discharge her cargo, load and depart, independent of the services in the immediate employ of such vessels:

Inward-bar pilot, $4.50 per foot	$81 00
Tonnage to city, $1.25 per ton	1,250 00
Quarantine tax	20 00
Custom-house entry	5 00
Harbor master, 3 cents per ton	30 00
Port warden, by estimate	15 00
Levee dues, 20 cents per ton	200 00
Passenger tax $2 each, estimate for 50	100 00
Custom-house clearance	5 00
Towage to the passes, 25 cents per ton	250 00
Outward-bar pilot, $4.50 per foot	81 00
Tonnage dues, 30 cts per ton, for twelve months, estimated at	$20 00
Hospital dues, 40 cents per month, for each seaman, say	15 00
Total	2,065 00

Ships of greater tonnage of course have to pay more, the rates of towage, quarantine, and levee dues being proportionately higher.

If in the light of all the facts cited it be, as I think, reasonably supposed that one-half of the $50,000,000 annual loss inflicted upon western production by all the causes mentioned, and that one-fifth of that portion of loss would, in view of the difficulties, delays, and expense of the passage from the mouth of the Mississippi, be relieved by the opening of a canal from New Orleans through Lake Borgne, and thence through Florida to the ocean, there would be an annual saving of $5,000,000 immediately created.

But in thus basing our calculations upon the past and present state of our commerce and navigation, we are making no account of the impending and inevitable increase of that commerce. That may as surely be calculated upon to proceed in nearly the ratio of its past increase as the passage of time itself.

And it is no exaggeration to predict that as the imperative commercial necessities of the civilized world have demanded and in an incredibly short space of time have effected a practical duplication of the facilities of commercial interchange by means of the transcontinental railroads constructed under the auspices of American statesmen and the almost miraculous Suez Canal of the East, so undoubtedly and at no distant period, at the same imperative demand of the commerce of the world, the waters of the Atlantic and Pacific will meet and mingle in a channel formed for the purpose by the genius, skill, and persistence of some American Lesseps. Whatever importance, then, is fairly attributed to the great enterprise in view, from a consideration of the known facts of commerce and navigation in the present and past, that importance is immeasurably increased in view of those great events in internal improvement which already "cast their shadows before."

In consequence of the facts and causes to which I have alluded, we find a most alarming state of circumstances, and discover all the business and resources of the whole population of the West, composed mainly of those depending upon the products of the soil and their quick and cheap transportation for a competence, very seriously crippled from the inadequacy and incompleteness of all existing means of transportation.

And on the other hand we find a very large proportion, probably more than two-thirds of the whole population of the country, profoundly, and, until science and actual exploration shall convince them to the contrary, unalterably impressed with an irresistible conviction that a comparatively small outlay will so far relieve their distressing situation which has been endured so long that nothing but actual proof of its being absolutely without remedy can make it longer endurable.

We find that the belief of the practicability of essential relief, easily at hand through the construction of several lines of water transportation, has dwelt in the public mind for more than half a century.

We find that after presenting and re-presenting the subject to one after another of great and well-attended national commercial conventions, and year after year urged upon the attention of the national Legislature, but after all with few practical results.

At last we find that, driven by stern necessity and actual want, thousands of our countrymen have associated themselves together for the very purpose of making full investigation and prompt relief a paramount issue of the day, overriding and ignoring all other merely political questions which have hitherto held such undisputed sway.

Without dwelling upon the thousand details of proof that are daily presenting themselves on every hand, it is sufficient for my present purpose to say, that beyond the possibility of a doubt facts well known to the general mind unmistakably demonstrate the cost of constructing at least three lines of water transportation—one northern, one central, and one southern—would be fully compensated once in every ten years of time by the actual saving that would thereby be effected in the transaction of the business of the Western and Gulf States.

And for one, I cannot be shaken in the profound conviction that one of our first and most important duties, as representing the wishes and executing the declared will of the people, and as statesmen wisely and in season guarding and caring for palpable present and probable future events, we ought to take immediate and effectual measures, by full and accurate surveys of the most comprehensive and satisfactory character, to ascertain the practicability or impracticability of constructing the three great routes to which I have alluded, and by complete and reliable estimates to ascertain and announce their probable cost; and at any and all times for such a patriotic and proper measure my vote and earnest advocacy shall be ready.

Having thus expressed myself in regard to the general question, I wish now to ask special attention to that portion of the subject which was given to me particularly in charge, namely, the feasibility and desirability of a canal-route across the State of Florida, as one of the main features of the great general plan of relief.

I have probably gone more largely into the general reasoning and given more time and attention to the general statistics upon the subject than I otherwise should, because all these facts and reasonings are more particularly applicable to the existing plans of water transit across Florida than to any other one feature of the general plan, and this for the convincing reason that the water-line across Florida will relieve the general stagnation of western trade as much as any other: it can be more easily built than any other; it can be constructed in much less time, and will cost very much less, while it will be effective at all seasons throughout the year.

The possible and, as I believe, practicable routes through the peninsula are three in number, and may be called the Suwannee and Saint Mary's, the Suwannee and Black Creek, and the Withlacoochee Lake and Saint John's routes.

All these three routes contemplate a common or joint trunk line from the city of New Orleans, through Lake Borgne, eastwardly through the large, numerous, and peculiar inlets, bays, and lagoons with which the northern gulf coast seems to have been providentially furnished. So far the practicability of this safe inland route has never, for seventy-five years, been doubted; indeed, it seems scarcely possible for the most incredulous to continue in doubt after learning that with only twelve miles of artificial excavation to connect the natural water-courses some three hundred and fifty miles of navigation will be accomplished.

This fact has been well known to many for years, and was conclusively established by the survey called General Bernard's survey, which, of the date of February 19, 1829, will be found in the report made to Congress by the board of internal improvement.

From the mouth of the Suwannee to the Saint Mary's, or "Raiford's route," and Suwannee, Santa Fé, and Black Creek route diverges from the Withlacoochee route and passes up the Suwannee, then diverging from each other, the Saint Mary's route pointing from the head-waters of the Suwannee by the way of Okefinokee Swamp to the Saint Mary's, and then down the Saint Mary's to the harbor of Fernandina.

The highest estimate that to my knowledge has ever been reasonably made of the cost of a canal across Florida would be more than paid once in every ten years by the saving of insurance alone. It would be paid a second time once in every ten years by the saving on the cost of transportation of western grain alone.

Mr. Charles Randolph, secretary of the Chicago Board of Trade, in August, 1870, (see New York Tribune of August 27, 1870,) admits that such is the superior economy of water transportation that "it does not cost any more to put a bushel of wheat grown in Iowa into an elevator at New Orleans than into an elevator at Chicago."

And the testimony of Mr. Higby, a grain-dealer of life-long ex-

perience in New York and Wisconsin and of continental reputation, shows the storage of grain in New Orleans to be as safe and for many considerations preferable to storage in New York or Saint Louis.

The present importance, not to say imperative necessity, of the Florida transit is immeasurably enhanced by the strong probability indeed certainty, of an early accomplishment of some water communication between the Atlantic and Pacific as demanded by the commerce of the world.

On consideration of the earnest and pressing and almost desperate demands of the South and West, comprising in extent a majority of the area and po pulation and resources of the entire country, as well as the certainty of the vast benefits that will surely attend the construction of anyor all of the four gre at routes, namely, the Mississippi, the Northern, the Central, and Southern routes, which upon careful and full survey shall be found practicable and desirable. I desire to say with the utmost emphasis that I have not a doubt that both duty and expediency demand an immediate survey of these routes at the expense of the nation, and that they should be immediately ordered by Congress.

Granite Contracts.

SPEECH OF HON. J. AMBLER SMITH,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

June 15, 1874.

The House being in Committee of the Whole, and having under consideration the bill (H. R. No. 3600) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1875, and for other purposes—

Mr. SMITH, of Virginia, said:

Mr. CHAIRMAN: I am in nowise responsible for any improper action that has been had in these contracts. I have called the attention of the President to Washburn's connection with the violations of law and protested against it.

Mr. SPEER. I made no reference to you.

Mr. SMITH, of Virginia. Of course no man in the House would. I make this statement so that members may know that I have nothing to conceal. I am anxious that any party who has acted improperly in this matter should be punished. I have condemned the connection of Federal officials with these contracts openly, and do now condemn them. Colonel Albert Ordway, the contractor, has stated frequently to me and several persons that Andrew Washburn forced him to give an interest in this contract that paid said Washburn $60,000. Among the number I name Colonel Williard Smith, superintendent of the granite works, Dr. Edwin H. Smith, Major Hart, myself, and a number of others. I am glad the gentleman has mentioned the matter in the House, so that it can be properly brought before the law-officers of the Government, and if it should be shown that Washburn did receive this money improperly he may be punished.

But when the Government is offered as good granite as can be furnished for a fair price by a Virginia company, I hope that gentlemen will not, for the purpose of punishing criminals or men who have acted improperly, attack the innocent contractors, and through them hundreds of honest skilled laborers, who are now waiting patiently for this appropriation to be made so that they may get employment and support their families. Messrs. Ordway & Co. furnished the granite as low as it can be had, and if men have defrauded them, and at the same time have defrauded the Government, go for those men; instruct the officers of the courts to prosecute them to the full extent of the law; but do not attack the innocent contractors, Ordway & Co. They have been guilty of no frauds. They have carried out their contract in good faith and honesty. They are to-day poorer than when they commenced, and all by reason of this rascally Washburn & Co.'s combination to make money out of them.

Mr. SPEER. I have not attacked them. I have merely stated facts in regard to the contract and the price paid. Does the gentleman dispute the facts I have stated? Does he dispute that they get two dollars a cubic foot for this granite?

Mr. SMITH, of Virginia. I say that they furnish it as cheaply as anybody could do and that they get only fifty-nine cents. a cubic foot; but I say that the Government or the contractors have been swindled out of $60,000 or more, and that too by an officer of the Government, or to be more explicit, a Government officer has received that amount of money in flagrant violation of the laws of our country. (See Statutes at Large, volume 12, page 568.)

Mr. SPEER. Is he still an officer there?

Mr. SMITH, of Virginia. He is, and the only man who indorses him in Virginia that I know of is my colleague, Mr. PLATT.

Mr. PLATT, of Virginia, having obtained the floor and made a five-minute speech—

Mr. SMITH, of Virginia, obtained the floor.

Mr. GARFIELD. I ask unanimous consent that the debate on the question be closed in five minutes.

There was no objection.

Mr. SMITH, of Virginia. Mr. Chairman, there is no man who can bear more or suffer more with patience than I can. I have sat here during this entire session refraining from asking, as I felt impelled to do, an investigation into the letting of this contract because I foresaw that certain of our opponents would undertake to make political use of any proposition for an investigation. My desire is not to injure Washburn but to do justice to a much-injured people. For that reason I have submitted to what I believed to be an imposition upon Virginia and an imposition upon the nation. I want the committee to understand that the continuing of this contract has no possible bearing upon the outrages committed in connection with the last contract.

The men who, as I have said before, plundered the Government or the contractors in the last contract, and who did no service, will have no possible interest in this contract. Colonel A. Ordway, who is an industrious citizen of my district, and one of the sharpest New Englanders I have ever met, stated to me the other day in this Hall that he would suffer his right arm to be taken off before he would allow Andrew Washburn to take advantage of him again. I want the committee to understand it; I want the committee to understand if there has been blackmailing before there can be no blackmailing again.

Mr. Chairman, our people have furnished this granite as low as any other parties could furnish it, and lower than New England offered to furnish it. Mr. Andrew Washburn, of the Fourteenth Massachusetts Volunteers, who was dishonorably discharged from that regiment for embezzlement during the war, has made money dishonestly.

I herewith publish the official copy of the trial and conviction of said Washburn, obtained from the War Department:

[General Orders, No. 156.]

HEADQUARTERS ARMY OF THE POTOMAC,
Camp near Rockville, Maryland, September 10, 1862.

I. Before a general court-martial, of which Colonel Gustave Waagner, Second New York Artillery, is president, which convened near Fairfax Seminary, Virginia, on the 30th day of July, 1862, pursuant to Special Orders No. 94, from Headquarters Sturgis Division, was arraigned and tried Major Andrew Washburn, Fourteenth Massachusetts Volunteers, on the following charges and specifications:

CHARGE 1.—Embezzling of public money of the Subsistence Department of the Army intrusted to him.

Specification 1—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment of Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 30th September, 1861, did then and there convert to his own use and embezzle $20.26, money of the Subsistence Department paid him for sales to officers of commissary stores in said month.

Specification 2.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 31st day of October, 1861, did then and there convert to his own use and embezzle $38.23, money of the Subsistence Department paid him for sales to officers of commissary stores in said month.

Specification 3.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 30th day of November, 1861, did then and there convert to his own use and embezzle $27.01, money of the Subsistence Department paid him for sales to officers of commissary stores in said month.

Specification 4.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 31st day of December, 1861, did then and there convert to his own use and embezzle $30.94, money of the Subsistence Department paid him for sales to officers of commissary stores in said month.

Specification 5.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 31st day of January, 1862, did then and there convert to his own use and embezzle $10.51, money of the Subsistence Department paid to him for sales to officers of commissary stores during the said month.

Specification 6.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 28th day of February, 1862, did then and there convert to his own use and embezzle $20.63, money of the Subsistence Department paid to him for sales to officers of commissary stores during the said month.

Specification 7.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 14th day of March, 1862, did then and there convert to his own use and embezzle $21.83, money of the Subsistence Department, paid to him for sales to officers of commissary stores during the forgoing part of said month.

CHARGE 2.—Embezzlement of public property.

Specification 1.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting commissary of subsistence at Fort Albany, Virginia, on the 25th day of September, 1861, did then and there convert to his own use and embezzle one barrel of salt beef, provisions belonging to the United States, worth $13.85, received by him from the savings of Company F of said regiment.

Specification 2.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting assistant commissary of subsistence at Fort Albany, Virginia, on the 31st day of October, 1861, did then and there convert to his own use and embezzle two barrels of salt beef, provisions belonging to the United States, worth $27.70, received by him from the savings of Company B of said regiment.

Specification 3.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting assistant commissary of subsistence at Fort Albany, Virginia, on the 1st day of November, 1861, did then and there convert to his own use and embezzle four barrels of salt beef, provisions belonging to the United States, worth $55.40, received by him from the savings of Company F of said regiment.

CHARGE 3.—Conduct unbecoming an officer and a gentleman.

Specification 2.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and acting assistant commissary of subsistence at Fort Albany, Virginia, on the 1st day of November, 1861, did then and there pay five dollars only per barrel for four barrels of salt beef, of the savings of Company F of said regiment, instead of $55.40, the cost-price of said

beef, which by the regulations of the service was the just and true amount to be paid therefor; and therein he did defraud said company.

Specification 3.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and assistant commissary of subsistence at Fort Albany, Virginia, on the 31st day of December, 1861, did then and there omit from his provision returns for said month any account of beef, namely, fifty-two and a quarter pounds, sold to Captain Bradley of said regiment in said month; and therein said Washburn did render and certify a false return.

Specification 4.—In this, that he, Andrew Washburn, regimental quartermaster of the Fourteenth Regiment Massachusetts Volunteers, and assistant commissary of subsistence at Fort Albany, Virginia, from the 1st day of September, 1861, to the 14th day of March, 1862, did not during the whole of said period credit the Government with moneys received from sales of commissary stores, or render any account to the proper department of such sales, except of and for sixty-three pounds fresh beef, two hundred and fifty-three pounds of candles, four thousand nine hundred and eighty-eight pounds of potatoes, thirty pounds of tea, four hundred and fifty pounds of sugar, and forty gallons of molasses; whereas in fact he had sold and received money for a much larger amount of each and all of these articles than thus returned and accounted for; and had also sold and received money for other articles whereof he rendered no account whatever, that is to say, coffee, rice, hominy, beans, vinegar, soap, pork, ham, bread, and flour.

To which charges and specifications the accused pleaded not guilty.

After mature deliberation on the evidence adduced the court finds the accused as follows:

Of the first specification of the first charge, guilty.
Of the second specification of the first charge, guilty.
Of the third specification of the first charge, guilty.
Of the fourth specification of the first charge, guilty.
Of the fifth specification of the first charge, not guilty.
Of the sixth specification of the first charge, guilty.
Of the seventh specification of the first charge, guilty.
Of the first charge, guilty.
Of the first specification, second charge, guilty.
Of the second specification, second charge, guilty.
Of the third specification, second charge, guilty.
Of the second charge, guilty.
Of the first specification of third charge, guilty.
Of the second specification of third charge, guilty.
Of the third specification of third charge, guilty.
Of the fourth specification of third charge, guilty.
Of the third charge, guilty.

And the court does therefore sentence him, Major Andrew Washburne, Fourteenth Massachusetts Volunteers, "to be cashiered, and to refund the money."

II. The proceedings in the case of Major Washburn, Fourteenth Massachusetts Volunteers, are confirmed. Major Washburn accordingly ceases to be an officer in the military service of the United States from this date.

By command of Major-General McClellan.

S. WILLIAMS,
Assistant Adjutant-General.

Washburn was out of the contract, afterward pardoned through political influence. No *bona fide* Virginian, native-born or adopted, has made one dollar he was not entitled to. The Virginians connected with the contract are honest men, and they have given the Government the best granite ever furnished for any public building and they have furnished it cheaper than any other persons would have done. In making this appropriation you will do an act of justice to Virginia and one that is due from the national Government. My colleague [Mr. PLATT] is exceedingly tender on this subject; he flies to the defense of a man living a hundred miles away from him with an officiousness that is astounding. He tells the House that Washburn has done nothing wrong. To show that my colleague does not know of what he is speaking, I desire to print the contract between the sharp New Englander, Ordway, and the still sharper one, Washburn:

Agreement of partnership between Albert Ordway, of Richmond, Virginia, and Andrew Washburn, of said Richmond, made November 25, 1871.

The said Albert Ordway and Andrew Washburn hereby agree to form a partnership for the purpose of cutting, dressing, and boxing the stone to be furnished the United States under the contract of said Ordway, dated November 16, 1871, for the new State Department at Washington, District of Columbia.

Mr. Washburn agrees with Mr. Ordway that he will furnish all capital, make all the necessary expenditures, and become responsible for and carry on all the work of cutting, dressing, and boxing said stone, including all the work for which the United States is to pay the actual cost and 15 per cent. in addition, under said contract of November 16, 1871; all to be done to the full and complete satisfaction of the Government.

In reimbursement of the capital furnished, and for the use thereof and the responsibility assumed and services performed in carrying on the work devolving upon Mr. Washburn under this agreement, he is to receive the full amount of money paid by the Government therefor under said contract of November, 16, 1871, including said 15 per cent. thereon.

Mr. Ordway agrees with Mr. Washburn that he will become responsible for and seasonably quarry and furnish for cutting, in accordance with said contract of November 16, all the stone necessary to enable Mr. Washburn to promptly prepare the same for the Government in accordance with this agreement; and also to render to Mr. Washburn his personal assistance as may be required in superintending the cutting and dressing of the stone and performing the work.

Payments to Mr. Washburn are to be made as fast as the money is paid by the Government, and Mr. Ordway agrees that if practicable such payments may be made directly by the Government to Mr. Washburn, and that he will execute any powers of attorney or further agreements that may be necessary for that purpose.

In case of any failure at any time of Mr. Washburn to furnish money as needed, so that Mr. Ordway is compelled to furnish the same, Mr. Washburn is to forfeit his claim to a proportional share of the profits otherwise due him.

The balance of the money paid by the Government under said contract of November 16 is to be received and retained by Mr. Ordway; and he is to have no claim upon Mr. Washburn for losses, if any there shall be, in quarrying the stone.

In case it may be advisable for the accommodation of the workmen engaged in performing work under said contract of November 16, 1871, to establish a store for the sale of provisions, clothing, and other merchandise, the same shall be established by Mr. Ordway, and Mr. Washburn agrees that he will not claim any participation therein, nor himself establish any competing store; and that he will afford all reasonable facilities to Mr. Ordway for the collection of any store accounts against said workmen.

Any buildings that may be necessary to be erected by Mr. Washburn at or near the quarries to carry out said contract he may remove within six months after the dissolution of this agreement, or if Mr. Washburn so elects Mr. Ordway agrees to purchase them upon such dissolution at prices to be fixed, if the parties do not agree, by referees, one to be selected by each party and a third to be selected by said two referees.

Mr. Ordway agrees not to open boarding-houses for the workmen engaged in cutting or dressing the stone; and also agrees to grant without charge the use of all land required by Mr. Washburn for any purpose connected with the execution of this contract.

This agreement is to extend only to the workmen connected with the south wing of the State Department building first to be erected, and not to the work for the other portions designed for the War and Navy Departments; and upon the completion of the work this partnership is to be dissolved.

Signed and sealed in duplicate this 25th day of November, 1871.

ALBERT ORDWAY. [L. S.]
ANDREW WASHBURN. [L. S.]

Witness.
GEO. GRAY.
W. N. WALTON.
JAMES H. PLATT, Jr.

DEPARTMENT OF STATE, *Washington, December* 12, 1871.

Consent given to the foregoing.

HAMILTON FISH,
Secretary of State.

In this contract Ordway presents to Washburn without consideration the 15 per cent. paid by the Government for expending the Government's money in cutting and dressing the stone, which of course involved no risk to Washburne, but which was intended for the benefit of the *bona fide* contractors; and for what? It is alleged for the advance of capital to dress the stone, whereas the Government furnished the capital. This contract bears corruption on its face. No honest man can read it without being struck with it, the contract being originally given to Ordway alone. It is reeking with corruption from beginning to end, and I have the assurance of Mr. Ordway, made to myself and others, that he would never have agreed to it except that he had been threatened that unless he consented to this wholesale robbery he should not have the contract, although he was the lowest bidder.

Not satisfied with this contract, and judging other people by himself, Washburne required Ordway to give him a power of attorney, to wit:

POWER OF ATTORNEY.

Know all men by these presents that I, Albert Ordway, of the city of Richmond, in the State of Virginia, have made, constituted, and appointed, and by these presents do make, constitute, and appoint, Andrew Washburn, of the city of Richmond, in the State of Virginia, my true and lawful attorney for me and in my name, place, and stead to make out vouchers and to receive payment thereon or so much thereof as might be due by the Government of the United States for cutting granite for the construction of the State Department wing of the new State, War, and Navy Department building, now in process of erection in the city of Washington, in the District of Columbia, under my contract therefor, dated November 15, 1871; giving and granting to my said attorney full power and authority to do and perform all and every act and thing whatsoever requisite and necessary to be done in and about the premises as fully to all intents and purposes as I might or could do if personally present at the doing thereof, hereby ratifying and confirming all that my said attorney may or shall lawfully do or cause to be done by virtue hereof.

This power of attorney shall cease and be null, void, and of no effect on the termination of the partnership existing between Albert Ordway and Andrew Washburn aforesaid, and now on file in the office of the Secretary of State, in the city of Washington, District of Columbia.

In testimony whereof I have hereto set my hand and seal this 3d day of February, 1872.

ALBERT ORDWAY. [SEAL.]

[Fifty-cent U. S. internal-revenue stamp.]

Witness:
DAVID B. PARKER.
THOS. P. JACKSON.

UNITED STATES OF AMERICA. *Eastern District of Virginia:*

I, M. F. Pleasants, clerk of the circuit court of the United States for the district aforesaid, do hereby certify that Albert Ordway, the party to a certain power of attorney bearing date on the 3d day of February, 1872, aforesaid, the said Albert Ordway, of the city of Richmond, in the State of Virginia, being personally well known to me as the person who executed said power of attorney, acknowledged the same to be his act and deed.

Given under my hand and official seal this 3d day of February, 1872.

[SEAL.] M. F. PLEASANTS, *Clerk.*

[Five-cent U. S. internal-revenue stamp.]

Here the fraud is again shown, and now, Mr. Chairman, in the name of the republicans of Virginia, I demand an investigation of this gross fraud.

Freedmen's Savings and Trust Company.

SPEECH OF HON. E. D. STANDIFORD,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

June 16, 1874,

On the bill to annul the charter of the Freedmen's Savings and Trust Company.

Mr. STANDIFORD. Mr. Speaker, this bill to annul the charter of the Freedman's Savings and Trust Company came to us from the Senate, after having passed the House, in an entirely different form. The other body saw fit to strike out the whole of the bill as we passed it, and substitute an entirely different bill, and one that had we agreed to would have crippled the financial prospects of the colored people in the South for many years to come. Such was the nature of it that I could not divest myself of the idea that it was gotten up in the interest of a ring, and passed the Senate without proper consideration.

While the amendment as it came to us from our Committee on Banking and Currency met my hearty approval, I was compelled by sentiments of common honesty, and a desire to see justice done, to oppose the Senate substitute.

The Senate bill if made a law would have simply appointed a receiver for the Freedman's Bank, declaring it insolvent, and turned its property and possessions over to be divided up among sheriffs, attorneys, commissioners of various kinds, and lastly the depositors who would find their share greatly diminished by reason of the legal processes which it would necessarily undergo before it would reach their hands. A proper consideration of the Senate bill, based upon a knowledge of the condition of the institution, would show that the measure was unjust and in bad faith to the interests of the colored men who had become depositors in this bank. The bank, under the amendment offered by my colleague, if let alone would be able to pay to the last dollar all of its depositors; and while the Senate bill in my opinion would have placed it beyond its power to do so, it would have placed the funds of the institution in the hands of three irresponsible men, whom, from the nature of their position, it would have been impossible to have checked from wasting the money and property thus placed under their control. While not attacking the personal integrity of any prospective commissioner under that bill, I say that we would not be dealing honestly with these hard-working colored men if we placed their money in a shape where it might be disposed of for private benefit and accounted for in a general way, unless it would be from the necessity of resorting to such a measure to save a part rather than lose the whole, which condition of affairs has not arisen in the case of this institution, notwithstanding its past injudicious management. It was unjust, because the depositors would not receive their money back under its provisions.

This bank is the creature of the present party in power; and it was upon the pledged faith of the Government, as they understood it, that induced these colored men to deposit a portion of their hard earnings in its keeping, supposing that they had the word of the republican party, which they regarded as their deliverer from bondage, that it should be returned to them with interest. It is useless for gentlemen to say that the law incorporating the bank did not so state, or so pledge the General Government for the redemption of deposits. You could not expect that these poor, uneducated, hard-working colored men and women so lately released from slavery, and for the protection of whose political rights that party think it necessary to make such stringent laws, would understand and comprehend the scope of a law incorporating a bank; it was sufficient for them that the party in power, their party, their friend, had established this bank and christened it with the sounding title "The Freedman's Savings and Trust Company." To each of these colored men it was as though there was written after the name of the institution "under the patronage of the republican party, who pledge the faith of the United States for the safety of deposits."

I tell you, sir, that the United States is as morally bound to see to it that not a dollar is lost to these men as it is possible to establish a moral obligation. There are $3,000,000 in the hands of this company, and those $3,000,000 is the money saved by the recently liberated slave from his small wages earned beneath the heat of the southern sun in the tobacco and corn field and upon the cotton plantation and deposited in the various branches of this bank, ranging in individual credits of from one dollar to one thousand dollars. The Senate bill would at once have closed up the bank and its branches and have left the poor deluded freedman to employ a lawyer to recover a portion of what he had theretofore considered savings for a time of need. Most of us have had experience in these matters of insolvency and bankruptcy, and know that the creditors usually receive the smallest dividends; and so the freedman would get, after all the law's delay, but an insignificant part of what he would be entitled to receive. I tell you, sir, it will be the death-blow to any encouragement to industry, economy, and thrift among the late slaves for years to come if the depositors in this bank are not paid dollar for dollar.

But there was one feature in this bill of which I must speak in terms of special condemnation. While it robbed the honest colored man of his sweat-earned wages, it provided munificently for the payment of the proposed commissioners; and while the poor freedman wastes his strength in industrious toil to save from out his scanty earnings something to keep him when he is old, these official gentlemen can live lives of luxury and ease by the labor of these colored men.

The bill, as it has come back to us from the conference committee, provides fully for the protection of the depositors in this bank in the future, and under its provisions I have no doubt, from all the information I can gather in reference to the securities upon which their money was loaned, that every depositor will receive every dollar of his money. It does away with the most objectionable feature in the original bill, (except the incorporation of the bank itself,) and the feature which, to my mind, has caused all the trouble, namely, requiring all the branches to send the money received by them on deposit to Washington for investment. This has resulted badly in several ways, the worst of which are: First, the money has not been wisely handled here, their investments have been injudicious and unbusiness-like, although not likely to result in very great loss under careful management and the exercise of good judgment, if time be given for the conversion into money of their securities; second, this plan has taken away from the South and Southwest, where these branch banks have been established, that much currency which should have been kept in those localities to be used by the industrious colored men to help them obtain homes and assist them in business. All the money deposited in those branch banks could have been loaned in that way, and ample security obtained which would, I imagine, be as well as investing in certificates of the board of public works of the District of Columbia, as was done with a portion of the money sent to this bank.

The South is and has been suffering from a lack of currency, and this has been one of the drains which has helped to deplete it in that respect. It was wrong in the first place to compel this money to be sent here for investment. The principle upon which the bank was organized was wrong. The men in charge of the bank at Washington were incompetent and ought to be held responsible for the bad investment of the funds trusted to their care. Many of the branches were well and ably conducted, and that was the case with the branch at Louisville.

We ought not to recede from the position that these men shall be taken care of to the extent that they have been trusted in this bank, and I am of the opinion that this bill will guarantee them that protection. This experiment in banking will be a valuable lesson that will teach the colored people to look to their home institutions for the safety of their surplus cash, and not to depend upon the Government for everything. It will teach them that they have to take their chances with all others in the business transactions of life, and that it is better to trust their friends at home than to depend upon imaginary friends abroad.

Civil Rights.

SPEECH OF HON. C. B. DARRALL,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

June 16, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. DARRALL. Mr. Speaker, I did not intend till very recently to say anything on the subject of securing by action of the Congress of the United States equal civil rights to all the people of the States. I had felt sure that with a two-thirds majority in each branch of Congress of republican members there would be no doubt of the passage of the bill, and I did not, so long as this result was reached, care to consume the time of the House in a discussion of the merits of such a bill, or in the reasons why it should become a law. But the recent votes of the House on the motion to suspend the rules and refer the Senate bill now on the Speaker's table to the Judiciary Committee, with leave to report at any time, have shown a disposition on the part of some members, and I am sorry to say of members returned here in great part by the votes of the class to be benefited by this bill, to either modify the Senate bill in one of its most important features, that regarding the right to attendance in the public schools, or else to prevent any action at all by voting against suspending the rules and making the reference. This places the Senate bill in a position requiring a two-thirds vote of the House to reach it, and leaves but little doubt that no action will be taken this session at all, or if action should be had the bill will, or may be, amended by striking out the school clause, and in this shape sending it back to the Senate, there to fail from want of time to reach it so close the end of the session. Thus it is not only possible but quite likely that this just and righteous measure to a large portion of our people will fail to become a law; that though it is a part of the platform of the republican party that civil rights should be granted to all citizens, and this party is in a two-thirds majority in Congress, that though it has been recommended time and again by the President in his messages, still it is likely to lie over for final action and passage till another session of Congress.

I have been silent heretofore in regard to this measure because I thought that surely after these long years of probation there was no member of the republican party but had become convinced that it was not only just and right, but safe in every sense of the word to confer by law on our colored citizens all the rights enjoyed by others. I had thought that perhaps some of our members from the Northern States who had not seen much of the practical workings of the enfranchisement of the colored people, might have their doubts as to the wisdom of conferring these additional rights on this class, as they might have been led to believe that it would do harm by involving questions of social privileges, and I was prepared to show and demonstrate from my personal knowledge that this would not be the case.

I am glad to say this has not been necessary, as the members of our party from the North only seem anxious to complete this final act of justice to a people who have suffered ages of degradation and wrong. But while I have been agreeably surprised in this respect to find how well this important question is understood and appreciated in that

section of the country, I was not prepared to see gentlemen on this floor, members of the republican party, who come here representing southern constituencies, representing districts in which the colored people constitute a large portion of the population, have any doubt as to the wisdom of passing this bill—indeed have so much doubt that they have even gone so far as to vote against the reference of it to the proper committee.

Under these circumstances, Mr. Speaker, I have felt it my duty, coming as I do from one of the extreme Southern States, where we have been trying for some years the experiment of placing all of our citizens on an equality in their civil rights, where we have demonstrated that the granting of the right of attendance in the public schools of the State to colored children does not destroy the usefulness of our schools, to here and now enter my protest against further delay in the passage of this bill, and to bear witness from personal knowledge, and from the history of the State of Louisiana, where civil rights and free schools to all of every race have been tried, and thoroughly tried for several years, that the granting of these rights does no possible harm to any class of citizens, and raises a heavy burden from a large and important part of our people; that the opening of our schools alike to all our children have in no way impaired their usefulness. These, sir, are facts, and cannot be too widely known, that colored people under the Constitution and laws of Louisiana have all the civil rights of other citizens, that colored children attend any and all the public schools of that State, and I shall show as I proceed that not only do white republicans and colored people approve of this, but many of the oldest and best of the citizens of that State have publicly in mass meetings and addresses heartily approved of all the features of the civil-rights bill, including free schools to all. When this is demonstrated in a State like Louisiana, it seems to me that all the arguments against this bill fall to the ground.

Before proceeding to this I desire to call attention to the fact shown by the vote of the House May 25, on the motion made by the gentleman from Massachusetts [Mr. BUTLER] to refer the bill to the Judiciary Committee, that of the republicans voting against doing so, all but one or two were from the border Southern States, and are natives or old residents of those States. And it has occurred to me that though these gentlemen may have so far accepted the rights of the colored people as to allow them to cast their votes for the purpose of giving them seats on this floor, with all the honor and emoluments, including the two bouquets and pine box attached thereto, still there must be lingering in their minds some of the old leaven of prejudice engendered by their early training and associations that prevents them from coming out frankly and granting these rights which they know their colored constituents so ardently desire, and which they must surely know, unless they are blind to the history of their own section for the last few years, that the colored people will never abuse. I know it is claimed and the excuse is made that the school clause of the bill will injuriously affect the common schools of certain States. Well, sir, I am glad to see these gentlemen so anxious about their common schools and the education of the colored children; but their anxiety in this regard is uncalled for, and seems to me but a poor excuse indeed for opposing the bill.

I can to my own satisfaction only explain the secret of this action by believing that it is owing to the senseless and unreasoning prejudice that has at all times controlled the white people of the South in their treatment of the colored people; that is in their treatment as a whole; for I admit that there are instances where there are honorable exceptions to this. But, sir, whether it is this or some other reason that has controlled these gentlemen in their action on this bill it will still remain a sad reminder to the colored people of the country that justice is denied them again, and by those whom their own votes have elevated to high positions.

I have said that we have in the State of Louisiana tried the experiment of equal civil rights to all of our citizens, and I desire to place before the House the evidence not only of the friends of this measure there, but that also of its worst enemies, of those whom we would suppose would be the last to admit such a policy was wise or just, and who certainly would not have admitted what they have were they not convinced by actual trial of its results, that the granting of equal civil rights to all the people of a State or country is the only true policy to make the people contented, happy, and prosperous.

The constitution of the State of Louisiana provides:

ART. 13. That all persons shall enjoy equal rights and privileges upon any conveyance of a public character; and all places of business or of public resort, or for which a license is required by either State, parish, or municipal authority, shall be deemed places of a public character, and shall be opened to the accommodation and patronage of all persons without distinction or discrimination on account of color.

And further:

ART. 135. That all children of this State between the ages of six and twenty-one shall be admitted to the public schools or other institutions of learning sustained or established by the State in common, without distinction of race, color, or previous condition.

The constitution containing the provisions above was adopted and ratified on the 17th and 18th days of April, 1868, by a vote of the people of that State, and the majority for it was over 35,000 in a total vote of about 103,000.

The Legislature has provided laws for the enforcement of all the provisions quoted, and they have been in force for some years. It is true they have given rise to some litigation, and suits have been decided in about all cases in favor of the colored persons aggrieved. Still, though the law gives them all these rights, there has been little effort on the part of colored citizens to insist on all their privileges on common conveyances and in places of amusement and public resort. They seem to have preferred to let the prejudice held against themselves gradually die away. Though they have the entire power in their hands through the law to obtain all their rights, they have shown there a spirit of forbearance and conciliation that it is unfortunate their white brothers do not imitate.

Though these laws in that State have not been rigidly enforced, still they have been in effect and enforced to some extent; and though a certain class of people there have made some noise, the wiser and better class of the white people of the State have come to recognize, as I will show, their justness and wisdom. And I think I can demonstrate to the House, from our experience there, that if we pass this general civil-rights bill, applying to all the citizens of all the States, it will in less than five years be cheerfully acquiesced in by all; that the class of people to be affected and benefited by it will use the rights it confers so moderately and judiciously that in even less time than that they will to a great extent disarm this senseless prejudice that prevents its passage.

If the provisions of the civil-rights laws of that State regarding conveyances and places of public resort have not been so rigidly enforced, that other provision in regard to the right of attendance in the public schools has been. And as this is the feature of the present bill that seems especially obnoxious to many, I am glad we can show such favorable results from our experience. The school law attaches heavy penalties to the refusal of colored children admission into any of the public schools; some years ago it was put in force against an opposition on the part of the press and white people that was very strong, and especially in the city of New Orleans. There the people were advised by the opponents of the free schools to take their children from them, and give the schools over to the colored children; every argument of prejudice and hate was used to effect this, and with what result the report of the board of school directors of the city of New Orleans of as long ago as 1871 will show. In the report for that year made to the State board of education by Judge Henry C. Dibble, president of the city board, the following in regard to enforcement of free schools to all children of whatever color is said:

The requirements of the school law have been faithfully observed by the board, and no case has come to their knowledge of the exclusion of a pupil on account of race, color, or previous condition. Nor has this strict adherence to the law been attended by any of the unfavorable results so freely predicted, in advance of the honest trial of an impartial system of education. As a general thing, pupils have preferred to attend at schools where their associates are of their own race, but in the instances where, under the action of the law, schools have to some extent become mixed schools, no difficulty is experienced. In one school where, under the passionate impulse of the moment, the whole number of white children was withdrawn because of the admission of colored pupils, they have returned to their places, and the school is proceeding harmoniously.

This shows the effect of impartial schools in the city of New Orleans, and such was the result all over the State as is shown by the report of superintendents and school directors at that time. Since then, although there has been an occasional growl in the press, the people have seen the practical workings of such a system, and are satisfied, and instead of the schools being destroyed as it was asserted then they would be, just as it is now they will be in Virginia and Tennessee, they have increased and prospered till to-day there is ten times at least the number of public schools in the State that there was before the passage of the law. And, sir, that State has had at the head of its schools as State superintendent of education since the 1st of January, 1873, a colored man, a gentleman in the true sense of the word, and one whose energy, varied accomplishments, and thorough education peculiarly qualify him for the duties of his position. Under his charge the schools of the State are more prosperous than ever before, the only drawback being the want of means to place them on an equal footing with those of more favored communities. If my time would admit I would like to read to the House a few of the many complimentary notices from democratic papers of this colored superintendent of education, but I will content myself by saying that he has performed his trying duties in such a manner as to gain the respect and disarm the prejudice of all his political enemies.

Now, in regard to our civil rights and school laws in that State, I have given the evidence of the friends of these measures. It was charged that the enforcement of the school law would destroy our schools; I have shown it has had just the opposite effect. With this example before their eyes how can gentlemen from the States of Virginia, North Carolina, or Tennessee with any degree of consistency assert that the passage of the law will injure their public schools in those States? Surely the experience of Louisiana is sufficient to convince the most skeptical. But I desire to place before the House the evidence of a class of our citizens there who have always opposed these measures; at least they did so till a year or more ago. About a year ago a movement for what was called the unification of the people of Louisiana was started in New Orleans. A committee of one hundred leading men of the two races were appointed to prepare resolutions to be presented to a grand mass meeting called for the 15th of July, 1873. This committee adopted a series of resolutions and published them in the papers, over their signatures and those of several thousand of the wealthiest merchants, bankers, and others of that city, indorsing the sentiments of the resolutions in the call for the mass meeting.

I quote at some length from these resolutions, and ask the careful attention of the House to their hearty indorsement of all civil rights to colored citizens. They are as follows:

Resolved, That henceforward we dedicate ourselves to the unification of our people.

Resolved, That by "our people" we mean all men, of whatever race, color, or religion, who are citizens of Louisiana, and who are willing to work for her prosperity.

Resolved, That we shall advocate by speech and pen and deed the equal and impartial exercise by every citizen of Louisiana of every civil and political right guaranteed by the Constitution and laws of the United States and by the laws of honor, brotherhood, and fair-dealing.

Resolved, That we shall maintain and advocate the right of every citizen of Louisiana, and of every citizen of the United States, to frequent at will all places of public resort, and to travel at will on all vehicles of public conveyance upon terms of perfect equality with any and every other citizen; and we pledge ourselves, so far as our influence, counsel, and example may go, to make this right a live and practical right; and that there may be no misunderstanding of our views on this point—

First. We shall recommend to the proprietors of all places of licensed public resort in the State of Louisiana the opening of said places to the patronage of both races inhabiting our State.

Second. And we shall further recommend that all railroads, steamboats, steamships, and other public conveyances pursue the same policy.

Third. We shall further recommend that our banks, insurance offices, and other public corporations recognize and concede to our colored fellow-citizens, where they are stockholders in such institutions, the right of being represented in the direction thereof.

Fourth. We shall further recommend that hereafter no distinction shall exist among citizens of Louisiana in any of our public schools, or State institutions of education, or in any other public institutions supported by the State, city, or parishes. * * * * * * *

Fifth. That we pledge our honor and good faith to exercise our moral influence, both through personal advice and personal example, to bring about the rapid removal of all prejudices heretofore existing against the colored citizens of Louisiana, in order that they may hereafter enjoy all the rights belonging to citizens of the United States.

G. T. BEAUREGARD, *Chairman.*

W. M. RANDOLPH,
Committee on Resolutions.

As I said, the sentiments of these resolutions were indorsed by the signers of the call for the mass meeting. The meeting was held, and was probably the largest gathering of the kind ever held in that city. Speeches were made by orators of both races, and the resolutions quoted from were unanimously adopted.

If I am asked what did all this amount to, and what, if any, has been the result of resolutions and meetings, I answer as yet but little; for unfortunately the politicians got control of the move, and two years before an election talked of a new party called the unification party, and began to show their reason for their zeal so plainly, that the whole thing has dropped out of sight. In my opinion, however, that move will be productive ultimately of much good to the State. But this result at least we have, that in a State where civil rights and free schools had been tried for years they have been indorsed by a large number of the wisest and best of the old democratic party. And that this was done in good faith by them I quote from an address to the people of the State by General G. T. Beauregard, chairman of the committee on resolutions, dated New Orleans, July 1, 1873. General Beauregard had been censured for his course in this matter, and his address is his vindication.

Much weight I find, Mr. Speaker, has been attached to the utterances on this floor of former leaders, whether civil or military, of the Southern States; and I ask for these opinions of one of the foremost of the military leaders of the South due consideration.

General Beauregard, in the portion of his address I quote, says:

We are bound to give this great experiment of republican self-government, on the basis of impartial suffrage, a fair trial, and as long as we assume a position antagonistic in principle to his rights and thereby drive the colored man into opposition to us, if harm results we must lay the blame upon ourselves rather than on the system.

I am persuaded that the natural relation between the white and colored people is that of friendship. I am persuaded that their interests are identical; that their destines in this State, where the two races are equally divided, are linked together; and that there is no prosperity for Louisiana which must not be the result of their co-operation.

I am equally convinced that the evils anticipated by some from the practical enforcement of equal rights are mostly imaginary, and that the relations of the races in the exercise of these rights will speedily adjust themselves to the satisfaction of all.

I take it that nothing but malice or stupidity could find anything either in the letter or spirit of the unification resolutions which contemplates any interference or dictation in the private social relations of the people. These lie entirely outside the domain of legislation and politics. It would not be denied that in traveling and at places of public resort we often share these privileges in common with thieves, prostitutes, gamblers, and others who have worse sins to answer for than the accident of color; but no one ever supposed that we thereby assented to the social equality of these people with ourselves. I therefore say that participation in these public privileges involves no question of social equality. By the enjoyment in common of these privileges neither whites nor blacks assert or assent to social equality either with each other or even between individuals of the same race.

I have not proposed to myself any advantages from the resolutions referred to. I do not seek or desire office or emoluments. I have in view but the restoration of Louisiana to the place of honor from which she has fallen.

No one, Mr. Speaker, who reads these words can doubt the sincerity of the man who wrote them. And I have quoted somewhat at length, because in my opinion, coming from one who has seen civil rights practically tested, and who has the reputation of the writer, they are the most conclusive arguments that could be made. And I especially commend to the democratic members of this House from the Southern States these words of wisdom.

They complain that their States have been ruined by negro and carpet-bag rule; that ruin, poverty, and despair stare them in the face. If all this is true, why do they not even at this late day secure the lasting gratitude of the colored people of their States by voting for this bill, by throwing aside their prejudice, and taking the step toward the colored people now which if they had taken in 1866 and 1867, by giving to those people fully and freely all the rights of free citizens of the country, they would have secured their confidence and co-operation and could have formed such State governments as they desired. But no; hey stood aloof from the colored people then, and now, when this last act of justice is to be done, we find them voting solidly against them. I admit, sir, they have the right to do this; they must vote as their consciences dictate, but after steadily opposing every measure proposed, either here or by their State governments, for the advancement of the colored people, they should at least have more pride than to stand up here and complain of colored people because they elect local officers in the Southern States and members here to seats on this floor who will vote to grant them what is justly due them—the full rights of citizenship of our country.

And this is the most unfortunate feature connected with the Southern States, that the white people, natives there, have persistently opposed every move to improve the condition and advance the interests of the colored people. They endeavored after the close of the war to reduce them to a condition of serfdom in some States by what were called black laws. They opposed their enfranchisement and their education, and now they oppose granting to them equal civil rights, and they threaten in some of those States where they are in power that if it is done they will refuse to appropriate money to continue the public schools. I say that this is the most unfortunate feature connected with the various troubles in the Southern States for how can there be good feeling, peace, and prosperity when one portion of the people array themselves solidly against granting to the other portion rights that they are entitled to. Where will be the end to contention and bad feeling should this continue? For the longer the colored people are denied these rights the stronger will be their feeling against those who deny them. It is only by a true unification of all the people of the South that those States will again become prosperous. You have granted to the late slaves in those States equal political rights with their former masters. You must now grant them equal civil rights. You cannot make a man part free. All shackles must be removed. Far better would it be if this were to be freely and generously done by the white citizens of those States; if these rights were to be generously guaranteed in the manner proposed by the resolutions I have quoted from. Then, indeed, would the colored people, always retaining their respect and love for their old owners, give them back the confidence they have lost by their denial of other rights to them.

But if this is not done—and from the sentiments expressed here by the special representatives of the white people of the South it is not likely to be done soon—then the General Government through Congress should act promptly and pass this bill. There is no reason whatever in my opinion for further delay. The law will rarely need to be enforced by the courts; the passage of it alone will go far to make the enforcement of it unnecessary. It will be acquiesced in, and very soon, by all. As to the threat in regard to the school clause that we will destroy the schools of some of the States, I have only to say that it is rather late in the day to be making threats of any kind, and we are all tired of these continual threats of what will be done if we do not quit legislating to protect our citizens in their rights. But there is no danger whatever that these threats will ever be carried into effect, or if they are, if the Legislature of Virginia or of Tennessee should fail to appropriate for one year, they would find their people were wiser than they were, and it would not be repeated. But should the worst come, should the schools fall, let them fall, but let justice be done.

I had not intended, Mr. Speaker, to detain the House longer than to show some of the practical workings of the civil-rights bill in my own State, and I think the illustration I have given of its effect should be sufficient to satisfy any reasonable mind. This whole subject has been so thoroughly discussed by gentlemen on this floor and by the Senate, that there is little or nothing that is new to be said. And I only wish in conclusion to call the attention of members who live in the North to the actual condition and hardships the denial of these rights imposes on the colored people, and especially in those States where they are in large numbers or even a majority. When you come to consider that in a State like Louisiana, where nearly or quite one-half of the people are colored, and that this proportion of the population when they leave their homes to travel either on business or pleasure are denied the rights in cars or other public conveyances of having clean and suitable accommodations; that no matter how refined or well educated or wealthy or respectable they are, they are to be served with second-class or even worse accommodations, though required to pay the same amount for them; and then when you consider that there are nearly five millions of our people, equal in all their other rights in the country, who have to bear these hardships, you can begin to realize the necessity of some remedy. I have mentioned public conveyances, because it comes nearer to any one's mind to realize what it is to travel without the comforts of sleeping or other first-

class cars, or to be stowed away in what is called the "texas" of a steamboat, and be supplied with insufficient or bad food. The denial of other rights provided for in this bill works equal hardship and is equally unjust. But let us consider what kind of people these often are who are treated in this manner. In the State of Louisiana, and especially in the city of New Orleans, there was, even before the war, a large population of colored people who had always been free, and who had, in many instances, become very wealthy, and I am told that to-day one of the largest property-owners in that city is a man of this class. These people were and are well educated, often in the schools of France; are as refined, intelligent, and respectable as any people there or elsewhere. Then many of those who were always slaves have educated themselves by hard study at night or between the hours of their work, are schooling their children, are saving their money and buying themselves homes, and have, in some cases, become quite wealthy. They are as respectable, well-behaved, and useful citizens as can be, are living on good terms with their white neighbors, and are treated well and respected by them.

And, again, through the operation of your reconstruction laws they have become citizens and officers in the land. And we see, as in our State, a lieutenant-governor, or senator, or other high officer, who may have, as had the late Governor Dunn—and as has our present lieutenant-governor, the respect of all people, white and black—denied the right to ride in a decent car or in a comfortable room on a boat; or they may be officers of your own, appointed by the President and confirmed by the Senate, against whom these discriminations are enforced. I have in mind now a collector of internal revenue, a colored man, who served the Government faithfully for over three years, who collected millions of revenue, but who when he went to the city of New Orleans to deposit your money with the proper officer there could not have the accommodations on a boat accorded to the lowest white man. I take it, sir, that no one will claim it is right to deny people like these the common rights of comfort and convenience when they pay their money for them. But you cannot draw any line here nor elsewhere; all must be treated alike.

Let us look at the consistency, or rather at the want of consistency, in such a course; and we see it demonstrated every day before our eyes on this floor. The colored man is made free; he is made a citizen of the country, with all the political rights and privileges attached thereto; he is given high official position; he takes his seat here on this floor and in the Senate of the United States. He is in every respect here our equal. His vote counts for so much, and his voice is listened to with the same attention as others. But when he goes out of this Hall he may be and is denied the most common rights and privileges. And it comes even nearer to him, Mr. Speaker. His wife and his daughters are as dear to him as our own to us; they may be as sensitive and refined, but when he travels to his home from here he is not allowed to take them into a comfortable car; he cannot take them to a comfortable hotel; they must be shuffled into a box-car. Should they come into a strange town or city at night, they have no place to lay their heads. This is consistency with a vengeance! Is it possible that members on this floor, knowing all this to be true, can look their colored fellow-members in the face and vote against this bill? Are they prepared to leave the rights and privileges of American citizenship so low? Are they prepared to deal out this kind of justice to nearly five millions of our people?

It is said, Mr. Speaker, that this is an age of progress; and truly it is. The rapid and easy means of communication between different parts of our country, and from ours to older countries of the world, have revolutionized thought and sentiment, time and distance. From the nations of the Old World, almost or totally unknown to our fathers, have come to us their people asking to be instructed in the, to them, wonderful results of our civilization.

I recall to the House a scene in this Chamber but a year or two ago. An embassy from the empire of Japan was visiting this the capital of our country, to cement by further treaty the friendly relations between the two nations, and to be instructed by us in the knowledge of the arts and sciences of our civilization. They were received in this Hall by the Congress of the United States. They entered, and after words of welcome to our shores from the Speaker of this House, the leader of the embassy, one high in office in their own land, responded in a peculiar chant, which was afterward interpreted to those of us assembled here. The scene was very impressive. It was the Old World clasping hands with the New. They asked to be instructed in many of our arts, and to have the privilege of employing teachers from among our wise men to go with them to their own country to give this instruction. They also asked that some of their young people be admitted into our schools and colleges. All this was granted, and it is well it should be so.

They were received as guests into our best hotels, they were furnished the best of accommodations in traveling, they were feted and feasted by our high dignitaries, and yet they were not white people; they did not speak our language, they did not dress or appear as our people do, they did not worship the same God we do. Still, for all this, our prejudice in this case did not cause us to deny to these people those rights which we daily deny to millions of our own citizens, natives of our own soil, speaking our own language, worshiping with us the same God, and many of whom are by far superior in every respect to these strangers.

Then, sir, let us throw aside this foolish prejudice, and be just and impartial to all our people. Let us remember the history of the people to be benefited by this bill, how they have suffered patiently through centuries of wrong and oppression, till at last the light of a glorious freedom has dawned on their eyes; till they see themselves at once as it were delivered, with their wives and little ones, from the oppression and shadow of death of a cruel slavery, and placed before the world as citizens of this great and now free country.

Let us remember, too, sir, if we are Christians, that God is just; that we paid the penalty for holding a people for years in a cruel bondage with the lives of hundreds of thousands of our bravest and best. Let us, then, remove from them every vestige or trace of their wrongs; let us atone in full for all they have suffered; let us as a nation be fair and just to all our people, or else divine Providence will again chasten us in wrath.

Arbitration.

SPEECH OF HON. H. B. SMITH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

June 17, 1874,

On the resolution reported by the Committee on Foreign Affairs, requesting the treaty-making power of the Government to incorporate a provision in future treaties that war shall not be declared by either of the contracting parties against the other until an effort shall have been first made to settle the alleged cause of offense by impartial arbitration.

Mr. SMITH, of New York. Mr. Speaker, I offered the resolution, which was referred to the committee, to redeem a promise made while I was abroad last summer to some distinguished friends of international arbitration that I would endeavor to have some expression of this House which should fitly interpret what I knew to be the sentiment of the American heart. The action of the Italian Chamber of Deputies in November last, in adopting a request to the King of Italy identical in terms with the resolution which I offered, was largely due to the influence of Count Sclopis, *clarum et venerabile nomen*. The action in the British Parliament in July last, though differing in terms from this resolution, was a most emphatic commitment of the English Commons to the substitution of peaceful arbitration for the settlement of national differences in place of the barbarism of war. The question in hand is, Shall the American Congress make no response to this timely action? Shall the battle-scarred nations of Europe stretch out to us in a new brotherhood of peace an ungrasped hand?

> The stars shoot good fortunes in fair junctions,
> And tell us, "Now's the time!"

In my own judgment, an international Congress is unattainable for a generation, perhaps for a century to come. Hostile nations will nor in this age submit their differences to the arbitrament of a tribunal not chosen by themselves at the time and not known to be impartial in the exigency.

An international code will be found, I fear, a work of magnitude so stupendous that it can never be settled by treaty, but must grow up by precedents, slowly and during the centuries, like the common law. If once written, will not quarrels arise over its construction and will it not even breed disputes, like the English statute of frauds?

But this resolution aims at what is practicable; impossible of mischief; the first step to be taken; the duty of the hour. In my humble judgment it practically reaches the results to be hoped for in an international code and an international Congress. The effect of such a provision in treaties will inevitably be, that before war is declared some negotiation will ensue, and when negotiation begins the danger of war is past.

Since this resolution was offered I have been told by gentlemen upon this floor that it is unnecessary; that the moral effect of the Geneva arbitration prevents the possibility of war without an attempt at arbitration. Mr. Speaker, in the history of the civilized world war has been averted twenty-five times by international arbitration. Perhaps there has been no instance of arbitration so conspicuous as the arbitration at Geneva; perhaps none which has so profoundly impressed the world. But these numerous examples have gone for nothing, because no way was found to utilize them, or practically to bring them into precedent.

Shall the moral effect of the successful result of the Geneva tribunal be broken by some act of war in a reckless hour of national anger? Shall the ripe fruit it has borne for humanity perish unplucked? There is a tide in the affairs of nations as of men. The hour is supreme. I speak for Christian civilization, for the threatened, trembling hope of the world, when I entreat you, with no commitment which can possibly embarrass you in the declaration of any necessary war, to save what you have already won for humanity. You will then have recognized the progress of the race. War will not cease at once, but it will be the last, not the first resort.

> Down the dark future, through long generations,
> The echoing sounds grow fainter and then cease,
> And like a bell, with solemn, sweet vibrations,
> We hear once more the voice of Christ say,
> Peace! Peace!

Civil Rights.

SPEECH OF HON. JOHN J. DAVIS,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

June 19, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. DAVIS. Mr. Speaker, I have no set speech to inflict upon the House, and shall trespass on its patience but a few moments to enter a simple protest against the passage of what is known as the "civil-rights bill." This bill has been discussed sufficiently already to acquaint the country with its obnoxious character, and to excite inquiry into its pernicious tendencies. Aside from its unconstitutionality, it is objectionable and repulsive because it seeks to accomplish by legislation what reason, sound policy, and the natural instincts of the white race forbid. No written law, however constitutional, can efface or obliterate those distinctions and differences between the races which nature has created; nor will any law cause the Anglo-Saxon to recognize the equality this bill seeks to enforce.

The white man and the negro are distinct races, created differently by an all-wise Being for reasons which are inscrutable to us and beyond our capacity to comprehend. In their mental and physical constitutions they are unlike each other, and as "the Ethiopian cannot change his skin, nor the leopard his spots," your legislation cannot change humanity and bring together into the close relations contemplated by this bill what God has put asunder. This feeble attempt to evade nature's law and crush out by legislation prejudices implanted by Deity in the breast of the white man, can only result in injury to both white as well as black. Each race is chosen for a particular plane of action, distinct from the other, though perhaps tending ultimately to the same end, and as long as you permit it to move in its separate sphere untrammeled by laws contrived to change what is irreversible the races will accomplish the design of Providence in their creation.

I cherish no prejudices against the colored race on account of their dark hue; nor would I place obstacles in the way of their advancement in morals, religion, and education, apart from the white race. In their own way and in their appointed sphere, I bid them God-speed. But when I am asked to sanction a measure that compels my own race to stifle those prejudices which are involuntary, and spring from no false sentiment or defective education, and submit to associations against which their highest instincts revolt, I must be excused from lending it my countenance and support. As between the white and the colored race there is no neutral ground for me to occupy. I believe in the superiority of my own race over every other, and when it is attempted to degrade it by a forced equality and an involuntary association with an inferior race, be it red, brown, or black, I shall protest against the impious and wicked act.

The passage of this bill will arouse the very prejudices it is your purpose to crush out, if possible, and render tenfold more intense that feeling of antipathy which, in the not distant future, must end in a conflict of races, fatal to one and brutalizing to the other in the spirit of hate it will engender. If it is the interests of the colored race you would promote, pause before you enact a measure that will destroy the instrumentalities already devised to ameliorate their condition and elevate them in the scale of mental and moral improvement. Pass this measure and you strike a fatal blow at the free-school system of the South and in the border States. You cut your wards off from the lights of knowledge and seal up the fountain a generous people, their truest friends, have provided for their advancement. Besides thus injuring them, you close the avenues of learning to the sons and daughters of the poor who cannot purchase exemption from the evils of this act, and bestow upon them as the memento of your folly the curse of ignorance. In their behalf I protest against it.

But, passing from this view of the subject, I oppose the measure because it is an exercise of power unwarranted by the Constitution and destructive of the whole theory on which the Federal Government is founded. From whence do you get your power to enact such laws? Where is the grant which confers it? In what article of the Constitution is it found? When did the States delegate to the Federal Government the right to exercise the powers assumed in this bill? The States made the Federal Government, it did not make them. They delegated to it certain specified and defined powers, and reserved to themselves all not delegated. If the power claimed was not delegated it remains with the States, and you dare not exercise it without committing a *usurpation* which would render your action null and void. You find no such power delegated in the Constitution either expressly or by implication, nor is its exercise a necessary incident of any power granted. It is an assumption, and an assumption of the most dangerous character, as it establishes a precedent for further innovations and aggressions upon the rights of the States. The institutions and subjects you seek to regulate and control by the bill are all under the control of the States, solely and absolutely. To the Federal Government they never delegated any power over them, and it they are wise and jealous of maintaining that system of government which makes the Union a blessing and not a curse to them, they will never cease to protest against this act of political robbery. If you may regulate the relation of the races in schools, churches, theaters, hotels, places of public amusement, cemeteries, &c.; if you may dictate to the States their policy in this respect and enforce obedience to your mandates, you must admit that the Government established by the Constitution as it came from the hands of its framers no longer exists. The omnipotent arm of the "new nation," born of a war prosecuted to preserve the Federal Republic, blots out States and converts them into petty provinces at its pleasure.

I do not believe the transformation this bill assumes has taken place, nor can it until you boldly proclaim that the Constitution as it was written is no longer the supreme, fundamental law for your government. I know in practice it is treated as obsolete, as no longer of binding authority, but it still remains the written law, with its specifications and restrictions, to remind you that your powers are limited, and cannot be stretched by an unlimited power of construction to suit the interests of a predominant sect or party. Under repeated encroachments upon its provisions, the fabric of government is silently but surely crumbling and tottering to its fall. Upon its ruins is being raised a colossal structure, magnificent in its proportions, dazzling in its patronage, bespangled with the armorial ensigns of despotism, and altogether unlike the simple republican Government bequeathed to us by the men who framed the Constitution. Is there not just reason to fear that while retaining the form we are losing the substance of free government?

A constitution made up of *balanced powers* must ever be a critical thing. * * * Being once settled upon some compact, tacit or expressed, there is no power existing of force to alter it without the breach of the covenant or consent of all the parties.

Shall not a halt be called, and that pernicious species of construction, which enlarges the powers of the Federal Government to the destruction of the whole system, be excluded and forever abandoned? Let us preserve religiously the Constitution, which forms the key-stone that binds together the well-constructed arch of the Union, and in so doing we shall secure good government and liberty to all.

Charges of Bigamy against the Delegate from Utah.

SPEECH OF HON. J. W. ROBINSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

June 19, 1874,

On the charges of bigamy against the Delegate from Utah.

Mr. ROBINSON, of Ohio. Mr. Speaker, I did not propose to say anything upon the charge of bigamy preferred against the Delegate from Utah, and I would not now but that this matter being referred to the Committee on Elections, of which I am a member, the committee, after the evidence was closed and the parties had submitted the case, decided contrary to my wish to postpone its decision and report until the next session. Neither would I feel at liberty to do so now if there remained any substantial dispute as to the facts of the case. The real difference of opinion relates to the proper action to be taken by the House, conceding the charge to be true; therefore in self-defense I give my views in a general way, rather as an explanation than as an argument in the case.

The Delegate is a teacher, high in office in the Mormon Church, so called, and not only believes in the doctrine of polygamy, but is a practical polygamist, living with four wives in one family, the last one of whom he married in 1865, being three years after the enactment of the law of Congress prohibiting bigamy in the Territories of the United States. A majority of the inhabitants of the Territory of Utah believe in the same doctrine, and the evidence shows that they well knew that the Delegate was a practical polygamist when they voted for him. Heretofore that people have sent as their Delegate a Mormon who, while a polygamist in faith, was not such in practice, and now for the first time it has taken the aggressive, and having by unfriendly legislation in the Territory prevented the enforcement of the law against bigamy, now takes an advance step, and undertakes to test the temper of the House and country by presenting the issue fairly to us whether the law shall be respected or repealed.

Well might the House admit Hooper to his seat as a Delegate, though a polygamist in belief, for the reason that the law takes no cognizance of opinions, but operates upon the acts and conduct of men.

I have no personal contest with the Delegate from Utah as an individual, but consider the question from a much higher stand-point. If he stood here charged with the crime of bigamy, living with four wives in a clandestine manner, without justifying the act, it would be a grave offense against decency, and the House might, in my judgment, censure or exclude him from the House as a means of purification; but the case presented, it seems to me, is infinitely higher in importance. In the one case it would be the private scandal of a single person whom we might or might not tolerate as the judgment

of each of us might dictate, but in this case the crime is not concealed, but justified, and that is doubtless one of the causes of his election by that people. Instead of a private scandal it becomes a public one, and presents an issue which cannot, in my judgment, be whistled down by a sneer as some gentlemen have sought to do. It is not merely a question whether the House in its discretion for self-purification and decency should remove a private scandal by excluding a Delegate guilty of disgraceful practices, but in his person and the circumstances of his case, this man must be excluded from his position as Delegate, or this House must, to be consistent, repeal the statute and acknowledge the right of this monstrous evil to continue in the Territory to the destruction of all the relations on which the Christian civilization of this country are based. I accept the issue, and ask in the name of decency and public virtue and of law that the House vindicate the laws of the country and respect the moral sense of the civilized world.

But it is argued that his exclusion would be a violation of his right of conscience to worship according to his own judgment and conscience. This claim has no foundation in law or ethics. The right of faith and worship according to one's conscience is sacred under the Constitution, but by well-defined interpretation this affords no protection for acts which interfere with the rights of others. As well might you undertake to defend the practice of burning the widow on the funeral pile of her deceased husbandas this of polygamy, which enslaves women and sacrifices her on a more than funeral pile, and it is no palliation or defense that she may in her helplessness consent to the sacrifice.

Again, it is argued that so long as the Government fails to enforce the law in the Territory, it is trifling to visit punishment on the poor Delegate by excluding him from his seat. I answer that it is no fault of this House or the Government that the law is not enforced; but on the contrary, it is an aggravation of the crime and the injury that the people there have been able, by territorial legislation, to defeat the enforcement of the law, and that fact furnishes an unanswerable reason why this House should maintain its dignity and respect for law by repelling the defiance of the Delegate and his people in this matter. It makes it impossible for us to surrender the issue without self-degradation and the humiliation of the country. I will not stop to answer other objections which I have heard, but may when the report shall be made take the opportunity to discuss the matter more fully, having now defined my position in the premises which I felt bound to do in view of all the surroundings of the case.

The Republican Party.

SPEECH OF HON. W. S. HERNDON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

June 19, 1874,

On the republican party, its objects secured, its mission ended, its statesmanship exhausted, and its incapacity for future success.

Mr. HERNDON. Mr. Speaker, we have reached a period in the history of the political parties of this country that is both interesting and instructive. We should pause for a moment, analyze their constituent elements, and determine if possible their value to the country in future. Unmistakable evidence everywhere indicates that a great change is demanded and must soon come. The ties of old organizations are giving away; the party lash has lost its force; the battlecry of "*rebellion*" and "*treason*" is drowned amid the shouts of the multitude for more honest government. Everywhere discontent, discord, and distrust are seen and painfully felt. No State or Territory of the Union but has its grievance. In the Army and Navy, on land and sea, the banker and merchant, the farmer and manufacturer, the laborer and professional man, and even the corporations, from one end of the country to the other, are sending up a wail of distress which weakens public confidence and threatens to sweep over the land like a wave of ruin. Politicians are changing front and putting their houses in order to meet the impending storm. This day finds no class of the American people contented and happy. But the most unhappy class among them all is the professional office-holder. He trembles for the future. The uncertainty of the present is great, but that of the future is much greater for him. The wrath of an outraged and offended people is without mercy. Why should the office-holder dread the future? The faithful steward fears not the day of reckoning. It is only the slothful and wicked servant that dreads the master's coming.

Sir, who is responsible for the present condition of the country? The republican party took complete control of this great country in 1860. It was then the richest, freest, and most noble heritage of earth. Possessing thirty millions of freemen, sixteen billions of wealth, with but a nominal national, State, and municipal debt, at peace with all the world, a noble army, a navy but second among the nations of earth, and with aspirations that opened up the most brilliant career, what achievements might we not have attained under wise statemanship! But this party being sectional in its strength was also limited in its statesmanship, never comprehending the underlying causes that divided the sections. It began with one single avowed purpose, while many other designs were planned and well understood. The South had reason to dread a sectional party, and to avoid conflict and save slavery and the principles of the Constitution, which were endangered; she resorted to the most extreme remedy, that of self-preservation, the withdrawing from the Union. This was deemed sufficient cause for war. The republican party declared the union of the States paramount, and used force to maintain its integrity. And thus the two sections were plunged into civil war. This party held that the sole object of the war was to maintain the integrity of the Union, and that it was to preserve the life of the Republic as well as for the good of the States themselves.

The freedom of the negro became the second issue that entered into the contest in 1863. The negro was the immediate inflammatory cause of the war, but because the Constitution guaranteed the right of property in him, it was not one of the open and avowed issues at the commencement of hostilities.

Upon these issues the war raged with unexampled fury until it finally ended in defeat for the South and victory for the North. And these two issues, the right of a State to secede from the Union at will and the right of slavery were forever settled before that tribunal where embattled hosts are the advocates and the Almighty is the judge.

What had this party accomplished up to the close of the war? These two issues had been settled by arms, and these were the two distinct and avowed objects of the war. One was the real and leading object, the integrity of the Union; the freedom of the negro was merely a war measure, and avowed late as January, 1863. Had the sovereignty of the States been destroyed, or had the fundamental principles of our Government been changed? Let us examine this closely The States of the South in withdrawing from the Union did not seek to destroy the Union for those States that desired it, or to overthrow their governments; nor did their acts have that effect. The union of all the States, except those that seceded, remained perfect. Nay, those States themselves denied that secession existed at all as a right, or that it was essential to the sovereignty of a State. Those States surely had lost nothing of that sovereignty which they had always separately claimed. And had the Southern States lost any real, substantial power or attribute of sovereignty necessary for their normal existence and the exercise of their proper functions?

Up to this period, then, it was settled that the Southern States should never again exercise that dangerous power which the other States of the Union maintained of right did not exist in them as an attribute of sovereignty. The denial of the right of property in man was an infringement of the constitutions of the Southern States and General Government, and to this extent limited both forms of government in their power over this question. It did not have the effect of enlarging one at the expense of the other, but of taking from both, for both the Federal and State constitutions had previously to these changes authorized it. When peace was announced in 1865 the States of the Union, all alike, North and South, in the letter of their organic law and sovereign power were unchanged. It remained for the civic methods of peace to be applied. Now the war was ended; the surging billows of contending hosts had died away amid the groans of defeat for the one and the shouts of victory for the other. The people of the South laid down their arms in good faith and have kept their pledge till now. There is no example in history like it. No people of earth so perfectly kept faith. Not a single revolt among ten millions of people.

But turn your eyes to England, Scotland, Ireland, France, Sicily, and the kingdoms of the East, or to the provinces of South America; everywhere sudden upheavels and terrible retaliations by the conquered followed their defeats. But there is a reason for this; there is no example in history that illustrates the peaceful and perfect acquiescence in the result of the war, because no war was like this one, no people like the southern people. The armies of the South were fighting for peace, *to be let alone*, for separate existence, for the principles of the Constitution. When overpowered, and the two objects of the war were lost, they had the assurance that the party which had conducted the war would be satisfied, that they did not mean conquest, but integrity of the Union. But here commenced the double dealing, that crafty, cunning inquisitorial work that has laid waste that portion of the South that escaped the ravages of war. It was now assumed by this party that the fruits of victory must be saved by legislation; that the negro was set free by arms, but the act must be sanctioned by law; so the thirteenth amendment gave him freedom, the fourteenth made him a citizen, and the fifteenth gave him the right of franchise in quick succession. Thus without preparation or training the negro was elevated in three years by law to a position that it had taken centuries of toil and sacrifice to bring the white man. The necessity of these amendments entered largely into the contests for power, and they were claimed as issues resulting from the war, and therefore within the scope of the grand purposes of this party.

Mr. Speaker, I want to direct special attention to the effect that these amendments had upon the sovereignty of the States. I said that the war itself settled but two questions, the right of a State to secede at will, and the question of slavery, nothing more, and that

the attributes of sovereignty as to the former question were left unimpaired, according to the views of all the Northern States and those of the General Government then controlled by these States, and the latter question added nothing to but took away an attribute of sovereignty from both the Federal and State governments, serving all precisely alike as to the future exercise of this power. The financial effect was quite different; it fell like a thunder-bolt upon the South and crashed like it, while the North escaped calamity. The three amendments enlarged the sovereign powers of the Federal Government and diminished those of the States. All the powers conferred by these amendments upon the General Government were taken from the States, were derived from them, and the States restrained from their future use. What the Federal Government gained in power or sovereignty by them the States lost. But it surely was not intended by the majority of the people of the States themselves to emasculate their own strength. To destroy the sovereign States with their mass of rights and powers would be to destroy the federal idea of government itself.

The true federal idea of this Government is that it is composed of free and independent commonwealths, independent of each other and free from the superintendence of the General Government in their local affairs. Local State governments existed before the Federal Government; before our Constitution they were independent of and superior to it, were in no way dependent upon it for existence. The federative system was but a bond of union among these free States. This is the rock upon which the whole system is founded; destroy this, and your noble structure fails. You may still have a government, but it will not be a federal government. It may be a centralized consolidated form, or it may be an aristocratic form, but certainly not a free representative government. Our Constitution is but the evidence of the existence of these free and separate States acting in concert for certain defined purposes.

All forms of government possess a greater or less degree of political power. The more perfectly this political power in a republican government is distributed, the greater will be the strength of the government. The great office of the Constitution is to distribute, utilize, and direct this power. And it rises in dignity, wisdom, and perfection, just in proportion as it succeeds in distributing, adjusting, and limiting the political powers confided to it. The amendments themselves have trenched upon the sovereignty of all the States, but not destroyed that sovereignty. Fairly construed, they are not sufficiently comprehensive to embrace all the sovereign powers and attributes heretofore exercised and possessed by the several States. They were never intended to destroy anything but slavery. They could only be remedial, for the true office of the amending power of the Constitution is strictly remedial in its nature. The States do exist in their sovereign power, possessing not all the attributes they did prior to their adoption, but sufficient to maintain the grand object of their creation, to foster and maintain local self-government.

And here is the greatest crime of the republican party, the teaching of the doctrine that the States as such have no rights that they are required to respect and that they do not possess sovereignty at all. To have taught such doctrines was evil, but to put them into practice has proven a calamity. Openly proclaiming these ideas, they enacted a series of reconstruction laws, claiming that these were sanctioned under the war powers of the Government and the last amendments to the Constitution. Here was a fatal step toward anarchy in the States to be reconstructed and consolidation in the States not so affected. To recite the devastation, waste, and widespread ruin produced in the South by this proscriptive and oppressive legislation would require a volume. It has been the constant theme in and out of Congress for years, until not only our own people are familiar with its frightful details, but other countries are beginning to inquire if these things can be possible in a free country. These States at the close of the war were either in the Union or out of it, and certain rights attached accordingly. This party, for the purpose of retaining power, declared either way as it served their plans.

It was not contemplated at the commencement or during the war to make a conquest of these States, but the oft-declared object was to restore them to their true relations in the Union as equals. They were not to be despoiled of their rights, powers, or property, nor were their citizens to be oppressed with unjust and proscriptive laws. Yet all this and much more was done. These acts were performed during profound peace, long after the war had ended, and wholly without the warrant of the Constitution. It could only be done by the aid of the Army, the combination of the legislative and executive departments of the Government. Here was the ground-work of this terrible and most wanton disregard of all law, both human and divine, that has characterized the agents of this party in the South; and this disease of corruption that seized upon the officials of this party South has gradually spread its poison until the whole party has become affected. There is one profound truth this party has failed to learn, that "in the character of a nation inconsistency is impossible." In the moral and physical world nothing is strange, unnatural, or inconsistent. Contradictions do not exist. The doctrine of uniform sequence must be true. When certain things happen, certain other things corresponding must follow. This idea was profoundly impressed by the greatest of all philosophers when he uttered these truths:

Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?

Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit.

Apply this sublime truth to the deeds of this party in the Southern States and throughout the Union, and what must be your judgment? The State governments South were not dismantled and overthrown by the war or laid prostrate before her despoilers by the amendments to the Constitution. These all occurred, and still if nothing else had happened these States, left to govern themselves, would have to-day been prosperous and happy. This party was not satisfied with the legitimate results of the war, the restoration of the States to former relations and their citizens to equal rights. They demanded power and plunder, and they used the sword and corruption to secure them. And, like all former cases of robbery and anarchy in conquered countries, the vultures and carrion-crows, the dregs and scabs of society were used to afflict us. The swarms of locusts, and flies, and lice and frogs, and famine and blood, have all swept over that unhappy land.

Unlike every other country overrun by the ravages of war, there is not a trace of good left behind these plunderers. It is not difficult to point here and there to monuments of mercy and objects of good that in other conquered provinces escaped the ravage of the victors on the one hand, or were left to propitiate the gods on the other. Here, however, are wide desolation, bankruptcy, distress, wailing, disappointed hopes, and a dark future. These fraudulent and sham governments are bearing fruit—*the apples of Sodom.* They are a calamity, a curse, and disgrace to the American people. They were not made by the people or for the people. They were dictated by a merciless despotism to retain wanton power. No free and independent brave people can maintain good government under them. They must be remodeled by the wisdom of our people, suited to the genius and progress of free States.

The spoils and power procured by plundering the Southern States made this party drunk with its own success. It did not fear to lay its iron hand on the Executive who dared to warn it of its ruin. It did not fear to corrupt the very fountains of justice, and thus sow the seeds of ultimate ruin in the Republic. When brought to a pause by some sudden calamity it has attributed the cause to the *rank outgrowth* of the war, to something that might have been expected. The theft, robbery, and licentious plundering of eleven States of the Union were sanctioned by this party. This was the license and the shield of protection to plunderers throughout the nation. The chiefs in power became violators of the Constitution; pledges of honesty and the sanctions of the law were broken alike.

A wild hunt for plunder without honest toil became the rule of action, and this contagion spread through every branch of the Government service. And what has been the effect? The more honest men of the party first endeavored to correct these excesses and eliminate the plunderers and the proscriptive spirit from the party, collect the best material in it, and march forward. But they were in a hopeless minority. Then they endeavored to fly from the party, but without general concert of action or a knowledge of their numerical strength. When this honest element numbered their rank and file in the republican party they were so few in number and so weak in power that the multitudes, indorsing the corrupt and vicious, overwhelmed and crushed them. But this class did enough to deserve gratitude from their countrymen. They directed public attention to those evils which had been often exposed by the opposition, but unheeded. Investigations commenced after a hard struggle. But against whom were they leveled? Not against the democratic party or its members, but against the office-holders of the republican party. For three years a large portion of the time of Congress has been occupied in searching out and uncovering the blackest frauds committed against the Government. Has a single department of the Government escaped? The one tale of woe and distress and shame and dishonor is uniform and consistent. To investigate is to find and expose some great and damning fraud. So rapid have these exposures occurred that the excitement and disgust produced by one have hardly ceased to ring in our ears before it is succeeded by another still more monstrous. The whole land has become familiar with them. It is but natural now to look for them. The crimes of reconstruction, Credit Mobilier, the syndicate, unlawful expenditure of the proceeds of our navy and war material, the sale of French arms, the expenditures of Federal courts in different districts, the New York custom-house frauds, South Carolina, Louisiana, Arkansas, with all their shocking frauds and willful violations of law, the systematic robbery of the internal revenue, the thefts of sharpers and swindlers of the pensions to soldiers, corners in gold and "Black Friday," the District of Columbia with its board of public works and corrupt rings, the Department of Justice with its frightful expenditures, the Treasury Department with its violators of law and wanton excesses, the impeachment of Federal judges for high crimes and misdemeanors, and the Sanborn contracts with the corrupt and disgraced officials connected therewith, besides a host of smaller investigations that sicken the heart of every lover of free and honest government in this country. "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?" How can the tree be a good one and bear such corrupt fruit? It is useless for the party to explain or attempt to hush the voice of indignation that is ringing out like thunder throughout the land. These investigations show, and it is not denied, that millions of the people's money have been fraudulently and recklessly squandered by Government officials within the last few years, and that many of these officials are still in office, or, if disgraced in

one and forced to resign, are appointed to another. While every branch of the public service is reeking with foul corruption, with laws disregarded and honesty at a discount, the appropriations are on the increase, showing that we are going from bad to worse.

Each year fair promises are made by the leaders that retrenchment and reform will take the place of extravagance and profligacy. But these are always broken. Since 1870 our appropriations have steadily increased. In 1871 appropriations were $300,627,086.44, and for 1874, $319,652,644.31, being an increase of over nineteen millions. Appropriations for ordinary purposes in 1871, $134,233,508.05, and for the same in 1873, $172,290,700.82, showing an increase of about thirty-eight millions. How can this increase be justified? But go back to 1868 and compare it with 1873 on several items, and note the increase.

Summary and comparative statement of expenditures in the several branches of the public service named from 1868 to 1873, inclusive.

Branch of service.	1868.	1873.
Post-office	$22, 730, 592	$29, 084, 945
Indians	3, 988, 353	7, 951, 704
Naval	16, 288, 244	18, 296, 733
Coast Survey	455, 709	852, 828
Survey of public lands	373, 252	1, 128, 060
Surveyor-General's office	95, 209	414, 135
Judiciary	723, 378	3, 826, 131
Sub-Treasury	260, 113	493, 661
Miscellaneous	53, 009, 867	73, 328, 110
Total	97, 924, 708	135, 376, 307

This table shows an increase for these items in 1873 over 1868, the beginning of Grant's administration, of over thirty-seven millions. Is this actually necessary for the public service, or is it on account of the increase of corruption and profligacy? While this has been marching forward the bonds of the Government, amounting to $400,000,000, have been paid in gold at a most ruinous sacrifice. The idea is kept up that the public debt is being paid and the taxes being lessened; all of which time and experience have shown to be but untrue and unwise. When this frightful condition of the country is presented, what answer can be made? The result of this suicidal policy was vividly portrayed lately by Mr. BELL, of Georgia, when he said:

With every element of wealth, surrounded with profusion and burdened with excess, we are starving at a banquet and famishing at a fountain.

The national debt amounts to $2,293,170,689.43, upon $1,712,749,200 of which we pay interest in coin. The revenues fail to meet current expenses on a peace basis. Commerce decaying, labor disorganized in the South and unproductive in the West, starving freedmen imploring the Government to feed them upon rations issued from the War Department, finances deranged, factories running on half time and thousands of operatives turned out of employment in the North, agrarian mobs and communistic associations clamoring for bread or blood in the cities, railroad magnates monopolizing the profits of industry and money-changers defiling the temple with a heartless idolatry at the shrine of Mammon—this state of things must be changed. These evils must be corrected.

The answer of the party is that they have built a great number of railroads and given the country increased communication. But, Mr. Speaker, these giant monopolies, against which the whole country is crying out to-day, were built at a fearful cost to the Government. The Government granted over one hundred and thirty-five million acres of the public domain to the Pacific roads alone; nay, more, issued nearly $65,000,000 of bonds, on which we have paid nearly $22,000,000 of interest. Said Mr. TOWNSEND a few days ago, (who is a republican,) in a well-considered speech on finance:

Notwithstanding all this ruin and despair throughout the land, my colleague, [Mr. KELLEY,] the gentleman from Indiana who so eloquently spoke here yesterday, [Mr. ORTH,] and his colleague who has addressed us to-day, [Mr. COBURN,] say that all is prosperous and serene throughout the country. They point us to the railroads that have been laid down, and the furnaces, forges, and rolling-mills that have been set up. They point us to the cities that are being built up around us. But they forget, Mr. Speaker, to tell you that these improvements have been made at a fearful cost, leaving a heavy permanent indebtedness. They forget to tell you that the country in its national capacity owes $2,000,000,000. They forget to tell you that for these railroads which they speak of the country owes $4,000,000,000. They forget to tell you that the municipal debt of the country is $1,000,000,000. They forget to tell you of the other indebtedness of the people, amounting in all to more than $10,000,000,000, or 30 per cent. of the whole real and personal estate of the nation, which the people lie under to-day. Every year $600,000,000 of interest is grinding out the faces of the poor; $600,000,000 is working against the capital and against the industry of the nation.

Thus it will appear that while the census shows the total wealth of the nation in 1870 to be $30,000,000,000, yet we owe $10,000,000,000, nearly one-third of our wealth, and in fact are but little richer than we were in 1860 when we were out of debt and owned sixteen billions of wealth.

A great non-resident proprietorship is being built up all over this country which is gradually but certainly drawing away all the surplus substance of our people. The people of this country are deeply in debt. We have been living beyond our means; we have daily witnessed extravagance and excess, until the whole people have been injured. Speculation by the Government and its officials has taught the country to seek riches without honest toil. The number of non-producers are on the increase. We need more honest industry among all classes and less profligacy and speculation. The uncertainty of the value of the money of the country added to the extravagance of the Government have done much to unsettle values, stimulate speculation, and produce financial crashes and wide-spread calamities.

Sir, the method adopted by this party in the government of this country is evil and vicious. They have ruled the country upon false principles. It has been treated as a consolidated nation as contra-distinguished from a Federal. Both the rights and sovereignty of the States have been ignored and disregarded. And they have endeavored to take the control of local affairs out of the hands of the true proprietors and lawful custodians. A false interpretation has been placed upon the last three amendments to the Constitution, such a construction as enabled this party to overthrow our State governments and trample upon the most sacred rights of the citizen. And this laid the foundation for all the corruption, waste, robbery, peculation, and ruin that has followed. This has destroyed all accountability in the official. From the highest to the lowest official of the Federal Government they feel independent of the people.

No stab is so fatal to the life of a nation as the want of accountability in her officers; this always produces corruption, then weakness, disgrace, and ruin. Is not this our pitiful condition to-day? How weak is this apparently powerful party for good! They utterly fail to give the country relief on the financial question, although boasting of a two-thirds majority in Congress; they are torn and weakened by internal discord and faction; they often fail on measures of utility small in themselves; they possess neither concert nor combination; they distrust one another and their power is emasculated. What yet remains for it to do? Has it added a new issue since reconstruction—since it conquered a peace, and fell to plundering the spoils and fighting over the division? What public good has it accomplished? Since 1868 it has been literally feeding upon its own flesh. All national issues for which it struggled have been exhausted. There is no vital living principle left; it is stagnant as a pool of bitter water. All it can hope to do is by the mere weight of its yet unbroken but mutinous columns.

In July, 1868, the delegates of the democratic party from every State in the Union, after making certain specific demands of the Administration for better government, said:

In demanding these measures and reforms, we arraign the radical party for its disregard of right, and the unparalleled oppression and tyranny which have marked its career. After the most solemn and unanimous pledge of both Houses of Congress to prosecute the war exclusively for the maintenance of the Government and the preservation of the Union under the Constitution, it has repeatedly violated that most sacred pledge under which alone was rallied that noble volunteer Army which carried our flag to victory. Instead of restoring the Union, it has, so far as in its power, dissolved it, and subjected ten States, in time of profound peace, to military despotism and negro supremacy. It has nullified there the right of trial by jury; it has abolished the *habeas corpus*, that most sacred writ of liberty; it has overthrown the freedom of speech and the press; it has substituted arbitrary seizure and arrests and military trials and star-chamber inquisitions for the constitutional tribunals; it has disregarded in time of peace the right of the people to be free from searches and seizures; it has entered the post and telegraph offices, and even the private rooms of individuals and seized their private papers and letters without any specific charge or notice of affidavit as required by the organic law; it has converted the American Capitol into a bastile; it has established a system of spies and official espionage to which no constitutional monarchy of Europe would ever dare to resort; it has abolished the right of appeal on important constitutional questions to the supreme judicial tribunal, and threatens to curtail or destroy its original jurisdiction, which is irrevocably vested by the Constitution, while the learned Chief Justice has been subjected to the most atrocious calumnies merely because he would not prostitute his high office to the support of the false and partisan charges preferred against the President. Its corruption and extravagance have exceeded anything known in history, and by its frauds and monopolies it has nearly doubled the burden of the debt created by the war. It has stripped the President of his constitutional power of appointment even of his own Cabinet. Under its repeated assaults the pillars of the Government are rocking on their base, "amid the ruins of liberty and the scattered fragments of the Constitution."

Sir, there is no one familiar with the history of this party in 1868 who is not concious of the truth of these grave charges. Yet with the combined power of the Army, Navy, Treasury, and the whole patronage of the country it was able to retain power and supremacy in spite of all this wickedness and maladministration. Has there been any improvement since 1868? Has not the light of experience for six years shown a constant increase of corruption, profligacy, and extravagant expenditures, and at the same time a corresponding retrogression of virtue, frugality, and honesty in the public service?

The life of this nation must be preserved by its progress. A nation can no more remain stationary and live than an individual or a plant. The whole intellectual, moral, and physical world are fulfilling a high destiny. But stop them in their determined march, and the order of their being is obstructed and they suffer the consequences. This party has ceased to govern wisely, to advance; it is no longer progressive; hence signs of decay are evident, and it is languishing and will surely die. It has preyed upon and devoured all that could nourish such a monster. It is powerless to recuperate and survive its own rottenness and decomposition. It has left in it none of the positive elements of recovery or success. Discord, distrust among its leaders, want of confidence between the leaders and voters, without a single solid issue that can either arouse enthusiasm or combine effort—it must fail. Who will trust the party, as such, or its most distinguished leaders with further rule? What can they promise the country? A sound money, lower taxes, larger revenues, less of monopolies, peace between capital and labor, cheap transportation, more honest rule, less defalcation in office, stricter accountability, the payment of the national debt, free State governments, freedom at the ballot-box, a strict construction of the last three amendments, one term for the Presidency, restoration of purity in the judiciary,

less profligacy with the public money, and a general return to the fundamental principles of the Republic? Sir, fourteen years have they had ample opportunity to do all these things, but they did them not; and this is the crime for which they must answer before the bar of the American people.

Sir, there are two mighty forces at work in every government, and constantly at war. One force is represented by the class that pay the taxes, and the other by that which consumes them. The office-holders constitute the former one and the people the latter. The consumers are always seeking to increase the taxes and the payers to decrease them. The one may baffle and conceal the real condition for a time, but the destruction is all the more swift when the wrong is discovered. The millions of tax-payers are springing to their feet all over the land demanding an account, a full exhibit. The party in power has had all the tax-consumers for fourteen long years; they cannot make an honest answer. They look anxiously to each other and inquire, who shall cast the first stone? And not one is able; all are guilty of some political sin. Must this party retain power because it is forced to search out its own criminals; because, when concealment is impossible, it permits the felon to be exposed? How many of the detected officials with stolen plunder have been punished?

A corrupt tree cannot bring forth good fruit. That the tree is corrupt has ceased to be an open question even in the party itself. It has not only ceased to grow, but it is actually withering and dying. Many of its branches have been cut away; some of the most vigorous roots have died; the beautiful stream, the Treasury, that ran hard by and nourished its massive trunk, has ceased to overflow its banks and is drying up, and the blazing sun of honesty is pouring upon it its pitiless rays, and the yellow leaves are being rapidly swept away. Soon you will see that once proud monarch, amid whose branches the lightnings of a bloody revolution played without harm and which might have won and kept the hearts of the American people, lying low in the dust. While honest and true to the principles of the Constitution, it defied alike the storm of battle and the contention of opposition parties, but in betraying the trusts confided to it and prostituting its noble mission, it fell a prey to its own corruptions.

In the next contest for political power in this country all the old issues that have stirred the popular mind to such depths in other days will sink in importance beneath the mightiest of all issues that can arouse a free people. The controlling issue will not be upon the kind or quantity of money, the sovereignty or rights of States, the freedom of speech or the purity of the ballot-box, national or free banking, monopolies with or without lawful control, one term or more for the presidency, cheap or high transportation, tariff or free trade, license to sell at will, or restrictive liquor laws, whether the President shall be elected by a direct vote of the people or by electors, as now, or what shall be the true construction given to the last three amendments to the Constitution. All of these are important and must exercise greater or less influence; but that upon which the very life of the Republic depends is, honesty against rascality, economy against profligacy, fidelity against corruption.

If there be no honesty, economy, or fidelity in the party that ascends to power, what boots it how the other issues are decided? With dishonesty and corruption clothed with power, all issues, pledges, and laws are worthless to restrain its wanton excesses. It is that disease which has never failed to destroy all governments afflicted with it. The seeds are already sown, they have germinated, been fostered by skillful hands, and are to-day bearing fruits in the most favored spots of this rich country. Will the people free the land of dishonesty and corruption? They yet have the power, if they will exercise the Spartan virtue and courage to rise in their might and demand an unconditional surrender of the sacred trust which is now held by the republican party. With full power once more in their own hands, they will have learned sufficient wisdom from experience to guard this trust more sacredly in the future.

This country and age need a broader and wiser statesmanship. True statesmanship is always honest, just, noble, direct, faithful, and full of simplicity. It cannot and will not tolerate vice, profligacy, selfishness, corruption, and dishonesty in the public service; but, possessing integrity, fidelity, and honest purposes, it presses forward to a noble discharge of duty with the resistless tread of conscious power for good. Littleness, craftiness, and conceit in political life, either in the individual or party, excites but disgust and pity.

The history of all the parties that have ruled this country discloses in none of them so little of greatness to admire and so much of littleness to despise as this. This party has had its day of prosperity and power; and its day of sorrow and affliction is near at hand. It has lost its hold on the heart of the American people, and is without competent leaders or sound principles to succeed in future. Its usefulness has ceased, and it is in a state of disintegration and dissolution. Here and there it will still give signs of life for a time; so great an organization will not disperse or lose all life in a month or a year; but the handwriting is already visible on the wall. It has some noble and true men in its ranks, but they are utterly powerless to correct the abuses that exist inside of the party. So deeply seated is the cancer of corruption in this party, that elimination is impossible and amputation is death. Therefore it must, in obedience to the almost universal demand of the country, yield the sacred trust which it has betrayed and dishonored into the hands of the people, who always mean well, and in whose honesty and fidelity as a mass I repose undiminished confidence.

Currency—Free Banking.

SPEECH OF HON. S. S. MARSHALL,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

June 20, 1874.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. No. 1572) to amend the several acts providing a national currency and to establish free banking, and for other purposes—

Mr. MARSHALL said:

Mr. SPEAKER: All previous efforts to mature and crystallize into law some measure tending to an adjustment of the financial policies of the Government and to give relief to the embarrassed and prostrate industries of the country having utterly failed, as one of the conferees on the part of the House, appointed by its Presiding Officer to unite with the conferees on the part of the Senate in the preparation, if possible, of a measure of relief that would harmonize the conflicting views of both Houses of Congress and receive the sanction of the President, and having aided in the preparation of and agreed to and signed the report which has been presented to the House, and which is now before us for consideration, I feel it incumbent upon me very briefly to express my views, not only in regard to the measure itself now before the House, but to refer incidentally to some of the questions growing out of this most difficult currency problem.

While we believe that this is much the best bill yet presented to Congress with any hope of its passage, we do not pretend that it is a final or satisfactory adjustment of the financial question which has been so long before us and which has agitated the country from one end to the other. It leaves the present vicious financial system in the main in full force and operation. It does not enter into the disputed questions in regard to a resumption of specie payments, or attempt to determine whether our very objectionable banking system shall be retained as one of the permanent institutions of the country, or shall be gotten rid of just as speedily as possible. These important questions have been waived and postponed because it is manifest that no legislation can be had thereon at the present session.

We simply bring before the House for action a measure whose principal object is a redistribution of the national currency now authorized by law, a measure manifestly demanded by justice and by the rights and interests of the people of the South and West. Indeed it is a measure which ought to have been adopted without opposition the first week of this session of Congress, and ought to have been preliminary to any general discussion of the great financial problems now pressing on us for their solution. For a better comprehension of the measure now under consideration I will present it in detail:

The second committee of conference on the disagreeing votes of the two Houses on the bill (H. R. No. 1572) to amend the several acts providing a national currency and to establish free banking, and for other purposes, having met, after full and free conference have agreed to recommend, and do recommend, to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate, and agree to the same with an amendment as follows:

Strike out all of the amendment after "that," in the first line, and insert in lieu thereof the following:

The act entitled "An act to provide a national currency secured by a pledge of United States bonds and to provide for the circulation and redemption thereof," approved June 3, 1864, shall be hereafter known as "the national-bank act."

SEC. 2. That section 31 of "the national-bank act" be so amended that the several associations therein provided for shall not hereafter be required to keep on hand any amount of money whatever, by reason of the amount of their respective circulations; but the moneys required by said section to be kept at all times on hand shall be determined by the amount of deposits in all respects as provided for in the said section.

SEC. 3. That every association organized, or to be organized, under the provisions of the said act and of the several acts amendatory thereof, shall at all times keep and have on deposit in the Treasury of the United States, in lawful money of the United States, a sum equal to 5 per cent. of its circulation, to be held and used for the redemption of such circulation; which sum shall be counted as a part of its lawful reserve, as provided in section 2 of this act; and when the circulating notes of any such associations, assorted or unassorted, shall be presented for redemption, in sums of $1,000, or any multiple thereof, to the Treasurer of the United States, the same shall be redeemed in the United States notes. All notes so redeemed shall be charged by the Treasurer of the United States to the respective associations issuing the same, and he shall notify them severally, on the first day of each month, or oftener, at his discretion, of the amount of such redemptions; and whenever such redemptions for any associations shall amount to the sum of $500, such association so notified shall forthwith deposit with the Treasurer of the United States a sum in United States notes equal to the amount of its circulating notes so redeemed. And all notes of national banks worn, defaced, mutilated, or otherwise unfit for circulation shall, when received by any assistant treasurer or at any designated depository of the United States, be forwarded to the Treasurer of the United States for redemption as provided herein. And when such redemptions have been so reimbursed, the circulating notes so redeemed shall be forwarded to the respective associations by which they were issued; but if any of such notes are worn, mutilated, defaced, or rendered otherwise unfit for use, they shall be forwarded to the Comptroller of the Currency and destroyed, and replaced as now provided by law: *Provided*, That each of said associations shall reimburse to the Treasury the charges for transportation and the costs for assorting such notes, and the associations hereafter organized shall also severally reimburse to the Treasury the cost of engraving such plates as shall be ordered by each association respectively; and the amount assessed upon each association shall be in proportion to the circulation redeemed, and be charged to the fund on deposit with the Treasurer: *And provided further*, That so much of section 32 of said national-bank act requiring or permitting the redemption of its circulating notes elsewhere than at its own counter, except as provided for in this section, is hereby repealed.

SEC. 4. That any association organized under this act or any of the acts of which this is an amendment, desiring to withdraw its circulating notes, in whole or in

part, may, upon the deposit of lawful money with the Treasurer of the United States in sums of not less than $9,000, take up the bonds which said association has on deposit with the Treasurer for the security of such circulating notes; which bonds shall be assigned to the bank in the manner specified in the nineteenth section of the national-bank act; and the outstanding notes of said association, to an amount equal to the legal-tender notes deposited, shall be redeemed at the Treasury of the United States and destroyed, as now provided by law: *Provided*, That the amount of the bonds on deposit for circulation shall not be reduced below $50,000.

SEC. 5. That the Comptroller of the Currency shall, under such rules and regulations as the Secretary of the Treasury may prescribe, cause the charter numbers of the association to be printed upon all national-bank notes which may be hereafter issued by him.

SEC. 6. That the amount of United States notes outstanding and to be used as a part of the circulating medium shall not exceed the sum of $382,000,000, which said sum shall appear in each monthly statement of the public debt, and no part thereof shall be held or used as a reserve.

SEC. 7. That so much of the act entitled "An act to provide for the redemption of the 3 per cent. temporary-loan certificates, and for an increase of national-bank notes" as provides that no circulation shall be withdrawn, under the provisions of section 6 of said act, until after the fifty-four millions granted in section 1 of said act shall have been taken up, is hereby repealed; and it shall be the duty of the Comptroller of the Currency, under the direction of the Secretary of the Treasury, to proceed forthwith, and he is hereby authorized and required, from time to time, as applications shall be duly made therefor, and until the full amount of $54,000,000 shall be withdrawn, to make requisitions upon each of the national banks described in said section, and in the manner therein provided, organized in States having an excess of circulation, to withdraw and return so much of their circulation as by said act may be apportioned to be withdrawn from them, or in lieu thereof to deposit in the Treasury of the United States lawful money sufficient to redeem such circulation, and upon the return of the circulation required or the deposit of lawful money, as herein provided, a proportionate amount of the bonds held to secure the circulation of such association as shall make such return or deposit shall be surrendered to it.

SEC. 8. That upon the failure of the national banks upon which requisition for circulation shall be made, or of any of them, to return the amount required or to deposit in the Treasury lawful money to redeem the circulation required, within thirty days, the Comptroller of the Currency shall at once sell, as provided in section 49 of the national-currency act approved June 3, 1864, bonds held to secure the redemption of the circulation of the association or associations which shall so fail, an amount sufficient to redeem the circulation required of such association or associations, and with the proceeds, which shall be deposited in the Treasury of the United States, so much of the circulation of such association or associations shall be redeemed as will equal the amount required and not returned; and if there be an excess of proceeds over the amount required for such redemption it shall be returned to the association or associations whose bonds shall have been sold. And it shall be the duty of the Treasurer, assistant treasurers, designated depositaries, and national-bank depositaries of the United States, who shall be kept informed by the Comptroller of the Currency of such associations as shall fail to return circulation as required, to assort and return to the Treasury for redemption the notes of such associations as shall come into their hands until the amount required shall be redeemed, and in like manner to assort and return to the Treasury for redemption the notes of such national banks as have failed or gone into voluntary liquidation for the purpose of winding up their affairs and of such as shall hereafter so fail or go into liquidation.

SEC. 9. That from and after the passage of this act it shall be lawful for the Comptroller of the Currency, and he is hereby required, to issue circulating notes, without delay, as applications therefor are made, not to exceed the sum of $55,000,000, to associations organized or to be organized in those States and Territories having less than their proportion of circulation, under an apportionment made on the basis of population and of wealth, as shown by the returns of the census of 1870; and every association hereafter organized shall be subject to, and be governed by, the rules, restrictions, and limitations, and possess the rights, privileges, and franchises now or hereafter to be prescribed by law as to national banking associations, with the same power to amend, alter, and repeal provided by the "national-bank act:" *Provided*, That the whole amount of circulation withdrawn and redeemed from banks transacting business shall not exceed $55,000,000, and that such circulation shall be withdrawn and redeemed as it shall be necessary to supply the circulation previously issued to the banks in those States having less than their apportionment: *And provided further*, That not more than $30,000,000 shall be withdrawn and redeemed as contemplated during the fiscal year ending June 30, 1875.

And that the title be amended so as to read as follows:

An act fixing the amount of United States notes, providing for a redistribution of the national-bank currency, and for other purposes.

H. L. DAWES,
GEO. W. McCRARY,
S. S. MARSHALL,
Managers on the part of the House.

GEO. G. WRIGHT,
T. W. FERRY,
J. W. STEVENSON,
Managers on the part of the Senate.

The main and salient points of this bill, and which require special notice, are those which provide—

First, for a repeal of that portion of section 31 of the national-bank act which requires the banking associations to keep on hand a reserve on account of their circulation.

Second, requiring national banks to keep in lawful money in the United States Treasury a sum equal to 5 per cent. of their circulation, to be held and used for redemption of circulation.

Third, permitting banking associations to withdraw at pleasure their circulation, in whole or in part, by depositing in the United States Treasury lawful money for its redemption.

Fourth, fixing the amount of United States legal-tenders to be kept in circulation at $382,000,000, and withdrawing from the Administration the power claimed by it of contracting and expanding the volume of currency at pleasure.

Fifth, withdrawing from the States that now have it in excess of their due proportionate share $55,000,000 of the national-bank circulation, and giving it to the States that are now justly entitled to it.

These measures are all believed to be wise, beneficial, and conservative in their character, and it is hoped that they will give relief to those sections where that relief is most needed. If we have not the capital and cannot induce it to come among us to take up this additional bank circulation allowed us, we will at least have the satisfaction of knowing that it is no longer withheld from us by legal enactment in violation of every principle of justice.

It will be observed that we do not propose to increase the national banking capital. To that I would be opposed. We do not propose to establish what is called "free banking." That would prove ruinous, I fear, unless some system of actual redemption should be provided for which has not been proposed; and I may as well say here that I am opposed to any measure that looks to a perpetuation of our present banking system. But the system is now fastened on us for the present, and until we get rid of it the people are compelled to rely very largely upon its notes for a circulating medium. The West and South have long complained justly of the outrageous injustice by which the larger part of the banking facilities have been given to the East and withheld from them. This injustice has become intolerably oppressive, and we propose in part to remedy the evil by the present bill.

The State of Massachusetts alone has an excess of over forty million dollars more than its proper share of this circulation. New England has an excess of over seventy millions, and the Middle States an excess of over nine millions, while the Southern States have a deficiency of fifty-one millions, the Northwestern States of twenty-one millions, and the Territories of nearly eight millions.

We do not complain that these favored States have more wealth and capital than we, if it is acquired by industry, thrift, and economy, and without the aid of that cunning and iniquitous legislation by which all other sections have been persistently and continuously robbed to produce this very result. The system by which, through the operation of the tariff, the wealth of all other sections has been drawn to these favored States is based on theories and arguments so specious and delusive in their character that thousands even of those who are daily robbed and impoverished thereby yield willingly to the seductive influences of these imposing fallacies. But the injustice and outrageous discrimination in favor of these States in the distribution of the national currency is so monstrous and transparent, the robbery has been so bold and defiant, that it is amazing that the wronged sections have so long submitted tamely to the indignity and injustice.

I beg leave here to say a word in regard to the gross misrepresentations that have been made of the people of the Western States.

Now, sir, the section of the country from which I come has been to a great extent misrepresented, at least in speeches made by gentlemen from other sections of the country as well as by the press of the country. The people of the West are in no sense whatever in favor of repudiation as has been charged. They are in no sense whatever in favor of any financial system that looks to the repudiation of any of the just obligations of the Government, and they will never deliberately sanction any measure that tends in that direction. The people of the West, as I believe, are almost unanimously in favor of some financial legislation that will look to an early enhancement of the circulating medium of the country to a par with the gold standard. But while they demand that kind, of legislation they are opposed to any system of contraction that will put them within the grinding power of the moneyed monopolies of the country. They believe that a financial system can be adjusted by proper legislation that will at an early day make the money which they receive for their produce good and convertible into that money which is the standard of the world, and at the same time without bringing distress to the debtor class of the community. For myself, sir, I have no doubt that by wise legislation such a system can be and ought to be adopted[1]

As far as the measure goes, however, that is now before the House, it looks in the right direction, and every feature as I believe thereof tends to an improvement of the present system and to do justice to those sections of the country which have been doing their business at a great disadvantage while the money and wealth of the country have been monopolized by another section. I am amazed to see that there is any spirit of opposition to this measure manifested in any portion of the House. It will not do for gentlemen to say that they are in favor of an honest and equitable distribution of the currency which has been withheld so long, and yet industriously seek for petty quibbles on which to ground opposition to the measure. When this bill is brought before the House it appears to be approached by some gentlemen in a spirit of hypercriticism. The feature of it to which the distinguished gentleman from Connecticut [Mr. HAWLEY] has objected is one of the most conservative in it. It removes the restrictions upon the use of what has been called the reserve on bank circulation.

Now, I do not imagine that the repeal of this provision of law which requires banks to hold a reserve upon their circulation will throw into circulation a very large portion of this currency. Every banker keeps, and indeed must keep, a reserve for the contingencies of his business. No legal enactment is necessary to produce this result. There is neither reason, philosophy, nor good sense in fixing by law a reserve which must be kept on hand at all times and under all circumstances. For myself, if I could have my own way or now had it, I would repeal every provision of law fixing an amount of reserve to be held either for circulation or deposits. I believe these enactments to be not only useless, but vicious. They often embarrass the banks in their operations when the money is most needed for the business of the country; but, what is worse, they delude and mislead the people by holding out a false hope of security to depositors which does not exist and which it is impossible by legal enactment to provide.

The Government undertakes ostensibly to take care of the people and it does not do it. It says to the people upon the face of the stat-

ute which it enacts that it is guarding them and preserving for them security for the deposits which they place in the national banks, when in fact it does no such thing. The only security which the depositors have is in the business capacity and honesty of the banker with whom the individual deposits his money. And we ought to say so frankly to the people, and let them know that they must take care of themselves by satisfying themselves by proper inquiries that the character of their banker justifies the confidence reposed in him. The utter fallacy and vicious tendency of this supposed protection of the people by the Government have been demonstrated by hundreds of financial shipwrecks, but perhaps by none more strongly than the utter wreck of the pet First National Bank of Washington City, which, in the very shadow of the Treasury building and under the immediate eye of the Comptroller of the Currency, squandered the money of its depositors and brought distress and ruin to thousands.

This reserve which is required by law is of no value as a security to the depositor, while on the other hand it ties up money that might be of immense value to the country in times of stringency and financial panic. I would like for the gentleman from Connecticut [Mr. HAWLEY] or any other gentleman to say what is the value of a reserve that cannot be used when it is needed.

Mr. MERRIAM. There is not any.

Mr. MARSHALL. There is not any, my friend on the opposite side answers me. None whatever. The only use of the reserves kept by the banker is to have money on hand in times of financial trouble and panic that it may relieve the country and remove the panic. But if tied up by an absolute provision of law requiring the bank to hold it at all times, it cannot be used. It might as well be stricken out of existence, for all useful purposes to either bank or people. I repeat that such legislation is not only useless but vicious in its tendency, as it holds out a delusion to the depositor, and says to him, "You are protected," when there is no protection whatever. But as the judgment of a majority of Congress seems to favor a repeal only of the provision requiring a reserve on circulation, we have thought best not to raise a question that might embarrass the passage of the bill by interfering in this respect now with the clause requiring a reserve on deposits.

There is another feature of this bill that I believe has not been heretofore referred to—that clause of the bill which requires a sum in lawful money equal to 5 per cent. of its circulation to be kept in the Treasury of the United States for redemption of circulation. That was adopted by us because it was in the former conference report, and seems to have met the approbation of the House and the country as far as it was discussed. I heard of no opposition or antagonism to that clause. And therefore it was deemed best by the conference committee, and every member thereof, to retain it. But for myself I did not believe it to be of much value. It is thought, however, by others to be important as a means of purifying the currency, if not as a means of redemption; and, not seeing that any serious injury could result therefrom, I have agreed to the insertion of the clause in this bill.

The objection, if there be any, to this provision is a very small one, and the bill as reported by the committee of conference is in this respect much preferable to the existing law. I therefore support this clause very cordially, and suppose in fact that it will tend to strengthen the bill with a large majority of the members of this House.

Mr. BURCHARD. I would like to ask my colleague a question. I would ask him if in his opinion there will be any inflation or increase of circulation under the provisions of this bill repealing so much of the national-bank act as requires reserves to be kept for the security of circulation?

Mr. MARSHALL. It does not add to the currency now authorized by law, and does not in any objectionable sense operate as an expansion or inflation to the extent of one dollar. It only releases for use at the time at which it may be needed by the country a portion of that which by a provision of existing law is required to be held at the very time that it is most needed, and in this way it will prove highly beneficial to the business of the country.

Mr. BURCHARD. I understand the provisions of the bank act to prohibit banks from loaning money when their reserve is below a certain percentage. What I desire to ask is, will not the safe bankers of the country reserve as large a percentage as the law now requires, even if you repeal this provision in regard to the amount of the reserve?

Mr. MARSHALL. It is well known, and I suppose is not questioned, that every safe and judicious banker generally keeps on hand a reserve quite as large as that now required by law, and this is done as a matter of safe and judicious business management. The object of the repeal is to remove the absurdity of requiring it to be held there without answering the proper function of a reserve—that is, to furnish relief in times of panic or stringency.

Mr. BURCHARD. Then while this may appear to be inflation, it is not really so.

Mr. MARSHALL. Certainly not in any objectionable sense.

Mr. PENDLETON. How about the unsafe bankers?

Mr. MARSHALL. Every judicious banker generally keeps on hand, as I have already stated, a larger reserve than that now required by law, and as for the dishonest and unsafe banker, the provision of the law now stricken out furnishes no protection whatever to depositors or to the business community, as has been demonstrated by a hundred disastrous failures; and therefore it is in the direction of conservatism to strike out this provision of the law and adopt the provision reported by the committee of conference.

Mr. PENDLETON. If what the gentleman says is correct, that the banks always keep a larger reserve than the law requires and that now if this bill passes they will continue to keep such larger reserve, what in the world is the object of putting this provision in the bill?

Mr. MARSHALL. Mr. Speaker, I have already indicated that the reserve while it is absolute and can never be used is of no use to the banker or to the public—none whatever. It is money kept in the vaults of the bank, if the law is obeyed, which for all practical purposes might as well not exist at all when the time of trouble comes. Any one who has studied the operations of the English banking system and the manner in which the business of the Bank of England is carried on knows that that great institution in times of panic pays out for the purpose of allaying the panic and reduces its reserve to the lowest minimum. That is a conservative principle of action for the purpose of allaying the panic and preventing disaster to the business interests of the country, and if we have a banking system established by our Government we must rely somewhat upon the judgment of the bankers who have their money and their all invested in this kind of business. The circulation is protected by a deposit of bonds, and I have already shown that there can be no adequate security for the depositors except what is furnished by the character of the banker.

Mr. Speaker, I must hurry on, for I promised to yield a portion of my time to some of my friends. I suppose it is proper for me to say that as an original proposition I should not favor the establishment of a single national bank in the country. I believe that the system is wholly and entirely vicious and is one of the potent agencies working in the interest of that system of centralization which is most dangerous to our republican system of Government. If I had it in my power I would not strike it from existence in a moment, but I would adopt some measure by which the present national banking system should be wound up as rapidly as it can be done without materially affecting the business of the country.

Mr. MERRIAM. In what other mode would the gentleman furnish a currency for the people?

Mr. MARSHALL. I have not time now I fear to go into that. I presented the other day a bill now on the files of the House, and which I may print with my remarks, which foreshadows a plan that in my judgment would rid us of the strong political objections that exist against the present system, save to us $20,000,000 annually in gold which we now pay for interest, and give a much better and more uniform currency than we now have.

Mr. MERRIAM. As the gentleman has expressed what is doubtless the opinion of many gentlemen here, I desire to ask him whether he would return to the State-bank system or would continue the national-banking system?

Mr. MARSHALL. There are various modes which would be preferable to the present system. The one that I should prefer would be the issue to supply the place of bank notes retired, not legal-tenders, (for I should be opposed to the issue of any more legal-tenders,) but Treasury notes payable on demand in legal-tenders and provide bonds if necessary for the redemption thereof, and I would provide for their redemption in such manner as would soon bring them up to par with gold. It is not desirable that that result should follow immediately. But every legitimate industry and business in the country demands that our present system of an inconvertible and vicious currency shall not be indefinitely continued.

Banks of some kind, honestly and properly conducted, are a great convenience to the people, and indeed almost absolutely necessary for the proper transaction of business. Banking in such mode as the laws permit is as legitimate and, properly conducted, is as laudable a business as any. I have no censures for nor assaults to make upon gentlemen who engage in that business. The honest, intelligent, safe banker is a most useful and meritorious citizen. It is to the system I object. I do not believe in Government managing or interfering with this any more than any other business. If let alone it will take care of itself, as merchandising, manufacturing, and the like do. Let Government wind up the national banks and issue Treasury notes payable on demand to supply the place of the bank circulation and make these notes in a short time equivalent to or convertible into gold, as provided for in the bill I print herewith. Then, every monopoly feature being removed, these notes would permeate all the channels of business. Wherever there was a demand for money they would be found. Individuals or associations all over the country, having capital, could go into the banking business unmolested by the intermeddling of Government officials. The money they issued would be these Treasury notes, legal-tenders, or gold and silver, and this money would always be good in the hands of those holding it whether the bank that loaned it prospered or failed. Depositors would take care of themselves, as they must do now, and knowing that the Government had nothing to do with these institutions, they would be more careful in the selection of their banker. We would be rid of the centralizing and vicious political tendencies of the present system, remit the Government back to its legitimate functions, and in this way we would get rid of a monopoly which I regard as dangerous in its tendencies to the best interests of the country.

Mr. MERRIAM. You ought to have voted for free banking; that would have freed us from a monopoly.

Mr. MARSHALL. What you call free banking would still be a monopoly, and dangerous as I think to our political institutions. I am opposed to the Federal Government furnishing to the people any system of banking or undertaking in any way to manage the business of the people.

Mr. MAYNARD. You would adopt substantially the system of exchequer bills.

Mr. MARSHALL. By the mode proposed we would have a better currency, better and safer banking system, perfectly free and untrammeled, entirely freed from the odious monopoly feature, and at the same time save to the national Treasury at least $20,000,000 in gold that we now pay for interest on our bonds. Why should not the people have the benefit of this better currency? Why should not the Government have the profit of furnishing it? Why should not the four hundred millions of capital now lying dead in the Treasury in the shape of bonds deposited as a security for the circulation of banks be freed from its prison and enter in some way into the productive pursuits of the country? Why should not banking on this safe basis be as free as any other business?

But I did not, Mr. Speaker, intend to take up so much time. As I said at the outset, the bill before the House is right, just, and equitable. I ought to make one additional remark upon another point. This bill provides for keeping in circulation $382,000,000 of legal-tender notes. That is the amount now said to be out. A portion of that was issued by the Secretary of the Treasury, as I believe in utter violation of law.

Mr. KELLOGG. Allow me right here——

Mr. MARSHALL. Wait a moment.

Mr. KELLOGG. All right.

Mr. MARSHALL. But it is out and in circulation. As I would have objected to the Secretary issuing it in violation of the law, I shall at all times oppose leaving the power in the hands of any man on earth to either contract or expand the currency of the country at his will. This additional amount of legal-tenders was put out for the benefit of New York bankers and stock brokers. It was put out by the Secretary of the Treasury to prevent their going into that insolvency and ruin that should have fallen upon them, for they brought this disaster upon the country. Having put it out in their interest, I shall oppose leaving it in the power of any man on earth to withdraw it at the bid of the men for whose benefit it was put out. It is now out and a part of the circulation. It is said, and I believe truly, that if Congress does not interfere this $26,000,000 will soon be withdrawn, which would at this time bring great distress to the people. I propose that Congress shall put its foot down right there and say, "Thus far you have gone, but you shall go no farther; you shall not expand or contract the currency at your pleasure; it is for the law-making power to determine that question; it is a power dangerous in the hands of the best of men, and immensely dangerous in the hands of bad men." We ought to hold out no such temptation to any man on earth, whether good or bad. We should say "This much is the fixed currency of the country and not to be withdrawn without authority expressly given by law," and thus we have here done.

It has been suggested that by providing that no part of this shall be held as a reserve the Secretary of the Treasury may be embarrassed. Not necessarily so. A fair construction of this provision of the report would be that its purpose and effect was simply that that much shall be regarded as a part of the circulating medium of the country. The Secretary of the Treasury can retain a balance for the business and necessities of the Treasury, just as he has always done. It is impossible to misconstrue this provision.

As I said before, it will not be regarded by the House, I suppose, and cannot be regarded by the country, that this measure, just and necessary and equitable as it is, is in any sense a settlement of the financial question. It leaves the present vicious system in full force in all respects except as changed by the report of the committee of conference.

For years since the adoption of our present financial system we have been floating on in almost utter financial anarchy, and trusting, according to the principles, or I should rather say the policy, of the Secretary of the Treasury, for time and circumstances to bring around a wholesome change in our financial condition. It never can be done in that way. This idea of growing up to a safe financial system, or contracting to a safe financial system, is equally absurd and preposterous. There are radical changes demanded, so that we may have a safe, uniform, certain, circulating medium, equivalent in value to the gold currency of the world, if not immediately convertible into that kind of currency. The country demands it, and it will never rest until it is secured.

Mr. Speaker, I desire, as stated before, to print herewith the bill that I had printed some days ago on this currency question. I do not of course expect action on it at this session of Congress. It is doubtless immature and imperfect in some of the details. But I believe it indicates a plan that, if adopted, would result in a uniform and safe currency, bring prosperity to the country, and save to the country annually many millions of money now absolutely squandered by our present vicious system.

Before concluding, Mr. Speaker, I hope it will not be deemed impertinent or offensive for me to remark that the utter failure of the party in power to handle successfully this great financial question or to furnish any satisfactory solution of the difficulties with which all the industrial interests of the country are embarrassed furnishes another potent fact, added to those heretofore given, that the republican party is necessarily and inherently unfitted for the successful and proper administration of the Government in times of peace. I do not propose to criticise its administration during the civil war; I do not deny its immense energy and momentum since the close of the war. It has undertaken herculean tasks, and has overridden constitutional and other obstacles to reach its purposes. It has made most frightful strides toward centralization, and where it found a constitutional, federative republic it now wields the powers of an almost imperial empire. But it has demonstrated that it is wholly unfitted to administer successfully in peaceful times the affairs of a constitutional republic. Its reconstruction policy has resulted in the utter impoverishment, ruin, and desolation of eight noble Commonwealths that even five years of a terrible civil war had left in comparative prosperity. With overwhelming majorities in both branches of Congress all its efforts at financial legislation and financial reform have been ridiculous failures, and its efforts to mature some measure of relief against the grinding extortions of railroads and common carriers have been equally abortive. Corruption pervades every branch of the civil service, stalks abroad in gaudy tinsel, and is everywhere found clothed in official robes. There are as good people in the republican party as are to be found anywhere.

I do not claim or believe that its adherents are in the main either vicious or corrupt. It is the policies of the party that make it necessarily a party of corruption. It is the issues upon which it was organized and drawn together which unfit it for civil administration when those issues have passed away. The republican party believes in centralization, in paternal government, in thinking for and managing the business of the people. This policy necessitates large revenues and oppressive taxation. Large revenues require numerous officials for their collection and disbursement, hold out temptation to the peculator and robber, and breed corruption as certainly and inevitably as the sun gives light and heat. It has always done so in every age and in all countries, and will do so to the end of time. We have reached a point when there must be a change or the country drift into inevitable ruin and bankruptcy.

It is easy to see and point out the necessary and inevitable remedy. Will the people have the courage and the intelligence to adopt it? That they will do so I have no more doubt than I have of the truism that man is capable of self-government.

Since the foundation of the Government there have been two central ideas which have been warring for the mastery in the Government: one the federal and centralizing idea which leads to extravagance and corruption and tends to tread the road to a centralized despotism; the other the democratic idea which abhors centralization, makes eternal war on despotism and corruption in all their forms, confines the functions of government to their original and legitimate limits, abhors protection and paternalism in government, leaves the people free to manage their own affairs, and enthrones economy and honesty in the administration of the Government.

This idea, taking possession of the democratic party and its great chiefs, administered the affairs of our Government for sixty years. During this time economy sat enthroned in every department of the Government, and liberty, peace, and joy dwelt in the homes of our people. Corruption and peculation were outlaws, and whenever they raised their heads were driven with scorn into ignominy and disgrace. The boundaries of our country were extended from sea to sea, and embraced in its area the productions of every clime. We prosecuted successfully two foreign wars, and subdued the numerous hostile tribes of aborigines without contracting ruinous debts or imposing oppressive taxation upon the people. During all this time the hand of the Federal Government was never felt oppressively anywhere; no citizen's liberties were invaded in violation of law; the great writ of *habeas corpus* was inviolate, and not one tear-drop was ever during this whole time brought from a human eye for any political offense. This party has now been out of power for fifteen years. During that time it has been persistently maligned and traduced by its enemies, and many of those reared in its bosom and who had felt its love and warm embrace have turned and stung it with ingratitude. But its principles are immortal. They are as eternal as the hopes of man for redemption from oppression and wrong. If we are to have relief from our present oppressions and wrongs, this grand old party must be enthroned once more in the administration of the Government. The people are everywhere alive to this fact. The prospects were never more propitious. State after State is wheeling into line to constitute a part of the grand army, and the time is now at hand when the party of Jefferson and Jackson will once more march to the front with economy and honesty in the administration of the Government, free trade, anti-monopoly, and home rule inscribed upon its banners, and will, it is to be hoped, for ages administer the Government to the honor of the country and the peace, happiness and prosperity of a free people.

The bill referred to by Mr. MARSHALL is as follows:

A bill to provide for retiring the national-bank circulation, prevent oppressive contraction or undue expansion of the currency, restore prosperity to the country, and provide for an early resumption of specie payments by the Government.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the entire amount of United States notes au-

thorized by law shall be and not exceed $382,000,000, which sum shall appear in the monthly reports of the Treasury as a part of the public debt, and no part of which shall be held and used as a reserve or retired from circulation except as authorized by law.

SEC. 2. That the act entitled "An act to provide a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof," approved June 3, 1864, shall hereafter be known as "the national-bank act."

SEC. 3. That all further issue of national-bank notes to national banks by the Comptroller of the Currency, whether for the renewal of the defaced and torn bank-notes, or for any other purpose, is hereby prohibited.

SEC. 4. That every association organized under the provisions of said national-bank act, and of the several acts amendatory thereof, shall at all times keep and have on deposit in the Treasury of the United States, in lawful money of the United States, a sum equal to 5 per cent. of its circulation, to be used and held for the redemption of such circulation; and when the circulating notes of any such associations, assorted or unassorted, shall be presented for redemption in sums of $100, or any multiple thereof, to the Treasurer of the United States, the same shall be redeemed in United States notes. All notes so redeemed shall be charged by the Treasurer of the United States to the respective associations issuing the same; and he shall notify them severally, on the 1st day of each month, or oftener, at his discretion, of the amount of such redemptions; and whenever such redemptions for any association shall amount to the sum of $500, such association so notified shall forthwith deposit with the Treasurer of the United States a sum in United States notes equal to the amount of its circulating notes so redeemed. And all such notes of national banks shall, when received by any assistant treasurer or at any designated depository of the United States, be forwarded to the Treasurer of the United States. And whenever such association shall fail to make good, within twenty days after notice given for such purpose, any deficit in said 5 per cent. deposit, the said Treasurer shall sell, of the bonds on deposit to secure the circulation of such association, a sufficient amount to make up such deficiency; and when, by the action of such association or by the sale of bonds, the United States notes so paid in redemption of the circulating notes of such association or associations shall be replaced, the said Treasurer shall cause the said circulating notes to be canceled and destroyed, under the supervision of the Comptroller of the Currency; and a full and complete record thereof shall be made and kept by said Comptroller; and whenever $900, or any multiple thereof, of the circulating notes of any such association shall be so canceled and destroyed, (the United States notes required for the redemption thereof having been replaced otherwise than by the sale of bonds on deposit for the security of such circulation,) the said Treasurer shall deliver to such association the bond or bonds on deposit with the Treasurer for the security of such circulating notes so destroyed: *Provided*, That each of said associations shall reimburse to the Treasury the charges for transportation and the costs for assorting such notes: *And provided further*, That so much of section 32 of the said national-bank act requiring or permitting the redemption of its circulating notes elsewhere than at its own counter, except as provided for in this section, is hereby repealed.

SEC. 5. That any association organized under any of the acts of which this is an amendment desiring to withdraw its circulating notes, in whole or in part, may, upon the deposit of lawful money with the Treasurer of the United States in sums of not less than $900, take up the bonds which said association has on deposit with the Treasurer for the security of such circulating notes; which bonds shall be assigned to the bank in the manner specified in the nineteenth section of the national-bank act; and the outstanding notes of said association, to an amount equal to the legal-tender notes deposited, shall be redeemed at the Treasury of the United States, and destroyed as now provided by law.

SEC. 6. That on and after the 1st day of January, 1875, in lieu of the tax of 1 per cent. per annum now imposed by law on the outstanding circulation of national banks, a tax of 3 per cent. per annum, payable semi-annually in gold, shall be collected upon the circulation which has been issued to each national bank which has not been returned for cancellation. This tax shall be collected by withholding one-half of said tax semi-annually from the interest upon the registered bonds deposited by said banks as security for their circulation; and if the interest of said registered bonds is payable in currency, there shall be retained of said currency the equivalent of said tax at the market premium on gold, which premium shall be fixed by the Secretary of the Treasury.

SEC. 7. That section 31 of the said national-bank act, requiring and regulating reserves of said national banking associations, is hereby repealed.

SEC. 8. That the Secretary of the Treasury be, and he is hereby, authorized to issue, in manner as hereinafter prescribed, on the faith and credit of the Government, a sufficient amount to furnish to the public a currency, in lieu of the bank-notes retired, of Treasury notes payable on demand in United States legal-tender notes at the Treasury and at such United States depositories as the Secretary of the Treasury may designate. Said notes shall be similar in form and appearance to the said legal-tender notes, and may be of denominations not less than one dollar nor more than $10,000, and shall be receivable in payment of all taxes, claims, and demands due to the United States: *Provided, however*, That for the fiscal year commencing July 1, 1874, 20 per cent., and for the fiscal year commencing July 1, 1875, 30 per cent., and for the fiscal year commencing July 1, 1876, 40 per cent.; and on and after July, 1, 1877, 50 per cent. only of the duties on imports shall be payable in Treasury notes.

SEC. 9. That the Treasury notes authorized herein to be issued shall only be issued to the extent that national-bank notes shall be returned for cancellation and destruction, as provided in this act, and shall only be used in the purchase of the United States bonds commonly called "five-twenties."

SEC. 10. That the Secretary of the Treasury is hereby authorized to issue, in exchange for legal-tender notes of the United States, or Treasury notes hereby authorized, at the option of any one who shall present them and demand the exchange, an equal amount of coupon or registered bonds of the United States, in such form as he may prescribe, and in denominations of fifty dollars, or some multiple of that sum, redeemable in the lawful money of the United States, at the pleasure of the United States, after five years from the date of their issue, and bearing interest payable quarterly in said legal-tender notes at the rate of 5 per cent. per annum. And the Secretary of the Treasury shall reissue the United States legal-tender or Treasury notes so received, or, if they are canceled, shall reissue notes of the same character as those canceled, and use them only to purchase or redeem and retire the bonds of the United States known as five-twenty bonds: *Provided*, That no purchases of United States five-twenty bonds shall be made under the provisions of this section when the price demanded shall be at a greater rate of premium upon the bonds than 10 per cent. of their par value of principal and accrued interest.

SEC. 11. That on and after the 1st day of January, 1878, any holder of United States notes, or Treasury notes hereby authorized, to the amount of fifty dollars, or any multiple thereof, may present them for payment at the office of the Treasurer of the United States, or at the office of the assistant treasurer at the city of New York; and thereupon he shall be entitled to receive, at his option, from the Secretary of the Treasury, who is authorized and required to issue, in exchange for said notes, an equal amount of either class of the coupon or registered bonds of the United States, not then worth more than par in gold, provided for in the first section of the act approved on the 14th of July, 1870, entitled "An act to authorize the refunding of the national debt," and the act amendatory thereof, approved the 20th day of January, 1871: *Provided, however*, That the Secretary of the Treasury, in lieu of such bonds, may redeem said notes in the gold coin of the United States. And the Secretary of the Treasury shall reissue the Treasury notes or United States notes so received either in exchange for coin at par, or, with the consent of the holder, in the redemption of bonds then redeemable at par, or in the purchase of bonds at not less than par, or to meet the current payments for the public service; and when used to meet current payments, an equal amount of the gold in the Treasury shall be applied in redemption of the bonds known as five-twenty bonds.

SEC. 12. That the Treasury notes authorized by this act, when received in payment of taxes, claims, and demands due to the United States, shall be reissued to meet the current expenditures of the Government.

Currency.

SPEECH OF HON. S. L. WOODFORD,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

June 20, 1874,

On the report of the committee of conference on the disagreeing votes of the two Houses upon the bill (H. R. No. 1572) entitled "An act to amend the several acts providing a national currency and to establish free banking and for other purposes."

Mr. WOODFORD. Mr. Speaker, I came into this Hall to-day earnestly desiring to vote for the pending bill. I deeply regret that after very careful reflection I cannot.

The measure certainly answers our instinctive sense of justice in attempting to redistribute the bank currency among the several States according to the ratio of wealth and population. It also looks in the right direction in fixing or limiting the volume of legal-tender notes, and in denying to the Executive and the Treasury Department any possible future exercise of the power hitherto claimed by the Treasury of regarding and using the retired legal-tenders as a reserve for paying the necessary current expenses of the Government. These two purposes are manifestly just and wise.

The bill seems to me to err in the following respects:

First. While it fixes the volume of legal-tenders, it does so at the sum of three hundred and eighty-two millions. It recognizes the temporary employment of twenty-six million of the reserve and adds that amount permanently to the legal-tenders in circulation. It makes no provision for retiring the paper thus issued from the so-called "*reserve*" during the stringency of the panic of last autumn. It thus permanently increases the volume of irredeemable paper "legal-tenders" twenty-six millions beyond the amount that was out on the 1st of July, 1873. This is a direct, deliberate step away from specie resumption.

Second. This bill releases and puts into active use at least twenty-six or seven millions of legal-tenders which are now locked up in the vaults of the banks as reserve against bank circulation. Some good judges estimate the amount thus released at a much higher figure, even as high as fifty millions. It thus surely and largely increases the volume of legal-tenders in actual employment among the people or available for artificial speculations. This is a second direct, deliberate step away from specie resumption.

Third. This bill recognizes in theory the right of the Government to increase in time of profound peace the volume of a paper currency irredeemable in coin that must be accepted, under certain circumstances, as the legal payments of public and private debts.

As I read this measure, (and I have sought to read it carefully,) whenever the States not now having their full quota of national-bank circulation shall furnish the necessary Government bonds they can have the entire fifty-five millions of currency allowed by this bill to be redistributed. If they shall furnish the bonds they can have the entire fifty-five millions of currency at any time either before July 1, 1875, or after; while on the other hand only thirty millions of such currency can be withdrawn from the States now having an excess before such 1st day of July, 1875. Do not let me be misunderstood. I do not believe that the bonds will be furnished and the fifty-five millions of bank currency be issued to the South and West before July 1, 1875. So that this third objection, as just stated, is theoretical and constitutional rather than practical. Still if the requisite bonds should be furnished within the next year, so as to authorize the issue of fifty-five millions of bank currency within that year, and only thirty millions can be withdrawn from the East and North during the same period, then the volume of bank currency may under the form and with the apparent authority of law be increased by the amount of the difference, that is, to the extent of twenty-five millions, for at least part of twelve months, or until July 1, 1875.

So long as such bank currency retains its present quality of partial legal tender; so long as the citizen can compel the Government to receive this currency for all excises and dues except customs duties; so long as the Government can compel its citizens to receive this currency in payment of all salaries, obligations, and dues except interest on the public debt; so long as each individual bank must receive the notes of all the national banks in payment of whatever is due to such individual bank; in one word, so long as the present national-bank currency is by direct requirement of law practically a legal tender for at least nine-tenths of all our business and financial transactions, I cannot vote for any measure which, even in theory only and by the subtlest interpretation, recognizes the right of the

Government in time of profound peace to stamp or invest paper that is not redeemable in coin with any quality or property of money so as to compel any one to accept that paper, whether he will or not, in payment of any debt whatever, public or private. This bill does this to the possible extent of twenty-five millions until July 1, 1875. There is not, I freely admit, the slightest probability of such an occurrence. But the claim of a right to issue additional paper in time of peace, to stamp or invest that paper with certain of the qualities of money, and by the sovereign power of the Government to force our citizens and aliens coming within our borders, to receive such additional paper as money for the payment of certain public and private debts, is in this bill. It is there, clearly and unmistakably, in direct language and by inevitable deduction. The power thus claimed is not in the Constitution as I read its provisions.

We have reached the parting of the ways.

In time of war, under the last plea of self-preservation, we passed the "legal-tender" act and printed Government notes which by law we compelled creditors to receive in legal payment of debts when due. In like time of war, and under the like plea of supreme necessity, we passed the "national-bank" act and printed bank-notes, secured by pledge of Government bonds, which by law we compelled certain classes of creditors to receive in legal payment of certain classes of debts when due.

These things we did in time of battle in exercise of what we called the "war power of the Republic."

Surely the war is ended now. With the ending of the war the rightful exercise of the "war power of the Republic" ended also. Such paper promises to pay as peace found outstanding and unredeemed may justly remain in use as currency until the Government can redeem and retire them. Let me, I trust with modesty, but still with the utmost firmness, state these resulting propositions:

1. The Government is morally and legally bound to redeem in coin all its outstanding and non-interest-bearing paper promises to pay, known as legal-tenders, at the earliest practicable moment.

2. The Government has in time of peace no moral right or constitutional power to issue one single additional Government note, or *greenback*, as popularly styled, and to compel any person to accept such note as money in payment of any debt whatever.

3. The Government cannot delegate to a private corporation the exercise of a power which the Government cannot itself constitutionally exercise, unless the authority to so delegate such power is clearly expressed in the Constitution.

4. If the Government cannot in time of peace itself print and issue additional paper, stamp that paper with the essential quality of money, and forcibly make that paper a legal tender in the payment of any debt, then it certainly cannot delegate the power to a bank corporation to issue and put in circulation a single additional piece of paper, however well secured, which any one must under the absolute requirement of Federal law accept as money in legal and compulsory payment of certain classes of debts.

The claim of right to do this is in the pending bill. If we may constitutionally authorize for any time whatever the issue of twenty-five million additional bank-notes with their present legal quality of "legal-tenders" in payment of certain kinds or classes of public and private debts, we may constitutionally authorize the issue of any amount for any period whatever. If one dollar, then one billion. If for one hour, then for a century. The constitutional power lies in doing or authorizing the thing itself, not in the amount nor in the time.

Nay, more than this; if we may constitutionally authorize the additional issue of additional bank-notes, and compel certain persons to accept them as money in the legal and absolute payment of certain classes of debts, may we not by even higher rule of law and constitutional construction authorize the Treasury to issue additional Government notes or greenbacks, stamp them as legal-tenders, and compel all persons within our jurisdiction to accept them as money in the legal and absolute payment of all debts except interest on the outstanding Federal bonds?

I commend this inquiry to the careful consideration of thoughtful men.

To repeat, we have reached the parting of the ways. I would that I could compromise this difference. I do not see how or where I justly may. The variance at this point is very slight. A little yonder and it is still but a few yards, which such a bill as this may seem, but only seem, to span. Still a little further and it is a great gulf which no scheme or device of conference committees can bridge over.

The single question at issue is but a simple one, easily and briefly stated. Can our Government in time of peace issue or authorize the issue of one single piece of paper that any one must under compulsion of the law accept as money in payment of any debt?

Here part the ways.

If you say "*yes*," then you may logically vote for this measure. You are consistently and intelligently entering upon a road that leads through inflation to repudiation.

If you say "no" you may still in mistaken effort for an impossible result vote for this measure. But you enter on a road where you must at the last retrace your steps and come back again to the old path whose sure way you to-day are leaving.

With great reluctance and with sincerest respect for valued friends and party associates who differ from these conclusions, let me simply repeat the essence of these words.

This question seems to me one of bed-rock duty and constitutional obligation. I cannot so vote as to admit even by indirection that this Government can in time of profound peace issue or authorize the issue of a single additional piece of paper, whether you call it Treasury note or bank-bill, which any one must under compulsion of the law accept as money in payment of even any kind of debt.

Currency.

SPEECH OF HON. JAMES MONROE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

June 20, 1874,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. No. 1572) entitled "An act to amend the several acts providing a national currency and to establish free banking, and for other purposes."

Mr. MONROE. Mr. Speaker, the conflict between different sections, during the present Congress, upon the question of the currency has been so sharp, and has at times threatened results so disastrous to that spirit of confidence which is the basis of all financial prosperity, that I have been very desirous of uniting with others upon some measure that would harmonize existing differences. Until this should be done, I did not see how any real progress could be made toward resumption of specie payments. I could not have voted for any large expansion of the currency nor for any sudden contration, but within these limits I have been willing to vote for any reasonable measure that promised peace. I have considered the question of a few millions more or less as of less importance than the question of equitable distribution and consequent harmony. With this desire to allay the heated contest which we have all witnessed, I have steadily supported such moderate measures as seemed likely to accomplish the object, even when they were not in all respects what I would have preferred. In the same spirit of conciliation, I am glad of an opportunity to vote for the bill now before the House. Heretofore we have failed in our measures, but this one bids fair to succeed. It does not contain all that I could wish, but the provisions that it does contain meet my approval, and its passage promises harmony. By removing $55,000,000 of bank-note currency from the East to the West it removes all ground of complaint in regard to unequal distribution, and by fixing the limit of Treasury notes at $382,000,000, it relieves the business men of the country of that uncertainty as to the amount of legal-tenders in circulation of which they have complained. The section which repeals the law requiring the banks to keep a reserve upon circulation, already abundantly secured, relieves them from a useless burden and enables them to offer larger accommodations to legitimate borrowers. I hope, therefore, that this bill will become a law. If it should, it will in several ways afford relief, and will accomplish what is more important still—it will give peace to the country.

The Currency.

SPEECH OF HON. S. W. KELLOGG,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

June 20, 1874.

The House having under consideration the report submitted by the committee of conference on the currency question—

Mr. KELLOGG said:

Mr. SPEAKER: I voted for the second conference committee upon this matter for the purpose of getting a bill upon which we could all harmonize if possible. And I voted also with more willingness for it because my friend from Massachusetts [Mr. DAWES] made the motion, and I thought I could rely upon his judgment. And I will say to my friends here of the South and West that I have studied this bill carefully and anxiously, with an earnest desire to vote for it if I possibly could consistently with my own convictions. I certainly have no feeling against the South or West or any part of this broad country in connection with this matter, and the constituents I represent are too broad and liberal in their views to have any sectional feeling upon this great question. And I want my friends from the West and South to understand that we have no desire to withhold any portion of the currency in excess of what you say we are entitled to if you are in a condition to take it and if it will benefit you to take it. For we remember that a large portion of the great West was settled by our own brothers and friends, and our interests

and our affections are there as well as yours; for there is the home of our brethren and our kinsmen; and from all your broad prairies there stretch forth to some New England home the ties of interest, of affection and love. But when my friend from Indiana [Mr. HOLMAN] gets up and tells me that this bill increases the legal-tenders $26,000,000, besides the reserves that you release by the terms of the bill, then I say, in accordance with my settled convictions, I cannot possibly vote for this bill, because instead of its being a step toward specie payments, it is a long step in the opposite direction.

Mr. KASSON. Do you believe that it adds $26,000,000 of legal-tenders to the circulation?

Mr. KELLOGG. It does. It increases the legal-tender circulation $26,000,000 from the old limit of $354,000,000; and I will tell you why. There are not $382,000,000 out now. Of the $382,000,000 there are $26,000,000 which are treated as a reserve to be called in, and we ought to provide for calling it in gradually. If you will look at the monthly statements of the public debt issued by the Secretary of the Treasury month by month, you will find that the Treasury has begun to retire this $26,000,000 and that it ought to be called in just as soon as the interests of the country will allow it. But by this bill, instead of allowing the Secretary of the Treasury to call in these $26,000,000, which would never have been issued except to meet the necessary demands upon the Treasury, you provide that no part of this shall be kept as a reserve or called in and retired. You therefore expand your greenback circulation $26,000,000 beyond the amount last year, besides letting out your reserve on national-bank circulation. I say then that it is a reason why this bill should be rejected, that you have left out of it entirely anything that provides for the redemption of these legal-tenders, and you have not put in any provision that looks to a return to specie payments in all time to come.

While I would be glad, and would with all my heart go as far as I could without belying my own convictions, to meet the views of my friends from the West and the South, I cannot vote for this bill with those provisions in it, and with no provision whatever in it that can lead the country in the direction of specie payments in the future. The committee have utterly failed in my judgment to present such a bill as the interests of the country demand at our door.

War Claims.

SPEECH OF HON. PHILIP COOK,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

June 23, 1874,

On the subject of war claims.

Mr. COOK. Mr. Speaker, by the rules of this House and the organization of its committees I have been forced to seek this occasion to say what I desired to have said some days since, when the bill reported by the Committee on War Claims was before the House. It was most unfortunate for the section of the country I represent in part, and I may say for the whole country, that we have no representative man in the Cabinet or in any Department of the Government by appointment. Every office is filled with a scrupulous care to the exclusion of one great section of the country, and we have recently seen the virtual rejection of a distinguished gentleman for a place on the supreme bench upon the simple ground that he had written a friendly letter expressing feelings of kindness and respect to a gentleman of the South. This fact shows the animus of the ruling party in regard to the people of the South, and the difficulty they have in presenting themselves before the tribunals of the country. Not only do they appear to this House before those who have to a certain extent prejudged their claims, but they are forced before tribunals whose judges must show that they are equally committed against them.

It will be seen by looking at the organization of the committees of this House that the same facts prevail; that the Southern States, which are most vitally interested in many measures before this House, have not that opportunity of representing their interests before the committees or on this floor which other sections have in regard to their peculiar interests; and we have thus been virtually debarred to a great extent the privilege of being heard upon the floor of this House. But, sir, this is one of the fundamental principles of the republican party, the great party of moral ideas and higher-law doctrines. And what, sir, was the condition of the whole country when this Congress assembled under the management of this party? A universal prostration of all its interests; its commerce languishing; its banks, the creation of its own power, suspended; its syndicate bursted, and its financial agents gone into bankruptcy; the toiling millions of the country clamoring for bread and work, and every telegram bringing intelligence of the continued suspension of your furnaces and machine-shops throughout the country.

A memorial and bill were introduced at the very beginning of the session, asking for provisions to feed the hungry in the Mississippi Valley—a thing unknown before in the history of this country. There was a universal stagnation of all business and enterprises, and a depreciation in values, which swept away in a moment the fortunes of the wealthy and pitiful accumulations of the poor. We have seen the militia of two States called on to protect the interests and property of corporations. We have seen one State in civil discord and a committee appointed to investigate its affairs. We have seen the citizens of another State before our doors asking and imploring an investigation of their affairs, and praying us to protect their property from confiscation; and we have seen the governor of that State indicted for larceny by a grand jury of his own party. Charges of the grossest character have been preferred against more than one of the Federal judges, and frauds, peculations, and defalcations have been shown in almost every department of the Government. And what, sir, has been done to relieve the country from financial embarrassment or to save it from the lusty greed of the freebooters who collect its revenues and disburse its moneys? You have passed a currency bill which the President has vetoed; you have repealed the Sanborn contracts. What other act of general legislation for the benefit of the country generally has been passed? Its soldiers carried the country successfully through the storm and tempest of civil war; and its politicians have wrecked and ruined it in the time of peace.

No government on the earth has had the same sources of recuperation and wealth, and no government has ever been more utterly destroyed or paralyzed than this. The President informs us that the currency in this country was not sufficient to carry on its commerce. This was in his first message to this Congress, and yet he vetoed the only bill which promised any increase or aid; and now he says we must return to specie payments, when in fact the whole amount of specie in the country would not pay the tax of the people due to the Government. What hope to-day does this party hold out to the laboring men of the distant West or the impoverished people of my section? What, sir, is the great panacea which is offered to anxious, waiting people of this country? What glad tidings of great joy is proposed to the country? Why, sir, what do you hear each Monday morning? Gentlemen enter this Hall fresh from their Sunday devotions, subdued by the songs and prayer, by the smiles of the virtuous and good, and the first opportunity to the exclusion of all other business a motion is made to suspend the rules and pass the "civil-rights bill." Upon this single question the republican party seems to rest its hopes for the future. All the other great interests of the country must give way to this. I will simply say in regard to this bill that it is fraught with evil to the country. It is prompted not so much by love and admiration of the colored man as it is by the lingering hatred of the race I have the honor to represent upon this floor. It is not to elevate the colored race but to degrade the white race, and I beg the thoughtful consideration and deliberate attention of honest men of all sections and all parties to this fact.

My main purpose, Mr. Speaker, in seeking this opportunity to address the House was briefly to allude to the report of the Committee on War Claims recently presented by the gentleman from Ohio, [Mr. LAWRENCE.] This report seems not to have had a full concurrence of the committee, though the chairman was authorized to make it. It is to be regretted, extremely regretted, that the members from the Southern States did not see proper to make a minority report. The well-known ability of one of the gentlemen at least [Mr. HARRIS, of Virginia] would have enabled him to do this simple act of justice to the needy people of our section. His general intelligence and fealty to principle is a sufficient guarantee that he could have exposed the sophistry and fallacy of the grounds upon which that report is based and vindicated our section from charges which are not founded in fact and are most unjust and ungracious.

I will allude to but two classes of claimants for which any compensation has as yet been asked or promised by the Government. First, this report shows that there was seized during the war and shipped and sold in New York cotton, the net proceeds of which are now in the Treasury of the United States, $24,251,269.93. After deducting all charges, costs, payments, &c., the records of the Court of Claims show there was due the 27th of February, 1874, $14,410,429. From this amount in the Treasury Congress passed an act allowing loyal citizens to recover their interest in this cotton, and yet every difficulty has been thrown in the way of the recovery of this large amount of money due the loyal citizens of the Southern States. I was not a loyal citizen myself, nor have I ever undertaken to defend the loyalty of that class, nor do I now; but if the Government honestly intended that these people should be paid their money, of which they have been unjustly deprived, and which now lies in the public vaults, good faith requires that they should be permitted to go into the courts and get their just dues.

The Supreme Court of the United States has decided that the act requiring the oath of loyalty was unconstitutional. This was in the Drake amendment. But before that decision was made known, the time for filing these claims had expired, and these men have thus been debarred from appealing to the courts for the recovery of their property. The Supreme Court says this money never has been confiscated, but that the Government holds it in trust for the owners. (See decision in Paddleford's case, 4 Wallace.) They say the act requiring loyalty, or rather the proof of it, is unconstitutional; and that if it is not, the amnesty proclamation wiped out all guilt and restored all the rights of property.

There is another class of claimants for cotton which was taken after June 1, 1865. The amount of this in the Treasury approximates five

and a half millions. The act of May 18, 1872, authorized the payment of the net proceeds of this to owners, not requiring any oath of loyalty. The report of your Committee on War Claims makes a charge of bad faith if not gross fraud and corruption against the claimants of this fund by saying that claims covering near three times that amount have been presented. I have a complete answer and refutation of this charge which shows not only the general correctness of these claims, but the most stupendous stealings, corruptions, and frauds on the part of the Government officials who had charge of this branch of business, which might with great propriety be termed the stealing department of the Government.

The following statement of the sales of cotton seized in the southern cities, with the expenses charged and deductions made under various pretexts, exhibits the showing of the Treasury Department, and, on its face, is specious and plausible. Of the Savannah cotton, sea island, which was worth about two dollars and fifty cents per pound, was sold at about eighty cents, and upland was sold at about forty cents, when it ought to have averaged over a dollar.

A great fraud is concealed in these figures—a fraud which could have been perpetrated only by false samples and other similar dishonest contrivances. That such fraudulent devices were used has long been well known and understood. The history of the commercial world may be searched in vain for any similar frauds, on a scale so gigantic and with results so ruinous and unjust to the parties concerned.

Of the cotton sold by Simeon Draper, United States cotton agent, derived from Savannah, there were of sea island 6,531 bales, weighing 2,644,673 pounds, (value, currency)	$1,657,231 77
Charges of transportation, &c., following cotton to sale	101,958 58
Making net value	1,555,273 20
Or an average of $238.13 per bale.	
From the foregoing proceeds there was subsequently to the sale deducted by direction of the Secretary of the Treasury—	
1½ per cent. to cover incidental expenses	$24,858 47
1 per cent. to pay commission to agents	16,572 31
Internal-revenue tax on 2,644,673 pounds	40,893 46
	82,324 24
Or $12.61 per bale, leaving as an absolute net balance upon which judgments were paid of but $225.53 per bale.	
Of upland from Savannah, 32,827 bales of cotton, 16,034,415 pounds.	$6,418,600 36
Charges of transportation, &c., following cotton to sale	512,478 00
Net value of sale	5,906,122 36
Or an average of $179.91 per bale.	
Deducted after sale—	
1½ per cent. incidental expenses	$96,279 00
1 per cent. commission to agents	64,186 00
2 cents per pound revenue tax, 16,034,415 pounds	320,688 30
	481,153 30
Or $14.34 per bale, leaving an absolute net amount of $165.57, and which amount has been paid on judgments of the Court of Claims.	
Of sales from Charleston, South Carolina:	
Sea island, 1,063 bales, 286,302 pounds	$202,671 24
Charges of transportation, following cotton to sale	7,876 83
Making net value	194,794 41
Or an average of $183.25 per bale.	
Charges subsequently deducted—	
1½ per cent. incidental expenses	$3,040 06
1 per cent. agents' commissions	2,026 71
2 centr internal-revenue tax on 286,302 pounds	5,726 04
	10,792 81
Or $10.15 per bale deduction, leaving but $173.10 on which judgments were rendered.	
Of upland cotton, Charleston, South Carolina:	
3,639 bales, 1,437,118 pounds	$530,421 03
Charges of transportation, following cotton to sale	26,964 46
Net of sales	503,456 57
Or an average of $138.36 per bale.	
Amounts subsequently deducted:	
1½ per cent. to cover incidental expenses	$7,956 31
1 per cent., to pay commissions of agents	5,304 21
2 cents per pound on 1,437,118 pounds by internal-revenue tax	28,742 36
	42,002 88
Or $11.54 per bale, leaving $126.82 per bale to satisfy the judgments of the Court of Claims.	
Of sales from Mobile, Alabama, derived from seizures by the military forces:	
3,220 bales upland cotton, 1,628,873 pounds	$628,645 91
Charges following the cotton to sale	22,319 15
Net of sales	606,326 76
Or $188.31 per bale.	
Charges deducted after sale:	
1½ per cent. to cover incidental expenses	$9,429 67
1 per cent., commission of agents	6,256 45
2 cents per pound on 1,628,873 pounds, internal-revenue	32,577 46
	48,293 58
Or $14.99 per bale, leaving but $173.32 per bale for any claimant in the court.	
Of sales from Mobile, Alabama, derived from agents of the Treasury:	
9,986 bales of cotton, 4,018,689 pounds	$1,461,077 27
Charges following the cottons to sale	111,013 38
Net of sales	1,350,063 89
Or $135.20 per bale.	
Charges deducted after sale:	
1½ per cent. to cover incidental expenses	$21,916 17
3½ per cent. to commissions of agents	51,137 70
2 cents per pound internal revenue on 4,018,689 pounds	80,373 78
	153,427 65
Or $15.36 per bale, leaving but $119.84 upon which judgments are rendered to claimants.	

The cottons derived from New Orleans and received at New York were disposed of with the same charges attached. Those sold at New Orleans by the several agents had only the 2 cents per pound revenue tax deducted, besides the other expenses, and without any percentage for incidental expenses or for the commission of agents.

The average net amount obtained per bale—	
By the sales of military	$192 00
By B. F. Flanders, Treasury agent	146 64
By G. H. Burbridge Treasury agent	43 34
By O. N. Cutler, Treasury agent	160 37
The sea island cotton seized at Savannah, 2,044,673 pounds, was worth at $2.50 per pound	$5,111,682 50
It was reported as sold for	1,657,231 77
Loss unexplained	3,454,550 73
The real value of the upland cotton seized at Savannah, 16,034,415 pounds, was	$16,034,415 00
Reported as sold for	6,418,600 36
Loss unexplained	9,615,814 64

Similar, or even worse results will be shown by an investigation of the sales made of the cotton seized in the other southern cities.

Such are the facts and figures as to the cotton seized during the war. Now, sir, as to that seized after the war and after the 1st of June, 1865, the report says the amount approximates five and a half millions, but that claims to the amount of eighteen millions—nearly three times the amount seized—were filed before the Secretary of the Treasury. I will state but one case, and for the payment of which I offered a bill early in the session and which is yet before the committee. The evidence in this case is before the Treasury Department in full; and what is true in this case is true as to all the seizures after the 1st of June, 1865.

This case illustrates a stealing of over $50,000 to get $11,600 in the Treasury, and accounts fully for the difference of the amount in the Treasury and the amount claimed. This gentleman had one hundred and sixty-two bales seized and shipped to New York and there sold. At the time of the sale the market value of the cotton was about $62,000. He brought his witnesses to this city, their testimony was taken here, and he established his title to the property. He was paid by the Treasury in December last $11,600 for $62,000 of property that had been stolen from him. Here is a clear loss to this man of $50,000 by the illegal seizure and sale of his cotton. Judge Chase decided in the circuit court of South Carolina that such seizures were illegal, and that the owner was entitled to the market value of his cotton at the time of the seizure and the interest upon the same.

The Constitution provides that the President "shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment." The power thus conferred is unlimited with the exception stated. It extends to every case known to the law before legal proceedings are taken during their pendency or after conviction and judgment. A pardon wipes out both the punishment prescribed for the offense and the guilt of the offender, and when the pardon is full it relieves the punishment and blots from existence all guilt or taint thereof, so that in the eye of the law the offender is innocent as if he never committed the offense. If granted before conviction it prevents any of the penalties and disabilities consequent upon conviction from attaching. If granted after conviction it removes the penalties and disabilities, and restores him to all his legal and civil rights. It makes him as it were a new man and gives him a new credit and capacity.

There never has been a conviction in this country by any court or tribunal for treason. The courts say this power of the President is not subject to legislative control. Congress can neither limit the effect of his pardon nor exclude from its exercise any class of offenders. It is not within the constitutional power of Congress thus to inflict punishment beyond the reach of executive clemency. If such exclusion can be accomplished by the Executive and an expurgatory oath concerning the offense, the pardon may be avoided and that accomplished indirectly which cannot be reached by direct legislation. (*Ex parte* Garland, 4 Wallace, 380.) Such is the decision of the court in regard to the effect of the power of pardon by the President, and yet notwithstanding this fact there are $30,000,000 in the Treasury of the United States belonging to pardoned citizens of the South.

In United States *vs.* Kline (13 Wallace) the Supreme Court say:

> On the 4th of July, 1868, a full pardon and amnesty, with some exceptions, was granted; and on the 25th of December, 1868, without exception, unconditionally and without reserve, to all who participated in the rebellion, with restoration of the rights of property as before.

No oath was required. The court decreed the President's power of pardon is not subject to legislation; that Congress can neither limit the effect of his pardon nor exclude from its exercise any class of offenders.

The court further say that the title to the proceeds of property which came into possession of the Government by capture and abandonment with the rebellious States was in no case divested out of the original owner, and yet Congress has by its legislation since this decision, and in the very face of it, continued to deprive the citizens of the property which the court say is held in trust for them; and the bill now proposed by the committee contains the same provisions as the Drake amendment, which the Supreme Court adjudged to be unconstitutional and void. Thus by this unconstitutional restriction and limitation upon the power of the President to pardon Congress does indirectly what it cannot do by direct legislative power.

I appeal to the candid judgment of the country whether such action is not trifling with the honor, good faith, and integrity of the Government. How long will the honest and upright people of the

country sustain such action on the part of their representatives? I appeal to those gentlemen who have professed such great sympathy for the laboring masses of the country, and especially such sympathy for the grangers, to do justice to those who are now suffering in common with the great mass of the people, who have been unmercifully plundered by corrupt officials in the past few years.

As to the charge, Mr. Speaker, made by the report that upon the surrender of Lee and his army the war did not cease but was still continued, it is only true so far as the troops of the United States Government were concerned, and it is equally untrue in every particular as to the South and the southern people. No people ever surrendered in better faith; none abided the fortunes of war with more fortitude than those of the South.

A brief statement of the facts in my own State will be sufficient refutation of the groundless assertion of the report made by the gentleman from Ohio, [Mr. LAWRENCE.] Immediately after the surrender President Johnson appointed a provisional governor; he was authorized to call a convention of the people of the State, which he did, and which assembled in November, 1865. That convention was composed exclusively of those who had been Union men and opposed secession. Ex-Governor Johnson was elected president of it. That convention repealed the ordinance of secession, repudiated the Confederate States war debt, and adopted the thirteenth amendment. It also adopted an ordinance giving to colored people all the rights of person and property enjoyed by the whites, protected them in their liberty, personal and martial rights, and opened to them the doors of our courts upon equal terms with the whites. They had every right under the laws and constitution of the State of Georgia that they now have under the new amendments of the Constitution except the right of voting and holding office. At that day no ill-feeling or animosity had been engendered between the races. The colored people, as they had done during the war, remained at their old homes, conducted themselves quietly and orderly, and I challenge the history of the world to show a people more quiet, more orderly, law-abiding, and peaceful after a ruinous and disastrous war than the whole people of the South, white and colored.

I challenge the history of the world to show a class of people like our then slaves, who for four years remained true and loyal, and by whom fewer crimes were committed than by any other people on the face of the earth under circumstances like these. Their conduct deserved and received our respect and consideration. President Johnson sought in good faith to carry out Mr. Lincoln's proclamation, but that did not suit the party in power. The members elected to the Thirty-ninth Congress were all Union men originally, and the Legislature of the same class elected without opposition Mr. STEPHENS and ex-Governor Johnson as her Senators, men distinguished for their conservatism, intelligence, prudence, and integrity. No men were ever elected to represent any people who did more thoroughly have the confidence of their constituents, who better understood the wishes and necessities of the people, and who were more deeply solicitous to place the State in full accord with the General Government and the other States of the Union than those selected by my State to represent her. And yet in the face of all these facts this strange report says the South was ready to take up arms at any time. But this is said, sir, to justify the unwarrantable treatment of southern claimants by the General Government.

This report sets up the doctrine of the freebooter and marauder—the doctrine that captives become slaves and in violation of civilized warfare for the past two hundred years. The gentleman from Pennsylvania, [Mr. KELLEY,] the other day in invoking the aid of the South for his centennial bill, felicitated himself upon the effect it would have in the restoration of good feeling and comity between the different sections. He said the word "treason" had become obsolete, and all that was wanted was to bring each section face to face and all would be well. Sir, if the word "treason" has become obsolete it has been substituted by one far more degrading and disastrous to the people.

Treason is a well-defined term, and the penalty prescribed by law. Far better for us, and I may say for the whole country, had the question of treason been settled by the trial of those arrested or others equally guilty. It would have saved the country from all the plundering which has been carried on under the guise of loyalty for the avowed purpose of suppressing disloyalty. The word he says has become obsolete, and yet punishments have been inflicted and confiscations of estates have been effected which could never have been imposed under any conviction for treason in this country.

These, sir, are the acts of bad legislation of which the South complains; and it is a fact which should deeply impress itself upon the public mind of the country that nearly every act of legislation in regard to the Southern States and her people has been declared unconstitutional by the Supreme Court of the United States; and it is equally worthy of reflection that but few acts of Congress prior to the late war had ever been held unconstitutional.

Sir, the people of the South have ever been loyal to the principles of free government and constitutional liberty:

> We too are the friends of loyalty;
> We love a king who loves the law
> Knows his bounds,
> And reigns content within them.

And beyond this God forbid that any American citizen should be loyal to king or government.

Tax on Brokers' Sales.

SPEECH OF H. H. STARKWEATHER.

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

June 23, 1874,

On the bill levying a tax of $\frac{1}{10}$ of 1 per cent. on all sales of stocks, bonds, gold, silver and other securities.

Mr. STARKWEATHER. Mr. Speaker, on the 20th of April last I introduced a bill levying a tax of $\frac{1}{10}$ of 1 per cent. on all sales of stocks, bonds, gold, silver, and other securities, and moved its reference to the Committee on Ways and Means.

Subsequently, on further consultation with the Commissioner of Internal Revenue and other officials who have had large experience in the collection of our revenue, I introduced another bill in its main provisions the same as the first, but with a few additional provisions.

The bill passed the House by a majority of nearly one hundred as an amendment to the tariff bill; went to the Senate where it has encountered the opposition of such brokers as are engaged in demoralizing and disarranging the business interests of the country. These are the men who procured the repeal of the law by most scandalous lobby influences two years since. The past week there has been a regiment of these brokers and their attorneys here endeavoring to control the action of Congress. It is a repetition of the scenes and influences of 1872. Have the members of this House forgotten the character of these influences? I refer to Miscellaneous Document No. 98, third session Forty-second Congress, and to the testimony of Clinton C. Colgate, Judge Sherman, Le Grand Lockwood, Stephen V. White, John T. Denny, and to the statement of the governing committee of the New York Stock Exchange, in proof of the assertion that their conduct was an outrage. This testimony shows how the repeal of these taxes was brought about.

Here is a class of men more favored than any other in this country, and, while they are enjoying the privileges that arise from the creation of the coin and currency of the Government, escape entirely the burdens of taxation. It is another case of class legislation for the benefit of the few.

Let me quote a few lines from Medbury's "Wall Street," showing the immense incomes realized by the Wall street brokers:

> There are not more than four hundred stock-brokers who do any considerable business on "the street." Dividing up the percentage among that number of members of the exchange, we find that it will allow of a yearly income to each of about $109,000.

But this is but a portion of their profits and income. Many of these men have made immense fortunes. Ought they to come here and press their claims for exemption from taxation? I hope that Congress will not longer be controlled by their importunity and impertinence.

Let us examine the merits of this question and see whether these brokers are entitled to this exemption from taxation.

The Committee on Banking and Currency of this House in the Forty-first Congress were directed "to investigate the causes that led to the unusual and extraordinary fluctuations of gold in the city of New York from the 21st to the 27th of September, 1869." That committee, after full investigation, made their report at the second session of the Forty-first Congress.

In looking at that report and the testimony taken by that committee it will be seen that Jay Gould, Fisk, and other stock and gold speculators entered into a conspiracy to raise the price of gold, and they determined to bring as great a pressure as possible on the financial and business interests of the country to effect that purpose. In March and April, 1869, gold stood at 130½, when Jay Gould, who seemed to be the organizing force in this conspiracy, bought seven millions of gold, which put up the price to 140. Fisk and other brokers followed his example, and by the 20th of May had advanced the price to 144⅛.

Every effort that human ingenuity and consummate rascality could devise was made to advance their interests to the sacrifice of the business interests of the country. Contracts were made and broken without the least pretense of observing the common rules of honor that is said to exist among thieves even, and the conspirators held high carnival until the courts intervened to check their illegal proceedings.

These same men led on by Jay Gould are now besieging Congress, threatening and pleading alternately. They have put forth their printed manifestoes, in which they demand that Congress shall not impose this tax, because it is a burden, as they say, on the honest emigrant who wishes to send $100 to the land of his birth.

This hypocritical pretense is put forth with a brazen effrontery and impudence characteristic of these men. It is not any honest emigrant or business man that is raising this clamor, as will be shown by their conduct and by the character of the business they are pursuing.

In proof of this assertion, I quote from the report of the committee:

> Thursday afternoon gold closed at about 144, and the conspirators, flushed with apparent success, held a meeting that evening to lay plans for the next day's campaign. The operations of the gold clearing-house, which usually amounted to seventy millions, had reached that day two hundred and thirty-nine millions. The clique held calls for more than one hundred millions of gold, and as there were not more than fifteen millions of actual gold and gold certificates in New York outside

of the sub-treasury, they seemed to be masters of the situation. Every man that had bought or loaned gold owed it to them, and must buy it of them or settle at such ruinous rates as they might dictate. They had a full list of all who were short of gold, including more than two hundred and fifty prominent firms in New York, many of them leading bankers and merchants whose legitimate business required large purchases of gold.

At that meeting it was proposed to publish this list next morning in all the city papers, stating the amount each firm was short, and how much gold the clique held, and informing the victims that if they did not settle at 160 before three o'clock a higher rate would be demanded.

So strongly did this shameless proposal commend itself to some of the conspirators that they sent for counsel to inquire whether there was any legal obstacle in the way. They were informed that such a course would constitute a conspiracy under the statutes of New York, and for this reason, or perhaps for fear of popular fury, the scheme was abandoned.

It was finally determined to put gold up still further and to continue the work of the previous day on a still larger scale. Early on Friday morning Fisk and Gould drove down to Wall street, reading on their way from the morning papers the unmistakable signs of the wrath in store for them. Nothing can more strikingly exhibit the artificial and unnatural character of speculation in gold than one of the answers of Mr. Fisk. When asked why he feared any sale the Treasury could make, while the clique held calls for six times as much gold as there was in New York outside the sub-Treasury, and much more than both the Treasury and the city could command, he answered, "O, our phantom gold can't stand the weight of the real stuff."

They made Heath's office their headquarters, and, with bullies standing as guards at the door and a crowd of runners at their elbows, issued their final orders for their grand assault upon the commercial community.

This exhibits the real character of these transactions. Fictitious sales of gold amounting to hundreds of millions daily! Shall we tax all the great business industries of the country for the benefit of this privileged class and allow them to go free? This is the real question. Indeed, Jay Gould, who controls the majority interest in the New York Tribune, assumes to dictate through its columns the policy of Congress.

THEY HAVE NOT REFORMED.

But it is claimed by these brokers that they have reformed their practices. Have they? Only last week in New York on one day there were sales of gold to the amount of $65,000,000. Of this, not over two millions were for any legitimate business transaction. And to-day the business interests are suffering by the unnatural condition of affairs induced by these speculations and fictitious sales of stocks and gold more than from any other single cause. The panic of last September is the legitimate result of their doings, as was the panic of 1869. Let me quote from the testimony of William E. Dodge, sr., as given before that committee:

My opinion is that without that organization it would have been utterly impossible to have got up that panic. In the open market no such excitement can occur. In the gold-room gold—or rather the ownership of gold—changes hands at fictitious values; men of almost no capital buy and sell gold, which they do not in reality possess, merely for purposes of speculation. There is no legitimate business about it, and the commerce of the country is obliged to make settlements at the current rate of gold according to the fictitious prices established by those gamblers. The law ought to treat it as *gambling* for that is what it is; gambling in the very life-blood of the nation, in the currency of the country, in which every person throughout the land is interested.

While in their development the panic of 1869 and of last September, like all panics, exhibit a variety of phases, their origin is traceable to the same cause, excessive speculation, and this is induced largely by the temptation afforded by these fictitious stock and gold sales.

But the most dangerous, the most tempting, and the most destructive of real business interests is the speculation in gold. A man with little money can make large purchases.

Let me quote from the testimony of Mr. Opdyke. He says:

There is this about speculations in gold which makes it more dangerous, and perhaps more tempting than speculation in almost anything else, namely, that it requires scarcely any money to speculate in gold. I think the general custom is with a man who is regarded as responsible no margin whatever is required, and when a man's responsibility is not acknowledged I think they require only 1 or 2 per cent. margin day by day.

This would enable a man worth $10,000 to speculate in gold to the amount of $1,000,000, as is often the case. A few characterless gamblers can control millions, and change the coin value of the whole country.

HOW IT AFFECTS BUSINESS.

The effects of this panic on the business interests of the country are thus stated by Mr. Opdyke in his testimony before the committee:

It produced an impression on the mercantile and financial mind, not only in this country but all over the world, that we here are a set of gamblers, and that it is not safe to enter into any contracts with us when it is possible for a small combination of speculators to monopolize one branch of our currency, the coin, which performs its functions now as it did before the suspension of specie payments, so far as our foreign trade is concerned.

It produced a universal feeling of distrust which made it difficult to obtain currency, and injured for a time very seriously the general business interests of the country.

AN EXISTING PERIL.

The danger now is just as imminent as ever, nor is this danger passed as the paper currency approaches gold in value. In regard to this point, Mr. Opdyke is unquestionably right when he says:

I think our return to specie payment will not increase our security against these combinations. They are just as liable to attack gold as paper by locking it up; and in doing that they can affect the market price of everything.

But it is said there are honest brokers, and legitimate and honest sales of stocks and gold. I freely concede it. One-fiftieth probably, possibly a larger proportion of the sales, are of this character. These honest dealers, however, do not assume to dictate to Congress. Of course they, like all others, desire to go untaxed; but it is perfectly apparent that even these enjoy such great advantages for making large incomes that this tax is no hardship either on the seller or buyer. No other business transactions can better afford to pay or bear the burden of taxation.

Mr. Speaker, I think we have seen in this discussion the dangerous character of the business of these Goulds and Fisks and associates. We have seen that their incomes are immense. We have seen how their reckless, selfish course affects, not the business of the country alone, but imperils the public credit. We have seen that it is a present peril, and that the return to specie payments, to which they are a standing obstruction, would not materially lessen the danger. We have shown the tax is one that is naturally suggested from the advantages enjoyed by the brokers arising in the business of the country in its relations to the coin and currency of the Government creation.

Now let us consider briefly the amount of sales and the feasibility of executing the law.

THE AMOUNT OF SALES OF STOCKS AND GOLD.

In New York the daily average sale of stocks is $70,000,000; daily sale of gold $10,000,000; making a sale of stocks and gold daily of $80,000,000. Multiply this daily rate by the number of working days in the years, say three hundred, and we have the annual sales amounting to $24,000,000,000. A tax of $\frac{1}{10}$ of 1 per cent. on this will realize $12,000,000 annually in New York alone. There would be realized elsewhere in the country as much more, making the income from the tax on sales of stocks and gold at least $24,000,000 annually.

ITS EXECUTION.

Under the bill as revised, Mr. Douglass, the Commissioner of Internal Revenue, says there can be no trouble in executing the law, and it will require little if any additional force, as the present collectors and other officials can do all the work. Indeed, it can be more easily executed than the law taxing whisky or tobacco.

The opposition comes mainly from those brokers that have done most to demoralize the market and embarrass the Government. It was such stock gamblers and gold gamblers as Jay Gould and Fisk that brought on the present disasters in our finances, and the unnatural financial troubles of Black Friday.

Of the sales of stocks and gold in New York, amounting to $80,000,000, not one-twentieth part, probably not one-fiftieth part, is for any legitimate business purpose where an actual transfer of stock is made.

The opposition does not come from parties who desire actually to buy and hold stocks. Who that wishes to buy $1,000 in stocks objects to the payment of fifty cents tax on the sale? Compare it with the burden imposed by stamps on checks, or the tax on matches and on cigars, where the tax-gatherer enters every house, where a man with his children makes a few boxes of cigars a year, and taxes them tenfold more on their labor.

Those brokers who are rich and figure in these operations among the millions insist in their printed arguments and in the papers which they control in New York in being relieved at the expense of further taxes on the land and labor of the country. Indeed they ask in their leading paper for the restoration of the duty on tea and coffee.

IT IS JUST.

No other interest can so easily pay this tax. No other interest demands and receives so much favor. No other interest is so lightly taxed now. All their great sales and gains go untaxed. Let this be made right, and then the other business and laboring interests may be somewhat relieved of burdensome taxation.

The country's necessity is the stock-gamblers' opportunity. Shall they contribute nothing to relieve the business necessities from which they realize collossal fortunes? Take the speculative sales of gold in which neither the business men of the country nor the Government has any interest except in their being as limited as possible. These sales range from one million to hundreds of millions daily.

Why last week on one day the gold sales amounted to $65,000,000, and of this amount over $62,000,000 were outside of any case for legitimate business purposes—downright stock-gambling.

These reckless speculators claim to be outside of national or State legislation and beyond the control of the courts. Indeed for the most part they have defied the courts of the country. In answer to questions as to the enforcement of legal obligations against the gold exchange and the necessity of legislation, it was the opinion of all the intelligent business men of the country that the enforcement of any legal obligations was in doubt, and all agreed that these operations were detrimental to the business of the country. Mr. Opdyke said:

If men who have the power of controlling large sums of money can with impunity combine together to disturb to a degree that becomes dangerous to business the volume of the circulating medium, whether that be in paper or gold, I regard that as one of the most threatening dangers to the future of the country that has ever manifested itself.

WE NEED THE REVENUE.

The greatest economy consistent with the real interests of the Government should be adhered to. But we must pay our honest debts and keep our honor untarnished. No government can afford to repudiate a just claim.

The current expenses of the Government, as provided for in the regular appropriation bills, are on the whole reasonable. There are claims growing out of the war, and some of them prior to the war, that have

been adjudicated and found due by the Court of Claims, the claims commission, and by the committees of this House. These ought and must be paid.

Then, Mr. Speaker, let us pass this bill and relieve other business interests that are now overtaxed, and lift from the shoulders of the laborers of the country their heavy burdens. The tax is just, it can be easily collected, and it will be a wholesome restraint on the transactions of a class, a large portion of whose doings are evil and only evil and that continually. The imposition of this tax will do much good by calling the more reckless and dangerous of these conspirators to the light and requiring them to show, as the bill provides, a true and accurate record of their doings. To the honest brokers as a class the bill will be a positive advantage, and the merchants and business men of the country will be benefited by being rid, partially at least, of the corrupting influences of these speculators, and we shall take one step at least toward the return to specie payments by deposing from power the corrupt dynasty that has thrived by plundering the people and the national Treasury.

Cheap Transportation and Railways.

SPEECH OF HON. J. A. GARFIELD,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

June 22, 1874,

On the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. No. 3168) making appropriations for rivers and harbors.

Mr. GARFIELD. Mr. Speaker, I prepared an amendment to be offered to one of the Senate amendments to this bill, but the lateness of the hour when the bill came up for consideration made it necessary to non-concur in all the Senate amendments and send the bill to a conference committee.

The Senate added a proviso to the bill appropriating $200,000 for the survey of four routes, with a view to the establishment of several lines of transportation.

The four routes proposed are as follows: One by the way of the Mississippi; another by the northern lakes; a third by the Tennessee River and a canal across Alabama and Georgia to Savannah; and a fourth by canal or railway across Virginia to Richmond.

The first of these has been provided for in the section added to this bill by the Senate, which is substantially the substitute I offered for the bill to improve the mouths of the Mississippi River.

The chief object sought to be attained in the surveys required by the Senate amendment is to provide lines of water transportation from the Northwest to the sea-board by southward and eastward lines. I submit that this provision does not sufficiently provide for employing the greatest of our modern means of transportation, the railway.

Two important reports have been made to this Congress; one by the Senate Committee on Transportation, the other by the House Committee on Railways and Canals. Both recognize the great importance of railway communication to the commercial interests of the nation. Both committees unite in the opinion that the agricultural interests of the West and the manufacturing and commercial interests of the East are suffering from high and variable rates of freight. Both unite in recommending double-freight railways from East to West as a means of relief, by which freights can be so reduced that wheat can be transported from the Mississippi to tide-water at 18 cents per bushel; a saving, if applicable to the entire wheat product, of thirty to fifty million dollars a year.

Cheap freights by water transportation alone will not accomplish this end. Canals have been and still are regarded by some as the solution of the cheap transportation problem. But experience has demonstrated that canals have not succeeded in competition with railways. On the Erie Canal charges have increased, while tonnage has decreased, within the last decade; and at the same time on the Erie railway charges have decreased and tonnage has increased.

It is complained that the present system of railways does not afford adequate relief; that the main through lines are operated almost up to the limit of their capacity, and that by the running of mixed trains the expenses and the time of moving freight are greatly increased. It is insisted that a new system must be tried, a double-track through railway, with low grades, to enable uniform loads to be handled over all portions of the road by the same engine, at a uniform rate of speed.

Government roads have not been a success in our country; and private roads are unable to move freight at the rates which our interstate commerce requires. It is insisted that we need a combination of Government aid and Government regulation with private economy, and that on this principle a road can be built which will meet the required demand.

In view of these facts it was my purpose to offer an amendment to a clause of this bill which would require $100,000 of the amount appropriated to be used in an examination and report upon the feasibility of the plan recommended by the two committees to which I have referred, in order that Congress may be more fully informed on the general problem of transportation. Not being able to get the action of the House on my amendment at this session, I put these suggestions on record, and, using the permission which the House has so kindly granted, I will submit some reflections upon the railway problem, by employing the materials which I lately used in another place.

THE RAILWAY PROBLEM.

We are so involved in the events and movements of society that we do not stop to realize—what is undeniably true—that during the last forty years all modern societies have entered upon a period of change, more marked, more pervading, more radical than any that has occurred during the last three hundred years. In saying this I do not forget our own political and military history, nor the French revolution of 1793. The changes now taking place have been wrought and are being wrought, mainly, almost wholly, by a single mechanical contrivance, the steam-locomotive. Imagine, if you can, what would happen if to-morrow morning the railway locomotive, and its corollary, the telegraph, were blotted from the earth. At first thought it would seem impossible to get on at all with the feeble substitutes we should be compelled to adopt in place of these great forces. To what humble proportions mankind would be compelled to scale down the great enterprises they are now pushing forward with such ease! But were this calamity to happen, we should simply be placed where we were forty-three years ago.

There are many persons now living who well remember the day when Andrew Jackson, after four weeks of toilsome travel from his home in Tennessee, reached Washington and took his first oath of office as President of the United States. On that day the railway locomotive did not exist. During that year Henry Clay was struggling to make his name immortal by linking it with the then vast project of building a national road—a turnpike—from the national capital to the banks of the Mississippi.

In the autumn of that very year George Stephenson ran his first experimental locomotive, the "Rocket," from Manchester to Liverpool and back. The rumble of its wheels, redoubled a million times, is echoing to-day on every continent.

In 1870 there were about 125,000 miles of railroad on the two hemispheres, constructed at a cost of little less than $100,000 per mile, and representing nearly $12,000,000,000 of invested capital.

A parliamentary commission found that during the year 1866 the railway cars of Great Britain carried an average of 850,000 passengers per day; and during that year the work done by their 8,125 locomotives would have required for its performance three and a half million horses and nearly two million men.

What have our people done for the locomotive, and what has it done for us? To the United States, with its vast territorial areas, the railroad was a vital necessity.

Talleyrand once said to the first Napoleon that "the United States was a giant without bones." Since that time our gristle has been rapidly hardening. Sixty-seven thousand miles of iron track is a tolerable skeleton, even for a giant. When this new power appeared, our people everywhere felt the necessity of setting it to work; and individuals, cities, States, and the nation lavished their resources without stint to make a pathway for it. Fortunes were sunk under almost every mile of our earlier roads in the effort to capture and utilize this new power. If the State did not head the subscription for a new road, it usually came to the rescue before the work was completed.

The lands given by the States and by the national Government to aid in the construction of railroads reach an aggregate of nearly two hundred and fifty million acres—a territory equal to nine times the area of Ohio. With these vast resources we have made paths for the steam giant; and to-day nearly a quarter of a million of our business and working men are in his immediate service. Such a power naturally attracts to its enterprises the brightest and strongest intellects. It would be difficult to find in any other profession so large a proportion or men possessed of a high order of business ability as those who construct, manage, and operate our railroads.

The American people have done much for the locomotive; and it has done much for them. We have already seen that it has greatly reduced, if not wholly destroyed, the danger that the Government will fall to pieces by its own weight. The railroad has not only brought our people and their industries together, but it has carried civilization into the wilderness, has built up States and Territories, which but for its power would have remained deserts for a century to come. "Abroad and at home," as Mr. Adams tersely declares, "it has equally nationalized people and cosmopolized nations." It has played a most important part in the recent movement for the unification and preservation of nations.

It enabled us to do what the old military science had pronounced impossible, to conquer a revolted population of eleven millions, occupying a territory one-fifth as large as the continent of Europe. In an able essay on the railway system Mr. Charles F. Adams, jr., has pointed out some of the remarkable achievements of the railroad in our recent history. For example, a single railroad track enabled Sherman to maintain eighty thousand fighting men three hundred miles beyond his base of supplies. Another line, in a space of seven days, brought a re-enforcement of two fully equipped army corps around a circuit of thirteen hundred miles, to strengthen an army at

a threatened point. He calls attention to the still more striking fact that for ten years past, with fifteen hundred millions of our indebtedness abroad, an enormous debt at home, unparalleled public expenditures, and a depreciated paper currency, in defiance of all past experience, we have been steadily conquering our difficulties, have escaped the predicted collapse, and are promptly meeting our engagements; because, through energetic railroad development, the country has been producing real wealth, as no country has produced it before. Finally, he sums up the case by declaring that the locomotive has "dragged the country through its difficulties in spite of itself."

It is unnecessary to particularize further; for whether there be peace or war, society cannot exist in its present order without the railroad.

I have noticed briefly what society has done for the locomotive, and what it has done for society. Let us now inquire what it is doing and is likely to do *to* society.

The national Constitution and the constitutions of most of the States were formed before the locomotive existed; and of course no special provisions were made for its control. Are our institutions strong enough to stand the shock and strain of this new force?

The editor of the The Nation declares the simple truth when in a recent issue he says:

> The locomotive is coming in contact with the frame-work of our institutions. In this country of simple government the most powerful centralizing force which civilization has yet produced, must, within the next score years, assume its relations to that political machinery which is to control and regulate it.

The railway problem would have been much easier of solution if its difficulties had been understood in the beginning. But we have waited until the child has become a giant. We attempted to mount a columbiad on a carriage whose strength was only sufficient to stand the recoil of a twelve-pound shot.

The danger to be apprehended does not arise from the railroad, merely, but from its combination with a piece of legal machinery known as the private corporation.

In discussing this theme we must not make an indiscriminate attack upon corporations. The corporation limited to its proper uses is one of the most valuable of the many useful creations of law. One class of corporations has played a most important and conspicuous part in securing the liberties of mankind. It was the municipal corporations—the free cities and chartered towns—that preserved and developed the spirit of freedom during the darkness of the Middle Ages and powerfully aided in the overthrow of the feudal system. The charters of London and of the lesser cities and towns of England made the most effective resistance to the tyranny of Charles II, and the judicial savagery of Jeffreys. The spirit of the free town and the chartered colony taught our own fathers how to win their independence. The New England township was the political unit which formed the basis of most of our States.

This class of corporations have been most useful, and almost always safe, because they have been kept constantly within the control of the community for whose benefit they were created. The State has never surrendered the power of amending their charters.

The early English law writers classified all corporations into public and private; calling those of a municipal character public or quasi public, and all others private corporations. The latter class, at that time and indeed long afterward, consisted chiefly of such organizations as hospitals, colleges, and other charities supported by private benefactions. The ownership of the property, not the object of the corporation, was made the basis of classification. If the property was owned wholly by the state or the municipality, the corporation was public; if owned wholly or partly by individual citizens, the corporation was private. From this distinction have arisen the legal difficulties attending any attempt on the part of the community to control the great business corporations.

Under the name of private corporations, organizations have grown up, not for the perpetuation of great charity, like a college or hospital, not to enable a company of citizens more conveniently to carry on a private industry; but a class of corporations unknown to the early law writers has arisen, and to them have been committed the vast powers of the railroad and the telegraph, the great instruments by which modern communities live, move, and have their being.

Since the dawn of history, the great thoroughfares have belonged to the people, have been known as the king's highways or the public highways, and have been open to the free use of all, on payment of a small, uniform tax or toll to keep them in repair. But now the most perfect and by far the most important roads known to mankind are owned and managed as private property by a comparatively small number of private citizens.

In all its uses, the railroad is the most public of all our roads; and in all the objects to which its work relates, the railway corporation is as public as any organization can be. But in the start it was labeled a private corporation; and, so far as it's legal status is concerned, it is now grouped with eleemosynary institutions and private charities, and enjoys similar immunities and exemptions. It remains to be seen how long the community will suffer itself to be the victim of an abstract definition.

It will be readily conceded that a corporation is strictly and really private when it is authorized to carry on such a business as a private citizen may carry on. But when the state has delegated to a corporation the sovereign right of eminent domain, the right to take from the private citizen, without his consent, a portion of his real estate, to build its structure across farm, garden, and lawn, into and through, over or under, the blocks, squares, streets, churches, and dwellings of incorporated cities and towns, across navigable rivers, and over and along public highways, it requires a stretch of the common imagination and much refinement and subtlety of the law to maintain the old fiction that such an organization is not a public corporation.

In the famous Dartmouth College case of 1819 it was decided by the Supreme Court of the United States that the charter of Dartmouth College is a contract between the State and the corporation, which the Legislature cannot alter without the consent of the corporation; and that any such alteration is void, being in conflict with that clause of the Constitution of the United States which forbids a State to make any law impairing the obligation of contracts.

This decision has stood for more than half a century as a monument of judicial learning and the great safeguard of vested rights. But Chief Justice Marshall pronounced this opinion ten years before the steam railway was born; and it is clear he did not contemplate the class of corporations that have since come into being. But year by year the doctrine of that case has been extended to the whole class of private corporations, including railroad and telegraph companies. But few of the States in their early charters to railroads reserved any effectual control of the operations of the corporations they created. In many instances, like that of the Illinois Central charter, the right to amend was not reserved. In most States each Legislature has narrowed and abridged the powers of its successors, and enlarged the powers of the corporations; and these by the strong grip of the law, and in the name of private property and vested rights, hold fast all they have received. By these means not only the corporations but the vast railroad and telegraph systems have virtually passed from the control of the State. It is painfully evident from the experience of the last few years that the efforts of the States to regulate their railroads have amounted to but little more than feeble annoyance. In many cases the corporations have treated such efforts as impertinent intermeddling, and have brushed away legislative restrictions as easily as Gulliver broke the cords with which the Lilliputians attempted to bind him.

In these contests the corporations have become conscious of their strength, and have entered upon the work of controlling the States. Already they have captured several of the oldest and strongest of them; and these discrowned sovereigns now follow in chains the triumphal chariot of their conquerors. And this does not imply that merely the officers and representatives of States have been subjected to the railways, but that the corporations have grasped the sources and fountains of power, and control the choice of both officers and representatives.

The private corporation has another great advantage over the municipal corporation. The jurisdiction of the latter is confined to its own territory; but by the recent constructions and devices of the law, a private corporation, though it has no soul, no conscience, and can commit no crime, yet is a citizen of the State that creates it, and can make and execute contracts with individuals and corporations of other States.

Thus the way has been opened to those vast consolidations which have placed the control of the whole system in the hands of a few, and have developed the Charlemagnes and the Cæsars of our internal commerce.

In addition to these external conquests the great managers have in many cases grasped the private property of the corporations themselves; and the stocks which represent the investment have become mere counters in the great gambling houses of Wall street, where the daily ebb and flow of the stock market sweeps and tosses the business and trade of the continent.

If these corporations were in reality private corporations, transacting only private business, the community might perhaps stand by in wonder and amazement at their achievements; but a great and vital public interest is involved in the system, an interest which affects the social and political organization in a thousand ways. Prominent among these is the public necessity for means of transportation.

Mr. Adams, in his "Chapters of Erie," says that the estimated average amount transported by rail had risen from eighty-five dollars for each inhabitant in 1860 to $300 in 1870, and that the public are now paying to railroads for travel and transportation $450,000,000 per annum, an average of twelve dollars per head for the whole population.*

Two-thirds of this sum, he says, are paid for the actual work of transportation, and the remaining third "for the use of the capital and the risk involved in the business."

This latter sum is the tax on transportation, and is as really a *tax* as though it were paid on the grand duplicate of the State; "in other words," quoting from Mr. Adams, "certain private individuals, responsible to no authority, and subject to no supervision, but looking solely to their own interests, or to those of their immediate constituency, yearly levy upon the American people a tax, as a suitable remuneration of their private capital, equal to one-half of the expenses of the United States Government, including interest on the national debt."

*The amount for the year 1872, is set down at $473,241,055.—*Poor's Railroad Manual* for 1873, introduction, page 25.

I do not say that this tax is excessive; perhaps it is not; but its rate is determined, and the amount levied and collected, not by the authority of the State, but by private parties whose chief concern is to serve their own interests.

We have seen that the transportation tax is the amount paid to the companies for their investment. How much they shall invest, where, and under what limitations it shall be invested, has been wholly left to the companies themselves; but whether they have invested their capital wisely or unwisely, however much the business may be overdone, the investors must be paid for the use of their capital, and that payment is made by the community.

In most of the States railroads may be built in unlimited numbers wherever five or ten men, who incorporate themselves under the general law, may choose to build them.

This has probably been allowed in the belief that free competition in building and operating roads would produce economy in the management and cheapness in transportation.

But this expectation has utterly failed. All railroad experience has verified the truth of George Stephenson's aphorism, that "when combination is possible, competition is impossible." Great Britain has gone much farther into the study of this question than we have, and the result of her latest study is thus expressed in the London Quarterly Review of April last:

> By the common consent of all practical men competition, the ordinary safeguard of the public in matters of trade, has ceased to offer the slightest protection (except in a few unimportant cases of rival sea traffics) against railway monopolies.
>
> In spite of the efforts of Parliament and parliamentary commissions, combinations and amalgamation, have proceeded, at the instance of the companies, without check and almost without regulation. United systems now exist, constituting by their magnitude and by their exclusive possession of whole districts, monopolies to which the earlier authorities would have been strongly opposed. Nor is there any reason to suppose that the progress of combination has ceased, or that it will cease until Great Britain is divided between a small number of great companies.

The article concludes with this striking paragraph:

> We have tried the *laissez faire* policy and it has failed; we have tried a meddlesome policy, and it has failed also. We have now to meet the coming day, when all the railways, having completed their several systems, may, and probably in their own interests will, combine together to take advantage of the public. In the face of this contingency we have simply to make our choice between two alternatives: either to let the state manage the railways, or let the railways manage the state.

It is easy to see that we are repeating the experience of Great Britain on a vast scale. We have doubled our miles of railway in the last eight years. In the last two years we have built and put into operation 14,206 miles of road—more than a quarter of all we had in January, 1871.

The cost of constructing the roads we are now operating was $3,160,000,000; and during the year 1872, there were transported by rail more than two hundred million tons of freight.* The process of consolidation of our leading lines of road has been even more rapid than that of construction; and whatever dangers we may expect from the system are rapidly culminating to the point of full development. In antagonism to these and to similar combinations of capitalists are the combinations of laborers in trades-unions and labor leagues. The indications are abundant that we shall soon see, set in full array, a conflict between capital and labor—a conflict between forces that ought not to be enemies; for labor is the creator of capital, which is only another name for accumulated labor. It is the duty of statesmanship to study the relation which the Government sustains and ought to sustain to this struggle, and to provide that it shall not be the partisan supporter of either combatant, but the just protector of both. The right to labor has not been sufficiently emphasized as one of the rights of man. The right to enjoy the fruits of labor has been better secured.

In view of the facts already set forth the question returns, what is likely to be the effect of railway and other similar combinations upon our community and our political institutions? Is it true, as asserted by the British writer quoted above, that the state must soon recapture and control the railroads, or be captured and subjugated by them? Or do the phenomena we are witnessing indicate that general breaking-up of the social and political order of modern nations so confidently predicted by a class of philosophers whose opinions have hitherto made but little impression on the public mind? That we may not neglect this broader view of the question, I will quote a few paragraphs written by Charles Fourier sixty-six years ago—nearly a quarter of a century before the fire of the first steam locomotive was lighted.

After tracing the course of civilization through its several phases of development, and declaring that it was then (1807) past the middle of its third phase and moving toward its own destruction, he said:

> Civilization is tending toward the fourth phase, by the influence of joint-stock corporations, which, under the cover of certain legal privileges dictate, terms and conditions to labor, and arbitrarily exclude from it whomever they please. These corporations contain the germ of a vast feudal coalition, which is destined soon to invade the whole industrial and financial system, and give birth to a commercial feudalism. * * * These corporations will become dangerous and lead to new outbreaks and convulsions only by being extended to the whole commercial and industrial system. The event is not far distant, and will be brought about all the more easily from the fact that it is not apprehended. * * * Extremes meet; and the greater the extent to which anarchical competition is carried the nearer is the approach to the reign of *universal monopoly*, which is the opposite excess. It is the fate of civilization to be always balancing between extremes. Circumstances are tending toward the organization of the commercial classes into federal companies or affiliated monopolies, which, operating in conjunction with the great landed interest, will reduce the middle and laboring classes to a state of commercial vassalage, and by the influence of combined action will become master of the productive industry of entire nations. The small operators will be forced indirectly to dispose of their products according to the wishes of these monopolists; they will become mere agents for the coalition. We shall thus see the reappearance of feudalism in an inverse order, founded on mercantile leagues, and answering to the baronial leagues of the Middle Ages. Everything is concurring to produce this result. * * * We are marching with rapid strides toward a commercial feudalism, and to the fourth phase of civilization.*

These declarations read something like prophecy, so far as they relate to the effects of combined corporations. New mechanical forces have hastened the development of corporations since Fourier wrote. We need not take alarm at his prophecy of the speedy decay of civilization; but the analogy between the industrial condition of society at the present time and the feudalism of the Middle Ages is both striking and instructive.

In the darkness and chaos of that period the feudal system was the first important step toward the organization of modern nations. Powerful chiefs and barons intrenched themselves in castles, and in return for submission and service gave to their vassals rude protection and ruder laws. But as the feudal chiefs grew in power and wealth, they became the oppressors of their people, taxed and robbed them at will, and finally, in their arrogance, defied the kings and emperors of the mediæval states. From their castles, planted on the great thoroughfares, they practiced the most capricious extortions on commerce and travel, and thus gave to modern language the phrase, "levy black mail."†

The consolidation of our great industrial and commercial companies, the power they wield and the relations they sustain to the state and to the industry of the people, do not fall far short of Fourier's definition of commercial or industrial feudalism. The modern barons, more powerful than their military prototypes, own our greatest highways, and levy tribute at will upon all our vast industries. And, as the old feudalism was finally controlled and subordinated only by the combined efforts of the kings and the people of the free cities and towns, so, our modern feudalism can be subordinated to the public good only by the great body of the people, acting through their governments by wise and just laws.

I shall not now enter upon the discussion of methods by which this great work of adjustment may be accomplished. But I refuse to believe that the genius and energy which have developed these new and tremendous forces will fail to make them not the masters but the faithful servants of society. It will be a disgrace to our age and to us if we do not discover some method by which the public functions of these organizations may be brought into full subordination to the public, and that too without violence, and without unjust interference with the rights of private individuals. It will be unworthy of our age, and of us, if we make the discussion of this subject a mere warfare against men. For in these great industrial enterprises have been and still are engaged some of the noblest and worthiest men of our time. It is the system—its tendencies and its dangers—which society itself has produced, that we are now to confront. And these industries must not be crippled, but promoted. The evils complained of are mainly of our own making. States and communities have willingly and thoughtlessly conferred these great powers upon railways; and they must seek to rectify their own errors without injury to the industries they have encouraged.

Already methods are being suggested. Massachusetts has been discussing the proposal to purchase and operate a portion of her railroad system, and thus bring the rest into competition with the state, as the representative of the people. And it is claimed that the success of this plan has been proved by the experience of Belgium.

Another proposition is that the state purchase the roads and open them, like other highways to the free use of the public, subject to such regulations and toll as the safety of transportation and the maintenance of the system may require. This, it is claimed, would remove the stocks and bonds from the gambling operations of the markets and place the levying of the transportation tax in the hands of the state and under the control of those who pay.

Others again insist that the system has overgrown the limits and the powers of the separate States, and must be taken in hand by the national Government under that provision of the Constitution which empowers Congress "to regulate commerce among the several States." When it is objected that this would be a great and dangerous step toward political centralization—which many think has already been pushed too far—it is responded that as the railway is the greatest centralizing force of modern times nothing but a kindred force can control it, and it is better to rule it than to be ruled by it. Other solutions have been proposed, but these are sufficient to show how strongly the current of public thought is setting toward the subject. Indications are not wanting that the discussion will be attended by passion and by a full exhibition of that low, political cunning which plays

† A very large portion of the nobility lived by robbery. Their castles, as the ruins still bear witness, were erected upon inaccessible hills and in defiles that command the road. An archbishop of Cologne, having built a fortress of this kind, the governor inquired how he was to maintain himself, no revenue having been assigned for that purpose. The prelate only desired him to remark that the castle was situated near the junction of four roads.—*Hallam's Middle Ages*, vol. ii, page 94.

with the passions and prejudices of men, and measures success by results, and not by the character of the means employed. I have ventured to criticise the judicial application of the Dartmouth College case; and I venture the further opinion that some features of that decision as applied to the railway and similar corporations must give way under the new elements which time has added to the problem. But this must be done, not by denouncing judges who faithfully administer the law, but by such prudent changes in the law, and perhaps in our constitutions, as will guide the courts in future adjudications.*

It depends upon the wisdom, the culture, the self-control of our people and their representatives to determine how wisely and how well this question shall be settled. But that it will be solved, and solved in the interest of liberty and justice, I do not doubt. And its solution will open the way to a solution of a whole chapter of similar questions that relate to the conflict between capital and labor.

I do not believe that this Congress has so thoroughly studied the problem that they are now ready to settle it wisely and permanently. But I should be glad to see a commission of intelligent men appointed who would explore the facts and report to Congress the results of their examination. The whole American people need to have their thinking stimulated and directed by the wisest and best men among them, so that a just conclusion may be reached.

Such an inquiry as I have proposed would aid us in determining whether the building of a double-track railway from the Mississippi River to the Atlantic tide-water, either by the Government or by private enterprise under a national charter, would so reduce the cost of transportation between the East and the West that middle-men shall not as now take the lion's share of the profit of industry.

The International Exhibition of 1876.

SPEECH OF HON. R. C. McCORMICK,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

May 6, 1874.

The House having under consideration the bill (H. R. No. 2986) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876—

Mr. McCORMICK said:

Mr. SPEAKER: Nearly ten years since the propriety of grandly celebrating the completion of the first century of our national existence became a subject of popular consideration and interest. It was conceded that there should be something more than mere noisy demonstrations of patriotism and pride, and those who were most earnest in the desire for a dignified, befitting, and useful commemoration of the important event in the history of this

Realm to sudden greatness grown,

conceived the idea of holding an international exhibition.

To lift the undertaking above anything like local or limited influences Congress was asked to charter a board of centennial commissioners, to consist of one commissioner and one alternate commissioner from each State and Territory in the Union. This was done by act approved March 3, 1871, and it was declared by the same act "that an exhibition of American and foreign arts, products, and manufactures should be held under the auspices of the Government of the United States in the city of Philadelphia in the year 1876."

The commissioners were to be appointed by the President of the United States on the nomination of the governors of the States and Territories respectively, and it was made their duty to prepare and superintend the execution of a plan for holding the exhibition.

Subsequently, by act approved June 1, 1872, Congress created what is known as the centennial board of finance, an organization made up of two citizens from each congressional district in the Union, and empowered to secure subscriptions of capital stock to an amount not exceeding $10,000,000, to be divided into shares of ten dollars each; the proceeds to be used by said corporation for all the expenditures required in carrying out the objects of the act creating the centennial commission.

These two organizations brought into existence by Congress, and acting under the direct provisions of law, have been zealously engaged in the vast preparations necessary for the successful carrying out of so great an undertaking as an international exhibition. Of the scope and extent of their labors the volume I hold in my hand, the third annual report of the centennial commission to Congress, will give gentlemen some idea, although no one not actually involved in the work will readily comprehend how much has been done and how much remains to be done.

As a member of the executive committee of the commission, to which committee of thirteen the whole management of the business of the commission is intrusted for the year, I may say that no pains have been spared to gather from all sources all facts and figures of value in connection with the holding of the great exhibitions in Europe. Vienna was visited last summer by a number of the commissioners, and from a date prior to the opening of the exhibition held there to its close agents authorized by the executive committee were present and actively occupied in behalf of the commission.

The elaborate reports of Professor W. P. Blake and Henry Pettit, esq., which are embodied in the report of the commission to which I have referred, present a perfect epitome of the organization of the Vienna exhibition in all its details, so arranged and classified that it will be invaluable for the use of the commission and board of finance. The defects and the failures as well as the advantages and triumphs of the exhibition are carefully set forth and many practical conclusions and suggestions of importance are presented.

Much interesting and valuable matter relating to other foreign exhibitions is given in these reports, and from many sources the commission has been supplied with information which will, I think, lead to an avoidance of the mistakes in buildings and the useless expenditures in management or mismanagement which have characterized some of the exhibitions and resulted in pecuniary loss where there need to have been none.

I speak particularly of this because in the present debate gentlemen opposing the bill under discussion seem to have little idea of the thorough, I may say the exhaustive manner in which the centennial commissioners have entered into the consideration of every question bearing in any way upon the management of exhibitions like that proposed for 1876, the first of its national and international class projected in the United States.

The commission has also had the benefit of the reports of various State commissioners to Vienna, and as an offset to the assertion frequently heard that it is yet too early in the history of the United States to attempt an international exhibition, I take these words from the report of Mr. Charles Francis Adams, jr., the Massachusetts commissioner:

> There is good reason to believe that every condition exists necessary to make a decided success of the proposed centennial exhibition. The court pageant, which has played so brilliant and essential a part in its great European prototypes, will, it is true, necessarily be wanting. The mercantile element, however, which has proved the mainspring of all recent expositions, will there be present in a more than ordinary degree.

If a member of the careful and conservative, the historic Adams family can speak thus confidently, New England need not fear to come to the aid of the enterprise.

OUR SUCCESS IN EUROPE.

Mr. Chairman, our success at London, at Paris, and at Vienna, with but a limited and imperfect exhibit in each instance, and at Vienna a degree of confusion in the management of our department, alike unfortunate and discreditable, upon whoever the blame may rest, has been such as to make it evident that we need not for a moment question our ability as a people to provide, as required by the act creating the centennial commission, a most creditable exhibition of the "national resources of the country and their development, and of its progress in those arts which benefit mankind," a display fitting to make, as further required by said act, "in comparison with those of older nations."

My distinguished friend from Pennsylvania, [Mr. KELLEY,] in his eloquent speech at the opening of this debate, called attention to the fact that at London, Paris, and Vienna there was simply an "American department" containing but a few specimens of the products and industries of a part of the States, and nothing at all calculated to illustrate the resources and development of the whole Republic, the many States united as one.

The patriotic gentleman from Massachusetts, Mr. Banks, so long an able advocate of the national honor upon this floor, in his memorable speech in 1866 upon our representation at the Paris exposition of 1867 thus referred to our position at London:

> Every one must confess that so far as the Government was represented in the exhibition of 1851, it was a melancholy and discreditable feature. We were saved from humiliation if not disgrace by the unexpected and marvelous skill and power of our own unappreciated mechanics.

No one can forget the surprise created in London over the unexpected triumphs of American ingenuity and skill, in honor of which even Punch forgot his prejudice and sang to amazed John Bull:

> Your gunsmiths of their skill may crack,
> But that again don't mention:
> I guess that Colt's revolvers whack
> Their very first invention.
> By Yankee Doodle, too, you're beat
> Downright in agriculture,
> With his machine for reaping wheat,
> Chaw'd up as by a vulture.

Nor need I refer in detail to the victories achieved at Paris in 1867, where the United States received many awards. In communicating to Congress the reports of the commissioners to this grand exposition, which I may say are now classed among the most valuable of our

*One member of the court, Mr. Justice Duvall, dissented from the opinion of the court in the Dartmouth College case. Even Chief Justice Marshall, in pronouncing the opinion of the court, used expressions which would not at all apply to our railway companies. He said, (4 Wheaton, 647,) "these eleemosynary institutions do not fill the place which would otherwise be occupied by the Government, but that which would otherwise remain vacant." There has been a growing dissent against the enlarged application of this principle. In a recent case—Washington University *vs.* Rouse, (8 Wallace, 439.)—three justices, including the Chief Justice, dissented.

public documents, Mr. Seward, then Secretary of State, said of such international exhibitions:

Their beneficent influences are many and wide-spread. They advance human knowledge in all directions. Through the universal language of the products of labor, the artisans of all countries hold communication; ancient prejudices are broken down; nations are fraternized; generous rivalries in the peaceful fields of industry are excited; the tendencies to war are lessened, and a better understanding between capital and labor is fostered. * * * One of their most salutary results is the promotion of an appreciation of the true dignity of labor and its paramount claims to consideration as the basis of national wealth and power.

At Vienna last year the United States was represented in twenty-three of the twenty-six groups into which the exposition was divided, and secured four hundred and forty awards; but Mr. Adams states that "the representation was in no way calculated to give a correct impression of our progress or condition as a people."

There can be no doubt, I think, that the resources and industries of the United States as now developed and advanced will warrant an exhibition upon our own soil that will surprise the world.

Horace Greeley, writing in 1871 upon the proposed exhibition, which he appeared to consider even then as an assured success, spoke thus of the progress of American industry:

We are advancing with rapid strides toward excellence in every department of industrial art, and the exposition of 1876 may confidently be expected to embody gratifying evidence that American industry, regarded as a whole, is equal, not merely in productive efficiency, but in skill and in taste, to that of any other nation on the globe.

THE INTERNATIONAL FEATURE.

But the world must be here in 1876 in order to stimulate us to the exertion necessary to our own certain success. It has been well said by an able writer that "the only way to obtain a completely national exposition is to make it international. Our own people will not exhibit themselves to themselves." There is no inspiration in such a programme, and for one I look upon the international feature of the proposed exhibition of 1876 as not only unobjectionable, but essential, if we would reap profitable results. I am at a loss to understand why gentlemen oppose it, for a purely national exhibition would cost nearly or quite as much and would not be nearly as likely to command interest, even at home, as an international exposition. It cannot be said that other nations will refuse to come, for upon the President's simple proclamation and commendation of July last, which the Secretary of State says is not an invitation, a number have already signified their purpose to come.

Our late minister to Mexico, a distinguished citizen of Indiana, (Mr. Nelson,) now upon the floor of the House, informs me that the people of "our sister republic" were greatly pleased at the receipt of the proclamation, and the government at once decided to be represented. He says that not less than one hundred artisans are already at work in the city of Mexico preparing articles of skill, taste, and utility for exhibition at Philadelphia.

Of the feeling in Europe Professor Blake, in his report, remarks:

I can report the existence of the most friendly and even enthusiastic feeling in regard to the centennial exhibition. It is looked forward to by all classes with inquiring interest. The statesman and political economist expect to derive from it fresh and more correct information regarding our institutions and resources and a deeper view of the great future of the American people. The men of science expect richer harvests than ever before of material for investigation, and look forward to the coming reunion of the nations in the New World as the opportunity to see some of its marvels with their own eyes. The industrial classes, with appetites whetted by what they have seen of our inventions and manufactures at Paris and Vienna, desire a nearer view and a broader association with the elements of our successful progress. The merchants and tradesmen believe that in our exhibition they will have the most favorable opportunity to extend their trade and to introduce products of a higher culture than we yet can claim. These are some of the elements, in general, upon which the interest in our exhibition is based; but I have not mentioned one which I am sure, from personal interviews with leading men of the various foreign commissions, jurors, and statesmen, comes of a broad and liberal sympathy with all that conduces to human progress and the realization that international exhibitions are potential in this direction. Much of the interest is engendered by the recognized fact that for the first time the American people are to have an international exhibition. It is spoken of as the *first* international exhibition in America under Government sanction and patronage. The Government is regarded as its responsible founder and sustainer.

All over Europe the exhibition is talked of and written of in a manner which shows that great importance is attached to it. At Vienna the commissioners from various countries parted with the earnestly expressed hope that they might meet in America in 1876, and it is known that many of them have already urged their governments to the most liberal provision for representation at Philadelphia. Nothing can be more absurd than the idea that foreigners will hesitate to come here in 1876 because it is the centennial year of our national independence. The Fourth of July week, with its inevitable outburst of patriotic ardor, may not be as enjoyable to some of them as to us; but to none will it, in my judgment, prove offensive. Certainly not to Great Britain; for the fact is notorious that our declaration of independence and the war which followed it, indicated principles now universally held in England, and constituted the triumph of a party to which all Englishmen now belong, whether they call themselves conservative or liberal.

But the celebration of the Fourth of July will be but an incident in the programme for the year, and the exhibition will not in any sense be a political glorification or a reminder of foreign or domestic differences or complications. For one I am ready to trust the good sense and good taste of the people, and I repel the thought that the representatives of any country or government may not visit us in 1876 with the assurance of the kindest and most respectful treatment. In a recent address the eminent Professor Tyndal said:

During my four months' residence in the United States I did not hear a single whisper hostile to England. This will sufficiently indicate to you my experience of the feeling of the people of the United States toward this country. Either they do not hate us, as alleged, or, if they do, the manner in which they suppressed this feeling, out of consideration for a guest, proves them to be the most courteous of nations.

RELATIONS OF THE GOVERNMENT TO THE EXHIBITION.

And now a word touching the relations of our Government to this exhibition. This subject was referred to by the gentleman from Pennsylvania, [Mr. KELLEY,] and will doubtless be enlarged upon by the gentleman from Connecticut, [Mr. HAWLEY,] the president of the centennial commission. But I am not willing to pass it by without expressing my great surprise at the ground assumed by gentlemen upon this floor. In the face of the act of Congress of 1871, which distinctly declares that the exhibition shall be held under the auspices of the Government of the United States, and of the act of 1872, which reaffirms it, we are now told that the Government has nothing whatever to do with it, and that to ask an appropriation from Congress toward the cost of the grand affair is little less than an impertinence.

Because on the announcement of enthusiastic Pennsylvanians that that State would bear all the expenses of the exhibition the act of 1871 was made to provide as follows:

SEC. 7. That no compensation for services shall be paid to the commissioners or other officers provided by this act from the Treasury of the United States; and the United States shall not be liable for any expenses attending such exhibition, or by reason of the same,

it is insisted that the commission has no right to ask the appropriation proposed in the bill now before the House, and that to do so would be a violation of good faith. Gentlemen lose sight of the fact that the commissioners had nothing to do with the passage of this act and are in no wise responsible for it, but were appointed some time after its adoption. Furthermore, its provisions have been strictly obeyed. No compensation for services of commissioners has been paid by the United States, or by any one else, for that matter, and the Government has not been, and is not under this act, held liable for any of the expenses of the exhibition.

Mr. DAWES. But you accepted that law with the stipulation that you would not call upon Congress for any aid.

Mr. MYERS. There was no such stipulation.

Mr. MCCORMICK. The gentleman from Pennsylvania [Mr. MYERS] is correct. There was no such stipulation in the act of 1871 or in that of 1872. The gentleman from Massachusetts [Mr. DAWES] will observe that these acts simply provide that under them the United States shall not be made liable for any debt or obligation incurred, and neither by the centennial commission nor the centennial board of finance has the United States been made liable for a dollar even to this hour.

But I submit that nothing in either of these acts makes it inconsistent or improper for those having the responsibility of the exhibition upon their hands to now come to Congress and ask a direct appropriation toward the necessarily large outlay required in order to make the exhibition what it should be, a grand and complete success. When we consider that in Europe the governments have been proud to bear nearly the entire expense of the exhibitions and have deemed it profitable to do so, it is to me incomprehensible that there should be opposition here to the payment of a sum supposed to be no more than one-third of the cost of the exhibition of 1876, which Congress has directly declared shall be held "under the auspices of the United States," and the commissioners for the control of which are commissioned from each State and Territory by the President under authority of law.

The cost of the Vienna exhibition, grossly exaggerated, is held up as a warning that instead of the sum which competent architects and engineers, who have considered the subject for many months, estimate the buildings and their appurtenances at Philadelphia will require, a much larger sum will be needed, and that the appropriation now asked of Congress is but a small part of what will be demanded from the Government for the purposes of the exhibition. To quiet this groundless clamor it may as well be announced now as at any time in this debate that the president of the commission [Mr. HAWLEY] is in possession of a letter from John Welch, esq., chairman of the centennial board of finance, authorizing the statement that no additional appropriation will ever be solicited of Congress. While I do not think Mr. Welch called upon to give any such pledge, I will say for the benefit of those to whom he is not personally known that he represents the solid men of Philadelphia and that his word is his bond.

I am of those who think the whole cost of the international exhibition might with propriety be borne by the Government, and that the legislation in 1871 and 1872 which prohibited any liability, and upon which such stress is laid by some gentlemen upon this floor, is a positive discredit to Congress, and should be blotted from the statute-books. Such legislation, I respectfully submit, is unworthy a great, powerful, and patriotic nation.

For one, I have never liked the plan of raising money by a stock subscription as provided in the act creating the board of finance, and I am not surprised that it does not win popular favor. The Legis-

lature of Tennessee recently sent a series of resolutions to Congress accompanied by the following preamble:

Whereas the mode of raising funds for celebrating the hundredth anniversary of American independence by a joint stock subscription necessarily tends to convert a great national occasion into a mere money-getting speculation, is inconsistent with the patriotic memories it is intended to commemorate, and utterly unworthy of the people whose liberty it is designed to fittingly immortalize: Therefore, &c.

Tennessee, by these resolutions, instructed her Senators and requested her Representatives to propose, advocate, and sustain, by their votes, such an appropriation by Congress for said centennial exhibition as may be necessary to make said proposed celebration thoroughly national and international and worthy alike of the Government and people of the United States.

I call the attention of gentlemen who say that no State has asked Congress to aid the centennial to these resolutions, and to this extract from a recent message of the governor of New Jersey to the Legislature of that State, which body has appropriated the sum of $100,000 to the centennial fund, an act worthy the loyal sons of the heroes of Monmouth and Princeton:

Congress inaugurated the movement under national auspices, and the President of the United States has announced to all nations that the exhibition will be held. The people desire that it shall be held, and they expect Congress to make such provision as will not only insure it against possibility of failure, but render it at least equal to any international exhibition that has been held in any part of the world.

Unquestionably the people desire that the international exhibition shall be held, and they look to Congress to insure it against possibility of failure. They do not believe the country so poor that it cannot grandly celebrate its centennial and give to all the nations of the earth ocular demonstration of what one hundred years of republican government has here done to develop art, science, and skilled labor. Instead of condemning members of Congress for voting money for such a purpose once in a century, my judgment is that the people will visit their displeasure upon all who hesitate so to do, and they will laugh at the plea of a want of constitutional authority in view of the appropriations for our representation at Paris and Vienna, and the aid rendered innumerable projects of far less interest and importance to the nation than this.

THE STATE OF PENNSYLVANIA.

Mr. Chairman, before passing to show some of the valuable results which may be expected to attend such an exhibition as it is proposed to hold in 1876, I will say a word in justice to the good people of Pennsylvania, who have been so harshly and unjustly criticised in the present discussion. Beyond urging the city of Philadelphia, where our independence was declared, as the most appropriate place, as it undoubtedly is, for the centennial demonstrations, whatever they might be, they have arrogated to themselves no undue prominence or influence, but constantly shown an unselfish desire that the management of the exhibition might be broadly national and as free as possible from local control. In the centennial commission the State, like the others, has but one commissioner and an alternate, and in the executive committee but a single representative. Yet Pennsylvania has already subscribed millions of dollars toward the expenses of the exhibition and given an example of liberality and patriotism which entitles her to high praise rather than cold criticism upon this floor.

Apart from the question of historic associations, the great Commonwealth of Pennsylvania, the key-stone in the Federal arch, has, in my opinion, strong and peculiar claims to have the centennial demonstrations made within her borders. More than one-fourth of the entire wealth of the nation is in Pennsylvania, and no State better illustrates the marvelous growth and progress attained in a single century under our government of the people. At the date of the Penn charter the population was about 2,500; at the death of Penn, thirty-seven years later, the population was about 100,000; and at the declaration of independence, about 325,000. Since then the census returns show the following remarkable growth:

	Population.
1790	434,373
1800	602,365
1810	810,091
1820	1,047,507
1830	1,348,238
1840	1,724,033
1850	2,311,786
1860	2,906,215
1870	3,521,951

In 1870 the total number of acres in farms in the State was 17,994,200; the yield of wheat was 19,672,967 bushels. In coal the yield was more than one-half of the entire product of the United States. In 1872 the total product of iron in the United States was 2,388,260 tons, of which Pennsylvania furnished nearly one-half. In the same year the yield of petroleum was 6,531,675 barrels.

The State commissioner of statistics has compiled a series of tables for 1872, in which the different sources of wealth are classified and arranged in six groups, each of which is no doubt as nearly correct as it is possible to make it. The result is as follows:

1. Real and personal property	$3,475,831,851 00
2. Banks and building associations	433,250,801 66
3. Railroads and telegraph and canal companies	393,913,734 60
4. Corporations, &c., not included in above	1,549,128,870 60
5. Manufactures of all kinds, &c	522,078,949 00
6. Coal and oil	129,710,855 00
Total	6,473,914,461 86

What product can we show to the world with more of honest pride than a magnificent commonwealth like this, so rapidly and wonderfully developed under the influence of our free institutions?

A MOST PROFITABLE INVESTMENT.

And now let us consider some of the results likely to come from the exhibition of 1876, for the practical American mind demands profit from every investment of money. The exhibition conducted upon the grand scale which it must attain will cost much, but I think there was never before such an opportunity for securing a great return for money appropriated. In the life-time of those who hear me speak there will not, in my opinion, be another such occasion for securing to the nation and people grand and lasting benefits in the best interests of peace and industry.

The London exhibition of 1851, begun in a season of financial distress, produced results of the greatest magnitude and widest range.

In a paper read by Lord Lennox, M. P., before the Society of Arts in 1866, he observed:

It may be and is undoubtedly true that as a nation we were, at the exhibition of 1851, not equal to the French in our designs, and in our appreciation of artistic beauty of form; but it is also true that at the exhibition of 1862 our inferiority was admitted on all hands to be unspeakably less apparent than it had been eleven years before on a similar occasion.

When the exhibition was over and the results known, never was public opinion more unanimous than in declaring that the great exhibition had succeeded in clearly manifesting the existence of certain principles, that, if carried out, would confer a solid benefit on those engaged in manufactures and commerce, by bringing about, in the memorable words uttered by the late prince consort at Birmingham "the introduction of science and art as the unconscious regulators of productive industry."

The increase in exports during the two years following the English exhibition of 1851 was £24,485,050; during the two years following the exhibition of 1862, £36,476,789.

The Paris exhibition of 1867 was highly advantageous to France, and, as results have shown, peculiarly profitable to the United States. The section of the exposition occupied by American contributions contained such a collection of specimens of our agricultural, mineral, and other natural productions as had never before been seen in Europe. The richness and extent of these products were the wonder and admiration even of those who had heard and read of our vast resources, and especially to those representatives of the great financial centers of Europe who were seeking for evidences of the material basis of our public credit with a view to ascertaining the safety of our bonds for permanent investments.

In connection with this exhibit, which was the visible and convincing evidence of their truthfulness, were printed statements of the extent and resources and the inducements to settlement of every State and Territory, each of which was accompanied by a general map on which the mineral deposits were indicated. These documents were freely distributed in the principal languages of Europe, and the fifteen millions of visitors from every quarter of the globe were placed face to face with these sample products, the extent of which and the opportunity of enjoying which were set forth in the printed governmental publication prepared at our General Land Office, which reached every government and every important library, as well as every center of intelligence in Europe. The interest of many of the people of Germany, the British dominions, and other European states was the greater in this question because of the large numbers of their countrymen and kindred who had sought new homes in America, and the effect was correspondingly strong upon their minds.

Now let us see what we can deduce from the officially prepared statistics of this Government as to the probable results of this exhibition upon immigration.

It may be interesting to state, first, that the lowest average value of immigrants to a country receiving them as permanent residents is estimated by Dr. Edward Young, the Chief of the Statistical Bureau, at $800 per head. Dr. Engel, an eminent statistical authority at Berlin, makes the average at $1,125, in which the estimate of Mr. Frederick Kapp, one of the commissioners of immigration for the State of New York, coincides.

During the first years of our domestic strife immigration declined to a rate much lower than the usual average, namely: For 1861 it was 91,920 against an average of about 130,000 for the previous three years. In 1864, 1865, and 1866, under the stimulus of war bounties and special efforts to encourage immigration, it reached the following numbers:

	Immigration.
1864	193,191
1865	248,394
1866	314,480

In 1867 it was 298,358; in 1868, 297,215—a gradual downward tendency until the influences of our exhibit at Paris had sufficient time to bear fruit, when we have the following results:

	Immigration.
1869	385,287
1870	356,303
1871	346,938
1872	437,750
1873	459,803

I do not undertake to say positively what percentage of this five years' immigration is due to the influence of the exhibition of 1867; but the average value of it to the United States, at $800 per immigrant, (Dr. Young's estimate,) is considerably *over* $200,000,000 a year. Placing my estimate, then, at 5 per cent., we have as a result

$10,000,000 from this one item of increased resources added to the most permanent and indestructible wealth of the country in *one* year by our exhibition at Paris. Assuming that there would be some decrease with time in the influence to which I have ascribed this item, I will reduce the percentage to 3 per cent. for the second year, which gives six millions, and to the next 2 per cent., or four millions; to the next 1 per cent., or two millions; making a total of twenty millions.

But what will be the results in increased immigration and in the abiding effects upon our public credit of such a representation as we can make of our agricultural and mineral resources, of all the vast range of raw materials which our soil will produce, of our industries and the compensation of those engaged in them?

Our public-land system and the abundance of land open in all directions to settlement enable us to secure a direct pecuniary return for outlay in an international exhibition such as no European nation could ever enjoy. European governments, cities, communes, provinces, societies, and the foreign press of all lands will be represented by their best talent, sent out to analyze and report upon those great features of national resources which control the movements of capital and enterprise. They will send into every department of European life the story of our progress and our development and of our golden opportunities for all in the coming century.

EFFECTS ON NATIONAL CREDIT AND SECURITIES.

There is another important form of benefit to the nation and its finances which presents strong claims for recognition in reviewing the past as well as in contemplating the future, and that is the very marked effect which inevitably flows from a concentrated and well-selected exhibt of our agricultural, mineral, and other specimens which indicate the nature and extent of our productive resources and energies.

How was it at Paris in 1867? It will not be disputed that the market value of our securities was materially affected by the judgment of European financiers, and that such an exhibit as has been described would demonstrate inexhaustible resources. What do the statistics prepared by our Treasury Department disclose on this subject? That the value of our currency advanced as follows:

1867	70.9
1868	71.5
1869	72.7
1870	81.1
1871	88.7

Of course there is no way of positively ascertaining the extent of this appreciation in the public securities due to this exhibition; but it would hardly be extravagant to credit the representation in the heart of Europe with ¼ of 1 per cent., and it is probable that it may have caused at least 2 or 3 per cent. of this rise in value. Counting the public debt at an even two thousand millions, an appreciation of ¼ of 1 per cent. gives as the result $10,000,000 benefit to the Government and people, bondholders and tax-payers of this country from this source.

What would be the result in this respect not only upon our present but upon our future welfare of a successful international exhibition?

And may we not legitimately regard this thirty millions derived from two sources which had their origin in our representation at Paris as a sufficient warrant for conferring upon our people the larger benefits of an international exhibition upon our own shores, especially when it can be done by borrowing, as it were, from the earnings of a former exhibition, and will enable us to warm the sentiment of patriotism into new and vigorous life by joining our people, North and South, East and West, in a celebration which for moral grandeur will have had no parallel in all the ages?

Another benefit which lies at the very foundation of national prosperity and wealth has been partially realized by Great Britain as the result mainly of the first great exhibition held within her dominions. British statesmen, manufacturers, and merchants discovered with alarm that their industries had met with a competition which threatened to undermine a vast proportion of her export trade. They found that this was due to the superior workmanship and taste imparted to French, Belgian, Russian and other products by artisans and designers indebted for their proficiency to superior systems of practical industrial education and training. Another cause of this progressive superiority of foreign competitors was the careful application of science in invention and processes to the economical and rapid production of the articles, fabrics, and commodities which supplied human wants, freighted the ships of Britannia, gave her the balance of trade, and the monopoly of the seas.

With all the energy of her best minds, her profoundest scientists, and industrial capitalists, under the leadership of the wise Prince Albert, who had inaugurated the exhibition, the British government directed itself to securing its industries against further encroachments, and to regaining its old prestige in international competition.

It was a slow and laborious process; but they succeeded in establishing the great industrial, artistic, and scientific museum at South Kensington, which has since become the source and center of a national system of industrial training which has shown its ever-increasing efficiency at succeeding exhibitions, thus exerting a saving influence on manufactures, art, and trade.

However triumphantly we have competed and may again compete in various departments of machinery and invention with other nations, we are now and have been suffering for the want of increased occupations, which will come to us with increased diversification of arts and products.

An international exhibition is of the first necessity to disclose to us the wide range of these arts and industries, a monopoly of which improved training in applied science and art now secures to a few European nations.

Can we afford to lose this golden opportunity or lessen by delay its redeeming effects? Shall we gain a half century in progress at a single bound, or shall we give up the race, as if we, as a republic, were incapable of competing with monarchical nations in the great race of human progress?

NECESSITY OF GOVERNMENTAL RECOGNITION.

Mr. Chairman, to my mind many of the arguments used by the opponents of the pending bill are as unreasonable, not to say ridiculous as the reply of the old lady who, when recently asked to subscribe to the stock of the centennial board of finance, said she would not subscribe a single dollar until the money raised for the last centennial had been accounted for. And the most unreasonable of all these arguments is, in my opinion, that which would entirely disconnect the Government from our proposed international exhibition, even in the face of the two acts of Congress upon the statute-books to which I have referred. Not only is it too late to undo this legislation without unending disgrace to the nation, but it is absolutely essential that the Government should be fully identified with the undertaking in order to secure co-operation from abroad. The powers which have acted favorably upon the President's proclamation of July last have done so with the understanding that it was an official invitation to a national affair, and those holding back are only waiting to be sure that such is the character of the invitation or commendation.

Baron Schwarz, the director general of the Vienna exhibition, when recently asked how foreign governments could be interested in the centennial exhibition, replied, "Through the action of your home Government and of its diplomatic agents abroad. The managers of your exhibition cannot address themselves directly to foreign governments. As far as Europe is concerned, it must be an exhibition *made by the United States* and not by private parties." Hence the importance of governmental sanction and support at every step, and the danger of the impression which must inevitably go abroad from the defeat of the measure now under discussion.

Mr. Chairman, the great and ever-growing West, the broad region of mountain and plain beyond the Mississippi, feels a deep interest in the success of the centennial exhibition. That vast country, if unexplored and uninhabited, save by the wily savage, when the declaration of 1776 was made, is now musical with the voice of industry and its busy people are second to none in the Union in their devotion to the principles upon which the Government was founded and has so signally flourished. They want to join heartily with the men of the North, the South, and the East in making the demonstrations of 1876 such as must be memorable in the annals of the Republic and of the world. The Pacific coast, with its thrifty States and Territories, what a wealth of display may it contribute to the great exhibition! Already a hundred boxes of specimens of precious ores have reached Philadelphia from this El Dorado, which since the London exhibition of 1851 has yielded to the world more than $1,500,000,000 in gold and silver, and has grown to be an empire in itself.

When before in the history of mankind have there arisen within a period so brief social organizations of such magnitude and importance, embracing such varied resources, embodying so much wealth and enterprise, so much intellectual power and civic experience, as are combined in these latest-born offspring of the Republic that have cradled themselves amid the murmurs of the Pacific? The dreams of romance have been more than realized in the sober facts of their recent history; and their progress from unpeopled solitudes to republican provinces would transcend the limits of credulity anywhere but among a people accustomed to the transformations which the American continent alone has presented.

Dared I but say a prophecy,
As sang the holy men of old,
Of rock-built cities yet to be,
Along these shining shores of gold,
Crowding athirst into the sea,
What wondrous marvels might be told!

In conclusion, Mr. Chairman, I have to say that apart from the question of sentiment aroused by this debate, sentiment in which our fathers fondly indulged, and of which we cannot, in my judgment, have too much, it seems to me that the representatives of the people in Congress assembled will be warranted by every consideration of national honor, dignity, and interest in insuring the success of the centennial exhibition, whatever amount it may be necessary to appropriate for such purpose. If any nation can afford to be liberal and should be liberal on such an occasion it is this; and knowing the people from the Atlantic to the Pacific as I do, I am satisfied beyond the shadow of a doubt, whatever may here be intimated to the contrary, that if the popular vote could be polled on the subject the verdict would be, "Make it as grand, as noble, as memorable as the Republic is resplendent in its history, its achievements, its vast dominions, and its world-wide renown."

Indian Appropriations.

SPEECH OF HON. R. C. McCORMICK,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

May 11, 1874.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 3030) making appropriations to supply deficiencies in the appropriations for the service of the Government for the fiscal years ending June 30, 1873 and 1874, and for other purposes—

Mr. McCORMICK said:

Mr. CHAIRMAN: In many respects the debate upon the bill making appropriations for the expenses of the Indian Department for the coming year was, in my judgment, more fair and sensible than any debate of the kind I have heard in the House, and I regard it as a promising indication that the Indian question is at last likely to be considered, as it ever should have been, not as one of romance or poetry, but as one of a very practical character requiring the exercise of the best judgment and wisest discretion in its treatment. The elaborate speeches made by the gentlemen of the Appropriation Committee and by others were in a good spirit; yet to one who has lived upon the frontier and who knows the Indian as he is some of their statements and conclusions, appear strange and irreconcilable with the facts, and there is yet too much of a disposition to misrepresent the attitude of the frontiersmen toward the Indians. I find in a late western paper this criticism upon the course of the Indian commissioners, commonly known as the "peace commissioners:"

Their most zealous efforts have been to scandalize and bring into disrepute a hard-working, self-sacrificing people on the frontier, who, to say the least, are as honest and much more charitable and merciful than people average in old settlements surrounded by all the appliances of advanced civilization.

Without adopting this language as expressive of my own view of the conduct of the commissioners, to whose good acts and foolish ones I hope to refer at some other time, I may say that denunciation of the frontier settlers, who are no better and no worse than our fathers who were pioneers in the Eastern and Middle States, is not necessary, as many seem to think, in order to obtain justice for the Indian.

If the Indian has at times been wronged, he has, as a rule, avenged himself in a summary and bloody way that gives him far less claim upon our sympathy and charity than his apologists and defenders would insist. He is entitled, however, to justice, and this the Government should see that he has, but not at the expense of those of our own race and blood, our own kith and kin, who have seen fit to make their homes upon the border, and who are as much entitled to protection as though they had remained in the crowded cities and towns; more, I sometimes think, by virtue of the enterprise and daring which have led them to undertake the opening to civilization and industry of new districts and vast regions which must otherwise have been of no value or profit to the nation.

The fundamental trouble with the Indian is that he will not work; and I look for no economical or very satisfactory dealing with him until he does. He naturally and systematically violates the scriptural injunction, "In the sweat of thy face shalt thou eat bread," and he forgets that "the desire of the slothful killeth him."

The legislation that leads the Indian to labor is the only legislation that will lift him from barbarism and make him other than an unending expense and vexation to the Government and people.

The reservation system is likely to be as costly and demoralizing for years to come as it now is, and there is no hope of escaping the large appropriations for food of which gentlemen annually complain without such legislation and its energetic enforcement by agents familiar with the Indian character. Being entirely convinced of this fact, both from my personal observations in the Indian country and from the history of our dealings with the savages, I endeavored so long ago as in March, 1870, to ingraft the following proviso upon the regular Indian appropriation bill, namely:

And provided further, That no part of the said sums herein appropriated for other than treaty Indians shall be given to the support of able-bodied male Indians, excepting as wages, at a fair rate, for labor performed upon the reservations, or upon roads or other public works in said Territories; said labor to be performed under direction of the superintendents of Indian affairs and the Indian agents in the Territories.

Upon a division of the House the proposition was lost by only ten votes. Since then I have steadily hoped to have it adopted, but in vain until this year, when the Committee on Appropriations presented it in substance in the following section of the regular Indian bill, and it has become the law so far as the House is concerned, and will, I have reason to believe, be sustained by the Senate:*

SEC. 3. That for the purpose of inducing Indians to labor and become self-supporting, it is hereby provided that in distributing the supplies to the Indians for whom the same are appropriated, the agent distributing the same shall require all able-bodied male Indians, between the ages of eighteen and forty-five, to perform service upon the reservation, for the benefit of themselves or of the tribe, at a reasonable rate, to be fixed by the agent in charge, and to an amount equal in value to the supplies to be delivered. And the allowances provided for such Indians shall be distributed to them only upon condition of the performance of such labor, under such rules and regulations as the agent may prescribe: *Provided*, That the Secretary of the Interior may, by written order, except any particular tribe from the operation of this provision where he deems it proper and expedient.

* It was concurred in by the Senate.

I congratulate the House and the country that after so much delay an effort is to be made in the right direction. I know there are many both here and upon the frontier who insist that the Indians, especially those lately brought under restraint, like the Apaches, cannot be made to work, and it may be a difficult if not impossible task to make them in some instances. But it is due to the Government, to Congress, and the tax-payers of the land, and to the Indian himself, that the experiment should be made, and his true friends will watch it with interest as involving the only solution of the great problem whether he is to remain a simple ward of the nation or to become a man among men, able to care for himself and to cope with the inevitable advances of civilization. The Commissioner of Indian Affairs in his annual report says that "any plan for civilization which does not provide for training the young, even though at a largely increased expenditure, is short-sighted and expensive;" and he thus refers to manual-labor schools, namely:

Upon no other subject or branch of the Indian service is there such entire agreement of opinion from all agents and persons connected directly and indirectly with Indian civilization as upon the necessity of labor schools for Indian children. Instruction in the day-school merely, except among Indians who are already far along in civilization, is attempted at great disadvantage on every hand. Indian children cannot come from the wigwam suitably clad for the school-room. If clothes are provided for them the supply must be frequently repeated. The habits also of wigwam life are entirely irregular. The Indian has no regular habits or hours. He eats and sleeps when and where he will or can, and no school attendance, which depends upon regular home habits of the parents or children, can be relied upon. It is also well-nigh impossible to teach Indian children the English language when they spend twenty hours out of the twenty-four in the wigwam, using only their native tongue. The boarding school, on the contrary, takes the youth under constant care, has him always at hand, and surrounds him by an English-speaking community, and above all gives him instruction in the first lessons of civilization, which can be found only in a well-ordered home.

Although some success has been had among the Indian children through the ordinary day-schools, there can be no question of the wisdom of these suggestions, and I hope that Congress will hereafter stipulate that moneys appropriated for educating the Indians shall be given in support of manual-labor schools only.

Upon another topic the views of the Commissioner are so worthy the consideration of Congress that I call especial attention to them. I refer to his remarks upon inadequate salaries to agents and the result. As is generally known, the Indian agents are now selected by the different religious denominations, and their appointment is in no sense political. There is a serious complaint on the part of these religious bodies that they are not able at the salary of $1,500 to find competent men willing to accept the service, and that when such men have been secured it has been found difficult if not impossible to retain them.

The Commissioner says:

The service has lost several of the most competent and reliable agents during the year from this cause. No man capable of managing the business of an agency ranging from fifteen to two hundred thousand dollars ought to be asked to give full service to the Government for $1,500 a year. I recommend that the salary of agents be increased to $2,000 per annum for the more eastern agencies, and $2,500 for those remote and inaccessible.

It is not creditable to the committee or the House that this reasonable increase in the salaries of agents has not been made. It is idle to expect to secure men of ability and to content them in their work unless they are at least fairly compensated.

Speaking to the Commissioner recently about some of the agents, I said they seemed honest and well-meaning, but lacked the force of character and judgment essential to success in dealing with a question so difficult as the Indian question, and I suggested that even Christian agents must be strong in order to succeed. He replied that I was quite right, but that it was impossible to secure the services of "strong Christians" for $1,500 per year. Occasionally one could be found whose circumstances would permit him to serve, but the instances were rare. It is indeed too much to expect that men will go to the frontier and faithfully labor in a most vexatious and often dangerous service for a compensation much less than they can secure for far less arduous labor amid the comforts and associations of the East.

The total pay of an Indian agent at this time is not nearly equal to that of a second lieutenant in the Army, while the responsibilities of his position and the services required of him are tenfold greater. If at any time the agents should be chosen from those living near to the Indians and entirely familiar with them, as for many reasons the people of the frontier think they should be, even then the proposed increased compensation would be necessary in order to obtain proper men, and to lift them above debt and temptation.

It may be remembered that in the debate on the regular Indian bill (May 2) I moved to increase the pay of interpreters to $1,000, but the motion was not agreed to. At my request the Clerk read the following extract from the last annual report of the superintendent of Indian affairs in New Mexico:

The sum allowed for the salary of interpreters, $500 per annum, is entirely inadequate to secure the services of men who can speak *any* language with even the slightest degree of accuracy. I believe more troubles have arisen from misinterpretation of the language of officers than from any other cause. When General O. O. Howard was at Tularosa the Indians received an impression through the interpreter of which General Howard was entirely ignorant, and which has caused much of the trouble at that agency from then until the present. I would recommend that interpreters be paid $1,000 per annum, and that all agents be required to employ only such men as can read and write both languages correctly, saving in instances where interpreters of Indian languages are required.

I do not know this superintendent, but I do know that much misunderstanding, both on the part of Indians and whites, has resulted

from improper interpretation by men professing to be familiar with the languages used, when in truth they were too ignorant to speak correctly, even in their native tongue. It is not too much to say that some of the most serious wars upon the frontier have originated from the misinterpretation of treaty stipulations or agreements through which both parties have been led to ill-will and violence when there was really no ground for either and an accurate interpreter would have saved all cause of difficulty and bloodshed.

It is due both to the whites and the Indians that the compensation should be so increased as to make it an object for men to fit themselves by study for the responsible and important work of interpreters, and that none should be employed as such who are not known to be thoroughly qualified.

More than fifty years ago Schoolcraft (see his Thirty Years among the Indian Tribes, page 106) wrote thus of his difficulties with interpreters, and the necessity of having those of a higher standard of intelligence:

> The attempts I have made thus far have at least been unsuccessful, partly, perhaps, because the topic was not properly apprehended by them, or by my ordinary office interpreter, who I find is soon run amuck by anything but the plainest and most ordinary line of inquiry. A man of the Indian frontiers who has lived all his life to eat and drink, to buy and sell, and has grown old in this devotion to the means necessary to secure the material necessaries of life, is not easily roused up to intellectual ardor. I find this to be the case with my present interpreter, and he is, perhaps, not inferior to the general run of paid interpreters. But as I find in my intercourse the growing difficulties of verbal communication with the Indians on topics at all out of the ordinary routine of business, I begin to feel less surprised at the numerous misapprehensions of the actual character, manners, and customs of the Indians which are found in books. I speak as to the communication of exact ideas of their belief. As to literal exactitude in such communications, my inquiries have already convinced me that there must be other and higher standards than a haphazard or trade interpreter before the thing can be attempted.

THE DEFICIENCIES.

But, Mr. Chairman, I must pass to the bill now before the House, the deficiency bill, which contains quite large appropriations for deficiencies in the Indian service, both for the last and the present fiscal year. As usual, there is more or less of complaint of all these deficiencies, and the Department of the Interior and the Indian Office are indirectly, and even directly, accused of sending in improper estimates, of permitting undue extravagance, and of other shortcomings too numerous to mention. Upon their face many of the allegations are manifestly unfair, and for all their acts I make no doubt the proper officers can give an ample explanation and justification. I am not authorized to speak for them, nor is it necessary that I should do so; but I cannot hesitate to say from my intimate intercourse with them that I believe they are as upright and conscientious as any officers of the Government, and that in their management of the most perplexing public question of the day they should have the active sympathy and co-operation rather than the distrust and contravention of Congress.

The Commissioner of Indian Affairs (Mr. Smith) has been the target of much ignorant and malicious criticism throughout the country, and yet every investigation into the details of his official transactions has established his integrity as above question or reproach. Moreover, he has, from residence, service, and travel in the Indian country, a more practical and thorough knowledge of the Indians, from Minnesota to Arizona, than any Commissioner lately appointed, which fact of itself should entitle his suggestions and recommendations to Congress to confidence and respect. Certainly he is not open to the charge of an utter want of acquaintance with the Indians, which of late years has been so often and justly applied to many men who have been intrusted with the management of Indian affairs, as for instance the members of the Indian or peace commission, scarcely one of whom had when appointed to office ever seen the red man outside of a museum or a menagerie, and who from this fact, much more than from their peace policy, have never been able to command the confidence of the people of the frontier, who know from experience that it is simply impossible for any one to correctly understand the Indian question and effectively deal with it excepting through long residence in the Indian country. For this reason, I may say, in passing, the reports of special agents and commissioners, who are often absent from Washington but a few weeks or months and who see the Indian in his holiday garb or on his best behavior, are often not worth the paper they are written upon, and serve only to mislead the Government and the public. Several such have been quoted from and cited as high authority at the present session of Congress, when in fact their statements and conclusions are so erroneous and unwarrantable as to make them simply ludicrous to those familiar with the Indians of whom they treat.

If gentlemen would confer with their associates upon this floor who represent the States and Territories in which the Indians live, and where the Indian question has to be met from day to day and hour to hour in all its troublesome details, they would be much less apt to fall into those misstatements and absurdities which often deprive their speeches of the, force they might otherwise have and destroy the effect of the prettiest sentiment, however eloquently expressed.

In a communication to the Secretary of the Interior, dated January 16, and forwarded to Congress by the Secretary January 19, the Commissioner of Indian Affairs reports a large indebtedness on account of the Indian service for the fiscal year ending June 30, 1873. Most of it, as will be seen by reference to the statement, is on account of the Apaches in Arizona and New Mexico.

The Commissioner says:

> The policy regarding these Apaches has been to bring them, peaceably or by force, upon reservations; and by feeding them and properly providing for their wants and necessities, keeping them quiet, and, as much as possible, from depredating on the citizens of the Territories named. Whenever they leave the reservations they are hunted down by the military and either killed or captured and brought back to the reservations. If not fed, therefore, by the Government, they must either starve on the reservations or be killed off them. The Department has endeavored to keep them on the reservations by feeding and clothing them; and in doing this and inaugurating and carrying on the requisite work of improvement on the several reservations, of which there are at present five, with a view to making the Indians, in time, self-sustaining, more funds than have heretofore been appropriated for the purpose have been absolutely necessary. This office has heretofore labored under great disadvantage in preparing and submitting estimates for the service, in connection with these Apaches, for the reason that the number of Indians to be provided for has never been known to the office at the time the estimates were being prepared.

The citizens of Arizona, and I think I may also say those of New Mexico, were not favorably inclined toward this policy, but when the Government, through its special representatives, gave them to understand that it was to be adopted, they said that if it should be so enforced as to make life and property secure, and bring peace where disorder had so long prevailed, they would ask nothing more. This has to such an extent been the result that there is a better state of things in both Territories, so far as Indian affairs are concerned, than at any previous time. But it has been produced at large cost to the Government, for to feed Indians and guard them by troops at the same time is an expensive business, and as yet the Apaches are not so well reconciled to the reservations as to make it safe to withdraw the troops. For straggling bands who have not been driven, with all the activity of the troops, to the reservations, and for the pursuit and punishment of those who break away from them, the presence of the military is still necessary and must be for some time.

I am not familiar with the manner in which the Indians upon the reservations in New Mexico have been cared for, nor do I know everything of the detail of the contracts for supplies or their carrying out in Arizona. But the Indian Office and even the peace commissioners seem satisfied that, with few exceptions, they have been wisely made and faithfully filled, and that the indebtedness reported is an honest one, necessarily incurred in carrying out the announced policy of the Government and keeping faith with the Apaches, hitherto utterly wild and implacable.

If upon examination any of the claims are found to be incorrectly stated, or any contractor is shown to have failed in any way to live up to his contract, payment should not be made, and I say to the House, as I have said to the committee, that I hope it will not be, and I object to no examination, however rigid, that may be thought necessary, either by Congress, the Indian Office, or any proper authority, to ascertain the facts in each and every case in Arizona, although I believe no question has been raised. But if the claims are shown to be honest and proper, then I insist that they should be paid without further delay, some of them having stood for nearly two years, and the delay having driven some of the best men on the frontier to the verge of bankruptcy, and greatly embarrassed all who have had dealings with the Indian Office.

As an evidence of how the claims referred to are looked upon in Arizona I may quote the following comment upon a telegram from this city giving a synopsis of the statement of the Commissioner to Congress. It is from the Arizona Miner, February 4, a journal much disposed to criticise the Indian Office and the so-called peace policy:

> We discover no lie or mistake in the foregoing, and wonder why Congress dilly-dallies about appropriating sufficient money to pay citizens of this Territory who, by having furnished Indian supplies for a long time past, have cramped themselves, and so aided in preserving the very remarkable peace that has existed here during the past year. Indeed, had it not been for the acts of contractors for supplying Indians, they (the Indians) could not have been kept peaceable on the reservations.

Here is a statement in which I find the Indian Office concurs, that entitles the contractors to the gratitude of the Government, and Congress cannot afford to be driven from the duty it owes to honest and faithful creditors by the fact that these deficiencies are large and that the public sentiment is against large appropriations at the present session. It is not against the payment of just debts incurred by the authorized agents of the Government upon any account and if it were Congress should not listen to it for a moment. There has already been too much indifference on the part of both Houses to provision for honest deficiencies on other accounts, and some members are, I fear, too apt to think that deficiencies always mean irregularities and improprieties. In this case the Commissioner of Indian Affairs says they have been caused principally by the inadequacy of the appropriations heretofore made under the heads in his statement. He might have said, truthfully, that Congress cut down the carefully prepared estimates of the Indian Office, as it has been wont to do, and has only itself to blame for the indebtedness for which members are now disposed to make him a scape-goat.

Deficiencies are the inevitable result of inadequate appropriations, and should not surprise any one where it is a matter of notoriety that the estimates of a Bureau, or Department, have been materially reduced by Congress. Indeed in the Indian service they are to be expected, as it is impossible, from the nature of the service, that very definite calculations can be made in advance. The late Commissioner (General F. A. Walker) repeatedly assured me of this, and the present Commissioner refers to it in the extract I have taken from his official statement concerning the deficiencies.

The business of feeding Indians is not, as I have intimated, one upon which the people of Arizona asked the Government to enter, and if in connection with the maintenance of a military force in the Territory it is found to involve the Government in a large expense, (until the Indians are taught to labor,) they are not to be held responsible for it. If, however, it is to be continued as a chief feature of the peace policy, and the reservations are to remain in charge of the Indian Office, as the debates at this session, in both Houses, indicate to be the decided preference of Congress, then the sooner that members realize what it costs and what appropriations must annually be made the better for all.

The Commissioner states that it is now costing an average of 20 per cent. more to furnish the necessary supplies for Indians than it would have done had Congress made timely and adequate appropriations. The credit of his office and its efficiency have been seriously impaired and must constantly be if Congress insists upon reducing its estimates. In this respect I regret that while the deficiency bill gives all that is asked to sweep away the indebtedness of the fiscal year ending June 30, 1873, it provides for less than one-half of the amount asked for the debt of the present year, and will thus enable the payment of something less than 50 per cent. upon claims, many of which have been due from the first months of the year.

Is it wise or just for Congress to deal thus with creditors of the Government, or to shield itself under the plea that the Commissioner was not authorized to incur the indebtedness when he has clearly shown its necessity, and that under the very wording of the appropriation bills he was to subsist and care for such Apaches "as have been, or may be, collected upon reservations in Arizona and New Mexico?" An elastic proviso rendered necessary because of the general invitation to the Apaches to go upon the reservations and the orders to the military to make war upon all who did not go. Of course any proper deficiency not provided for at this session will have to be at the next, and the Government can gain nothing by the delay while the Indian Office will be left in embarrassment, and those who have unsettled accounts with it will have fresh cause of complaint, and many will suffer seriously.

Mr. Chairman, I have said what I have regarding the Indian Department and the Indian Office with the more satisfaction inasmuch as I came to Washington somewhat prejudiced against them and have at times had warm controversies with them. I am not a convert to the so-called peace policy, as some of the "malignant philanthropists" interpret it. I have believed, and I do still, that force is an essential element in dealing with many of the Indian tribes, and that it is idle to expect success without it. It was more effective in putting the Apaches upon reservations than all the promises of beef or clothing.

But in admitting that with force and food together, or the peace policy, as the President, the Interior Department, and the Indian Office now uphold it, the Apaches are greatly subdued and quieted, I admit no more than the people of Arizona and New Mexico willingly admit and rejoice over; for whatever may at any time have been said or insinuated to the contrary, they desire peace and appreciate it as much as any people in the land.

A late issue of the Arizona Citizen says:

It used to be charged by those who did not know or who wished to misrepresent us that we did not want peace, but one year of peace will add more substantial wealth to Arizona than twenty years of war.

National Washington Monument.

SPEECH OF HON. R. C. McCORMICK,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

June 4, 1874.

The House having under consideration the report of the Special Committee on the Washington National Monument—

Mr. McCORMICK said:

Mr. CHAIRMAN: A year or more ago, when a similar committee was appointed to take this subject into consideration and a report was presented, it was supposed by many then in Congress that the recommendations of the report would meet very general favor, and at a meeting of the representatives of the Western Territories it was suggested that if there was to be a general movement in favor of the completion of the monument something should be said for the people living on the far frontier, and I was asked at that time to say something in their behalf. I prepared some remarks, and took pains to gather facts and figures from abroad in reference to monuments there, triumphal arches and mementoes of this class, but at this hour of the night I will not detain the House by a reference to them, or anything like a set speech.

I would simply say, in connection with what the gentleman from Illinois [Mr. WARD] has stated, that it seems to me that the question is not whether it was wise or unwise to start this monument upon the plan on which it was started. It may not have been wise, it may not have been necessary, and the plan may not have been in good taste or an appropriate one. But the people of this country, so far as I have talked with them, have a horror of allowing anything started as a monument in honor of Washington to be changed or given up; and therefore if it be not the most tasteful design, or if it be not in the most appropriate location, it would still seem to be in accordance with the spirit of the people throughout the length and breadth of the land that it should be completed and not abandoned.

When gentlemen say the people do not care to have this monument completed by a congressional appropriation they must have had a very different line of observation from mine. I do not know that I ever met a man East or West, North or South, who did not, if he spoke upon the subject at all, pronounce it a national disgrace that Congress had not long since furnished the money for its completion. And I have met not a few who think that the management of the enterprise should from the very beginning have been wholly assumed by Congress and not left to individuals. It is a shame to the American name that the consideration of a subject that should be so near to every patriotic heart as the upbuilding of this monument to the "Father of his Country" should be put off from session to session, and that the centennial of the nation is likely to witness it unfinished, a standing reproach and dishonor.

The appropriation which the committee say will be sufficient for the entire work is small; indeed the whole estimated cost of the monument is small when compared with that of many of the monuments in Europe erected by inferior governments to inferior heroes. I find that one of the triumphal arches in Paris cost a million and a half dollars, or nearly double what the Washington monument will cost if completed as recommended by the committee. It seems to me little less than an insult to the American people to say that they will not sustain Congress in any reasonable appropriation to complete a national work so befitting as this monument at the national capital, and I should be ashamed of my constituents, poor pioneers as they are, if I thought they held such views as some members of Congress have expressed upon the subject.

I am not willing to think the American people are so mean and unpatriotic, so lacking in sentiment, as some of their representatives would make it appear. On the contrary, I believe their love of country is such that they will despise here and elsewhere the tendency to measure everything by the dollar and to mistake littleness for economy. There are some things that are not to be weighed by money, and some measures that the people wish carried out upon higher and nobler considerations, and in connection with which money, however great the amount needed, should not for a moment be counted. Among these is a recognition in every proper form and manner of the mighty men whose great deeds gave life and liberty to the Republic, foremost among whom, by universal consent, stands George Washington, of whom the brilliant British orator, Fox, said:

Illustrious man! deriving honor less from the splendor of his situation than from the dignity of his mind. Before him all borrowed greatness sinks into insignificance, and all the potentates of Europe become little and contemptible.

Indian Appropriations.

SPEECH OF HON. FERNANDO WOOD,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES.

May 1, 1874.

The House being in Committee of the Whole on the State of the Union, and having under consideration the bill (H. R., No. 2343) making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with the various Indian tribes, for the year ending June 30, 1875, and for other purposes—

Mr. WOOD said:

Mr. CHAIRMAN: I am fully conscious of the embarrassments and difficulties surrounding this question, and in the time allotted to me I cannot of course attempt to present to the committee any intelligent solution.

It is now nearly three centuries since the conflict began upon this continent between the aborigines and the whites. Originally we were on the defensive; originally we approached this continent with hesitation, with fear, with apprehension as to our reception by the occupants of the soil. We offered friendly salutation. We offered every conciliatory means by which to obtain the lodgment which has resulted in permanent occupation; and for the first hundred years of the settlement of the whites we were hedged in and confined to the immediate boundaries of the ocean; and fully one century passed before the white man obtained what may be called a home and a habitation upon the American continent.

The next century, growing in numbers and understanding the Indian character better, we adopted a policy of aggression—only conciliatory so far as it was politic and wise to be so. We enlarged the area of our occupation, gently but steadily removing backward this our enemy. And, sir, during that second century, at that early

period in the history of the people of this continent, we did use the Indian for the purposes of war. He was used by the colonists in the French war. He was used by us in controversies and in military contests with our enemies upon the borders everywhere.

Until, sir, we reached the commencement of the third century of our occupation of this continent we had very little difficulty in successfully dealing with him; but the beginning of the third century, or, if you please, the end of the last century and the beginning of the nineteenth century, show a very marvelous change in the course which we adopted in reference to the treatment of the Indians. We then commenced to treat with them as independent tribes, as independent nations; and after the adoption of the Federal Constitution in 1798 we put them, in so far as treaties were concerned, upon equal footing with the most powerful nations of Europe. The President through his commissions made treaties, the Senate ratified those treaties, and they took their places upon the statute-books as treaties.

And, sir, to proceed very briefly and concisely with the history of this question, so far as we are concerned we lived at peace with the Indians, with some few exceptions. With these exceptions, in which it is true we had severe and costly military conflicts, we have continued on the whole with a good understanding and with amicable relations. We made for them what are termed reservations, by treaties, on other lands than their own, which, as a general thing, they have occupied contentedly ever since.

But it is this later period that has been productive of our embarrassments. I do not propose now to arraign this Administration, or to take a part either for or against the War Department or the Department of the Interior in its conduct of Indian affairs. I shall not be a party to that controversy, because in my judgment there are merits and demerits on both sides. But I fear that a wrong public sentiment, a combination of antagonistic interests, a mistaken idea of the Indian character, and a variety of other circumstances have all had a tendency to create outside of the Government a condition of public opinion that is not healthy with reference to a settlement of this great question.

Now, what is this public sentiment to which I refer? First, there are those who treat the Indian with sentimental philanthropy. They know nothing of his character except what they read in poetry or romance. They conceive him to be a very different man from what we know him to be; and thus in their imagination they are always in sympathy with his wrong, always placing the white man as the party who either originates or produces it, conceiving that the Indian can be nothing else but a hero. This may be termed sickly philantropy. It is a dangerous element in our legislation. It is a dangerous element to a true solution of this difficult Indian problem. Nothing can be more mischievous than to force ideas and views based upon a popular error into the law and into the execution of the law.

Well, sir, we have another element—one that has attracted a great deal of attention, one to which Congress and the President have given a very great deal of latitude, and which has succeeded in infusing itself not only into our legislation, but into the administration of the Indian question. I refer to propagandism, to an attempt to christianize the Indian under the belief that he is capable of accepting the divine truths of our religion, and that through the agency of the Government, through the power of the Government, by and with the aid of the money of the Government, we can christianize these savages. Sir, I respect this error also. I have the very highest regard for the Society of Quakers who are so active in the promulgation of this idea. I respect these men, these earnest, honest, truthful, good men.

This is not a Government of propagandism. The people of the United States do not put money into the public Treasury for religious conversion. On the contrary, the Constitution of the United States almost in terms forbids it. The Congress can make no laws which will in any degree recognize any religion. This Government is not even a Christian government. It had its origin at a period when we had the influence and the aid and the support of men of all religions, and of every character and class from every clime. It was incorporated in our fundamental law that religion should in no way be recognized and tolerated by the Government. And yet, sir, we find the money of the people and the power of the Government, by act of Congress, giving to the religious societies of this country access to and influence over the Indians for purposes of propagandism; to teach their uncultured minds the mysteries of Divine truths, and to convert them to our own religious faith.

Mr. Chairman, has it never occurred to these honest, good men that before you can christianize you must civilize, and before you can civilize you must educate; that before you can so improve the mind of the Indian as to make him susceptible of accepting divine truths, and also those principles, civil, political, and religious, which are recognized throughout our land, you must teach him the language, you must send him the school-master, and you must give him an opportunity of acquiring a knowledge of the rudiments of our language? I make a very wide distinction between civilization and Christianity. If we could succeed in civilizing the Indian we should have accomplished all, in my judgment, that can be accomplished in this day and generation. What is civilization? What has been the result of the efforts of this country for a hundred years in that direction? In my own State of New York, where the Indians for nearly a hundred years have been living surrounded by all the elements of refined civilization, they have retained their isolated position as Indians. They live alone; they refuse to assimilate with us; they retain as far as they may their own peculiar customs and habits and tongue, and it becomes physically impossible to incorporate them, unless we do it, as has been said by the gentleman from Texas, [Mr. HANCOCK,] by amalgamation.

Sir, I see before me an intelligent gentleman from Indiana [Mr. SHANKS] who was himself a commissioner to visit the Indians, appointed by the Indian Department. And as it is pertinent to this question of christianization, I desire to read from a report made to the Commissioner of Indian Affairs last November by J. P. C. SHANKS, T. W. Bennet, and Henry W. Reed, special commissioners to investigate the condition of the Indians in Idaho and adjacent Territories.

At the conclusion of the report, after giving an account of a conference with the Indians, the commissioners say:

To further illustrate the evil effects to the Indians of this persistent and injurious contest between religious denominations, among and concerning the Indians, the commission quote the language of Joseph, chief of the non-treaty Nez Percé Indians, now located in the Wallowa Valley, Oregon, but who with his people held a council with the commission at the Nez Percé agency, near the Clear Water River, Idaho Territory, on the 2d day of August, 1873.

"By the COMMISSION:

"Question. Do you want schools and school-houses on the Wallowa reservation?

"Answer by JOSEPH. No; we do not want schools or school-houses on the Wallowa reservation.

"Q. Why do you not want schools?

"A. They will teach us to have churches.

"Q. Do you not want churches?

"A. No; we do not want churches.

"Q. Why do you not want churches?

"A. They will teach us to quarrel about God, as the Catholics and Protestants do on the Nez Percé reservation and at other places. We do not want to learn that. We may quarrel with men sometimes about things on this earth, but we never quarrel about God. We do not want to learn that."

What a commentary, Mr. Chairman, upon two things: first, upon the want of harmony in the Church itself, and second, the futility of attempts to cultivate men whose simple natures are incapable of grasping the great truths involved in the divine revelation.

Recently one of the Indian agents sent a dispatch to the President, saying that on the Round Valley reservation in California he had converted since last November eight hundred of the tribe there. Now, sir, according to official statistics, there are but twelve hundred of those Indians all told. According to the report of the Commissioner of Indian Affairs, and the accompanying reports, there was but one school-house last fall on that whole reservation; and yet this enthusiast, an honest man no doubt, would mislead not only the President but public opinion with reference to religious conversions among the Indians, by telling us that within a few weeks he has converted eight hundred Indians who cannot read or write or understand the English language. This I say, Mr. Chairman, is one of the difficulties in the way of the solution of this question.

There is another difficulty in the way of a settlement of this question. It is the patronage and the money which the Government devotes to this service. The whole amount of appropriations by Congress fifty years ago for the Indian service was but $1,000,000, when the Indians numbered twice as many as they do now. Before the Department of the Interior was established, when the War Department had the exclusive control of the Indian service, the expenses of that service were not half as great as they are now. Under this complex system, this double-headed policy, by which two Departments of the Government attempt to have control over the same interest, notwithstanding the establishment of what we call the peace policy, the religious policy, the humanitarian policy, we have not abandoned a fort or withdrawn a soldier from one of the Indian or military reservations. We have maintained all of the expenses of the military power to keep the Indians in subjection, while we have also been going on an opposite principle—we have carried the olive-branch in the other hand; but we have made that olive-branch a source of speculation and of wrong to the injury of the Indians, and have corrupted the agents of the Government who have handled the money. And so long as the Indian is a source of patronage and profit, my word for it the Indians never will be christianized, civilized, or subjugated. They will be maintained as an element of advantage, as our colored brethren were recently used for a similar purpose.

At the close of the war, under the pretext of philanthropy and care of the freedmen, we made them instruments of plunder and profit. I will not refer to that matter now, except to say that I see indications in the report of the Commissioner of Indian Affairs, and the same indications in this bill, that these Indian agents are to have control over the services of the Indians just as the agents of the Freedmen's Bureau had control over the services of the freedmen on southern plantations, putting the results of the freedmen's labor into the pockets of the agents instead of giving it to the freedmen themselves. In this very bill you will find, toward the close, a section which provides that the Government, of course by its agents, shall control the labor of these Indians, shall make them work, and the result and profit of their labor will go wherever the Indian agents desire.

We also find in the report of the Commissioner of Indian Affairs a recommendation that it shall be left to the discretion of the Secretary of the Interior to carry out these treaties or not, as he pleases. I am now speaking of treaties which require cash payments; that the Secretary may consider them as cash or not cash, as he pleases. I differ

with my friend from Kentucky [Mr. PECK] with reference to treaties. If we are to disregard these treaties made in good faith with the Indians, if we are ourselves to set the example to their untutored minds of bad faith, then I say we should not blame them if they retaliate whenever they get a chance. These are either treaties or not treaties.

I voted for the resolution referred to by the gentleman from Kentucky, [Mr. BECK,] that this House has the right, as under the Constitution in my judgment we have the right, to give our assent to those treaties involving the appropriation of money or a regulation of the tariff. I took that ground with reference to the Alaska treaty where we had to vote money, and this House sustained that ground.

But these Indian treaties are treaties made when no such question was raised. The Indians have inherited these treaties, for some of them were made during the last century. We accepted them, not as treaties in an international sense, but as the plighted faith of the imperial government to deal with the Indians so and so. We command the Indians to do their part; we compel them by military force to leave those lands which they ceded to us by those treaties and to go farther west. Having compelled their acquiescence in their obligations under those treaties, I hold it would be dishonorable and unjust for us to violate our portion of the obligation, which requires us to give them food and rations and clothing and money, as the treaties may require. Therefore if we exact good faith from them, let us also act in good faith. With our superior intelligence and cultivation and sense of justice, do not let us complain of the wild barbarian, who knows no law except what we teach him, who looks upon the law of might as superior to every other law, and who relies upon his physical power to enforce it. Do not let us complain of him if we teach him to do wrong.

Sir, I agree with those who say that many of the Indian depredations arise from just such acts as these upon the part of the whites—where the Indians have been wronged and outraged and have retaliated by brute force, by rapine, arson, and murder. But, sir, let us deal kindly with the Indians. Let us exercise a wise, a just, a humanitarian policy, if you please. Those that are wild, those that live on horseback, those who recognize no law—deal with them in such a spirit as their habits and character demand. When it becomes a contest between force and force, let us show them that we have the power to compel them into subjection. But those who are disposed is live in amity, those who are disposed to respect our law, those who are disposed to recognize the difference between mine and thine, those who will assimilate to the least extent in the habits and occupations of civilized life—let us deal with them justly and kindly. But, sir, as to any belief or expectation that within our day these people can be assimilated and incorporated and infused with the Anglo-Saxon race, it cannot be done except by amalgamation; and that in my judgment will not be accomplished in a century.

[Here the hammer fell.]

Educational Fund.

SPEECH OF HON. JOHN B. STORM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

January 13, 1874,

On the bill to establish an educational fund, and to apply the proceeds of the public lands to the education of the people.

Mr. STORM. Mr. Speaker, the gentleman from Massachusetts [Mr. G. F. HOAR] has shown such admirable skill in the management of his bill that he has been obliged to make a motion which if it had been made by some one else would have been regarded as unfriendly. He has yielded the floor to the enemies of the bill only, and that too to the exclusion of the members of the committee, who by the usual courtesy of the House are entitled to the preference.

Mr. Speaker, there are some members who are favorable to the principles of this bill, but deny the propriety of passing it now, because of the embarrassed state of our finances; there are others who are friendly to the cause of education, but deny the right of Congress to pass such a measure; and there are some who have no scruples on either of these points, and are ready to vote for the bill now as reported.

In the Forty-second Congress I entertained grave doubts about our constitutional right to pass the bill, but so reluctant was I to putting myself on the record as opposed to education that I finally voted for the bill after having spoken against it, some important amendments having been first made. But upon the most mature reflection and study upon the subject, I cannot bring my mind to the support of this measure; and unless I shall be permitted to offer an amendment, wich I will hereafter indicate, I shall be obliged to vote against it.

I was surprised, Mr. Speaker, at the attack made upon this bill by the gentleman from Iowa, [Mr. KASSON.] I was surprised that so distinguished a member of the republican party should at last wake up to the fact that there is such a thing as State-rights. His speech was the boldest and most manly protest against the centralizing tendencies of that party uttered in the present Congress. With the recent action of the President of the United States in nominating Mr. Cushing, a State-rights democrat, for Chief Justice, and his letter to Governor Davis, of Texas, declining to repeat his Louisiana blunder in that State, may we not expect that the millennium is about to dawn on the world?

But the gentleman's great speech was not suitable to the occasion. One of the most harmless of all the wicked measures of his party has caused his pent-up fires to break forth. How well that speech would have come in when the reconstruction measures were before the Congress—measures which completely annihilated States! How appropriate that speech would have been if uttered in opposition to the enforcement acts, by which Federal interference was made possible in State elections; by the practical workings of which a Federal judge has been enabled to overthrow the State government in one of the States of the Union!

Has the gentleman from Iowa [Mr. KASSON] said one word in condemnation of the Ku-Klux bill, which took from the State courts their rightful jurisdiction to punish crimes, and gave it to the Federal courts?

Supplementary civil rights were discussed the other day in this House. The gentleman's speech would then have been a "word fitly spoken," yet he was as silent as the marble statues in the adjoining hall. It is true that the gentleman from Iowa was not in Congress all that time, but he has occupied prominent public positions; yet if he has ever expressed himself as hostile to these measures I have never heard of it. Still, I have no doubt now that the gentleman's conversion is genuine and sincere; and he will have the hearty cooperation of this side of the House in every effort he may make in opposition to the attempt to change the character of our Government.

Mr. Speaker, the problem of free government in a federal republic is a nice one; it is to so preserve the balance of power between the reserved rights of the States and the conferred powers of the General Government, as to prevent anarchy in the members or tyranny in the head. It is needless to say, that upon a review of Federal legislation for the last fourteen years—the period of republican ascendency—there have been fearful strides made toward complete centralization and consolidation. The country has become alarmed at it; and just at the moment when we on this side of the House had almost lost heart in the advocacy of the cause of State-rights, the West is all ablaze with it.

The distinguished gentleman from Iowa has made this bill a pretext for an attack upon our land system. There is not a word that the gentleman said in regard to our unjust policy of disposing of our public lands I do not approve of; and when he or any other gentleman in this House will introduce a bill to give effect to his views I will support it.

I have always, Mr. Speaker, believed that our public domain should not be regarded as a source of revenue to the States or to the Federal Government from their sale; but a source of revenue to be derived from wealth and population consequent upon their cultivation and settlement. This was the theory of Mr. Benton as opposed to Mr. Clay, and I believe it to be just and wise. But the gentleman's conversion on this subject must be quite recent, too. He says now we have gone on till nothing but wastes and mountains is left us. Who despoiled our fair public domain? I do not forget that the gentleman from Iowa [Mr. KASSON] was a member of this House in 1864 and 1866, the years when the mischief was done. By two acts alone over one hundred million acres were given to railroad corporations; and all that I can find that the eloquent gentleman from Iowa said upon these great occasions is contained in a speech of about twenty lines in the Globe on the 16th day of May, 1864—the day the Northern Pacific secured its great grant of forty-seven million acres from this House—in which he says:

> I wish to say, first, that I believe thoroughly in the policy of aiding the construction of railroads by grants of public lands.

I submit, Mr. Speaker, in view of this record, the gentleman's remarks lose some of their force.

But this bill has no more to do with the policy of the Government in disposing of our public lands than it has to do with the theory of light or heat. It simply proposes to devote the "net proceeds" of the public lands for educational purposes. The proceeds are the effects of our land system, and not its cause. It does not seek to "devote" the system, or to "consecrate" it, but the "proceeds" of it. If you modify the system so it shall yield no proceeds, this bill, if enacted into a law, must fail. I am surprised that the gentleman should have fallen into such an error. A member may vote for this bill to-day, and may to-morrow vote to so change our policy in regard to our public lands that not one cent of proceeds shall be realized, and not subject himself to the slightest inconsistency.

I assert, Mr. Speaker, that by the wildest system of constitutional construction ever resorted to no authority can be found to support this bill. An express power is nowhere conferred; no clause can be found from which it can be implied or inferred. I have heard one gentleman, not now a member of this House, say that he derived the power from the "general-welfare" clause in the preamble to the Constitution, yet, every great expounder of the Constitution has repudi-

ated this doctrine. They all agree in substance that it cannot be resorted to in order to enlarge the power of the General Government. It cannot of itself confer any power; it can never operate even by implication to the enlargement of any power expressly given; much less can it be the source of any implied power. Its true office is to expound the nature and extent and application of the power actually conferred by the Constitution, and not substantially to create them.

The gentleman from Massachusetts, [Mr. G. F. HOAR,] then, can find no authority in the Constitution for saying to a State, "You must establish a system of education which will be free to all your children between the ages of six and sixteen years." Not being permitted to do this directly, he seeks to do it indirectly through the operation of the bill. The State must either submit to degradation, by surrendering her rights under the Constitution, or forfeit her right to a common participation in our public domain. A refusal to make the provision, as indicated in the bill, would subject the State to pecuniary loss; to accept the dividend would imply a sale of constitutional privileges for money. This is a fair interpretation of the bill; and I can readily see how a State like Connecticut, having one of the best school systems in the Union—a system which would require no alteration to meet the requirements of this act—might feel compelled, in the vindication of her own sovereignty and self-respect, to reject the dividend offered her by this bill. Every State jealous of its rights,, and in order to protect them from encroachments by the Federal Government, would be bound to reject the offer. What right have we to subject the States to such an alternative? Are not the public lands the purchase of our common treasure and blood? Is the General Government to be likened to a testator, who can impose any conditions and burdens that whim or caprice may dictate, the States, as accepting legatees, to take the bequest *cum onere* or not take at all? Such is not the relation of the General Government to our public domain. It is a trustee, and, as such, has no right to impair the trust by unjust conditions.

This is no new question, Mr. Chairman. This whole subject was thoroughly discussed in 1832 and 1833. The division of the public lands among the States was a favorite hobby with Mr. Clay. Some of his most brilliant speeches were made on this question. Yet the most radical of his schemes never went the length of this bill. He simply proposed to divide the lands, or their gross proceeds, among the States for the purposes of education, colonization, or internal improvements—these three objects having been pet measures of the great Kentucky statesman. Yet he never succeeded in passing his bills; and mainly for the reason that Congress had not the authority to pass the measures. President Jackson's veto message on the subject is able and unanswerable, and since reading it and the debates preceding it I have no doubt upon the subject.

Again, Mr. Speaker, this bill seems born of a spirit of distrust which is at war with the true nature of our Federal Union. The strength of that Union is confidence. The bill before us says in effect that we cannot trust the States; that the General Government must watch them; and provides for the punishment of State officers who may embezzle or misapply the funds we grant them. It is time we desist from all legislation based upon such suspicions and want of confidence. From the line of my remarks it is apparent what my amendment would be. I would simply give the funds to the State for purposes of education, trusting to the State for their proper application. I would impose no condition which would deprive any State of its right to a free participation in the proceeds of the sale of our public lands.

I am anxious that such a bill shall pass. I believe it is the duty of our Government to encourage education in the States, not to control it. It lies at the very foundation of our free system of government. The wisest philosophers and statesmen of ancient and modern times, who have studied human nature and meditated upon the motives from which men act, have come to the conclusion that the education of the people is essential to the stability of government. Aristotle says "All who have meditated upon the art of governing mankind, have been convinced that the fate of empires depends upon the education of youth." William Penn, the peaceful founder of my own State, has said, "That which makes a good constitution must keep it, namely, men of wisdom and virtue, qualities that, because they descend not with worldly inheritance, must be carefully propagated by a virtuous education of youth." And Washington in his Farewell Address says, "In proportion as the structure of a government gives force to public opinion, it is essential that public opinion shall be enlightened." To these great authorities might be added the declarations and teachings of Burke, Locke, and Milton. But it is not necessary. Even those who oppose the bill for the reasons I have stated concede its merits on this point.

On one point I think my brilliant and witty friend from New York [Mr. COX] has fallen into an error. He complains that under the bill his State would get less than North Carolina. This, in my opinion, is the great merit of the bill. It distributes the proceeds of the public lands according to the wants and necessities of the different States. If New York or Pennsylvania was in nowise affected by ignorance in North Carolina or Louisiana the gentleman would be correct. But I assert that from the close, intimate federal relations which the States sustain toward each other, whatever adversely affects one affects all. What is for the good of one is for the good of all on this subject. Ignorance is like a poison, and would soon infuse itself into the whole body-politic if not speedily checked when it makes its appearance in any member of that body. It cannot be—

> Cabin'd, cribb'd, confined, bound in.

The bill indirectly, by force of public opinion, seeks to put an end to the policy of granting lands to aid in the construction of railroads. If it even in a small degree accomplishes this it will demand the support of every member who has the protection of our public domain at heart. And let the people feel, should this bill become a law, that every member hereafter who shall vote to give away our lands to corporations is voting to take from the States their funds which this Government has devoted to them for educational purposes.
